ANSWER KEYS

Study and Thinking Skills

Prepared by:

Prof. Merry Ruth M. Gutierrez and Prof. Ma. Jhona B. Acuña

Competencies:

General:

Comprehend written text in English

Specific:

Use strategies to efficiently search for information and learn from written texts in English

Apply study and critical reading skills in comprehending English texts

PART I - CONTENT UPDATE**I. Study Strategies and Thinking Skills**

- Study skills according to Graham and Robinson (1984) are specific abilities which students may use alone or in combination to learn the content of the curriculum on their own.
- Harris and Smith (1986) state that study skills are those that enable a person to gather information and to organize it in such a way that requires analysis, interpretation, and evaluation.
- Klein, Peterson, and Simington (1991) claim that study skills are skills necessary for acquiring critical information from a variety of texts and media sources for differing purposes and uses
- Study skills are skills related to gathering and using information.

A. Remembering Information

1. **Repetition** – saying or writing information a number of times
2. **Mnemonics** – a technique to remember details such as:
 - a. Acronyms are words that are formed by combining some parts (usually the first letters) of some other terms. The term is also used to refer to *initialisms*, which are combinations of letters representing a longer phrase.
 - b. Abbreviations (from Latin *brevis* "short") is strictly a shorter form of a word, but more particularly, is a letter or group of letters, taken from a word or words, and employed to represent them for the sake of brevity.
 - c. Pegwords are words that rhyme with numbers and are used to build associations with the information to be remembered.
 - d. Keywords are familiar words that lead the reader to the new words to be learned. They can be used to create mental images to remember new words and definitions.

- e. Rhymes are words with similar sounds usually found in poetry and songs.
- f. Graphic Organizers – are visual representations that show how information is organized.

B. Underlining/Highlighting

Highlighting and underlining engage the reader to select words, phrases and sentences, as well as, selecting the most important ideas and details in a reading. It makes information stand out so that you can find it easily when you go back to the text to study for a test. Systematically using different colored highlighter pens can make the review process even easier. Familiarity with the techniques is helpful to find rapidly what the reader needs when rereading the passage.

Method for Underlining/Highlighting

1. Mark the main ideas and the major details differently. Underline the main ideas with a double line, and the major details with a single line. Or use a different color high-lighter pen for each.
2. Find main-idea sentences. Underline the sentences or parts of sentences that state the main idea of a paragraph. If the main ideas are only implied, write your own main-idea sentence in the margin. Find major details and underline these.
3. Circle key words. Use brackets [], asterisks (*), or any other symbol to mark parts that are especially interesting or important to you.
4. Write notes or comments to yourself in the margin. The margins are good places to put down your own thoughts as you read. Margin notes can help you connect ideas from different parts of the selection. They can also help you connect a passage with other material you have read, comments your teacher has made, or your own experience.

C. Notetaking While Reading

Note taking is the practice of writing down pieces of information in a systematic way. It involves using your own words and a separate notebook to condense the key ideas you have marked in your text while annotating.

1. SQ3R (Rowntree, 1976: 40-64)

- a. **Survey** – flip through the chapter or book and note the layout, first and last chapters or paragraphs, look at the headings used, familiarize yourself with the reading.
- b. **Question** – Ask questions about the way the reading is structured and think about the questions you will need to keep in mind while reading. Think about whether or not you think the book is relevant or if it's current and if it suits the purpose of your study.
- c. **Read** – read actively but quickly, looking for the main points of the reading – don't take any notes – you might want to read through twice quickly.
- d. **Recall** – Write down the main points of the reading and any really important facts, and opinions that help support the main points. Also record the bibliographic details.
- e. **Review** – repeat the first three steps over and make sure you haven't missed anything. At this point you might like to finalize your notes and re-read your notes or write down how the material you've just covered relates to your question or task.

2. The PQ5R Study Method

PQ53 is the mnemonic for an effective student regulated approach to studying the kind of material assigned every day – textbooks. Gaining new information and ideas from a variety of different textbooks demands a balanced and flexible network of study strategies.

- a. **Preview** - Know where you're going first. You would never plunge in and try to cross rugged territory if you could have in advance an accurate map of the region. Here is your *mental map* of a textbook chapter: Examine the title. Read the introduction. Glance

at the pictures, charts, and diagrams. Read the wrap-up of the chapter--- the summary and review questions.

- b. **Question** -Work through the chapter - one manageable section at a time. A section marked off with a boldface or italic sideheading is likely to be the right size "bite" for you to digest.

Be a human question mark. Go into each section with a question in your mind. Turn headings, and sometimes topic sentences, into questions. These should guide you to the main points.

- c. **Read** - Read to find the answer to your question and other important content. Unknown terms say, STOP! LOOK UP! LEARN! Remove these roadblocks. Each pictorial aid is saying, "This is clearing up something important." Shift into back-and-forth reading for pictures, diagrams, and charts. Shift your eyes (and thoughts) back and forth as needed from the printed words to the pictorial aid.

Speed up and slow down as needed within the passage. Do stop-and-go reading. Thought time is needed in addition to reading time. Reread as often as necessary. Do "stop-and-go" reading.

- d. **Record** -Jot down or mark important ideas. Make the key ideas stand out in some way so they will "flag" you later. Use any combination of devices. Jot mini notes on a memo slip to be inserted between related pages or in the book's margin. Draw vertical lines in the margin just to the left or right of important content. Bracket key ideas. Underline or color-accent selectively. Now you won't have to reread the entire chapter when you return to review it later. Make key ideas "flag" you.

- e. **Recite** - Students exclaim, "I've read that chapter twice, but I still can't remember it." Solve this problem by using the most powerful technique known to psychologists - the technique of self-recitation. As you complete a section or a paragraph, ask yourself, "Just what have I learned here?"

Look away from the book while you self-recite, or cover the passage with your hand or with a convenient card (such as 5"x8" index card). Can you recite the important points to yourself in your own words? Now look back at the column of print, whenever you need to, and check your accuracy. Knowing you're going to self-recite when you finish a section forces you to concentrate while you're reading.

- f. **Review** - Add a last quick run through. Can you recall the broad chapter plan? Run through the chapter to recall that plan. Next, run through it section by section, checking yourself once more on the main points and the important subpoints. Use your cover card again. Make some quick reviews later on from time to time. Long term memory does improve grades.
 - g. **Reflect** -As you read a passage, turn on your critical thinking. Ask yourself: "What does this all mean? Is it true? How can I apply it?" Reading and reflecting should be simultaneous and inseparable – built right into every step of PQ3R.
3. **Annotating** – is a system of marking that includes underlining and notations. A notation system is used for selecting important ideas that goes beyond straight lines and includes numbers, circles, stars, and written comments such as marginal notes, questions and keywords. Annotations are comments, notes, explanations, or other types of external remarks that can be attached to a document or to a selected part of a document. As they are external, it is possible to annotate any document independently, without needing to edit the document itself. From a technical point of view, annotations are usually seen as metadata, as they give additional information about an existing piece of data.
- How to use annotation:**
- a. Underline important terms.
 - b. Circle definitions and meanings.
 - c. Write key words and definitions in the margin.

- Signal where important information can be found with key words or symbols in the margin.
- Write short summaries in the margin at the end of sub-units.
- Write the questions in the margin next to the section where the answer is found.
- Indicate steps in a process by using numbers in the margin.

4. The Cornell Method

This notetaking method has been devised 40 years ago by Walter Pauk, a lecturer at Cornell University. This method is used by dividing the paper in two columns. The first column is used to enter key or cue words while the second is the notes column (for recording ideas and facts).

There are six steps to Cornell note-taking:

- Record** During the lecture, *record* as many facts and ideas as possible in the notes column.
- Reduce** After the lecture, read through the notes taken and *reduce* to key words and phrases, or questions. The key words and phrases are used as cues to help recall the ideas and facts. The questions are to add clarity to the facts and ideas.
- Recite** Using only the key words, phrases and questions in the cue word column *recite* the ideas and facts in the notes column. It is important that you are not just mechanically repeating, but using your own words.
- Reflect** Based on the facts and ideas learnt, *reflect* upon how this fits in with what you already know, and how this knowledge can be applied.

- e. **Review** On a frequent basis, *review* your past notes by reciting and reflecting upon them.
 - f. **Recapitulate** After you have reduced, recited and reflected upon your note, you should *recapitulate* each **main idea** using complete sentences at the bottom of the key word column.
5. **Concept maps and Mind maps** - The idea is to map out concepts, either as they are found or received or during the *Review* process in the Cornell or SQ3R method. Mind maps (i.e. hierarchical trees) can be used to take lecture notes in real time, but more often to organize concepts into a hierarchical tree. Concept maps allow to visualize more complex relationships between different concepts. They allow for example to integrate old and new knowledge and to construct a representation of a complex concept. Finally, concept maps also can be used a design tool. For example, after the initial literature review for a paper or a thesis, a student may create a conjecture map that relates theory to design to observable process to outcomes.
6. **Charting** - is method that helps to summarize the most important concepts found in articles and to identify implicit relations (what concepts go together and which authors). This concept charting technique uses a table with columns representing concepts and rows representing a text.
7. **Outlining** -is a short verbal sketch that show in skeleton form the pattern of ideas in text or a draft prepared for speaking or writing often with main and sub-ideas highlighted by numbers and letters. It is a form of notetaking that gives a quick display of key issues and essential supporting details. It shows indentions, numbers, and letters to show levels of importance.

TWO ACCEPTED OUTLINE FORMATS

Roman and Arabic Number and Letter System	Decimal Number System
Title I. II. A. 1. 2. a. b. 3. B. 1. 2. III.	Title 1. 2. 2.1 2.1.1 2.1.2 2.1.3 2.2 2.2.1 2.2.2 2.2.3 2.3 3.

D. Skimming and Scanning

1. **Skimming** – means reading only small parts of a text in order to get an overview of the organization of the text and its main ideas. When skimming a paragraph or a page, you are searching quickly among the sentences for the answers to your questions.

Here is how to skim:

- Make sure that you know what information you are looking for, ask yourself a question, and look for a key word.
- Move your eyes quickly from line to line and from sentence to sentence.
- When you think you have found what you are looking for, stop.

- d. Read slowly the part of the line or sentence that tells you what you want to know.
 - e. Think about the question you were trying to answer.
 - f. Does the information you found answer the question? If not, quickly read the passage again to look for the information you need.
 - g. Jot down the answer to the question you've asked.
2. **Scanning** - involves looking quickly through a text to find a specific word or piece of information. Instead of reading every word on a page, readers move eyes quickly, searching for what is needed.

Guidelines for Scanning

- a. Understand the organization of the material.
- b. Stay focused on what you are looking for.
- c. Use whatever clues are available to speed your search.
- d. Confirm your information.

E. Summarizing – is a method used in stating the main idea and significant supporting details into short, concise statements about the material you have read. Summaries are full pieces of writing that fit together a selection's facts and ideas in readable sentences and paragraphs which are shorter versions of the original.

F. Test-taking Strategies

1. **Read to comprehend** - concentrate on the main idea of the passage and avoid fixating on details
2. **Interact with the passage** – predict the topic and activate schema; monitor and self-correct
3. **Anticipate** – read first sentence carefully, it usually gives clues of what is to come
4. **Relax** – plan your time and concentrate
5. **Recall** – remind yourself of the author's main point
6. **Understand major question types** – testy questions follow certain predictable patterns

- a. **Main Idea Questions** – ask to identify the author's main point
 - b. **Detail Questions** – check your ability to understand material that is directly stated in the passage
 - c. **Implied Meaning Questions** – deals with the attitudes and feelings of the writer that emerges behind or between words wherein favorable and unfavorable descriptions suggest positive and negative opinions towards the subject
 - d. **Purpose Questions** – the purpose of the passage is not usually stated but implied and is related to the main idea
 - e. **Vocabulary Questions** – tests general knowledge as well as the ability to figure out meaning by using context clues
7. **Multiple-Choice and True-False Tests**
- a. Read all options
 - b. Predict the correct answer
 - c. Avoid answers with "100 Percent" Words
 - d. Consider answers with qualifying words
 - e. Do not Overgeneralize
 - f. True statements must be true without exception
 - g. If two options are synonymous, eliminate both
 - h. Figure out the difference between similar options
 - i. Use logical reasoning when two answers are correct
 - j. Look suspiciously at directly quoted pompous phrases
 - k. Simplify double negatives by canceling out both
 - l. Certain responses are neither true or false
 - m. Validate true responses
 - n. Recognize flaws in test taking
 - Grammar
 - Clues from other parts of the test
 - Length
 - Absurd ideas and emotional words

II. Reading Comprehension

A. Critical Reading

1. Recognize the author's purpose or intent

- To inform. Authors use facts to inform, to explain, to educate, and to enlighten.
- To persuade. Authors use a combination of facts and opinions to persuade, to argue, to condemn, and to ridicule.
- To entertain. Authors use fiction and non-fiction to entertain, to narrate, to describe, and to shock.

2. Recognize the author's point of view or bias

- Point of view refers to the opinions and beliefs of the author or of the reader, and a critical reader must recognize how those beliefs influence the message.
- Bias is a word closely related to point of view but tends to be associated with prejudice, and thus it has a negative connotation. It is an opinion or judgment that may be based on solid facts or on incorrect information but leans to one side, unequally presenting evidence and arguments.

3. Recognize the author's tone

The author's tone describes the writer's attitude toward the subject. To determine the tone, pick up clues from the choice of words and details. As a critical reader, tune in to the author's tone by letting attitude become a part of evaluating the message.

4. Distinguishing fact from opinion

- Fact is a statement that can be proven true or false. It is an observation that can be supported with direct evidence and is something own by actual experience.
- Opinion is a statement of feeling that cannot be proven right or wrong. It can be a commentary, position, or observation based

on fact but represents a personal judgment, belief, feeling or interpretations of these facts.

c. Recognize valid and invalid support for arguments

Fallacy is an error in reasoning that can give an illusion of support.

On the surface it appears to add support but closer examination shows it to be unrelated and illogical. They are particularly present in propaganda, a form of writing designed to convince the reader by whatever means possible. The following list describes some propaganda techniques:

- **Testimonials:** celebrities who are not experts state support.
- **Bandwagon:** you will be left out if you do not join the crowd.
- **Transfer:** a famous person is associated with an argument.
- **Straw Person:** a simplistic exaggeration is set up to represent the argument.
- **Misleading Analogy:** two things are compared as similar that are actually distinctly different.
- **Circular Reasoning:** the conclusion is supported by restating it.

B. Functional Reading

Readings often contain more than just words. Graphics accompany the text and knowing how to read these visual aids help the reader how to relate it to the ideas of the selection.

1. **Photographs** – to interpret photographs, you need to be able to identify what is being represented and then to infer moods, attitudes, and relations that help give life to the pictures, particularly if they are of people.
2. **Diagrams** – are drawings with labeled parts. Notice what the separate parts represented and see how they work together. Labels and captions usually point out the key features and explain how the parts relate to each other.

3. **Word Charts** – presents information in summary form to make material easy to find. Instead of using sentences in a paragraph, a writer can present complex information in chart form.
4. **Statistical Tables** – present numbers in chart form. Often, the numbers appear in columns with headings to explain what the numbers represent.
5. **Graphs** – present statistics visually with lines, bars, or circles that show how statistics compare with each other.
6. **Maps** – visually condense material to show relationships. It is a diagram that places important topics in a central location and connects major points and supporting details in a visual display that shows degrees of importance which uses space in a free and graphic manner.
7. **Charts** – give information in an abbreviated outline form

C. Active Reading

1. The **main idea** of a passage is the core of the material, the particular point the author is trying to convey. The main idea of a passage can be stated in one sentence that condenses specific ideas or details in the passage into a general, all-inclusive statement of the author's message.
Steps in determining the main idea
 - a. Recognize general and specific words - look for specific ideas presented in the sentences and decide on a general topic or subject under which ideas can be grouped. The general term encompasses or categorizes the key ideas and is considered the topic of the list.
 - b. Recognize general and specific phrases - topics of passages are more often stated as phrases rather than single words.
 - c. Recognize the General Topic for Sentences - study paragraphs are composed of sentences that develop a single general topic.
 - d. Recognize General and Supporting Sentences - sentences are related to a single subject, with two of the sentences expressing

specific support and one sentence expressing the general idea about the subject.

- e. Differentiate Topic, Main Idea, and Supporting Details
- f. Questioning for the Main Idea
 - Question: Who or what is this about?
 - Question: What are the important details?
 - Question: What main idea is the author trying to convey about the topic?

2. **Stated Main Ideas** - are directly stated, particularly at the beginning of a passage. Such an initial main idea statement, thesis statement, or topic sentence is a signpost for readers, briefing them on *what* to expect. This thesis or main idea statement provides an overview of the author's message and connects the supporting details.

3. **Unstated Main Ideas** - When the main idea is not directly stated, it said to be implied, which means it is suggested in the thoughts that are revealed. In this case, the author has presented a complete idea, but for reasons of style and impact has chosen not to express it concisely in one sentence. As a reader, it is your job to connect the details systematically and focus the message.

4. **Getting the Main Idea of Longer Selections** - longer selections have several major ideas contributing to the main point and many paragraphs of supporting details. To pull the ideas together under one central theme, an additional step is necessary: Simplify the material by organizing paragraphs or pages into manageable subsections and then deciding how each subsection contributes to the whole.

The following questions can help you determine the central theme for a longer selection:

- a. What is the significance of the title? What does the title suggest about the topic?
- b. How do the first paragraphs suggest the topic or thesis?
- c. Under what subsections can the paragraphs and ideas be grouped?

- d. How do these subsections support the whole?
 - e. What is the overall topic?
 - f. What point is the author trying to convey?
5. The **supporting details** develop, explain, and prove the main idea. They can be facts, descriptions, and reasons that convince the reader and make the material interesting. Details answer questions and paint visual images so the reader has an experience with the author and sees what the author sees and understands. Details can be ranked by their level of importance in supporting a topic. Some details offer major support and elaboration, whereas others merely provide illustrations to relate the material to the reader's prior knowledge and make visualizing easier.

How does a reader grasp the main idea of a selection?

- a. Determine the topic of the text. Use the title to predict the topic.
- b. Ask yourself, "What about the topic is discussed?" to point out the **focus** of the topic.
- c. Review the title to hypothesize about the writer's pattern of text organization. Generally, the rhetorical pattern chosen showcases the **main idea** and the supporting ideas.

Doing the three steps given will help the readers to come up with a main idea even prior to the reading of the actual text. The formula to construct or state the main idea is:

$$mi = p + f + t$$

Where

mi = main idea

p = pattern of organization

f = focus of discussion

t = topic

Read the entire selection to confirm if the main idea you have predicted matches the writers' main idea. If there is a match, the purpose of your reading is to look for the support ideas. Jot down all the important notes that relate to the main idea. However, if there is a mismatch between your main idea and the writer's main idea, revise or change your hypothesis before you gather the **support ideas**.

Evaluate the notes you have written, and synthesize the ideas you gathered from steps 1-4 to summarize the informational text in two or three sentences. The formula for summary of an expository text is:

$$\text{Set} = \text{mi} + \text{si} + (\text{sd})$$

Where

Set= summary of expository text

mi = main idea (p + f + t)

si = support idea

sd = support detail

PART II - ANALYZING TEST ITEMS**A. Sample Test Items**

Directions: Read the portion of a proposal on smoking written below. Then decide who could have written each proposal. Choose and copy the letter of the best answer for each item.

1. Proposal A:

I strongly propose that colleges and universities allow smoking among students in the campus during break as a way of easing pressure and tension caused by heavy academic demands.

- | | |
|-------------------|-------------------------|
| A. a psychologist | C. a student who smokes |
| B. a parent | D. a student leader |

*This is a question on critical thinking, specifically on noting point of view. The proposal requires sensitivity to the speaker's word choice and stand on the issue. The words **campus, break, academic pressure and tension** suggest that a person is very familiar with college life, and the stand is not against, but for smoking. Although choices A, B, and D are also familiar with university life, not all of them would fight for smoking. The best answer is C – the one who is a university student and who smokes would be the most likely to propose the idea.*

2. Proposal B:

Smoking increases the chances of having fire accidents not only in schools but also in all public places – parks, hotels, markets, and villages. It could be a way of endangering the lives of people whose interest the government has promised to serve and protect.

- | | |
|------------------|-----------------|
| A. a physician | C. a fire chief |
| B. a store owner | D. a teacher |

*The analysis done in 1 can be used here, too. Word choice will give a clue as to who is speaking – words such as **accidents, places, markets, hotels, government, serve, and protect**. Take note that the person's stand is not for, but against smoking. Choice A, physician will not talk about the risks of smoking in this manner and perhaps would not encourage smoking. Choice B, store owner, might cite other reasons and might be ambivalent about the issue – either to fight for or against smoking. A teacher, choice D, might not advocate smoking, but will offer different explanations. The best answer is choice C. Among the choices, only a fire chief would explain reasons the way it was done in the proposal because of which smoking is not viewed positively.*

3. How would a tobacco grower explain the reason of the proposal for smoking?
- A. Smoking indirectly boosts the country's economy.
 - B. Smoking relaxes the nerves and this helps control negative emotions.
 - C. Smoking has always been a part of male identity and superiority over women.
 - D. Smoking benefits the people who consider the plant as their source of income.

This is a thinking skill question which requires an analysis of the person's character as basis for identifying perspective and point of view. Notice that the person involved is a tobacco grower who would encourage smoking for business reasons. Choice A is perhaps from an economist's view, while Choice B could be made by a plain smoker trying to justify the act. Choice C might be a statement by a sociologist talking about gender issues. Choice D is the correct answer because the tobacco grower depends on the plant for a living, and so he/she airs a view from a business or labor perspective.

B. Practice Test

Read the selection and answer the questions that follow. Write only the letter of the best answer for each item.

1 For all his ability to travel over a sandy desert without water, the camel has a nasty temper and the spirit of revenge. He's not happy until he pays back a wrong, actual or seeming. Knowing this, camel drivers and others who use camels a lot have devised an interesting way of letting the camel settle his scores without the person getting hurt.

2 When a driver has made a camel angry in some way or other, he immediately runs out of sight. He hides near the road on which the camel will pass. He then takes off his clothes and throws them down on a heap, which vaguely resembles a sleeping person.

3 Along comes the camel. He sees and smells the clothes of the one who hurt him. Then he pounces upon the pile, shakes every piece and tramples all over everything. Satisfied, he walks away. The driver comes out of hiding, mounts the avenged beast, and rides off.

4 It makes one think of the baby who bumps its head against the leg of the table, turns around, and hits the leg in punishment.

-from 1000 Stories You Can Use by Frank Mihalic

- What is the passage mostly about?
 - a camel and his driver
 - a driver's way to trick an angry camel
 - a camel's attitude when angry
 - a driver's device to control anger
- Who is referred to by the pronoun he in paragraph 1, sentence 2?
 - driver
 - camel
 - person
 - cloth
- Who is referred to by the pronoun he in paragraph 2?
 - driver
 - camel
 - anger
 - sight
- How does the writer regard the camel?
 - with respect and care
 - with fear and love
 - with humility and love
 - with contempt and criticism

5. What does the writer think about the camel's driver?
- ☒ A. The driver is wise and clever.
 - ☐ B. The driver is a fool.
 - ☐ C. The driver is loving and kind.
 - ☐ D. The driver is a friend of a camel.
6. What is implied by the statement, "He's not happy until he pays back a wrong, actual or seeming"?
- ☐ A. The camel does not forgive any offense.
 - ☐ B. The camel never stops seeking revenge.
 - ☐ C. The camel pays for his happiness by doing the right thing.
 - ☒ D. The camel's happiness is making right the wrong done against him.
7. What happens after the camel has trampled all over the clothes of the driver?
- ☒ A. The camel walks away.
 - ☐ B. The camel smells the clothes.
 - ☐ C. The driver comes out of hiding.
 - ☐ D. The driver walks away from the camel.

A study made a number of years ago said the more education a man has, the less likely he is to be an inventor. Now, the reason for that is quite simple. From the time the boy or girl starts in school, he or she is examined three or four times a year, and of course, it is very, very disastrous if he/she fails. An inventor fails all the time and it is a triumph if he succeeds once. Consequently, if education is an inhibition to invention, it is due entirely to the form by which we rate things and not because of any intellectual differential.

I can take any group of young people any place, and teach them to be inventors, if I can get them to throw off the hazard of being afraid to fail. You fail because your ideas are not right. You should not be afraid to fail, but you should learn to fail intelligently. BY that I mean, when you fail, find out why you failed, and each time you fail it will bring you nearer to the goal.

-from 100 Stories You can Use by Frank Mihalic

8. What relationship is shown between education and invention?
- ☐ A. The former is the cause of the latter.
 - ☐ B. Education is not useful for the inventor.
 - ☐ C. One's education guarantees an invention.
 - ☒ D. Education does not encourage a person to be an inventor.

9. According to the selection, what is true about an inventor?
- An inventor succeeds in all endeavors.
 - An inventor always succeeds in the first attempt.
 - An inventor gives up on the first failure of the experiment.
 - An inventor experiences failures several times before he/she succeeds.
10. How are the ideas mentioned in this statement connected, "If education is an inhibition to invention, it is due entirely to the form by which we rate things"?
- The sentence enumerates reasons for invention.
 - The sentence conveys the result of being uneducated.
 - ☒ The sentence compares education and invention.
 - The sentence gives cause-effect relationship between education and invention.
11. What is the writer's view about failure?
- It is disastrous.
 - It is an inhibition to invention.
 - It hinders one's desire to succeed.
 - It helps people learn and get near their goal.
12. What could be the message of the selection?
- Success comes to those who persevere.
 - ☒ Failure reflects one's limited intellect.
 - Success brings pride to one's country.
 - Failure stops people from inventing things.

It is said:

That there is hardly a bar of music which Beethoven did not rewrite at least a dozen times.

That Bryant rewrote THANATOPSIS a hundred times.

That Gibbon rewrote his AUTOBIOGRAPHY nine times.

That Plato wrote the first sentence of his REPUBLIC nine times.

That Virgil spent 12 years writing his AENEID.

-from 1000 Stories You Can Use by Frank Mihalic

13. What does the word bar mean in the selection?
- A. A vertical line drawn to show division of notes
 - B. A strip of wood used for obstruction
 - C. A gate closing a road
 - D. A railing in a court
14. What could be the reason for capitalizing some words in the selection?
- A. They show the importance of greatness.
 - B. They reflect insights on human nature.
 - C. They stand for concepts difficult to understand.
 - D. They represent great works of persistent people.
15. What could be inferred about the people mentioned in the selection?
- A. They are gifted with power.
 - B. They are admired for who they are..
 - C. They are born to succeed in life.
 - ☒ D. They are recognized in their discipline.
16. Which is the best statement that tells the main idea of the selection?
- A. One's greatness is the product of brilliance.
 - B. Perseverance makes one reach his or her goal.
 - C. Success is measured by one's effortless creation.
 - D. Success is for every person who waits for it patiently.

The Cook's Prayer

*Lord of all the pots and pans and things,
Since I've no time to be
A saint by doing lovely things,
Or watching late with Thee,
Or dreaming in the dawnlight,
Or storming heaven's gates,
Make me a saint by getting meals
And washing up the plates.*

- From 1000 Stories You can Use by Frank Mihalic

17. Who is speaking in the poem?
A. A saint B. The Lord C. A cook D. A wife
18. Which of the following tells what the speaker does?
A. Watches late at night
B. Dreams in the dawnlight
C. Storms heaven's gate
D. Washes up the plates
19. How does the speaker in the poem regard the saints?
☒ A. With admiration
B. With compassion
C. With Understanding
☒ D. With Sympathy
20. What do the last two lines mean? The speaker is saying that he _____
A. Be given patience so he can do his work
B. likes his job and praying to his saints
C. wants to be a saint of pots and pans
D. does not like to work at night

Chance walked through the rooms, which seemed empty; the heavily curtained windows barely admitted the daylight. Slowly he looked at the large pieces of furniture shrouded in old linen covers, and at the veiled mirrors. The words that the Old Man had spoken to him the first time had wormed their way into his memory like firm roots. Chance was an orphan, and it was the Old Man himself who had sheltered him in the house ever since Chance was a child. Chance's mother had died when he was born. No one, not even the Old Man, would tell him who his father was. While some could learn to read and write, Chance would never be able to manage this. Nor would he ever be able to understand much of what others were saying to him or around him. Chance was to work in the garden, where he would care for plants and grasses and trees which grew there peacefully. He would be as one of them: quiet, open hearted in the sunshine and heavy when it rained. His name was Chance because he had been born by chance. He had no family. Although his mother had been very pretty, her mind had been as damaged as his; the soft soil of his brain, the ground from which his thoughts shot up, had been ruined forever. Therefore, he could not look for a place in the life led by people outside the house or the garden gate. Chance must limit his life to his quarters and to the garden; he must not enter the other parts of the household or walk out into the street. His food would always be brought to his room by Louise, who would be the only person to see Chance and talk to him. No one else was allowed to enter Chance's room. Only the Old Man himself might walk and sit in the garden. Chance would do exactly what he was told or else he would be sent to a special home for the insane where, the Old Man said, he would be locked in a cell and forgotten.

Chance did what he was told so did black Louise.

-Excerpted from *Being There* by Jerzy Kosinski

21. "It was the Old Man himself who had sheltered him in the house since Chance was a child." What does this suggest about their relationship?

The Old Man was Chance's

- | | |
|-------------|-------------|
| A. guardian | C. father |
| B. brother | D. landlord |

22. What would most likely happen to Chance if he were to venture outside the house?
- A. He would be locked up in a cell and forgotten.
 - B. He would end up in a special home for the insane.
 - C. He would develop a successful gardening business.
 - D. He would not understand the world around him.
23. Which of the following paragraph details does not support the conclusion that Chance is very limited in his abilities?
- A. While some could learn to read and write, Chance would never be able to manage this.
 - B. Nor would he ever be able to understand much of what others were saying ... around him.
 - ☒ C. Chance was to work in the garden, where he would care for plants and grasses and trees.
 - D. ... he must not enter other parts of the household or walk out into the streets.
24. From the details of the passage, what type of person may Chance be compared to?
- A. an insane adult
 - C. an ungrateful son
 - ☒ B. an unhappy teenager
 - ☐ D. an obedient child
25. What is the overall purpose of the passage from this novel?
- A. compare and contrast the characters of the Old Man and Chance
 - B. provide a background description of Chance and his life
 - C. explain the heredity (similar disabilities) of Chance's mother
 - D. promote the health benefits of peaceful gardening

PART III - ENHANCING TEST TAKING SKILLS

Read the selection and answer the questions that follow. Copy the letter of the best answer for each item.

1 What must occur to enable us to remember a friend's name, a fact from history, or an incident from our past? The act of remembering requires the successful completion of three processes: encoding, storage, and retrieval. The first process, encoding, involves transforming information into a form that can be stored in memory. Sometimes we encode information automatically, without any effort, but often we must do something with the information in order to remember it. For example, if you met someone named George at a party, you might associate his name with George Washington or George Bush. Such simple associations can markedly improve your ability to recall names and other information. The careful encoding of information greatly increases the chance that you will remember it.

2 The second memory process, storage, involves keeping or maintaining information in memory. For encoded information to be stored, some physiological change in the brain must take place – a process called consolidation. Normally consolidation occurs automatically, but if a person loses consciousness for any reason, the process can be disrupted and a permanent memory may not form. That is why a person who has been in a serious car accident could awaken in a hospital and not remember what has happened.

3 The final process, retrieval, occurs when information stored in memory is brought to mind. Calling George by name the next time you meet him shows that you have retrieved his name from memory. To remember, we must perform all three processes – encode the information, store it, and then retrieve it. Memory failure can result from the failure of any one of the three.

4 Similar steps are required in information processing of computers. Information is encoded (entered in some form the computer is able to use), then stored on disk, and later retrieved on the screen. You would not be able to retrieve the material if you had failed to enter it, if a power failure occurred before you could save what you had entered, or if you forgot which disk or file contained the needed information. Of course, human processing is far more complex than even the most advanced computer systems, but computer processing provides a useful analogy to memory if not taken too literally.

-from *Steps to College Reading* by Dorothy U. Seyler

1. What was the selection mostly about?
 - A. remembering George Bush
 - B. processes in human memory
 - C. processing information using computers
 - D. steps in improving retention
2. What rhetorical pattern was used in the selection?
 - A. chronological
 - C. cause-effect
 - B. comparison-contrast
 - D. enumeration
3. What do you think was the purpose of highlighting some words in the selection?
 - A. to enumerate effects of memory
 - B. to discuss reasons of the process
 - C. to emphasize the processes involved
 - D. to relate the information to prior knowledge
4. Which of the highlighted words is not a major process in memory?
 - A. retrieval
 - C. storage
 - B. encoding
 - D. consolidation
5. Which of the processes in memory should happen first?
 - A. retrieval
 - C. storage
 - B. encoding
 - D. consolidation
6. What type of change in the brain is needed for the storage of information?
 - A. psychological
 - C. physiological
 - B. psychosocial
 - D. physical
7. Why does memory fail, according to the selection?
 - A. when encoding does not happen
 - B. when any one of the three fails
 - C. when consolidation does not take place
 - D. when retrieval is impossible

8. Which of the following statements can be deleted from the selection?
- A. If you meet George at a party, you might associate his name with George Washington.
 - B. Encoding involves transforming information into a form that can be stored in memory.
 - C. Storage is the second memory process.
 - D. Retrieval is the final process in memory.
9. Which of the following could be the best title for the selection?
- A. Human Brain and the Computer
 - B. The Three Processes in Memory
 - C. Improving One's Memory
 - D. My Memory and I

Music Can Heal Mental Wounds but Only in the Right Hands
By Eva Dorothee Schmid

1 Human beings have known about the healing properties of music since Biblical times – according to the Old Testament for example. David soothed King Saul's aching brow by reaching for his harp.

2 There are also many references to the healing potential of music in texts left behind by the ancient Greeks.

3 The same properties are not put to good use in the modern field of music therapy. Music therapy is psychotherapeutic procedure which does not compete with traditional medicine but rather tries to complement it.

4 Music arouses emotion, soothes, comforts and can lead to changes in behavior. It can also encourage the healing process, increase a person's ability to tolerate pain and help them overcome their fears.

5 All of this can result in changes in the body's chemistry.

6 Studies show that the right sort of music causes the body to release an increased amount of so-called endorphins with the results that the person becomes less sensitive to pain and feels much better.

- from Manila Bulletin, August 2007

10. The writer discusses
A. the causes of music therapy C. the music in Biblical times
B. the effects of music D. the music for life
11. The ideas are arranged using _____ as a pattern of organization.
A. enumeration C. cause-effect
B. problem-solution D. chronological
12. The writer defines a concept/term in paragraph
A. 1 B. 2 C. 3 D. 4
13. According to the selection, the following are the effects of music except
A. emotional healing
B. pain tolerance
C. academic excellence
D. behavioral change
14. There are _____ effects of music mentioned in paragraph 3.
A. 2 B. 3 C. 4 D. 5
15. The writer wants to explain
A. that music can replace medicine
B. how music can be useful for well-being
C. when music can complement medicine
D. why music is popular

The Dangers of Acid Rain

Acid rain refers to all types of precipitation – rain, snow, sleet, hail, fog – that is acidic in nature. Acidic means that these forms of water have a pH lower than 5.6 average of rainwater. Acid rain kills aquatic life, trees, crops and other vegetation, damages buildings and monuments, corrodes copper and lead piping, damages such man-made things as automobiles, reduces soil fertility and can cause toxic metals to leach into underground water sources.

Rain is naturally acidic because carbon dioxide, found normally in the earth's atmosphere, reacts with water to form carbonic acid. While "pure" rain's acidity is pH 5.6 to 5.7, actual pH readings vary from place to place depending upon type and amount of other gases present in the air, such as sulfur oxide and nitrogen oxides.

The term pH refers to the free hydrogen ions (electrically charged atoms) in water and is measured on a scale from 0 to 14. Seven is considered neutral and measurements below seven are acidic while those above it are basic or alkaline. Every point on the pH scale represents a tenfold increase over the previous number. Thus, pH 4 is 10 times more acidic than pH 5 and 100 times more acidic more so than pH 6. Similarly, pH 9 is 10 times more basic than pH 8 and 100 times more basic than pH 7.

-from Manila Bulletin, October 2007

16. What is the average pH of rainwater?
A. 5.6 B. 14 C. 100 D. 10
17. Why is rain naturally acidic?
A. because water reacts with atmosphere
B. because of carbon dioxide's reaction with water
C. because of acid
D. because of the atmosphere
18. What affects the variation in the actual pH readings?
A. the type of gases
B. the amount of gases
C. the type and amount of gases
D. the kinds of plants in the area

19. What are free hydrogen ions?
- A. electrically-charged ions
 - B. electrically-charged atoms
 - C. water measured on a scale
 - D. electronically-charged atoms
20. Which is not directly stated as an effect of acid rain?
- A. death of marine life
 - B. damage of monuments
 - C. reduction of soil fertility
 - D. extinction of human race

Not much is known about the early history of printing with movable type. There is evidence, however, that hand-set printing with movable type was first invented in China and Korea. At a later time, it was developed in Europe. In the 1400s, Laurens JanzoonKoster of Holland, and Panfilo Castaldi of Italy, are thought to have made the first European use of printing with movable type. It is Johann Gutenberg's name, however, that is now associated with the invention of the movable type printing press. Although the separate elements of printing (the type, the ink, the press, and the paper) were not Gutenberg's own invention, his contribution was that he printed a large quantity of work of high quality.

Born in Mainz, Germany, in about 1397, Gutenberg was trained as a goldsmith, but he became a partner in a printing office in about 1436. It was in his hometown of Mainz that he began the project he is most famous for: printing of the Mazarin Bible. To finance this great project, he borrowed money from a lawyer named Johann Fust and form a printer. He was unable to pay back the money, however, and as a result lost both his printing press and the types to Fust, who carried on Gutenberg's work.

Gutenberg's method dominated the printing industry for almost 400 years. It required hand-setting particular pieces of type, locking them into place, and then printing on wooden flatbed handpresses. The rate was slow compared to modern printing; 300 to 500 sheets a day printed on a single side was considered a good rate production. Though not much is known about Gutenberg's life, his name lives on as a person who contributed significantly to the technology of human communication.

21. What is the main topic of this passage?
- ☒ A. A history of early printing
 - B. Gutenberg's contribution to printing
 - C. The printing of the Mazarin Bible
 - D. Gutenberg's life in Germany
22. The author infers that the most significant aspect of Gutenberg's work in developing the art of printing is:
- ☒ A. The large number and quality of copies that he printed
 - B. The printing of the Mazarin Bible
 - C. The fact that he developed a new technique using known elements
 - D. His inventive spirit and tenacious approach to his work
23. Why did Gutenberg borrow money from Fust?
- A. In order to fund his printing of the Bible
 - B. In order to pay back loans for buying movable types
 - C. In order to expand his printing ability
 - D. In order to go into partnership with another printer
24. According to the author, which of the following did NOT precede Gutenberg in the use of movable type printing?
- A. Fust
 - B. Koster
 - C. Castaldi
 - D. The Chinese
25. Why does the author mention Koster and Castaldi?
- A. To bring out the superiority of previous inventors
 - B. To show that Gutenberg had rivals
 - C. To demonstrate that historians disagree
 - ☒ D. To broaden the scope of this discussion

Academic Writing

Prepared by:

Prof. Ma. Concepcion Y. Raymundo and Prof. Ali G. Anudin

Competencies:

Use English accurately,
meaningfully, and appropriately
in written discourse

PART I - CONTENT UPDATE**I. COMMON SENTENCE ERRORS****A. Fragments**

SENTENCE FRAGMENT fails to be a sentence in the sense that it cannot stand by itself. It does not contain even one independent clause.

There are several reasons why a group of words may seem to act like a sentence but not have the wherewithal to make it as a complete thought.

1. It may locate something in time and place with a prepositional phrase or a series of such phrases, but it's still lacking a proper subject-verb relationship within an independent clause:

In Japan, during the last war, and just before the armistice.

2. It describes something, but there is no subject-verb relationship:

Working far into the night in an effort to salvage her little boat.

3. It may have most of the makings of a sentence but still be missing an important part of a verb string:

Some of the students working in Professor Espinoza's laboratory last semester.

4. It may even have a subject-verb relationship, but it has been subordinated to another idea by a dependent word and so cannot stand by itself:

Even though he had the better arguments and was by far the more powerful speaker.

Dependent-Word Fragments

Some words that begin with a dependent word are fragments. Following is a list of common dependent words. Whenever you start a sentence with one of these words, you must be careful that a fragment does not result.

Dependent Words			
after	if, even if	when, whenever	even though
although, though	in order that	where, wherever	until
as	since	whether	who, whose
because	that, so that	which, whichever	how
before	unless	while	what, whatever

B. Run-on Sentences and Comma Splice

A run-on is two complete thoughts that are run together with no adequate sign given to mark the break between them. Some run-ons have no punctuation at all to mark the break between the thoughts. Such run-ons are known as fused sentence : they are fused , or joined together, as if they were only one thought.

Three ways to correct run-on sentences:

1. Place a semi-colon in between the two sentences

*Jim's father passed the board exam for merchant marine officers; **he will be the captain of the ship next month.***

2. Add a transitional marker: a subordinating conjunction, or a coordinating conjunction (it depends upon the nature of the sentence) between the two sentences

*Jim's father passed the board exam for merchant marine officers, **and he will be the captain of the ship next month.***

3. Divide the sentence into two.

*Jim's father passed the board exam for merchant marine officers. **He will be the captain of the ship next month.***

- A comma splice is committed when a writer uses a comma without the proper connective. This, according to Tiempo and Tiempo, "destroys the unity of the sentence". (Tiempo & Tiempo, 1980) The sample sentence below looks almost the same with the sample run-on sentence. The only difference is the fact that the sentence uses a comma to divide the two independent clauses.

*The crowd cheered loudly when the band emerged from the backstage, **Eric stood quietly.***

Fused Sentences

The bus stopped suddenly. I spilled coffee all over my shirt.

Mario told everyone in the room to be quiet his favorite show was on.

In other run-ons, known as comma splices, a comma is used to connect, or "splice" together, the two complete thoughts. Some stronger connection than a comma alone is needed.

Comma Splices

The bus stopped suddenly, I spilled coffee all over my shirt.

Mario told everyone in the room to be quiet, his favorite show was on.

C. Dangling and Misplaced Modifiers

We often use phrases to describe words within sentences, and we determine the meaning of our sentences by placing these descriptive phrases next to the words they point to or "modify." For example, the sentence, "I saw a boy running down the street," indicates that the "boy" was doing the running. However, if we wrote, "Running down the street, I saw the boy," we would be suggesting to readers that "I" was doing the running.

Misplaced Modifier

Sometimes we become careless and place descriptive phrases far away from the words they modify, making our sentences unclear or inaccurate. We call these phrases misplaced modifiers. For example, in "I was told that I had been awarded the scholarship by my professor," does the underlined phrase mean that the professor did the telling or the awarding? If the professor did the telling, we could make the meaning of this sentence clearer by repositioning the phrase: "I was told by my professor that I had been awarded the scholarship."

Dangling Modifiers

Other times we write descriptive phrases that point to or modify words that are not clearly stated in our sentences, making our sentences illogical. We call these phrases dangling modifiers. For example, in "Walking to college on a subzero morning, my left ear became frozen," the underlined phrase modifies "my left ear." This doesn't make sense; some person must have been doing the walking. We can clarify the sentence by putting a logical word after the phrase: for example, "Walking to college on a subzero morning, I froze my left ear." Or, we can change the phrase so that it has a logical subject and verb in it: "When I was walking to college on a subzero morning, my left ear became frozen."

Examples of Dangling and Misplaced Modifiers

1. On July 20, 1969, American astronauts Neil Armstrong and Edwin "Buzz" Aldrin landed on the moon, watched by nearly a fifth of the world's population.

Revision

Watched by nearly a fifth of the world's population, American astronauts Neil Armstrong and Edwin "Buzz" Aldrin landed on the moon on July 20, 1969.

(The world was not watching the moon; the world was watching the astronauts.)

2. After seeing the benefits of reduced employee turnover, absenteeism, and lateness, onsite daycare is being provided more frequently as a perk for working parents.

Revision

3. After seeing the benefits of reduced employee turnover, absenteeism, and lateness, more and more companies are providing onsite daycare as a perk for working parents.

(Onsite daycare is not seeing the benefits of reduced turnover, absenteeism, and lateness; companies are seeing these benefits as a result of onsite daycare.)

4. An author who did not receive much attention until after her death, readers of all ages enjoy Emily Dickinson's poetry today.

or

Readers of all ages enjoy Emily Dickinson's poetry today, an author who did not receive much attention until after her death.

Revision

Today, readers of all ages enjoy the poetry of Emily Dickinson, an author who did not receive much attention until after her death.

(The phrase, an author who did not receive much attention until after her death, should modify Emily Dickinson rather than readers or Emily Dickinson's poetry.)

5. Cost-efficient and convenient, many of today's corporate employees are being trained through computer-assisted instruction.

Revision

Cost-efficient and convenient, computer-assisted instruction is being used by many companies to train employees.

(The descriptive words, cost-efficient and convenient, modify computer-assisted instruction rather than today's corporate employees.)

6. Having submitted the conference registration form after the deadline, special permission by the chairperson was needed before she could give her presentation.

Revision

Having submitted the conference registration form after the deadline, Susan needed special permission from the chairperson before she could give her presentation.

(The example doesn't make sense as it is written. Someone must have submitted the form late. According to the revision, Susan submitted the form late.)

7. When purchasing a cellular phone, the wide variety of calling plans and features overwhelms many people.

Revision

When purchasing a cellular phone, many people become overwhelmed by the wide variety of calling plans and features.

(The calling plans and features aren't purchasing cellular phones. People purchase cellular phones.)

D. Faulty Parallelism

Words in a pair or series should have parallel structure. By balancing the items in a pair or series so that they have the same kind of structure, you will make the sentences clearer and easier to read.

Nonparallel (Not Balanced)

My job includes checking the inventories, initialing the order, and *to call* the suppliers.

Parallel/Balanced

My job includes checking the inventory, initializing the orders, and calling the suppliers.

(A balanced series of *-ing words: checking, initialing, calling*)

Nonparallel (Not Balanced)

The game –show contestant was told to be cheerful, charming, and *with enthusiasm*.

Parallel/Balanced

The game –show contestant was told to be cheerful, charming, and enthusiastic.

(A balanced series of descriptive words: *cheerful, charming, enthusiastic*)

Nonparallel (Not Balanced)

Grandmother likes to read mystery novels, to do needle point, and browsing the Internet on her home computer.

Parallel/Balanced

Grandmother likes to read mystery novels, to do needle point, and to browse the Internet on her home computer.

(A balanced series of *to* verbs: *to read, to do, to browse*)

Nonparallel (Not Balanced)

We painted the trim in the living room; *the wallpaper was put up by a professional*.

Parallel/Balanced

We painted the trim in the living room; a professional put up the wallpaper.

(Balanced verbs and word order: *We painted...; a professional put up...*)

E. Faulty Coordination**The Coordinating Conjunction**

Coordinating conjunctions connect words, phrases, and clauses.

And, but, for, nor, or, so, and yet—these are the seven coordinating conjunctions.

Look at the examples that follow:

1. The bowl of squid eyeball stew is hot and delicious.
2. The squid eyeball stew is so thick that you can eat it with a fork or spoon.
3. Rocky, my orange tomcat, loves having his head scratched but hates getting his claws trimmed.
4. Rocky terrorizes the poodles next door yet adores the German shepherd across the street.
5. Rocky refuses to eat dry cat food, nor will he touch a saucer of squid eyeball stew.
6. I hate to waste a single drop of squid eyeball stew, for it is expensive and time-consuming to make.
7. Even though I added cream to the squid eyeball stew, Rocky ignored his serving, so I got a spoon and ate it myself.

F. Subordination

Subordination, however, emphasizes the idea in the main clause more than the one in the subordinate clause. Generally, the patterns look like these:

main clause + Ø + subordinate clause

subordinate clause + , + main clause

Punctuate coordinating conjunctions correctly.

Three patterns in writing use coordinating conjunctions. Add commas when required.

Pattern 1 — Connecting two main clauses

When you connect two main clauses with a coordinating conjunction, use a comma. The pattern looks like this:

main clause + , + coordinating conjunction + main clause

Here is an example:

While I am at work, my dog Floyd sleeps on the bed , and my cat Buster naps in the bathtub.

Pattern 2 — Connecting two items

You can also use a coordinating conjunction to connect any two items. These items can be any grammatical unit except main clauses. The pattern looks like this:

item + Ø + coordinating conjunction + item

Here are some examples:

My dog Floyd has too many fleas and too much hair.

My cat Buster has beautiful blue eyes but a destructive personality.

Pattern 3 — Connecting three or more items in a series

When you have three or more items in a series, you generally use a comma before the coordinating conjunction. Some handbooks and style guides will tell you that this comma is optional, but my advice is to put it in. The pattern looks like this:

item + , + item + , + coordinating conjunction + item

Here is an example:

Swatting olives off the kitchen counter, dragging toilet paper streamers through the house, and terrorizing Jacques Cousteau, the parakeet, have consumed another of Buster's days.

Subordinating Conjunctions

A subordinating conjunction joins a subordinate clause to a main clause.

An adverb clause is always introduced by a subordinating conjunction.

A noun clause and adjective clause sometimes are.

Adverb clause: Before you go, sign the log book.

Noun clause: He asked if he could leave early.

Adjective clause: That is the place where he was last seen.

A subordinating conjunction is always followed by a clause.

Many subordinating conjunctions can be other parts of speech.

Adverb: Jill came tumbling after.

Preposition: Jill came tumbling after Jack.

Subordinating Conjunction: Jill came tumbling after Jack had fallen.

II. THE TOPIC SENTENCE AND THE PARAGRAPH

A good paragraph contains several related sentences that support *one main idea*, which is limited to and focused in one sentence. This sentence helps guide the reader through the related sentence in the paragraph. The term used to identify this main idea is topic sentence.

A topic sentence has two parts:

A topic (key word or phrase)

A direction or general word, which may be a conclusion, an opinion, or a statement about the topic.

For example, the following sentences could be topic sentences:

Doing housework can be very boring.

Browsing in a library is an exciting experience.

My trip to the botanical garden taught me a lot.

You could use each one of these sentences as a topic sentence because each main idea is limited to and focused into two essential parts: a topic (key word or phrase) and a general direction (conclusion or opinion) about the topic:

Topic

Doing housework

Browsing in a library

Direction or General Word

is very boring.

is an exciting experience.

The paragraph

A paragraph has three parts:

1. a topic sentence
2. support sentences
3. a conclusion

The following is an example of a paragraph that has these three parts.

My blind date last night was a disaster. I got wet because just as I stopped to pick up my date, it started raining, and she borrowed my raincoat. At dinner, she ate so much that I had to use my next day's lunch money to pay for her meal. I had a terrible time because she could not dance. To make matters worse, I had a cut on my lip that hurt when I kissed her. **That's the last blind date I will ever have.**

Elements of a Strong Paragraph

Strong paragraphs need to have the following elements: completeness, logical or sensible order, unity and coherence.

Completeness

A paragraph must have enough information in it to give the reader a clearer picture or a full discussion of its main idea (the topic sentence). A paragraph without details or examples will be vague and unconvincing. A paragraph that does not have enough information is called **incomplete** or **undeveloped**.

Example of an undeveloped paragraph.

Dancing can be good exercise. It can be entertaining. It can be lots of fun as well. **Dancing can be very beneficial to everyone.**

Example of a complete paragraph:

Dancing can be good exercise. The constant arm and leg movements are like aerobics. They can be a really good workout if the dance lasts long enough. If the dance requires lots of quick movements, many calories can be used up, and more fat will be burned. Some dances require movements that are like stretching, so flexibility and muscle tone will be increased. **Dancing can help maintain weight and can be beneficial exercise to everyone.**

Logical Order

All the support sentences should be in clear, logical order. Sometimes the order of these supporting details does not matter. Other times, however, it does matter because if the sentences are not in logical order, the reader misses the main point of the paragraph.

Illogical Order

I opened the front door of my house and went inside.

I walked up the front steps to my front door.

Logical Order

I walked up the front steps to my front door.

I opened the front door of my house and went inside.

Unity

All sentences in a good paragraph relate to the topic sentence (main idea). When any idea doesn't relate specifically to the topic sentence, then that paragraph lacks unity or is not unified.

Example of a unified paragraph:

American scientists are working hard to gather facts about sea turtles called leatherbacks. The observers work, no matter what the weather is like—on clear days or in pouring rain. They count the turtles as they come ashore. When the turtles lay their egg, the scientists walk up and down the beaches for many hours at a time. They count the eggs in the sand. Then, later, they count the eggs that hatch. **These biologists know that they are collecting information that will someday be important to other scientists.**

Coherence

One of the most important considerations in writing a paragraph is coherence—the way all the sentences should be clearly connected to each other. Without connecting words or phrases, supporting ideas may be hard to follow and sometimes may even seem to be unrelated to the topic sentence and to each other.

The following paragraph has all the coherence it needs:

When Sue was a child, she learned from her dad how to be a hard worker. For example, she always helped in the yard. Many times they mowed the lawn together. Sue emptied the grass catcher (which her dad did not overfill), and he did the heavy part by lifting the barrels full of grass. Working together, they did not quit until the job was done. She and her dad worked even after the sun was gone, making sure the edges of the lawn were neat . In this way, Sue learned to stay with a job until she had done well and could feel proud of her effort.

Table of Transitional/Cohesive Devices

Function	Transitional/Cohesive Device
To show addition	again, also, and, and then, besides, equally important, finally, first, further, furthermore, in addition, in the first place, last, likewise, moreover, next, or, still, then, too
To compare	also, in comparison, in the same way, likewise, similarly
To contrast	although, and yet, at the same time, but, conversely, despite, even so, even though, for all that, however, in contrast, in spite of, nevertheless, nonetheless, notwithstanding, on the contrary, on the other hand, otherwise, regardless, still, though, yet
To give examples or intensify	after all, as an illustration, certainly, even, for example, for instance, indeed, in fact, it is true that, namely, of course, specifically, that is, to be sure, to illustrate, to tell the truth, truly

To summarize, repeat, or conclude	all in all, all together, as a result, as had been noted, basically, finally, in brief, in conclusion, in other words, in particular, in short, in simpler terms, in summary, on the whole, that is, therefore, to put it differently, to summarize
To indicate place	above, adjacent to, below, elsewhere, farther on, here, near, nearby, on the other side, opposite to, there, to the east, to the left
To indicate time	after a while, afterward, as long as, as soon as, at length, at that time, before, currently, earlier, eventually, first (second, third, etc.), finally, formerly, immediately, in the meantime, in the past (future), lately, later, meanwhile, now, presently, shortly, simultaneously, since, so far, soon, still, subsequently, then, thereafter, until, until now, when, while
To indicate cause and effect	accordingly, as a result, because, consequently, for this purpose, hence, otherwise, since, so, then, therefore, thereupon, thus, to this end, with this object

The Thesis Statement

In a nutshell, a thesis statement:

- tells the reader how you will interpret the significance of the subject matter under discussion.
- is a road map for the paper; in other words, it tells the reader what to expect from the rest of the paper.

- directly answers the question asked of you. A thesis is an interpretation of a question or subject, not the subject itself. The subject, or topic, of an essay might be on Poverty or a movie analysis; a thesis must then offer a way to understand the issue or the the movie.
- makes a claim that others might dispute.
- is usually a single sentence somewhere in your first paragraph that presents your argument to the reader. The rest of the paper, the body of the essay, gathers and organizes evidence that will persuade the reader of the logic of your interpretation.

You can tell if your thesis is strong if you can answer the following:

- *Do I answer the question?* Re-reading the question prompt after constructing a working thesis can help you fix an argument that misses the focus of the question.
- *Have I taken a position that others might challenge or oppose?* If your thesis simply states facts that no one would, or even could, disagree with, it's possible that you are simply providing a summary, rather than making an argument.
- *Is my thesis statement specific enough?* Thesis statements that are too vague often do not have a strong argument.
- *Does my thesis pass the "So what?" test?* If a reader's first response is, "So what?" then you need to clarify, to forge a relationship, or to connect to a larger issue.
- *Does my essay support my thesis specifically and without wandering?* If your thesis and the body of your essay do not seem to go together, one of them has to change.
- *Does my thesis pass the "how and why?" test?* If a reader's first response is "how?" or "why?" your thesis may be too open-ended and lack guidance for the reader.

Broadly, thesis statements can be divided into 3 categories:

- **Analytical:** An analytical thesis basically provides a comprehensive insight to some important issue and the facts that are related to the issue plus the analytical aspects of the same.

For example, "An analysis of the ferruginous hawk reveals two kinds of flight patterns: patterns related to hunting prey and patterns related to courtship."

- **Expository:** This is the simplest of all types of thesis, the expansionary thesis principally puts forth some facts and simplified explanations regarding a specific idea, in front of the people.

Example: Watching too much television may lead to physiological and psychological problems.

- **Argumentative:** The third type is that of the argumentative thesis and presents arguments between two view points.

Example: Smoking should be banned in all public places.

III. PATTERNS OF PARAGRAPH DEVELOPMENT

There are various Writing Genres or Patterns of Paragraph Development, and each pattern or genre has a specific function. Often, these genres are merged with each other to make the written output more effective.

Narration

- Use narration to establish a series of events that tells the reader what happened. Narration follows a chronological pattern of development. It is a convincing mode of paragraph development to the extent that it tells a coherent story.

Larry suddenly woke up from a deep sleep. The sun was dazzling his half-open eyes, and he couldn't figure out what time it was. The door to his room was closed; the house was immersed in some sort of reckless silence. He slowly got out of his bed and approached the bench right next to the window. For a moment, he thought, he heard a tapping sound coming from the attic. Then again he heard the sound, only this time it seemed to be somewhat closer. He looked outside the window and saw a man going by the left side of the road. On seeing Larry, the man approached his garden's fence and whistled. At this point, Larry recognized Nick and waved his hand. He quickly got dressed and was about to get down to open the gate, but he again heard someone murmuring in the other part of the house. Larry decided to go to the attic and see what was causing this, now buzzing, sound. He got to the second floor of his house and looked toward the attic. He quickly opened its door and looked inside. Nothing was found. He was about to turn back and attend to his guest when he, suddenly, slipped on the stairs and fell. He called out to Nick to help him get up.

Example taken from: <http://daria-przybyla.suite101.com/example-of-a-narrative-paragraph>

Descriptive Essay

- The descriptive essay relies on concrete, sensory detail to communicate its point.
- When writing a descriptive essay, writers should have a broad fund of modifiers, i.e., adjectives. Moreover, writers should be specific in using adjectives and other words that would describe the topic, i.e., beautiful may be different from *pretty, cute, gorgeous, etc.*

Sample Descriptive Paragraph

The Blond Guitar
by Jeremy Burden

My most valuable possession is an old, slightly warped blond guitar--the first instrument I taught myself how to play. It's nothing fancy, just a Madeira folk guitar, all scuffed and scratched and finger-printed. At the top is a bramble of copper-wound strings, each one hooked through the eye of a silver tuning key. The strings are stretched down a long, slim neck, its frets tarnished, the wood worn by years of fingers pressing chords and picking notes. The body of the Madeira is shaped like an enormous yellow pear, one that was slightly damaged in shipping. The blond wood has been chipped and gouged to gray, particularly where the pick guard fell off years ago. No, it's not a beautiful instrument, but it still lets me make music, and for that I will always treasure it.

Process Essay

- A process essay may either be “How to do” or “How something works”
- In a “How to do” essay the objective of the writer is to tell the reader how a certain product is produced. Most often, this type of essay uses the first person point of view because it “demonstrates” how something is done to the reader. (e.g. How to apply for the Fulbright Scholarship Grant)

Sample Process Paragraph

The writing process has four distinct phases. (2) The first is invention, which is aided by any number of techniques, including free-writing, mind-mapping and outlining. (3) In this first stage, it's important for a writer not to edit but to let ideas flow and to simply get them down on paper (4) After invention, comes the first draft—the stage where the ideas start to take shape. (5) Many writers use a sentence outline at this stage to see where they need to cut and where they need to add material. The first draft is also where writers should develop a tentative thesis to guide the structure of their essay. (6) The next stage of the process is when both the second and third drafts are done. (7) Here, ideas and structure are refined, and the thesis is revised until it becomes the unifying idea of the paper. (8) Finally, comes the last stage, that of editing. (9) Writers should take care at this stage that all sentence structure and punctuation is correct, and they should make corrections to documentation format as needed. (10) Writers often repeat these four phases more than once, or skip a phase and go back to it, making the writing process more cyclical than linear.

Comparison-Contrast

- A comparison-contrast essay presents the relationship between two items; this may be in the form of similarities and differences.
- This essay may be organized by using either the “point-by-point organization” or the “block organization”

Point-by-Point or Alternating Arrangement

- I. Introduction in which you state your purpose
- II. First difference
 - A. Topic 1
 - B. Topic 2
- III. Second difference
 - A. Topic 1
 - B. Topic 2
- IV. Third difference
 - A. Topic 1
 - B. Topic 2
- V. Conclusion

- In the "block organization", the focus is on the two topics.

Block Arrangement

- I. Introduction in which you state your purpose
- II. Topic 1
 - A. Similarity/Difference or Factor 1
 - B. Similarity/Difference or Factor 1
 - C. Similarity/Difference or Factor 1
- III. Topic 1
 - A. Similarity/Difference or Factor 1
 - B. Similarity/Difference or Factor 1
 - C. Similarity/Difference or Factor 1
- IV. Conclusion

Sample Comparison-Contrast Paragraph

A scientist and a poet both strive for perfection: the poet refines his sensibilities, while the scientist reduces everything to precise measurements. Both share the beauty of a rainbow; but while the poet imagines a pot of gold at the end of it, the scientist wants to spell it out in angstrom units measuring wavelength.

Cause-Effect

- The cause-effect essay presents the reasons or results for something.
- There are two possible ways to outline a cause-effect essay: (a) single cause, multiple effects or (b) multiple causes, single effect.

Sample Cause-Effect Paragraph

The tropical rainforests of West Africa, Brazil, Latin America and Southeast Asia are some of the most important environmental regions of the world because they hold millions of unique plants, animals, and people. However, they are being destroyed rapidly for agriculture, mining and logging. This essay will examine the causes of this destruction and outline its effects on our lives.

One of the main causes of this is logging for timber. Millions of hectares of trees are cut down every year, often illegally. The most valuable wood is taken and not replaced, and landless people move in along the new logging roads.

Argumentative

- An argumentative essay presents premises and conclusions regarding an issue. It presents the writer's stand—whether he/she agrees or not. However, it should be noted that an argumentative essay is different from an opinion simply

because an argumentative essay shows evidences and support details, while most opinions are based on beliefs and personal ideologies.

- **Premises** are reasons that support conclusions, while a **conclusion** is the key assertion, or claim.

Sample Argumentative Paragraph

Because of the pressing issues regarding global economic recession, it is high time that the government support programs that would boost the country's economy. We should set aside moral issues and start thinking of ways to curb to growing problems in finance. One way to deal with this is by legalizing prostitution.

We all know that this is the oldest profession and legalizing this will allow more revenues. How? Well, basically, legalizing prostitution is tantamount to taxation. Each prostitute will be taxed. Hence, a portion of their profits will contribute to the needs of the nation.

PART II - ANALYZING TEST ITEMS

Sample Test Items

1. *Oliver jumps every New Year season.* Believing that he will become taller. The error in these statements may be corrected using the following versions, except:
- A. Because he believes that he will become taller, Oliver jumps every New Year season.
 - B. Oliver jumps every New Year season, and he believes that he will become taller.
 - C. Oliver jumps every New Year season. He believes that he will become taller.
 - D. Believing that he will become taller, Oliver jumps every New Year season.

The answer is B. Fragments may be corrected by making one of the sentences a subordinating clause (just like A & D). Fragments may also be eliminated by simply making two sentences (just like C). B is not acceptable simply because it led to another common sentence error: Faulty Coordination.

2. Which of the following will best complete the sentence below?
The demonstrators were so enraged _____
- A. because they threw tomatoes to the effigy and burned it afterwards.
 - B. since they threw tomatoes to the effigy and burned it afterwards.
 - C. that they threw tomatoes to the effigy and burned it afterwards.
 - D. for they threw tomatoes to the effigy and burned it afterwards.

The answer is C. Options A, B, and D present subordination, i.e. the idea presented is a "reason." However, the sentence should present a "result" idea, i.e. what the demonstrators did because of their anger

3. All of the transitional/cohesive devices below may be used when writing a comparison-contrast essay, except
- | | |
|-----------------|---------------|
| A. consequently | C. conversely |
| B. nevertheless | D. similarly |

The answer is A. "Consequently" would be more useful in a cause-effect essay. All the other options may be used when comparing and contrasting.

1. What is the topic sentence for the following paragraph?
1. Visiting a dentist can be an uncomfortable experience. 2. One has to make an appointment with the dentist first. 3. The dentist normally examines the teeth first using terrifying instruments. 4. X-ray tooth frames cut into the gums. Lights in a person's eyes are annoying. 5. Most people would rather do anything than go to the dentist.
- | | |
|--|---------------|
| ☒ A. Sentence 1 | C. Sentence 4 |
| B. Sentence 2 | D. Sentence 5 |
2. What pattern of paragraph development was used in the excerpt below?
- | | |
|------------------------|---|
| A. Comparison-Contrast | ☒ C. Description |
| B. Cause-Effect | ☒ D. Process |
3. All of the following are fragments except:
- | |
|--|
| A. Dozens of young artists gathered for the concert. |
| ☒ B. Sipped at the steaming cup of coffee. |
| ☒ C. The young boy impressed at the sight of the men marching off to war. |
| D. A collection of quotations from famous contemporary politicians. |
4. Which of the following is not a run-on sentence?
- | |
|--|
| A. I play the piano for many musicals moreover I give lessons to twenty students. |
| ☒ B. The electricity went out I searched for the candles. |
| ☒ C. I lost the first chess game, but I won the second. |
| D. The first raindrops fell we raced for cover. |

5. All of the following contain a dangling modifier except:
- A. To compete in the race, a form must be completed.
 - B. When the cat scratched at the door, we let her in.
 - ☒ C. Wrapped in my blanket, the cold was no problem.
 - D. While taking the inventory, the store was closed.
6. What pattern of paragraph development was used in the excerpt below?
- A. Comparison-Contrast
 - ☒ B. Cause-Effect
 - C. Description
 - D. Process
7. Which of the following sentence construction follows the rule on coordination and subordination?

My father was upset all day he could not see his car keys.

Smoking has been proven dangerous to people's health, yet many continue to smoke for various reasons. For young people, smoking often represents maturity and individuality. Many smoke as a way to reduce tension. In addition, the regular smoker becomes addicted psychologically and physically to the nicotine in cigarettes.

- A. My father was upset all day, but he could not see his car keys.
 - ☒ B. My father was upset all day, yet he could not see his car keys.
 - C. My father was upset all day, and he could not see his car keys.
 - D. My father was upset all day because he could not see his car keys.
8. What makes the sentence below wrong?
- Patrick bought a new car-a Mitsubishi Lancer Evolution VIII-last week.*
- ☒ A. The indefinite article "a" was overused.
 - B. The verb "bought" should have been "has bought."
 - C. The verb "bought" should have been "has been buying."
 - D. The writer should have used a dash instead of a hyphen.
9. All of the following have misplaced modifiers except:
- ☒ A. The pianist played a new composition sitting on the piano bench.
 - B. We heard the bus crashed on the radio.
 - C. We boarded the train with three suitcases heading toward our ancestral home in Ilocos Sur.
 - D. I arranged the flowers for my mother using the new vase.

10. Which sentence in the paragraph does not support the main idea in the topic sentence?

1. Adult reentry students often have special needs. 2. They may have time restraints caused by families and jobs as well as by school. 3. Reentry students are willing to put in the extra time to be successful. 4. Since they sometimes work slowly than younger students, they may require more time to complete tasks. 5. As adults grow older, their vision is not as keen so classrooms need excellent lighting with little glare. 7. Also, reentry students may experience hearing problems, making it hard for them to hear everything that is said in the classroom. 8. These problems, although not serious, do not need to be a barrier to education.

A. Sentence 2

☒ C. Sentence 4

B. Sentence 3 not

☒ D. Sentence 5

11. All of the following are parallel except:

A. She left me angry, frustrated, and wearing a frown.

B. We have things to do, people to see, and places that should be visited.

☒ C. I enjoy the job because of the opportunities it offers, the fringe benefits I receive and I earn a good salary.

D. My father prepared the main course and fixed the dessert.

12. Which would be the appropriate subordinator to be used to complete this sentence?

_____ she finally grew accustomed to the dark, she noticed a small chest in the corner of the room.

☒ A. When

☒ C. While

B. Where

D. Because

13. All of the following show faulty use of coordinating conjunctions except:

A. Marian sings in the choir, for she is a soprano.

☒ B. The clock chimed nine times, but JC knew he had overslept.

C. I studied the children, and they were watching in awe as the parade floats went by.

D. I tried to sleep, yet the thought of tomorrow's math exam kept me awake.

14. Which of the following is a comma splice?

- A. In the back of the room, Nina sat with her arms crossed, glaring at her English teacher, Mr. Reyes, she wanted him to realize that English was her least favorite.
- ☒ B. Mike loves to play computer games, especially Tomb raider. He imagines that all of the villains are his problems, and he gets satisfaction blasting them to bits.
- C. Michelle is terrified of spiders, so when she found one in the bathroom, she panicked. Refusing to shower for three days to use the restroom, she drove to her neighborhood Jolibbee.
- D. Rommel likes to put peanut butter on his pancakes instead of syrup. The smell is appealing, but I wouldn't want to eat anything so sticky that early in the morning.

15. Which illustrates the proper use of a comma?

- ☒ A. When you call, and need someone, Rommel will come
- ☐ B. When you call and need someone Rommel, will come.
- C. When, you call and need someone Rommel will come.
- D. When you, call and need someone Rommel will come.

16. Which illustrates the proper use of a (;) ?

- A. JC knows every part of the game therefore; he should be made captain.
- ☐ B. Harry is interested in business; John prefers medicine as a profession.
- C. After Jason had finished playing; he opened the door and looked at the glowing sky.
- ☒ D. Marla had planned exactly what she would say consequently; she held the attention of the audience and made her point.

17. Which illustrates the appropriate use of an (') ?

- ☐ A. I saw a store window filled with artists supplies'.
- ☒ B. Alice's mother always goes with us.
- ☐ C. Do you spell this word with two rs' ?
- D. Your'e not very helpful.

18. Which is a sample of a proper use of (" ")?

- ☒ A. Irene laughed nervously and began, "Ladies and gentlemen."
- ☐ B. Irene laughed nervously and began, "Ladies and gentlemen.
- ☐ C. "Irene laughed nervously" and began, ladies and gentlemen.
- ☐ D. "Irene laughed nervously and began, ladies and gentlemen."

19. All of the following proper subordination except:

- ☐ A. The storm had passed and flood waters had receded as long as rescue teams flew into the stricken valley.
- ☒ B. The mayor could not win the party's bid even though she was popular with the people.
- ☐ C. We finally could sit down to dinner when the telephone rang.
- ☒ D. Mature trees can survive almost any weather condition or change while saplings are much more vulnerable.

20. Which of the following is not a fused sentence?

- ☒ A. Cecille is a real hypochondriac when her stomach hurts, she is certain that she has a bleeding ulcer, and if she has a backache, she starts to believe that she has cancer of the spine.
- ☐ B. Snoopy, my cat, loves to nap on warm appliances when he sleeps on top of the television, his tail swipes the screen like a windshield wiper.
- ☐ C. When Jason shaved his head, his mother worried that he had joined a cult the real reason for the bald head, however, was that Matt could get more attention and sympathy from the girls who thought he was sick with a dread disease.
- ☒ D. Mayang's mumbling often gets her in trouble. Just the other day, in fact, the market vendor misunderstood Mayang's instructions and cut the fish in half when Mayang had asked her just clean the fish.

21. If you are to arrange the following sentences, which sentence do you think tells why the topic on society is important?

- ☐ A. All societies are constantly changing – some rapidly and some very slowly
- ☒ B. It is passing through a period of extensive transitions that have far reaching social and cultural consequences.

- ~~C.~~ Modern society is dynamic, constantly changing, and either progressing or regressing.
- D. Social institutions, norms of behavior, and many other phases of the social order are undergoing change.
22. Which is the best way to paraphrase the sentence?
Theresa was worried about passing the very difficult test.
- A. Receiving a passing grade on the difficult exam concerned Theresa.
- ☒ B. Theresa was worried about receiving good marks on the test, which was very hard.
- C. She is worried about the results of the test.
- D. The outcome of the test made Theresa so worried.
23. Which among the following is not a type of thesis statement?
- A. Analytical thesis statement C. Argumentative thesis statement
- B. Expository thesis statement ~~D.~~ Literary thesis statement
24. "The life of the typical college student is characterized by time spent studying, attending class, and socializing with peers." This is an example of
- A. Analytical thesis statement C. Literary thesis statement
- ~~B.~~ Expository thesis statement D. Argumentative thesis statement
25. Which two questions is essential in writing the supporting details of an argumentative paragraph?
- A. Why and So What? C. Where and When?
- ~~B.~~ How and Why? D. When and Why?

PART III - ENHANCING TEST TAKING SKILLS

1. Which among the following may be used to fill in the blank?

One of the obvious differences between colleges and universities is the degree programs they offer. Usually, colleges have limited course offerings. _____ universities offer a wide range of degree programs to choose from. They even offer graduate degree programs, such as master's and doctorate.

- A. Similarly
 B. Likewise
 C. Furthermore
☒ D. On the other hand
2. When quoting a source, what should be done if a writer encounters an erroneous statement, such as the one below?

This philosophies is very essential in curriculum designing, because they serve as the guiding principle of curriculum designers.

- ☒ A. Change 'philosophies' into 'philosophy.'
- B. Insert the Latin abbreviation 'sic' at the end of the statement.
- C. Insert the Latin abbreviation 'sic' after 'philosophies'
- ☒ D. Insert the Latin abbreviation 'sic' after 'philosophies' enclosed in square brackets.
3. What should be done to correct the error in the sentence below?
- In Middle Eastern countries, for instance, women are required to serve the groom's family.*
- A. Insert a comma after 'countries'
- B. Insert a comma after 'instance'
- ☒ C. Insert a comma after 'countries' and 'instance'
- D. Insert a comma after 'countries' and 'women'

4. The sentence below is wrong because

Half of the applicants passed the exam the other half of them flunked the test.

- A. It is a run-on sentence. ~~C~~ It is a faulty coordination.
B. It shows faulty parallelism. ~~D~~ It has a dangling modifier.

5. The transitional devices used in this paragraph shows _____.

After choosing the flavor that best suits your taste buds, the second step is making sure that your kitchen houses some necessary equipment for making the Kool-Aid. Find a two-quart pitcher Plastic is nice, but glass pitchers allow the liquid to shine through and add festive coloration to any refrigerator shelf. Next, find a long-handled wooden spoon, a one-cup measuring cup, a water faucet that spouts drinkable water, usable white sugar, and an ice cube tray full of ice. Then, you are ready to mix.

- A. Comparison ~~C~~. Addition
B. Description D. Contrast

6. All the options may be applied to correct the statement below, except

In the seventh grade every young boy goes out for football. To prove to himself and his parents that he is a man.

- A. In the seventh grade, every young boy goes out for football to prove to himself and his parents that he is a man.

~~B~~ To prove to himself and his parents that he is a man, every young boy goes out for football in the seventh grade.

C. Proving to himself and his parents that he is a man, every young boy goes out for football in the seventh grade.

D. Every seventh grade boy goes out for football to prove to himself and his parents that he is a man.

7. What error is committed in the sentence below?

Having eaten their supper, the cook told the men to clear the table.

- ~~A~~ Fragment C. Faulty coordination
~~B~~ Dangling modifier D. Faulty parallelism

8. The hyphen is correctly used in all of the sentences below, except for:
- A. The Democrats won a landslide election, 24-0.
 - B. I am looking for the editor-in-chief to submit my article.
 - C. My father witnessed the signing of the Filipino-American treaty.
 - ☒ D. Vanessa acquired a second-hand-refrigerator lately.
9. Which among the following is a thesis statement?
- ☒ A. Tarsiers are considered as the smallest species of primate, and they are also considered as one of the tourist attractions in Bohol. However, they easily get stressed, making their lifespan shorter. Thus, they should be returned to the wild.
 - B. Tarsiers are considered as the smallest species of primate, and they are also considered as one of the tourist attractions in Bohol. Because of this, they should be returned to the wild.
 - C. Tarsiers, the smallest species of primate and one of the tourist attractions in Bohol, should be returned to the wild because they easily get stressed, making their lifespan shorter.
 - D. Tarsiers, the smallest species of primate and considered to as one of the tourist attractions in Bohol, should return to the wild.
10. All of the transitional/cohesive devices below may be used when writing/ showing a process, except _____.
- ☒ A. nevertheless
 - B. moreover
 - C. finally
 - D. next
11. Which word in this sentence needs to be capitalized?
Whatever you do, father, will please me very much.
- A. you
 - B. much
 - C. will
 - ☒ D. father
12. Which sentence illustrates the proper use of (:) ?
- ☒ A. There are three causes: poverty, indolence, and injustice.
 - B. There are three causes poverty: indolence: and injustice.
 - C. There are three: causes poverty, indolence, and injustice:
 - D. There are: three causes poverty, indolence, and injustice.

General Education

13. In the group of sentences that follow, which illustrates the best way of sentence construction?
- ☒ A. The speaker was too excited to sit still and the announcer fumbled for his notes of introduction.
 - B. The speaker was too excited to sit while the announcer fumbled for his notes of introduction.
 - C. It was the cause of the speaker's excitement fumbling for the announcer's notes of introduction.
 - D. The speaker he was too excited to sit while the announcer tumbled for his notes of introduction.
14. Which sentence shows the proper use of *parallelism*?
- A. Mahalia said she likes to swim, dancing, and cooking.
 - B. Mahalia said she likes to swim, to dance, and cooking.
 - ☒ C. Mahalia said she likes to swim, to dance, and to cook.
 - D. Mahalia said she likes swimming, to dance, and to cook.
15. Which of the following shows how modifiers are placed correctly in a sentence?
- ☒ A. A governess they selected for the child who spoke French fluently.
 - B. The child they selected for a governess who spoke French fluently.
 - ☒ C. They selected a governess for the child who spoke French fluently.
 - D. They selected for the child a governess who spoke French fluently.
16. Which of the following connectives indicate *addition of ideas*?
- ☒ A. besides
 - B. beside
 - C. all in all
 - D. for this purpose
17. Which of the following shows consistency of *point of view* and *tense*?
- ☒ A. The world has no use for excuses, only success is recognized.
 - B. Christian calls aloud to his mother and ran home at once.
 - ☒ C. If you should have an accident, don't hesitate to call the police.
 - D. Ms. Jacinto regrets that she is unable to accept Ms. Sevillano's kind invitation because I have another engagement for Tuesday evening, August 10.

18. Which is an appropriate title of the passage based on its content?

- A. The Moon
B. The Moon and Eclipses
C. The Eclipses
D. The Solar System

The moon both causes and suffers eclipses. When she passes exactly between the earth and the sun, the latter is hidden behind her opaque globe, and we have a solar eclipse - one of the most interesting of all astronomical phenomena, on account of the marvelous streamers of light, called the corona, which then appears surrounding the eclipsed sun, and extending away, in some cases, millions of mile, when the moon passes the earth, on the side opposite to the sun - in other words, when it is full moon - she comes at certain times almost exactly in line with the two, and then she enters the shadow of the earth and is herself eclipsed. Eclipses of the sun are very rare phenomena at any particular place on the earth because the moon's shadow is reduced almost to a point before it reaches the earth, from her average distance of 239,000 miles and it is only within the shadow that the sun appears eclipsed. The orbit of the moon around the earth is continuously shifting its place a little, and so the point of her shadow does not reach the earth at the same place in successive eclipses. Eclipses of the moon are frequently seen because the earth's shadow, being much larger than the moon's, completely buries the latter when she passes into it, so the moon can then be seen eclipsed from all places in the earth above whose horizon she happens to be at the moment.

G. P. Serviss

19. How is the following paragraph developed?

- A. By example
B. By details
C. By cause and effect
D. By comparison and contrast

Until better sources of energy are found, nuclear power is the answer to our growing energy needs. Given the enormous demands by industry and private consumers for electrical power, conventional means of generating power are no longer adequate. Water power and coal have proved too costly or clean as power sources, and in the foreseeable future, the world's supply of petroleum will be depleted. The use of solar energy and the development of synthetic foods may prove valuable, but they are still in their infancy. Nuclear power plants are available today. Although they are expensive to construct, they are efficient and economical in the long run because breeder reactors can recycle nuclear waste. Though everyone looks forward to safer and more efficient sources of energy, nuclear energy is the best choice for today.

20. Which sentence in the following paragraph states the topic sentence?

- A. First B. Second C. Third D. Fourth

1 Dancing and chanting to the rhythmic beat of the drums, Polynesian students give visitors to the Polynesian Culture Center a glimpse of Hawaii's past. 2 Through its exhibitions, the Polynesian Culture Center shows visitors the many elements of Hawaiian culture brought to Hawaii by its inhabitants, the Polynesian. 3 For example, the Center shows the similarities between Polynesian and Hawaiian villages with life-size models. 4 In addition, the Center dramatizes Hawaiian legends of ancestors journeying across the ocean in large canoes of hollowed logs, gardens of bananas, sweet potato, taro, and plants exhibit the food carried by the ocean travelers to their new home.

21. The topic of the paragraph below is

- A. a psychologist's view of life C. new beginnings in life
B. stages of life D. the importance of weddings

1 A rite of passage, according to psychologists, is an event that prompts movement from one stage of life to another. 2 Weddings and graduations are two examples of new beginnings that are considered significant rites of passage. 3 For the bride and groom, a wedding signifies the covenant of fidelity and the couple's public declaration of love. 4 Making the promise for life before loved ones is the first step to their new life together. 5 Graduations also signify a rite of passage. 6 Tests will not be scheduled, and paperwork will no longer be graded on a curve. 7 Whether it is a high school or college graduation, students acknowledge they are beginning a new path on their journey.

22. The main idea of the paragraph is found in

- A. sentence 1 C. sentence 3
B. sentence 2 D. sentence 7

23. Arrange the sentences in order to make a good and sound paragraph:

- (1) Changes in food preparation methods, for example, have improved our lives greatly.
(2) The twentieth century has brought with it many advances.
(3) In some ways life is worse, but mostly it is better.
(4) With those advances human lives have changed dramatically.

- A. 4, 3, 2, 1 B. 3, 1, 2, 4 C. 2, 3, 4, 1 D. 2, 4, 3, 1

24. Which one is the sentence that introduces the topic?
- A. Changes in food preparation methods, for example, have improved our lives greatly.
 - B. The twentieth century has brought with it many advances.
 - C. In some ways life is worse, but mostly it is better.
 - D. With those advances human lives have changed dramatically.
25. If you are to arrange the sentences below to make a sound paragraph, which sentence do you think should be the thesis statement?
- A. A special concern is whether movies and television make children and society more violent.
 - B. I believe that movies and television do influence our behavior, both for the better and for the worse.
 - C. Do movies affect our behavior?
 - D. None of above.

Speech and Oral Communication

PART I - CONTENT UPDATE

GRAMMAR

I. The Parts of Speech

The parts of speech fall into two categories: 1) the content words (also called form classes because they are best identified by form rather than by functions) are nouns, verbs, adjectives, and adverbs; and 2) the structure words most of which do carry some meaning but which also serve to form a structural framework so that words can fit into sentences.

A. Aspect and Tenses of Verb

TENSE	MEANING	EXAMPLES
SIMPLE PRESENT (verb + -s/-es) – singular subject (verb, base form) – plural subject	- expresses events or situations that exist <i>always, usually and habitually</i>	a. It snows in Alaska. b. Edbert and Kyle watch television every day.
SIMPLE PAST (Verb + -d/-ed)	- an action happened at one particular time in the past. - It began and ended at a specific time in the past.	a. It snowed in Alaska last year. b. Edbert and Kyle watched television last night.

ASPECT

• **PROGRESSIVE** (also called continuous)

The progressive aspects give the idea that an action is in progress during a particular time. It begins *before*, *is in progress during*, and *continues after* another time or action.

Present progressive (am/is/are + V-ing)	- an action began in the past, <i>is in progress at the at the present time</i> , and probably will continue	a. Beth is sleeping right now.
Past Progressive (was/were + V-ing)	- an action began <i>before</i> and <i>was in progress at a particular time in the past</i> .	b. Beth was sleeping when I arrived.
Future Progressive (will/shall + be + V-ing)	- an action will begin before another action, and <i>it will be in progress at a particular time in the future</i>	c. Beth will be sleeping when we arrive.

NOTE: WILL vs. BE GOING TO

- To express a PREDICTION: Use **either will or be going to**.
- To express a PRIOR PLAN: Use **only be going to**.
- To express WILLINGNESS: Use **only will**.

- e.g. 1. According to the weather report, it **will be** cloudy tomorrow.
According to the weather report, it **is going to be** cloudy tomorrow.
(Prediction)
2. Why did you buy this paint?
I am going to paint my bedroom tomorrow. (Prior plan)
3. I will do it for you. (Willingness)

• **PERFECT**

The perfect aspects all give the idea that one thing *happened before* another time or event.

Present Perfect (has/have + V-en (past participle))	- an action happened sometime <i>before now at an unspecified time in the past</i>. The exact time is not important. (Adverbs like ever, never, already, yet, still and just are frequently used with the present perfect) - a situation that began in the past and continues to the present (usually used with <i>for</i> or <i>since</i>)	a. Gary has already eaten. b. I have been here since seven o'clock. c. I have known him for many years. NOTE the difference between <i>since</i> and <i>for</i>. FOR + a duration of time SINCE + a particular time
Past Perfect (had + V-en (past participle))	- an action was completely finished before another activity or time in the past.	a. Gary had already eaten when his friend arrived.
Future Perfect (will/shall + have + V-en (past participle))	- an action will be completely finished before another time in the future.	b. Gary will already have eaten when his friend arrives.

• **PERFECT PROGRESSIVE**

The perfect progressive aspects give the idea that one event is *in progress* immediately *before, up to, until* another time or event.

Present Perfect Progressive (has/have + been + V-ing)	- an event is in progress. It happened <i>before now up to now</i> .	a. Abet has been delivering the speech for 30 minutes now.
Past Perfect Progressive (had + been + V-ing)	- emphasizes the <i>duration</i> of an activity that was in progress <i>before another activity or time in the past</i> .	b. Abet had been delivering the speech for 30 minutes before the President arrived.
Future Perfect Progressive (will have + been + V-ing)	- an event is in progress. It happened before another event in the future and will last for a particular period of time	c. Abet will have been delivering the speech for 30 minutes by the time the President arrives.

B. Stative Verbs

- Describe states, conditions or situations that exist.
- When verbs have stative meanings, they are usually not used in progressive tenses. (e.g. This food tastes good. I like it very much. Tastes and like both describe a state that exists; therefore, it is incorrect to say "This food is tasting good. I am liking it very much.")

Common Stative Verbs

MENTAL STATE	EMOTIONAL STATE	POSSESSION	SENSE PERCEPTIONS	OTHER EXISTING STATES
know	love	possess	taste	seem
understand	like	have	smell	look
recognize	appreciate	own	hear	appear
realize	please	belong	feel	sound
believe	prefer		see	resemble
need	hate			look like
suppose	dislike			cost
desire	fear			owe
feel	envy			equal
	mind			matter
	care			
	astonish			
	surprise			

- C. **Dynamic Verbs**, sometimes referred to as “**action verbs**”, express a wide range of actions which may be physical, mental or perceptual as opposed to a stative verb which purely expresses a state in which there is no obvious action.

Some examples of dynamic verbs are *eat, drink, go, type, read, write, listen, speak, watch, say, grow, melt, work, sleep, cook, talk, etc.*

II. Subject-Verb Agreement

Rule 1: A compound subject joined by **or**, or **nor** requires a singular verb if each part is singular; if the parts differ in number or person the verb agrees with the subject nearer to it.

e.g. My aunt or my uncle **is** arriving by train today.

The book or the magazines **are** on the shelf.

Rule 2: Two singular subjects connected by **either-or** or **neither-nor** require a singular verb, but when a singular and plural subject are connected, use a plural verb.

e.g. Either John or Susan **is** available.

Neither the teacher nor the principal **is** coming

Either the house or the cars **are** for sale.

Neither Jenny nor the others **are** available.

Rule 3: When one of your two subjects is **I**, put it second and follow it with the singular verb **am**.

e.g. Neither she nor I **am** going to the festival.

Rule 4: Compound subjects joined by **and** require a plural verb, but when the parts refer to the same person or have some other close relation, they take a singular verb. Also, if the parts of the compound subject are modified by **each**, or **no**, a singular verb is required.

e.g. Her professor and thesis adviser **is** here. (same person)

Every branch and twig **was** covered with dust.

No one **is** here.

Rule 5: Sometimes the subject is separated from the verb by words such as *along with*, *as well as*, *besides*, or *not*. Ignore these expressions when determining whether to use a singular or plural verb.

- e.g. The politician, along with the newsmen, is expected shortly.
Excitement, as well as nervousness, is the cause of her shaking.

Rule 6: The indefinite pronouns **each, everyone, one, everybody, anyone, anybody, someone, and somebody** are singular and require singular verbs. Do not be misled by what follows **of**.

e.g. Each of the girls sings well.

Everyone of participating teams is pleased about the judging.

NOTE: **Everyone** is one word when it means everybody. **Every one** is two words when the meaning is each one.

Every one of the items on sale is gone.

Rule 7: With words that indicate portions—*percent, fraction, part, majority, some, all, none, remainder, etc.*—look at the noun in your of phrase (object of the preposition) to determine whether to use a singular or plural verb. **If the object of the preposition is singular, use a singular verb. If the object of the preposition is plural, use a plural verb.**

e.g. Fifty percent of the pie has disappeared.

Fifty percent of the pies have disappeared.

All of the pie is gone.

All of the pies are gone.

Some of the pie is missing.

Some of the pies are missing.

Rule 8: When **either** and **neither** are subjects, they always take singular verbs.

e.g. Neither of them is available to speak right now.

Either of us is capable of doing the job.

Rule 9: The words **here** and **there** have generally been labeled as adverbs even though they indicate place. In sentences beginning with **here** or **there**, the subject follows the verb.

- e.g. There are four hurdles to jump
There is a high hurdle to jump.
There sits the guest of honor.
Here sleeps my baby brother.

Rule 10: Use a singular verb with sums of money or periods of time.
e.g. Ten dollars is a high price to pay.
Five years is the maximum sentence for that offense.

Rule 11: Sometimes the pronoun **who**, **that**, or **which** is the subject of the verb in the middle of the sentence. The pronouns **who**, **that**, and **which** become singular or plural according to the noun directly in front of them. So if that noun is singular, use a singular verb. If it is plural, use a plural verb.

- e.g. *Charlene is the scientist who writes the reports.*
The word in front of who is scientist, which is singular.
Therefore, the verb writes is singular.
He is one of the men who do the work.
Men preceding who is plural. The verb do is likewise plural.

Rule 12: Collective nouns such as **team** and **staff** may be either singular or plural depending on their use in the sentence.

- e.g. The staff is in a meeting.
The staff are in disagreement about the findings.

III. Nouns

Nouns are names of anything that exists or that can be conceived, referring to a person, place, thing or idea. They can also be categorized based on the following:

1. the kind of thought or perception they convey (*abstract or concrete*)
2. the type of matter they name (*common or proper*)

3. the number (*singular or plural*)
4. the quantity or amount they indicate (*collective or mass*)
5. the gender (*masculine, feminine or neuter*)

A. What To Remember About Noun Possessives and Pluralization

Possessives

1. An apostrophe is added to form the possessive case of singular and plural nouns ending in
-s or -z; 's to those not ending in -s or -z.
2. An of phrase is used after nouns not related to people.
e.g. the tires of the car the surface of the road
 the roof of the house the leaves of the tree
3. Nouns connected with people and human activity usually take the 's form.
e.g. *Proper names:* Abraham Lincoln's speech
 Personal nouns: the girl's dress
 Collective nouns: the team's success
 Relating to human activity: the body's ability
 Institution: the museum's members
4. Many phrases of time take the 's form.
e.g. a month's pay two weeks' vacation
 a year's work season's greetings
5. Certain idioms take the 's form.
e.g. our money's worth an arm's length
6. Higher animals can take the 's form.
e.g. a dog's life the kitten's cry
 a bird's nest the horse's mane
7. Double possessives using both **of** and the 's form are common with proper nouns when reference is definite and personal.
e.g. a novel of Conrad's a painting of Picasso's

Plurals

8. The plural of most nouns are generally formed by adding final **-s** when the singular form can be pronounced without adding a syllable, or a final **-es** if the singular form ends in **-s**, **-ch**, **-z**, and **-x** that cannot unite with **s** to form one syllable.
9. Plurals of figures, signs, and letters used as words add **'s**.
10. There are nouns generally used in the singular and therefore require a singular verb. Among these are *beard, food, fish, fruit, grass, hair*.
11. The following nouns do not have their plural form: *baggage, chalk, furniture, jewelry, scenery, information, machinery, pottery*
12. The following nouns are always plural: *trousers, binoculars, scissors, means, refreshments, forceps, pliers and falls*
13. Nouns ending in **-ics** are singular when they denote scientific subjects such as *Physics, Mathematics, Linguistics*
14. Nouns ending in **-ics** are plural when they denote activities or qualities such as *acoustics, acrobatics, athletics*
15. Hyphenated nouns or compound nouns usually attach **-s** to the element that is actually being pluralized: *mothers-in-law, officers-in-charge, editors-in-chief, mayors-elect*.
16. Foreign plural:

Foreign noun	Plural Form	Foreign noun	Plural Form
larva	<i>larvae</i>	criterion	<i>criteria</i>
vertebra	<i>vertebrae</i>	phenomenon	<i>phenomena</i>
alumnus	<i>alumni</i>	automaton	<i>automata</i>
bacillus	<i>bacilli</i>	libretto	<i>libretti</i>
cactus	<i>cacti /cactuses</i>	tempo	<i>tempi</i>
focus	<i>foci</i>	virtuoso	<i>virtuosi</i>

B. Order of Determiners in a Noun Phrase

<i>Pre-determiner</i>	<i>Core Determiner</i>	<i>Post-determiner</i>	<i>(Adjective)</i>	<i>Noun</i>
	A. Articles	Cardinal Numbers:		
all	a/an	1, 2, 3...	red	school
both	the	Ordinal Numbers:	old	college
half	B. Possessive Adjectives	first, second... last	new	dormitory
double	her	every	big	house
	his	few	high	garden
	its	less	tall	fence
	my	little (quantity)	thick	garage
	our	many (a)	intellectual	gate
	their	more	thoughtful	summer
	your	most	excellent	rock
	C. Possessive of Names	other	Japanese	wool
	Ex. John's	same	silken	silk
	D. Demonstratives	several	woollen	steel
	this	single		clay
	that	such (a)		plastic
	these			cloth
	those			leather

	E. Indefinite			brick
	another			paper
	any, each			coat
	either			skirt
	enough			
	much			
	neither			
	no			
	some			
	what (a)			
	which			
	whose			

Unlike the articles, possessives, and demonstratives, the indefinite forms are not preceded by predeterminers.

IV. PRONOUNS

Pronouns are words that stand for a noun or noun phrase

	SUBJECT PRONOUN	OBJECT PRONOUN	POSSESSIVE PRONOUN
SINGULAR	I you he she it	me you her him it	mine your hers his its

PLURAL	we you they	us you them	ours yours theirs
--------	-------------------	-------------------	-------------------------

The noun being referred back to is called the “**antecedent**” (e.g. I read a **book**. It was good.) The pronoun “it” refers to the antecedent noun “book”)

Possessive pronouns are not followed immediately by a noun; they stand alone. (e.g. That book is **hers**.)

Possessive pronouns do NOT take apostrophes.

Possessive determiners are followed immediately by a noun; they do not stand alone. (e.g. **Her** book is here.)

It has no apostrophe when used as a possessive determiner. (e.g. A bird uses its wings to fly.)

It's is a contraction of **it is** or **it has**.

V. ADJECTIVES

A. Degrees of Adjectives

Only the comparative and superlative adjectives show degrees. We use the comparative for comparing two entities and the superlative for comparing three or more entities.

Gladys is a rich woman, but Josie is richer than Gladys, and Sadie is the richest woman in town.

Positive

rich

lovely

beautiful

Comparative

richer

lovelier

more beautiful

Superlative

richest

loveliest

most beautiful

Certain adjectives have irregular forms in the comparative and superlative degrees:

Irregular	Comparative	Superlative
good	better	best
bad	worse	worst
little	less	least
much, many	more	most
far	further	furthest

Adjectives that do not admit comparative degree according to Bryan Garner:

absolute	impossible	principal
adequate	inevitable	stationary
chief	irrevocable	sufficient
complete	main	unanimous
devoid	manifest	unavoidable
entire	minor	unbroken
fatal	paramount	unique
final	perpetual	universal
ideal	preferable	whole

From The Oxford Dictionary of American Usage and Style by Bryan Garner. Copyright 1995 by Bryan A. Garner. Published by Oxford University Press, Inc., www.oup-usa.org, and used with the gracious consent of Oxford University Press.

B. The Order of Adjectives in a Series

The categories in the following table can be described as follows:

Determiners	- e.g. this, that, these, those, my, mine, your, yours, him, his, her, hers, they, their; or a, an, the
Observation/ Opinion	- e.g. beautiful, interesting, polite, difficult, hardworking
Size	- e.g. tall, wide, large, high, narrow, thin
Shape	- e.g. round, rectangular, circular
Age	- e.g., young, old, new, ancient
Color	- e.g., red, black, pale

Origin	- e.g., French, American, Canadian
Material	- e.g., woollen, metallic, wooden
Qualifier	- e.g., rocking chair, hunting cabin, passenger car

C. Collective Adjectives

When the definite article, **the**, is combined with an adjective describing a class or group of people, the resulting phrase can act as a noun: the poor, the rich, the oppressed, the homeless, the lonely, the unlettered, the unwashed, the gathered, the dear departed.

The rural poor **have** been ignored by the media.

The rich of Connecticut **are** responsible.

The elderly **are** beginning to demand their rights.

The young at heart **are** always a joy to be around.

D. Irregular Comparisons

A few of the comparatives and superlatives in English do not follow the usual pattern. Here is a list of common exceptions:

Positive	Comparative	Superlative
bad	worse	worst
badly	worse	worst
far (distance)	farther	farthest
far (extent)	further	furthest
good	better	best
ill	worse	worst
late	later	latest or last
less	lesser	least
little (amount)	less	least

many	more	most
much	more	most
well	better	best

E. Kinds Of Adjectives:

1. Possessive Adjectives

- modify a noun by telling whom it belongs to
- answer the question "*Whose?*"
- include **his, her, its, my, our, their**, and **your**
e.g.: You can share **my** rice.

Have you seen **their** house?

2. Demonstrative Adjectives

- include **that, these, this, those**, and answer the question "*Which?*"
- used to modify a noun or pronoun
e.g.: I'm going to open **that** present.

Those socks look warm.

3. Interrogative Adjectives

- include **what** and **which** used in a question.
- may look like an interrogative pronoun, but it is used differently in the sentence: it is an adjective used to modify a noun or pronoun.
e.g.: **What** movie do you want to see?

Which leaves turn color first?

4. Indefinite Adjectives

- An indefinite adjective gives indefinite, or general information.
- Often, it answers the question "*How much?*"
- Some common indefinite adjectives are **all, any, each, every, few, many**, and **some**.

e.g.: **Many** children like dinosaurs.

Did you **want some** bananas?

VI. Adverbs

Adverbs are modifiers of a verb, an adjective, another adverb, a phrase, or a clause. They indicate manner, time, place, cause, or degree and answers questions such as "how," "when," "where," "how much."

A. Types of Adverbs

1. Adverbs of Manner

- provide information on how someone does something
- placed after the verb or entire expression (at the end of the sentence).
e.g. Jack drives very *carefully*.
Their teacher speaks *quickly*.

2. Adverbs of Time

- provide information on when something happens.
e.g. We'll let you know our decision *next week*.

3. Adverbs of Frequency

- provide information on how often something happens.
- placed after the verb or entire expression (at the end of the sentence).
e.g. They *usually* get to work at eight o'clock.

4. Adverbs of Degree

- provide information concerning how much of something is done.
- placed after the verb or entire expression (at the end of the sentence).
e.g. They like playing golf *a lot*.
She'll attend the meeting *as well*.

5. Adverbs of Comment

- provide a comment, or opinion about a situation.
- placed at the beginning of a sentence.
e.g. *Fortunately*, there were enough seats left for the concert.
Luckily, I was able to come to the presentation.

B. Adverb Placement

- Adverbs of frequency are placed after the verb 'to be' when used as the main verb of the sentence.
e.g. Jack is often late for work.
- Some adverbs of frequency (*sometimes, usually, normally*) are also placed at the beginning of the sentence for emphasis.
- Adverbs can also modify an adjective. In this case, the adverb is placed before the adjective.
e.g. She is *extremely* happy.
They are absolutely sure.
- Do not use 'very' with adjectives that express an increased quality of a basic adjective
e.g. good – fantastic
- Adverbs of frequency (*always, never, sometimes*) usually come before the main verb.
e.g. He is often late for class.
Do you always eat in a restaurant?
They don't usually travel on Fridays.
- Adverbs of frequency expressing infrequency are not usually used in the negative or question form. "*Never*", "*seldom*", "*rarely*" and other adverbs of frequency with a negative sense are not usually used in the question form. When using adverbs of frequency in the negative form, put the adverb before the main verb.
e.g. Does she rarely eat fish? They don't.
- Adverbs of frequency are often placed at the beginning of a sentence.
e.g. *Sometimes*, he likes to go to museums.
- Adverbs of frequency follow - come after - the verb 'to be'.
e.g. He is *sometimes* late for work.
- When an adverb modifies an adjective, there is no need to join the two with a hyphen.

e.g. Thomas was a *highly* respected member of the team.

(Incorrect) Thomas was a highly-respected member of the team.

- With words like “well” and “fast” (which are both adjectives and adverbs), a hyphen can be used to avoid ambiguity.

e.g. We will be visited by a well-known actress.

- Usual word order when two or more adverbs modify a verb:
MANNER-- FREQUENCY--PLACE—TIME--CAUSE/REASON

VII. Prepositions

Prepositions show relationships in time and space and relationships between ideas (logical relationships).

	USES	EXAMPLES
IN	months, years, seasons	in December in 2009 in autumn
	enclosure in a landmark	in the box
	special expressions	in the meantime in addition in contrast
ON	days of the week and dates	on Wednesday on the fifth of July
	contact with a surface	
AT	time	at six o'clock
	place as a point of orientation	at the corner
FROM	separation from a point of orientation	away from me

General Education

OFF	separation from contact with a line or surface	fell off the stem
OUT OF	separation from inside of a landmark	fish out of water
BY	denotes the idea of "connection" or nearness	Stand by me
WITH	association and/or accompaniment	dinner with friends
	equal standing or ability	rank with the best
	manner	spoke with ease
THROUGH	structures space as a tunnel or channel	through the woods
	duration	through the years
	endurance	through thick and thin
ABOUT	spatial movement in any direction	walked about the room
	approximation	about 10 miles
	concerning something	about the book
UNDER	at a lower point than a landmark	under the mango tree
	below	under 18
OVER	at a higher point than the landmark	over the fence
ABOVE	higher than	above average
BEFORE	in front of	before us
	earlier than	before the year ends
BETWEEN	at an intermediate point in relation to two entities	between you and me

VIII. Conjunctions/Coordination

AND	addition
BUT	shows contrast
YET	but at the same time
SO	therefore
FOR	because
OR	one or the other of two alternatives is true
NOR	conjoins two negative sentences, both of which are true

Correlative Conjunctions – pairs of conjunctions that are used together

both...and

either...or

neither...nor

not only...but also

whether...or

Correlative conjunctions must be followed by the same grammatical structures.

Incorrect: Either the **meat** (noun) was tough to begin with or **overcooked**.
(adjective)

Correct: Either the **meat** (noun) was tough to begin with or **it** (pronoun) was
overcooked.

Subordinating Conjunctions – connect two complete ideas by making one of the ideas subordinate to or less important than the other.

e.g. **He ran steadily** as though **wolves were after him**.
(main idea) (subordinate idea)

Frequently Used Subordinating Conjunctions

after	because	now that	until
although	before	since	when
as	even if	so that	whenever
as if	even though	than	where
as long as	if	though	wherever
as soon as	in order that	till	while
as though	lest	unless	

IX. Modals

Basic modals: *can, could, may, might, must, ought to, shall, should, will, would*

Phrasal modals: *be able to, be going to, be supposed to, have to, have got to, used to*

Modals do not take a final -s even when the subject is singular.

Correct : She can do it.

Incorrect: She cans do it.

Modals are followed by the simple form of the verb. (The only exception is *ought*, which is followed by an infinitive (*to + simple form of the verb*))

Correct: She can do it.

Incorrect: She can does it.

Summary Chart of Modals and Similar Expressions

AUXILIARY	USES	PRESENT/FUTURE	PAST
MAY	polite request (only with <i>i</i> or <i>we</i>)	<i>May I borrow your pen?</i>	
	formal permission	You <i>may</i> leave the room.	
	less than 50% certainty	(Where's John?) He <i>may be</i> at the library	He <i>may have been</i> at the library.
MIGHT	less than 50% certainty	(Where's John?) He <i>might be</i> at the library	He <i>might have been</i> at the library.
	polite request (rare)	<i>Might I borrow your pen?</i>	
SHOULD	advisability	I <i>should study</i> tonight.	I <i>should have studied</i> last night, but I didn't.
	90% certainty (expectation)	She <i>should do</i> well on the test. (future only, not present)	She <i>should have done</i> well on the test.
OUGHT TO	advisability	I <i>ought to study</i> tonight	I <i>ought to have studied</i> last night, but I didn't.
	90% certainty (expectation)	She <i>ought to do</i> well on the test. (future only, not present)	She <i>ought to have done</i> well on the test.

General Education

BE SUPPOSED TO	expectation	Class <i>is supposed to</i> begin at 10:00.	
	unfulfilled expectation		Class <i>was supposed to</i> begin at 10:00, but it didn't begin until 10:15.
MUST	strong necessity	I <i>must go</i> to class today.	(I <i>had to go</i> to class yesterday)
	prohibition (negative)	You <i>must not</i> open that door.	
	95% certainty	Mary isn't in class. She <i>must be</i> sick. (present only)	Mary <i>must have been</i> sick yesterday.
WILL	100% certainty	He <i>will be</i> here at 6:00.	
	willingness	I <i>will do</i> that for you.	
	polite request	<i>Will</i> you please close the door?	
CAN	ability/ possibility	I <i>can run</i> fast.	I <i>could run</i> fast when I was a child, but now I can't.
	informal permission	You <i>can</i> use my car tomorrow.	
	informal polite request	<i>Can</i> we talk?	
	impossibility (negative only)	That can't be true!	That <i>can't have been</i> true!

COULD	past ability		<i>I could dance well during my younger years.</i>
	polite request	<i>Could you help me?</i>	
	suggestion (affirmative only)	You <i>could</i> talk to a doctor about your problem.	You <i>could have</i> talked to your doctor.
	less than 50% certainty	(Where's Johnny?) He <i>could be</i> at home.	He <i>could have been</i> at home.
	impossibility (negative only)	That <i>couldn't be</i> true!	That <i>could not have been</i> true!
WOULD	polite request	<i>Would you consider the offer?</i>	
	preference	I <i>would rather</i> go to the park than stay home.	I <i>would rather</i> have gone to the park.
	repeated action in the past		When I was a child, I <i>would visit</i> my grandparents every weekend.
	polite for "want" (with like)	I <i>would like</i> an apple, please.	
	unfulfilled wish		I <i>would have liked</i> a cookie, but there were none in the kitchen.

USED TO	repeated action in the past		He <i>used to</i> drink beer every night.
	past situation that no longer exists		I <i>used to</i> live in the province, but now I live in the city.
SHALL	polite question to make a suggestion	<i>Shall</i> I keep the secret?	
	future with "i" or "we" as subject	We <i>shall</i> celebrate after passing the examination.	

X. Tag Questions

A tag question is a question added at the end of a sentence. It aims to seek agreement or to ascertain correctness of information.

A tag question may be spoken (a) with a rising intonation if the speaker is truly seeking to ascertain that his/her information, idea or belief is correct, (e.g. *Ann lives in an apartment, doesn't she?*); or (b) with a falling intonation if the speaker is expressing an idea with which s/he is almost certain the listener will agree (e.g. *It's a nice day today, isn't it?*).

Affirmative Sentence + Negative Tag → Affirmative Answer Expected

Beth is here, isn't she?

Yes, she is.

You like coffee, don't you?

Yes, I do.

They have left, haven't they?

Yes, they have.

Negative Sentence + Affirmative Tag → Negative Answer Expected

Beth isn't here, is she?

No, she isn't.

You don't like coffee, do you?

No, I don't

They haven't left, have they?

No, they haven't.

XI. Basic Verb Forms Used in CONDITIONAL SENTENCES

SITUATION	IF-Clause	RESULT Clause	Examples
True in the present/ future	simple present	simple present simple future (<i>will + simple form</i>)	If I have enough time, visit my parents every week. If I have enough time, I will visit my parents next week.
Untrue in the present/ future	simple past	Would + simple form	If I had enough time, I would visit my parents now.
Untrue in the past	Past perfect	would have + past participle	If I had enough time, I would have visited my parents last month.

ENGLISH PHONOLOGY

Effective oral discourse means being able to use grammatical structures accurately; having the ability to express ideas, messages, and intentions meaningfully; and observing rules of use appropriately when interacting with others in various social contexts. In other words, a competent speaker has good pronunciation and correct intonation, forms grammatical sentences, and uses language appropriately when communicating with others.

A. The Speech Mechanism

The speech-producing mechanism or vocal apparatus consist of the following parts as shown in the figure:

- The *resonators* or *resonating cavities*: the pharynx or pharyngeal cavity, the nasal cavity, and the oral cavity. These cavities serve as the passage of the moving stream of air. The pharyngeal cavity is a space formed by the root of the tongue and the walls of the throat.
- The *articulators*: lower lip, lower teeth, the tongue and its parts (the tongue apex is made up of the tongue tip and blade, the front of the tongue, and the back of the tongue or dorsum), as well as the soft palate or velum with its pear-shaped appendage called the uvula. Articulators are movable parts.

- The important *points of articulation* are the upper lip, the upper teeth, the alveolar ridge (the gum behind the upper teeth), the hard palate (the bony roof of the mouth) and again, the velum. Except for the velum, these parts are non-movable. They are the parts of the speech apparatus near which or against which the articulators are placed in the production of the various speech sounds.
- The *vocal cords/bands*. They are two short bands of elastic flesh and muscle located inside the larynx (Adam's apple). The opening between them is called the *glottis*. The glottis may be opened so as to cause no obstruction in the passage of air as in normal breathing, completely closed, or partially closed. Speech sounds produced with an open glottis are said to be voiceless. When the vocal bands are brought so close together that the air passing through causes the glottis to vibrate, the speech sounds produced are said to be *voiced*. When the vocal bands are pressed together so tightly as to resist considerable air pressure from the lungs, the sound produced is a *glottal stop*.

B. The Phoneme

- The phoneme is a minimal significant or contrastive unit in a language. This speech sound signals a difference in meaning, e.g., /p/, /b/, and /f/ as in pan, ban, and fan. Note that a phoneme is enclosed in slants / /.
- A phoneme may be pronounced in different ways, depending on its position in the utterance, and still remains the same phoneme. These variations in pronunciation, called allophones, are enclosed in square brackets []. For example, the phoneme /p/ is pronounced differently in the following words: pin, spin, nip. It is aspirated in pin [p^hin], unaspirated in spin [spin], and unreleased in nip [nip-].

C. The Vowel Phonemes of English

- The following statements show the nature of vowels:
 - Vowels are oral sounds.
 - Vowels are voiced.
 - Vowels are characterized by a free flow of air through the oral cavity.
- Using Trager and Smith and the IPA transcription systems, the following are the simple and complex vowels of English with their corresponding keywords:

Key Word	Trager-Smith	IPA
bit	i	ɪ
bet	e	e
bat	æ	æ
just (adv)	i	-
ago	ə	ə
hut		
hot	a	a
pull	u	ʊ

Key Word	Trager-Smith	IPA
pall	ɔ	ɔ
beat	iy	i:
bait	ey	eɪ
bite	ay	aɪ
bout	aw	aʊ
boat	ow	oʊ
boy	oy	ɔɪ
boot	uw	u:

D. The Consonant Phonemes of English

The first set of consonant sounds in English are the stops /p, b, t, d, k, g/. They are produced by a stoppage of air. The sounds /p, t, k/ are voiceless because the vocal cords do not vibrate. On the other hand, /b, d, g/ are voiced. The /p, t, k/ sounds are aspirated when they occur initially in a stressed syllable. For example, the /t/ sound in the words *ten* and *attend* are aspirated or produced

with an accompanying puff of air. The sound /k/ in cat and recount are likewise aspirated. The same is true with the /p/ sound in pen and append.

The second set of sounds are the fricatives /f v θ ð s z ʃ ʒ h/. They are produced by an obstruction of the airstream causing audible friction.

Further, English has two affricates /tʃ/ and /dʒ/, three nasals /m n ŋ/, a lateral /l/, a retroflex /ɻ/ and two semivowels /w v/. The retroflex and the semivowels are sometimes referred to as glides.

The following table shows the consonant sounds of English in two transcription systems.

Key Word	Trager-Smith	IPA
pan	p	p
ban	b	b
ten	t	t
den	d	d
cot	k	k
got	g	g
fan	f	f
van	v	v
thin	θ	θ
hen	ð	ð
so	s	s
zoo	z	z

Key Word	Trager-Smith	IPA
sure	ʃ	ʃ
azure	ʒ	ʒ
hat	h	h
cat	tʃ	tʃ
job	dʒ	dʒ
mine	m	m
nine	n	n
sing	ŋ	ŋ
lot	l	l
rot	r	r
well	w	w
yell	j	j

Awareness of certain sounds are crucial in pronouncing noun plurals, and noun possessives as well as the third person singular inflection of regular verbs. Similarly, it is also significant in pronouncing the regular simple past inflection. To illustrate:

Noun plurals are spelled as *-s* or *-es*. This plural inflection can be pronounced in three different ways, i.e., */-s/*, */-z/*, or */-əz/* as shown below

<i>-s/</i>	<i>/-z/</i>	<i>/-əz/</i>
cats, ropes, rocks, graphs	beds, chairs, seeds, stones, leaves, dolls	dishes, churches, judges, garages, buses

/əz/ occurs after sibilants or s-like sounds such as */s, z, ʒ ʒ̃ ĉ ċ j/*

/s/ occurs after voiceless sounds except */s, ʃ, ĉ /*

/z/ occurs after voiced sounds except */z, ʒ, j/*

The pronunciation rules defined for the plural above also apply to noun possessives and third person singular forms of regular verbs.

Likewise, the regular simple past tense inflection *-ed* has three variants, namely */t, d, əd/*

/əd/ occurs after */t/* and */d/* as in *planted, hated, needed, and raided*

/t/ occurs after voiceless sounds except */t/*, e.g., *liked, surprised, realized, and cooked*

/d/ occurs after voiced sounds as in *loved, played, owned, and belonged*

E. Suprasegmental Phonemes and Prosodic Patterns in English

Pronouncing consonant and vowel sounds correctly in an utterance is not enough. As consequential are other phonemic phenomena labelled as *suprasegmentals* which contribute to a meaningful interpretation of what is being said. These phonemes consist of stress, pitch, and juncture. A combination of them makes up the prosodic patterns of spoken language or oral discourse.

1. Stress

- Stress refers to the degree of prominence a syllable has. In the word *forgive*, the syllable -give sounds more prominent than *for-*. There may be as many degrees of stress as there are syllables, but some of the differences may be imperceptible.
- For individual words, three stress phonemes are significant. These are:
 ' primary stress
 ` mid stress
 ~ weak stress (usually not indicated)

The word *légendâry* illustrate all these stress.

- In words of more than one syllable, there will be one syllable which is more heavily stressed than the others. This syllable carries the primary stress (eg. *rémedy*, *devélop*, *understánd*). In some longer words, other syllables may carry secondary stress, e.g. *légendâry*. The most important thing is to recognise where the primary stress is. The assignment of primary stress can change between words derived from the same base (eg. *photograph*, *photographer*, *photographic*).
- In word groups and sentences, there are four degrees of stress:
 ' primary stress
 ^ secondary stress
 ` tertiary stress
 ~ weak stress (usually not indicated)

Note the words *intelléctual* and *curiósity*.

In isolation each word gets a primary stress; however, when put together to form the phrase *intelléctual curiósity*, the primary stress in one is reduced to secondary stress. A word group carries only one primary stress.

Note that the last content word generally is assigned the primary stress in a phrase or sentence unless contrastive meaning is desired in which case there is a shift of stress.

- e.g. a black *dóg*
 a bláck dog (not white or brown)

2. Grammatical Stress Patterns

Grammatical patterns are accompanied by regular stress patterns. Sometimes such stress patterns are the sole means of differentiating one grammatical pattern, with its concomitant meaning, from another. The common ones include:

- Compound noun ^ ^
e.g. *rócking chair, póstrmàn*
- Modifier + noun ^
e.g. *bláck bird, lóng hánd*
- Verb + noun object ^
e.g. Carabaos *éat gráss*.
 He is *wáatching a móvie*.
- Verb + adverbial ^ ^
e.g. This information is not to be *hánded óut*.
 My boyfriend *cállled úp*.

3. Pitch Levels and Terminals

- Although many degrees of pitch are employed in speaking, only four levels of relative pitch are used as phonemes. These are:
 - 4 extra high
 - 3 high
 - 2 normal
 - 1 low
- Pitch is relative. The normal pitch of every individual's speaking voice, whatever its actual height (some speakers tend to be either high pitched or low pitched), is called level 2. From this level, one makes departures either upward (level 3) or downward (level 1). We begin on level 2, our natural normal level, and remain there until we reach the primary stress.
- Pitches combine into patterns to make meaningful melodies over the whole phrase or sentence, e.g. 231, 233, or 232. In 231, a statement or proposition is being uttered.
- These melodies have three methods of closure called *terminal junctures* or simply *terminals*. As the name suggests, these terminals occur at the end of the sentence. Oftentimes, they are marked with arrows as follows:
 - ↓ = *fading* terminal
 - ↑ = *rising* terminal
 - = *sustained* terminal
- The fading terminal as in 231↓ is characterized by a rapid fadeaway of the voice into silence. It closes a statement.
e.g. ²I'm going to ³school¹↓
- The rising terminal as in 233↑ is a short, slight rise in the pitch from the last level heard, but it does not go all the way up to the next level. This terminal commonly occurs at the end of a yes-no question.
e.g. ²Are you ³happy³↑

- The sustained terminal as in 232→ is characterized by a slight lengthening of the preceding pitch 3 word (i.e., the word that gets the primary stress. It may be heard at the end of a long sentence subject.
e.g. ²All of the members of the ³team² → look confused.
- Patterns of pitch, with their accompanying terminals such as 231↓, 233↑, and 232→ are called *intonation contours*.

4. Commonly Used Intonation Contours

- 231↓ This contour occurs in:
 - 1) Statement or declarative sentence
e.g. ²We watched a ³movie¹↓
 - 2) Command
e.g. ²Read the an³nouncement¹↓
 - 3) Wh- or information question (a question that begins with words like *who, what, where, when, why, which, and how*)
e.g. ²What's your ³name¹
- 233↑ This contour commonly occurs at the end of yes-no questions.
 - 1) Yes-no question in statement form
e.g. ²He's an ³actor³↑
 - 2) Yes-no question in question form
e.g. ²Are you ³coming³↑
 - 3) Initial grammatical unit (phrase, clause, or sentence segment)
e.g. ²If you'll ³notice³↑
- 232→ This contour signals incompleteness.
 - 1) Initial grammatical unit (an alternate for 233→)
e.g. ²If you'll ³notice²→
 - 2) Statement to indicate the speaker has more to say; often the word following this contour is *but*.
e.g. ²She's a bright ³girl²→ but . . .

ORAL COMMUNICATION and LANGUAGE FUNCTIONS

There are three elements in oral communication: the **speaker**, the **message**, and the **audience**. The **purpose** of the speaker's message must be appropriate to the occasion and the intended audience. Oral communication process may be illustrated as one-way or two-way as shown below.

A. Group Communication

The Four Criteria that Determine a Small Group
(Morreale, Spitzberg, & Barge, 2007)

1. Includes Three or More People
2. Includes Shared Perception
3. Emphasizes Interdependence
4. Requires Communication

B. Public Speaking as Communication (*O'Hair, Stewart, & Rubenstein, 2001*)

In public speaking, a speaker delivers a message with a specific purpose to an audience of people who are present during the delivery of the speech. Public speaking always includes a speaker who has a reason for speaking, an audience that gives the speaker its attention, and a message that is meant to accomplish a specific purpose.

1. Special Speaker Considerations

- **Context** - The speech context includes anything that influences the speaker, the audience, the speech, the occasion, or the situation.
- **Goals** - A clearly defined goal is a prerequisite for an effective speech. What is it that you want the audience to learn or do or believe as a result of your speech? How much ground do you want to cover? What do you personally want to achieve by delivering the speech?
- **Outcome** - A speech is not truly complete until its effects have been assessed and you decide whether you have accomplished what you set out to do. Usually this assessment is informal, as in listening to audience reactions. Constructive feedback is an invaluable tool for self-evaluation and improvement.

2. Types of Speeches

- An informative speech increases the audience's understanding or awareness by imparting knowledge. It provides audience with new information, new insights, or new ways of thinking about a topic, and introduces new ideas, events, people, places, or things.
- A persuasive speech attempts to influence the attitudes, beliefs, values, and acts of others. It limits alternatives, seeks a response, and respects audience choices.
- Special Occasion Speeches

- o *Speech of Introduction* prepares or warms up the audience for the speaker. It aims to motivate audience members to listen to what he or she has to say.
- o *Speech of Acceptance* aims to express gratitude for the honor bestowed on the speaker.
- o *Eulogies and Tributes* celebrate and commemorate the life the deceased while consoling those who have been left behind.
- o *Speech of Inspiration* aims to uplift the member of the audience and to help them see things in a positive light.

C. Language Functions and Useful Expressions

Expressions of Advice

Asking	Giving	Accepting	Rejecting
Can you give me any/some advice? What should I do? What do you suggest/ recommend/ advise? What do you think I should/ought to do?	You should + verb I advise you to + verb I suggest that you + verb You can/could + verb Why don't you + verb? Verb/Don't + verb	Thanks for the advice That sounds like a good idea. Thank. I'll do that.	Thanks, but I don't think that's a good idea. Thanks. I'll think about it. Thanks, but I'm not so sure.

(Tanka & Baker, 2007 p. 59)

Asking for a Favor	Responding	
	Yes	No
Can/could you do me a (small/big) favor?	Sure./Yes./OK./Yeah./Of course.	I'm sorry but... I'd like to, but...
Can/could I ask you for a favor?	Sure, what do you need?	I wish I could, but... Let me think about it.
Will/can/could you + verb?	I'd be glad to.	I really can't.

(Tanka & Baker, 2007 p. 107)

Asking for Directions	Giving Directions
Could you tell me where... is? Where is ...? Do you know how to get to...? How do you get to... I'm looking for... I'm trying to find...	Go straight. Go straight for two block on Avenue/Street/Road. Go past (the market). Go north/south/east/west. Turn right/left. Make a right/left. Cross the street. You'll see it on your right/left.

(Tanka & Most, 2007 p. 77)

Expressing Agreement	Expressing Disagreement
I agree. I agree with that. I agree with you. I'm with you. You're right. I couldn't agree more. I completely agree.	I'm not sure about that. I disagree. I don't agree. I disagree with that. I disagree with you. I completely disagree. You're wrong.

(Hartmann & Blass, 2000, p.45)

Expressions for Telephone Conversations

Answering the phone	Finding out who is calling
Hello. (when answering home phone) Full Name/CompanyName (for business people)	May I ask who's calling? Can I tell him who's calling? May I tell her who's calling?
Taking a phone message	Asking for clarification
He's not here right now. Would you like me to give him a message? She just stepped out. May I take a message?	Excuse me? What was that again? Could you please repeat that?

(Hartmann & Blass, 2000, p.211, 213)

Turn-taking and Turn-giving Expressions

Introducing the topic	Today we are here to discuss... The goal of our discussion today is...
Bringing in other people	What is your opinion, Mr. ___? Do you agree with Mr. ___'s opinion, Ms. ___?
Keeping the Discussion Moving	Let's go on to another point. Next, let's talk about...
Giving an opinion	In my opinion... Personally, I believe that...
Getting further information	Would you mind explaining that a little more, please? Could you explain that more fully? Could you tell us a bit more about that?

Interrupting	Excuse me for interrupting, but... Sorry to interrupt, but...
Seeking clarification	What do you mean? Sorry, I'm not quite sure what you mean. Do you mean that...? I'm sorry, I don't quite follow. I don't quite understand what you're saying.
Closing the Discussion	In conclusion, the purpose of this discussion... We have concluded that...

PART II - ANALYZING TEST ITEMS

DIRECTIONS: Write the letter that best completes the sentence.

1. Gabriel slept _____.
- A. last night in his air-conditioned room soundly.
 - B. soundly last night in his air-conditioned room.
 - C. in his air-conditioned room soundly last night.
 - D. soundly in his air-conditioned room last night.

Adverb in a series should follow this sequence: Manner – Frequency – Place – Time – Cause/Reason. Choice A is incorrect because last night is an adverb of time. Choice B is also incorrect. Even if the choice begins with an adverb of manner, what follows somehow is an adverb of time. Choice C is not the correct answer because it obviously does not begin with an adverb of manner. The correct answer is D because it follows the proper order of adverbs in a series.

2. At this time next week, I _____.
- A. will walk
 - B. will have been walking
 - C. will be walking
 - D. will have walked

Future progressive aspect denotes an action which will be in progress at a specific time in the future. The given statement is an indication of future progressive aspect, and Choice C best completes the sentence. Choice A only suggests futurity and is not a logical choice. Choice B is incorrect because it is in the future perfect progressive aspect and the given sentence does not say that the action is in progress. Choice D will suggest an action that should have been completely finished before another time in the future, therefore it is also incorrect. Choice C is the correct answer.

3. You watched the concert last night, didn't you? The correct response would be

- A. Yes, I wasn't
- B. Yes, I didn't
- C. Yes, I was.
- D. Yes, I did

Choices A and C are incorrect because the tag question made use of a do form. Choice B is also not correct because of a mismatch, "yes" is affirmative and "didn't" is negative. Therefore, the best answer is D.

4. The doctor recommended eating healthier meals and _____.

- A. to do exercise
- B. doing exercise
- C. exercise
- D. to exercise

Parallelism must be observed in the given statement. "Eating healthier meals" would be parallel with "doing exercise", therefore Choice B is the correct answer. Choices A and D are both infinitives while Choice C does not imply whether "exercise" is used as a verb or as a noun.

5. Ross is French but Gerald isn't; he's Mexican. Based on the sentence, which one is true?

- A. Gerald is French.
- B. Ross isn't Mexican
- C. Gerald isn't Mexican.
- D. Gerald and Ross are both Mexican.

Gerald is obviously not French, therefore Choice A is incorrect. Choice B is true because Ross is French. Choice C is false because Gerald is Mexican. Choice D states that both Gerald and Ross are Mexican, which isn't true. The correct answer then is Choice B.

BEGIN HERE:

1. Which sound is not a realization of the simple past tense?
☒ A. /d/ B. /əd/ C. /t/ D. /ed/
2. In the noun Jesus's, the possessive is pronounced as _____.
 A. /ʒ/ B. /s/ ☒ C. /əz/ D. /z/
3. Would you mind _____ me tomorrow?
 A. meet ☒ B. to meet C. meeting D. if we meet
4. Which of the following shows the correct stress pattern for a compound noun?
 A. bláckbird B. bláckbírđ C. bláckbírd D. bláckbírd
5. For thousands of years, rice _____ a staple food for many people.
 A. is B. had been C. was ☒ D. has been
6. Beth's new digital camera is more user-friendly than _____ I have seen.
☒ A. any one else C. another
☒ B. any other D. others
7. The twins look _____.
 A. equal ☒ B. identical C. similar D. synonymous
8. Neither of the accused officers decided to quit _____ position.
☒ A. their B. his C. it's D. its
9. Which of the following plural forms ends in /-əz/?
 A. giraffes B. means ☒ C. garages D. handcuffs
10. This car won't start. Let's call Danny because he's an old hand at repairing cars.
 An old hand means _____.
☒ A. a reliable person C. a trustworthy person
☒ B. an experienced person D. an industrious person
11. "I'll see you soon," she said. But we didn't see each other for a long time. She said _____.
 A. she will see me soon C. I would see her soon
 B. she would see me soon D. she sees me soon

12. Can you tell me what time _____?
A. the train arrives C. the train does arrive
B. does the train arrive D. arrives the train
13. The air around us _____
A. both contains oxygen and water
B. both contain oxygen and water
C. contains both oxygen and water
D. contain both oxygen and water
14. Which sentence does not have the same meaning as the others?
A. The athletes are observing rigid diet rules in the training.
B. Rigid diet rules are observed by athletes in the training.
C. In the training, the athletes observe rigid diet rules.
D. The athletes are training rigid diet rules observer.
15. Which "while" expresses a contrast?
A. While waiting for them, let's have some coffee first.
B. The farmers are very hopeful while walking from the province to the city.
C. She's taking a shower while her mother is preparing breakfast.
D. I am a pessimist while he is very optimistic.
16. Which of the following words has a different vowel sound?
A. clear B. meet C. ease D. he's
17. "The teacher needs some colored chalk for the _____." Which of the following words completes the sentence correctly?
A. bláckbóard C. black bóard
B. bláckbóard D. black board
18. Suppose that while waiting for someone, you talk with friends in the lobby of a building. Somebody says something that you did not quite hear. Which of the following would you say?
A. Please repeat that. C. Sorry, I didn't hear you.
B. Please speak louder D. May I request you to repeat that?

19. Suppose that you are introduced to a co-worker in an office or establishment. The person being introduced is approximately of the same age as you. Which of the following would you say to her?
- A. I am honored to meet you. C. How do you do?
B. I'm pleased to meet you. D. It is an honor to meet you.
20. Which line is produced with a sustained intonation?
- A. What brings you here?
B. Is the conference room ready?
C. We won the game!
D. To tell you the truth,
21. Which of the following words is not correctly stressed?
- A. secondáry
B. enginéer
C. spirítual
D. afternoón
22. Which word best completes this sentence: *I always feel _____ when the stars fill the sky.*
- A. happy B. happily C. am happy D. in happiness
23. The connection between time spent in social networking sites and poor academic grades _____.
- A. are alarming C. has alarmed
B. is alarming D. alarms
24. Neither of the suspects admits _____ the crime.
- A. their B. our C. his D. us
25. The actress signed the contract a few days after the talent management _____.
- A. sent it B. send it C. had sent it D. will have sent it

PART III - ENHANCING TEST TAKING SKILLS

DIRECTIONS: Write the letter of the word or phrases that best completes the sentence.

- What intonation contour or pattern applies to the question "Who will join the parade?"
A. 232→ B. 223↑ C. 231↓ D. 233↑
- Which sentence is marked as 233↑231↓?
A. Do you like to join torch parade
B. We want peace, good health, and a happy family life
C. Diane, as well as her friends, are planning a trip to the north
D. Do you prefer to go swimming or jog in the park
- Which of the following sounds in the Trager and Smith Transcription System would you consider a critical sound for Filipino learners of English?
A. /a/ B. /iy/ C. /i/ D. /uw/
- Every woman, man or child _____ the right to live.
A. have B. has C. had D. do have
- The excellent speaker can _____ even the most complicated ideas.
A. get across B. get away C. get through D. get along
- I drive my neighbors up a wall with the loud banging of my new set of drums. The underlined phrase means _____.
A. bump into my neighbor's fence
B. make them envious
C. annoy
D. let them listen and enjoy

7. I was simply making a tongue-in-cheek remark. I didn't mean to offend her. The underlined idiom means _____.
 A. impossible ☒ B. joke C. lie D. sketch
8. How did the students react when the teacher _____ the mistakes on their test papers?
 A. provided for C. picked out
☒ B. pointed out D. gave away
9. This book concludes with pages _____ useful hints to correcting common errors in English.
☒ A. that contain C. that is containing
☒ B. that contains D. that are containing
10. All political parties promise to turn the economy _____ if elected, but they never do.
 A. over B. around C. in D. on
11. _____ I prefer to live in an apartment, my husband wants to buy a house.
 A. Until ☒ B. Because C. Whereas D. When
12. If you had come to the theater last night, you _____ the play.
 A. would enjoy C. will have enjoyed
 B. will enjoy ☒ D. would have enjoyed
13. The students never cheated on the examination, _____.
 A. is there? ☒ C. do they?
 B. didn't they? D. did they?
14. More of our teammates now _____ with the new policies.
☒ A. are agreeing C. agree
 B. agrees D. is agreeing
15. By this time tomorrow, we _____ the meeting.
☒ A. shall have C. would have
 B. will have had D. have had

16. The class decided to give their teacher a/n _____ handbag on her retirement.
- A. latest long-wished black leather Louis Vuitton elegant
 - B. black latest long-wished Louis Vuitton elegant leather
 - C. long-wished elegant latest black Louis Vuitton leather
 - D. latest elegant black long-wished leather Louis Vuitton
17. The instructor expects students _____
- A. to attend every class, to be doing all the assignments; and hand in homework on time.
 - B. to be attending every class, to do all assignments, and hand in homework on time.
 - C. to attend every class, to do all the assignments and to hand in homework on time.
 - D. to attend every class, to do all the assignments; and to be handing in homework on time.
18. Which sentence contains an error?
- A. The card catalogue has a subject listing for reference purposes.
 - B. There are certain books that can be found without using the library card catalogue.
 - C. If a student cannot find any information lead in the author listing of the card catalogue, they should ask the librarian.
 - D. Every book in the library has a call number.
19. Which of the following does not have the same meaning as the other sentences?
- A. The problems about marriage and married life are what a young wife should know in this book.
 - B. What a young wife should know about marriage and the possible problems of married life are contained in this book.
 - C. This book contains what a young wife should know about marriage and the possible problems of married life.
 - D. Contained in this book are information about marriage and possible problems of married life which a young wife should know.

20. Which of the following would be inappropriate in making complaints?
- A. Excuse me but I'm afraid you are out of line.
 - B. Don't get me wrong, but I think we should discuss the issue.
 - C. Maybe you forgot to check the item.
 - D. How could you be so forgetful?
21. Which of the following expressions can help you involve other members of the group in the discussion?
- A. Do you agree with his opinion?
 - B. What do you mean?
 - C. Let's go on to another point.
 - D. Personally, I believe that...
22. Mathematics _____ to be one of the least popular subjects among students.
- A. appear
 - B. appears
 - C. appeared
 - D. has appears
23. Technology _____ classroom teaching and learning in the last decade.
- A. changed
 - B. changes
 - C. will change
 - D. has changed
24. Dr. Day is one of the language teaching experts _____.
- A. who advocates reading for pleasure.
 - B. who advocate reading for pleasure.
 - C. who advocated reading for pleasure.
 - D. who will have advocated reading for pleasure.
25. Maria wishes to say no to a friend who is asking for help in their homework. What should she say?
- A. I'd be glad to help.
 - B. Can you repeat what you said?
 - C. I'm with you.
 - D. I'm sorry but I'm busy.

Philippine Literature

Prepared by:
Prof. Victor Rey Fumar

Competencies:

1. Trace the development of Philippine Literature in English from the early American Period to the contemporary times.
2. Highlight the historical influences that inform Philippine literary productions.
3. Analyze the recurrent themes, pervading thought and styles in English literary productions of Filipino writers.
4. Interpret and analyze some literary texts of representative writers.

PART I-A - CONTENT UPDATE

- I. Early literary historians divided Philippine literature in English into five periods.
- Period of Orientation (1898-1899)
 - Period of Imitation (1900-1924)
 - Period of Growth and Experimentation (1925-1941)
 - Period of Propaganda (1941-1944)
 - Post- Liberation Period (1945-onwards)

The Period of Orientation (1898-1899)

- began with the Occupation of Manila by the American forces on August 13, 1898. It extended to the publication of the *College Folio* in 1910 when Filipino writers made their first attempts at expression in the new language.
- The nationalistic and rebellious spirit against the American occupation also found expression in the Filipino literature in English of this period. It consisted mostly of articles dealing with patriotism and nationalism.
- However, only *El Renacimiento* and the *Free Press* published writings in English.

The Period of Imitation (1900-1924)

- began in 1910 when the *College Folio* made its appearance in the University of the Philippines.
- This period was characterized by a strict adherence to the conventional forms of literature as exemplified in the works of Longfellow, Hawthorne, Emerson, Tennyson, Thackeray, and Macaulay; and by a careful observance of the rules of grammar and rhetoric.
- The publication of magazines and newspapers in English gave budding writers a chance to see their compositions in print. Ex. *Philippine Review, Independent,*

Rising Philippines, and *Citizens*, in addition to the *Philippine Collegian*, the UP student organ. *Philippines Herald* became the pioneer Filipino newspaper in English in 1920.

- Paz Marquez Benitez gained some measure of mastery far ahead of the period as exemplified in her short story "Dead Stars." This story was, for a long time, considered "a model of perfection in character delineation, local color, plot, and message."
- The first book of poems and the first novel in English written by a Filipino were published during this period: Procopio Solidum's *Never Mind and Other Poems* and Zoilo M. Galang's *A Child of Sorrow*.

It is the theme that poets sing about and glorify in sublime and immortal poetry. It is the wine that intoxicates. It is one of the greatest events in life – when two passionate lips dip into the sweet realm of the cup of love, while Cupid stands smiling and the angels in heaven sing of the faith of two loving souls, blessing them with ineffable happiness.

"A Child of Sorrow" - Zoilo M. Galang

Period of Expansion and Experimentation (1925-1941)

- Filipino writers mastered, not only the fundamentals, but also the nuances of the English language sufficiently to be able to write in it with more confidence. They tried all forms of writing including the novel and the drama.
- A deep attachment to the soil and a strong spirit of liberalism took possession of the writers.
- Some critics considered this period from 1930 until 1940 as the Golden Era of Filipino writing in English.
- Jose Garcia Villa (aka Dovegion) excelled as a critic, short story writer, and poet and tremendously influenced Filipino writing. A number of short story writers "arrived" with Villa – Manuel Arguilla, Paz Latorena, Loreto Paras, Arturo B. Rotor, and Alfredo E. Litiatco.

"Let me hold the bucket while you drink," she offered.

He flashed her a smile over his shoulder as he poured the water into her jar, and again lowered the bucket.

"No, no, you must not do that." She hurried to his side and held one of his arms. "I couldn't let you, a stranger..."

"Why not?" He smiled down at her, and noticed a slight film of moisture clinging down her upper lip and experienced a sudden desire to wipe it away with his forefinger. He continued to lower the bucket while she had to stand by.

"Midsummer" - Manuel Arguilla

- Filipino writers were influenced by Sherwood Anderson, Ernest Hemingway, William Saroyan, and Dorothy Parker.
- Marcelo de Gracia Concepcion's **Azucena** became the first book of Filipino verse to be printed in America. Other poets were Amador T. Daguio, Angela Manalang Gloria, and Luis Dato.
- In 1940, through the initiative and efforts of the Philippine Writers' League, the Commonwealth Government started a yearly literary contest.
- The first Filipino biographer to write in English is Carlos Quirino with his **The Great Malayan**. I.V. Mallari's **The Birth of Discontent** showed his mastery of the art of irony as well as of the English language.
- In the essay, the notable writings included Salvador P. Lopez' prize-winning collection **Literature and Society** and Francisco P. Icasiano's **Horizons from My Nipa Hut**.
- Filipino playwrights flourished during this period: Augusto C. Catanjal (The Oil Lamp), Vidal A. Tan (The Husband of Mrs. Cruz), Severino Montano (The Land of Our Fathers), and Wilfrido Ma. Guerrero (13 Plays), who became the most prolific dramatist.

RODOLFO: Did you come here to insult me, Mr. Bruno?

BRUNO: No, indeed. Kindly listen for a moment. I know also that my election is assured, and your efforts wasted.

BRUNO: Just a moment, please. I am giving you a chance to cut down your losses. Ten thousand pesos if you withdraw from this fight.

RODOLFO: Mr. Bruno, you don't understand me. I entered this fight to support certain principles. And those principles are not for sale! If this is the purpose of your (sarcastically) kind visit, (standing) I wish you goodnight.

"The Husband of Mrs. Cruz" - Vidal A. Tan

Period of Propaganda (1942-1944)

- The war dampened the literary enthusiasm of the preceding period.
- The writing of this period was largely journalistic, and the literary output was negligible for two reasons: (1) it was, in the main, insincere, and (2) there was very little opportunity for publication.
- This period saw the rise of Carlos P. Romulo, the first Filipino writer and journalist to win international recognition. He won the Pulitzer Prize; and his *I Saw the Fall of the Philippines*, *I See the Philippines Rise*, and *Mother America* became best sellers.

Post-Liberation Period (1945-)

- The militancy which might be expected as a result of the war was very evident among journalists and editors.
- The most significant achievement of this period was the recognition afforded to Filipino writers abroad.
- Carlos Bulosan put out a book of poems called *Voice of Bataan* immediately after the outbreak of World War II. This volume was followed by *The Laughter of My Father*, a collection of humorous short stories and *America Is in the Heart*, an autobiography.

Father and I hastened to the hut. He was proud of me, but he had no intention of making me marry that girl, he explained. He had better hopes for me. He opened his coconut shell in which he kept his money and took out all he had saved for years. Then we ran to town, where my mother lived with my two sisters. Father explained what had happened.

"The Laughter of My Father" - Carlos Bulosan

- Stevan Javellana published his novel ***Without Seeing the Dawn***, a war novel comparable to Rizal's masterpieces.

Her words fell like a bolt of thunder in his ears and he could not think clearly for some time. The boy, how had he looked? Did he ever come to learn to call his name, saying, "Tatay - Father?" He wanted to ask her but he did not. He had come home expecting to find peace in the bosom of his family. Peace did not welcome him, but Grief sat there on its haunches at his doorstep.

Without Seeing the Dawn - Stevan Javellana

- Jose Garcia Villa's collection of poems ***Have Come, Am Here*** revealed great power both in thought and expression and elicited the warmest praises from American and English critics.

II. Philippine Contemporary Literature in English: Tradition and Change by Ophelia A. Dimalanta and Virginia M. Mata (1985) outlined Philippine literary history into three periods.

A. The Pre-War Years from the 20's to 1941

- Philippine literature in English began with the coming of the Americans in 1898. Spanish continued to dominate the circle of the elite, but in the 30's it began to give way to English. Vernacular languages continued to be used in homes.

- UP was established in 1908, a landmark in the literary development of the country along the lines of Western traditions. It triggered the development and flowering of Philippine literature in English.
- With American textbooks, American instructors, American writers as models, the Filipinos started to learn not only a new language and a new way of life alien to their traditions: the start of Western education or mis-education, the start of colonial orientation or dis-orientation.

Pre-War Poetry

- S.P. Lopez, prophet of socially committed literature, influenced as he was by the social protest movement sweeping the USA at about that time in the wake of the great economic collapse and the depression wrote:

The real artist has a deep compassion for the suffering of the oppressed and anger at the oppressors. The highest form of art is that which springs from the wells of man's deepest urges and longings ... his love of his own kind and his longing to be free... of all the ends to which he (the artist) may dedicate his talents, none is more worthy than the improvement of the condition of man and the defense of freedom.

(Literature and Society, 1939)

- Jose Garcia Villa, on the other hand, believed in "art for art's sake": that in art, craft comes before meaning, that poetry should never be useful and propagandistic, that it must only arouse pleasure in the beautiful, must lead to contemplation, not action.
- Prior to the 20's, the poems that were written were nothing more than mere versifications, exercises in rhetoric, using specific classical moulds or patterns and poetic forms more for discipline than for art.

- Literary models were mostly Romantic and Victorian 19th century Anglo-American poets. The 20's and on to the 30's saw the profusion of romantic poems, effusive personal expression of all kinds of emotions, specifically love, love lost, love betrayed, love unrequited, or love triumphant.
- Summarizing, pre-war poetry underwent three important phases:
 1. poetry used as vehicle for mere rhetorical exercises in the service of language-learning rather than literature
 2. poetry used as vehicle for mere self-expression , personal and uncontrolled outpourings.
 3. poetry as vehicle for a dawning nationalistic fervor in the wake of the great S.P. Lopez versus Villa debate and the establishment of the Commonwealth in 1935.

Pre-War Fiction

- Prior to the 20's, Leopoldo Yabes said, " the short stories are better classified as tales rather than stories."
- The ***Philippine Free Press*** encouraged writers through its short story contest involving a cash award of one hundred pesos for the winning piece, aside from the regular twenty-peso publication royalty.
- By the end of the 30's, Filipino short stories written in English already showed more carefully crafted pieces:
 - a. the unified single impression or effect through atmosphere, tone, and style
 - b. plausible characterization
 - c. a well-defined plot structure
 - d. control of language as medium
 - e. interesting situation and a significant theme

B. The Post-War Years from the Late 40's to the 70's

- On July 4, 1946, the US granted the Philippines its political independence. Yet many features of colonialism remained.
- Petronilo Daroy noted that "indeed, the national sensibility after World War II is characterized by indignant perceptions which often manifest themselves in stories which base their claim to realism on the mere fact of their brutal treatment of evil. At any rate, this attention to the unsmiling aspects of Philippine life liberated our literature from maudlin emotionalizing and excessive sentimentalism."
- In 1949, the National Teachers College offered a 3-unit course in Contemporary Philippine Literature in English to stimulate interest in our own literature.
- The Bureau of Civil Service included Philippine Literature as a subject to be covered in the Civil Service Examination for Teachers in 1951.
- The Carlos Palanca Sr. Memorial Awards for Literature started the most prestigious annual literary contest sponsored by a liquor manufacturer, a magnate, and patron of the arts.
- The *Philippine Free Press* revived its annual award of P1,000 for the best short story. Writers' guilds were reorganized among them being the Philippine Writers Union (later the Philippine Writers Association) and the Philippine International PEN (poets, essayists, and novelists).
- In 1960, the Republic Cultural Heritage Awards for literature was created the purpose of which was "to initiate a movement for greater and more dedicated efforts in cultural advancement, to complement the country's program of economic development."

Post-War Poetry

- Modernism in poetry started in the 1950's. The modern poet experimented in techniques of versification, rhythm, music, and imagery.

- Modern poets were influenced by modern or western schools: (1) imagism, (2) metaphysical school, (3) impressionistic-symbolistic school, and (4) new criticism.

Post-War Fiction

- Carlos Bulosan's *America Is in the Heart* pursued literature's commitment to social problems in the choice of subject matter, the peasants, the laborers, the interface of economic conditions and politics.
- NVM Gonzales published *Seven Hills Away* in 1947.
- Francisco Arcellana joined the ranks of the finest writers with his *Divide By Two* by showing his artistic ingenuity in point of structure, emotional impact, subtle manipulation of symbols, and the powerful rhythm of his language.
- Bienvenido Santos wrote *You Lovely People*, his first book of short stories about Filipino exiles in America.

"Look," I said it, "one of these days, very soon, I hope, I'll be going home. I could go to your town."

"No," he said softly, sounding very much defeated but brave, "Thanks a lot. But, you see, nobody would remember me now."

Then he started the car, and as it moved away, he waved his hand.

"Goodbye," I said, waving back into the darkness. And suddenly the night was cold like winter straying early in these northern wood lands.

"Scent of Apples" - Bienvenido N. Santos

- Nick Joaquin stood above his contemporaries which included Kerima Polotan Tuvera, Gilda Cordero Fernando, Aida Rivera Ford, Estrella Alfon, Rony Diaz, Lilia Pabloc Amansec, and Gregorio Brillantes.

- The short story achieved a degree of mastery and became preoccupied with form: (1) emphasis on key moment or moment of illumination usually at the end of the story, (2) use of consistent point of view, (3) use of symbols, the story existing in more than one level, (4) evocative use of language and tone, and (5) overall structural unity, blending of form and content.
- In the novel form, Nick Joaquin's *The Woman Who Had Two Navels* showed a new way of presenting the subject matter, employing rich multi-layered meanings, and incorporating a sense of history and tradition.
- Francisco Sionil Jose started his Rosales saga with *The Pretenders*, an indictment against the modern ilustrados and social injustice.
- Kerima Polotan, writer-turned-publisher, showcased her artistic sensibility and social conscience and portrayed the yearnings and frustrations of a Flaubertian heroine in *The Hand of the Enemy*, a novel that is naturalistic in its pessimism, but romantic in its style and presentation.

It's bad enough having poor around us all the time, but not use them their loyalty, to fail to harness them for a man or a cause that can bring the country and themselves much good – All right, we pander to their greed but if you want to ensnare people's minds, you must dangle a bit of bait before them.

The Hand of the Enemy - Kerima Polotan Tuvera

The Essay

- The political essay became popular and most suited for the discussion of ideas and timely issues. Nationalist writers included Renato Constantino, Petronilo Daroy, Luis Teodoro, Jose Lacaba, Bienvenido Lumbera, Epifanio San Juan, and Dolores Feria.
- Nick Joaquin as Quijano de Manila (his pen name) wrote many essays.

- Travel essay became popular with Cristina Pantoja Hidalgo leading the pack.
- Literary critics wrote reviews and became members of the Manila Critics Circle, among them Isagani Cruz, Alfred Yuzon, Alfredo Salanga, Alice Guillermo, Doreen Fernandez, Rio Alma, and Ophelia Dimalanta.

*I shall lose them all again,
as I was wont, losing all
in this final irretrievable
loss of my deathtime.*

*or perhaps, possibly, yes,
death will be kinder and ho, yes
allow me at last this
lowing final find.*

"Finder Loser" - Ophelia Alcantara Dimalanta

A. The More Recent Times from the 70's up to the Present

- The immediate post-war years were years of conformism. It was not until the early 1960's that the students began to unite and hold mass protests and demonstrations against the evils that gnawed the government. Most of these rallies ended in violent dispersals of the police and the military.
- Using the pretext of saving the country from the threat of subversion and communist takeover, Ferdinand Marcos declared Martial Law in September 1972.
- During the 1960's some writers exhibited the western trends of naturalism and surrealism (the use of stream-of-consciousness to depict states of the subconscious). Language had also become more dense, more elaborate.
- Writers' personal commitment was questioned in terms of their choice of medium.
- Cirilo Bautista completed his trilogy of poetry books: *The Cave*, *The Archipelago*, and *Telex Moon*, a project epical in scheme, historical in perspective, and surrealistic in style.

- 10 *Compute the square of guilt against an integral*
- 11 *his age built when he was young*
- 12 *axiomatic; the sum stands thus : Along*
- 13 *the curve x (none noticed the leap; what they saw*
- 14 *was the red imprint) by which we know*
- 15 *the nothing particular, the momentum*
- 16 *carried him to the point beyond the dictum –*

"A Man Falls to His Death" - Cirilo F. Bautista

III. The Development of Philippine Literature in English (Since 1900)

by Richard Croghan, S.J. (1975) divided Philippine literature in English into three periods.

- A. The Early Period (1900-1930)
- B. The Middle Period (1930-1960)
- C. The Modern Period (1960-1975)

IV. Josephine Serrano and Trinidad Ames in A Survey of Literature in English had the following divisions:

- A. The Apprenticeship Period (1910-1935)
- B. The Emergence Period (1935-1945)
- C. Contemporary Period (1945-present)

V. Silverio Baltazar et al in Literature Past and Present (1981) described Philippine Literature in English as

- A. Period of Transition and Learning (1900-1935)
- B. Period of Emergence and Recognition (1935-1960)
- C. Period of Diversity and Re-examination (1960-present)

71. **Bienvenido Lumbera and Cynthia Nograles Lumbera in Philippine Literature: A History and Anthology (1982, revised 1997)** chronicled **Philippine literature in English** into:

- Literature during Pre-colonial Times (-1564)
- Literature Under Spanish Colonialism (1565-1898)
- Literature Under American Colonialism (1898-1945)
- Literature Under the Republic (1946-1985)
- Literature After EDSA (1986-1995)

Literatura ng Pilipinas

Inihanda ni
Prof. Victor Rey Fumar

Competencies:

1. Mabalangkas ang kasaysayan ng literature ng Pilipinas
2. Matukoy ang iba't ibang anyo ng literature na gawa ng mga manunulat sa Tagalog at iba't ibang rehiyon
3. magpakita ng kakayahan na magbigay kahulugan at magsuri ng mga teksto
4. Maipaliwanag at madalumat ang iba't ibang tema, paksa, estilo at ang kaugnayan nito sa iba't ibang panahon ng panitikan sa Pilipinas.

PART I-B - CONTENT UPDATE**I. Ang Literatura ng Pilipinas**

- Sumasaklaw sa pasalita o pasulat na pagpapahayag ng mga damdaming ukol sa mga gawi at kaugaliang panlipunan, paraan ng pamumuhay, kaisipang pampulitika at mga kapaniwalaang pangrelihiyon, ang mga adhikain, ang mga pangarap – mula pa sa bukanliwayway ng kanilang kabihasnan hanggang sa kasalukuyan
- Maaring naisulat o naisalimbibig sa iba't ibang wikain sa Pilipinas o mga salin sa panitikang banyaga o naisulat ng Filipino sa wikang dayuhan

A. Dalawang anyo ng Panitikan

1. **Tuluyan** – nasa anyo ng karaniwang pagpapahayag – malaya at madaloy na pagbuo ng mga salita. Halimbawa: maikling katha, kathambuhay o nobela, dula, salaysay, talumpati, talambuhay o biography, ulat, sanaysay at iba pa.
2. **Patula** – mga pahayag bna nagtataglay kadalasan ng sukat at tugma sa mga pantig ng taludtod o ang mga salita at paraan ng pagbuo ng pahayag ay piling-pili, matayutay, at masining bukod sa pagiging madamdamin.

Ang sukat ay bilang ng mga pantig sa isang taludtod samantalang ang tugma ay ang pagkakasintunugan ng mga huling pantig sa bawat taludtod ng saknong.

Mayroon ding mga tula na may sukat at walang tugma (blank verse) at mayroon pa ring walang sukat at walng tugma (free verse).

B. Mga Uri ng Tula

1. Tulang Liriko – mahimig, may musika, at puno ng damdamin
Kantahin – binubuo ng mga payak na salita at sukat
Oda – may marangal na uri at matinding damdamin, at karaniwang isang apostrophe o patungkol-sabi sa isang kaisipang binigyan ng personipikasyon, o pagpapahayag ng pangmadlang damdamin sa isang mahalagang pangyayari.
Elehiya – nagpapahayag ng pagninilay sanhi ng isang pangyayari o guniguni hinggil sa kamatayan.
Soneto – may labing-apat na taludtod at may iba't ibang kahatian
2. Tulang Salaysay – pagsasaad ng isang pangyayari na maaaring totoo o guniguni.
Epiko – mahabang salaysay tungkol sa kabayanihan ng bida, kung minsa'y hango sa mga karaniwang pangyayari ngunit kadalasa'y ukol sa mga di karaniwang tao na may mga pambihirang katangian.
Awit at korido – karaniwang pagsasalaysay ng kagitingan, pagkamaginoos at pakikipagsapalaran ng mga prinsepe't prinsesa, ng mga kabalyerong mandirigma sa layuning pagpapalaganap ng relihiyong Kristiano.
Karaniwang tulang salaysay – tungkol sa mga karaniwang takbo ng buhay at maaaring mga nobelang isinalaysay na patula lamang. Hal. "Ang Lumang Simbahan" (Collantes), "Ang Pangginggera (Santos)
3. Tulang Pandulaan – itinatanghal at ang mga tauhang gumaganap ay may kani-kaniyang bahaging binibigkas nang patula.
Saynete – "La India Elegante y El Negrito Amante"

TOMIN: Uban, kung ibig mo sana, / dinggin mo kung mabuti na ang itatapat kong kanta
/ kay Menanggeng aking sinta.

UBAN: Kanta yata sa ambahan / di ko na ibig pakinggan.

TOMING: Marikit na kantang bayan / bago kong pinag-aralan

UBAN: Baya! Kantahin mo agad, / totonohan ko ng lundag
Mahiwalay man sa kumpas / magagamot na ng tuwad.

"La India Elegante y el Negrito Amante" - Francisco Baltasar

Melodrama – "Plaridel" (J. Sevilla), "Katipunan," (G.B. Francisco)

C. Ang Tanaga – tulang palasak nabago pa man dumating ang mga Kastila.
Binubuo ito ng apat na taludtod na may sariling pantigan.

D. Mga Uri ng Akdang Tuluyan

1. **Ang nobela o kathambuhay** – nagtataglay ng maraming likaw ng mga tagpo at sumasaklaw sa mahabang kawing ng panahon.

Nobelang makabanghay – binibigyan diin ang pagkakabalangkas ng mga pangyayari

Nobela ng tauhan – mga hangarin at pangangailangan ng mga tauhan ang nangingibabaw

Nobela ng romansa – ito'y tungkol sa pag-iibigan

Nobela ng kasaysayan – nasasalig sa kasaysayan ang ibinubuhay

Nobela ng layunin – nagbibigay diin sa mga simulain at mga layuning mahahalaga sa buhay ng tao

Nobelang masining – mahusay na pagkakatalakay at pagkakahanay ng mga pangyayari

2. **Maikling Kuwento** – maiksi, may sadyang pangunahing tauhan, at may kaisahang kintal sa isipan ng bumabasa

Sala sayo sketch – hindi nagmamalabis bagamat masaklaw, timbang na tiribang ang mga bahagi

Kuwento ng katutubong kulay – binibigyang diin ang tagpuan, kapa giran ng isang pook, pamumuhay at kaugalian ng mga tao

Kuwento ng madulang pangyayari – pangyayari ay kapansin-pansin at nagbibubunga ng isang bigla at kakaibang pagbabago sa kapalaran ng mga tauhan

Kuwento ng pakikipagsapalarang maromansa – ang kawilihan ay nasa balangkas sa halip na sa mga tauhan

Kuwento ng kababalaghan – mga bagay na hindi kapani-paniwala at salungat sa hustong bait, kaisipan at karanasan

Kuwento ng katatawanan – kahawig lamang ng isang salaysay kaysa isang tunay na maikling kuwento

Kuwentong sikolohiko – ang tauhang nasa harap ng isang pangyayari o kaagayan ay inilalarawan sa mga pag-iisip ng mga mambabasa

Kuwento ng tauhan – binibigyang diin ang tauhan o mga tauhang gumagalaw sa kuwento.

Kuwento ng katatakutan – damdaming makapigil hininga ang pinukaw sa kawilihan ng mambabasa

Kuwento ng talino – ang mahusay na pagkakabuo ng balangkas ang umakit sa kawilihan ng mga mambabasa

3. ***Dula*** – ang kaisipan ng sumulat ay inilalagay sa bibig ng mga tauhang gumaganap sa tanghalan o dulaan.

Tragedya – nagtataglay ng mahigpit na tunggalian, ang mga tauha'y may mapupusok at masisidhing damdamin at humahantong sa pagkapahamak at pagkasawi ng pangunahing tauhan o ng iba pang mga tauhan

Komedya – masaya at nagwawakas ng kasiya-siya sa mga manonood

Melodrama – may malulungkot na sangkap ngunit nagwawakas na kasaya-siya at masaya para sa mabuting tauhan ng dula

Parsa – may layuning magpatawa sa pamamagitan ng kawil-kawil na mga pangyayaring nakakatawa at mga bukambibig at pananalitang katawa-tawa.

- Epiko ng mga Kristiano – Lam-ang; Ibalon, Labaw Donggon
- Epiko ng mga di-Kristiyano – Alim, Tuwaang, Darangan, Agyu, Sandayo, Bantugan

*Lahat sila ay tinungo ang kanilang vinta at naglayag
At nagmadali patungo sa Bayang-Nakapagitna-Sa-Dalawang-Karagatan.
Samantala, ang pinakamamahal na mga kaibigan ni Prinsipe Bantugan,
Sina Mabaning at Madali, ay bumuo ng isang mapangahas na balak
Na sakyan ang kanilang mahiwagang kalasag patungo sa langit
At hingin sa anghel ng mga patay na ibalik sa kanila
Ang kinuha nitong kaluluwa ng kanilang mahal na kaibigan.*

"Bantugen" - Epikong Maranaw, isinapilipino ni Fanny A. Garcia

B. Panahon ng Kastila / Pagpasok ng Kristiyanismo (1565-1872)

1. Panahon ng Panitikang Pansimbahan

- a. dalit – iba't ibang santo't santa ang pinagdadalitan
- b. nobena – katipunan ng mga panalangin na kailangang ganapin sa loob ng 9 na araw
- c. buhay ng mga santo't santa
- d. akdang pangmagandang-asal

Urbana at Felisa ni Padre Modesto de Castro

Ang pagsasalita ay sasayahan, ilagay sa ugali, itunton sa guhit, huwag hahaluhan ng kahambugan, at baka mapara doon sa isang nagsalitang hambog, na isinagot ng kausap: Fuu, Fuu, na ang kahulugan ay: habagat, habagat. Huwag magpalampas ng sabi at baka maparis doon sa isang palalo na sinagot ng kaharap : hintay ka muna amigo't kukuha ako ng gunting at gugupitin ko ang labis.

Urbana at Feliza - P. Modesto de Castro

2. Panahon ng Awit at Korido

a. awit ay korido

awit – binubuo ng 12 pantig sa loob ng isang taludtod, apat na taludtod sa isang taludturan. Ang musika'y madalang o andante. Ang paksa ay tungkol sa bayani at mandirigma at larawan ng buhay.

korido – ang sukat ay walong pantig sa loob ng taludtod. Ang musika ay mabilis o allegro. Ang paksa'y pananalampalataya, alamat o kababalaghan.

Pasyon – Gaspar Aquino de Belen, Don Luis Guian, Padre Mariano Pilapil, Padre Aniceto de la Merced

b. tulang pang-aliw
"Arte Poetico Tagalo"

c. tuluyang pang-aliw
Barlaan at Josaphat
Mga Buhok na Nangungusap
Tandang Basio Macunat

 - o Inigo Ed Regalado – "Ang Pinagbangunan"
 - o Florentino Collantes – "Ang Lumang Simbahan"
 - o Julian Cruz Balmaceda – "Kung Mamili ang Dalaga"
 - o Valeriano Hernandez Pena – "Luha ng Panulat"
- c. Nobela o Kathambuhay
- o Banaag at Sikat ni Lope K. Santos
 - o Pinaglahuan ni Faustino Aguilar
 - o Pinuno ng Tulisan ni Patricio Mariano
 - o Bulaklak ng Kalumpang ni Roman Reyes
 - o Madaling-Araw ni Inigo ed Regalado
- d. Dula at Dulaan
- o Severino Reyes – "Mga Kuwento ni Lola Basyang," "Walang Sugat", Gran Compañera de Zarsuela Tagala

- RELIGIOSO 1: *Ah, si Capitang Luis. Ito tagaroon sa amin. Masamang tao ito.*
 MARCELO: *Mason po yata among.*
 RELIGIOSO 1: *Kun hindi man mason, marahil filibustero, sapagka't kun siya sumulat maraming K, kabayo ka.*
 MARCELO: *Hindi po ako kabayo Among.*
 RELIGIOSO 1: *Hindi ko sinasabi kabayo ikaw, hindi kun isulat niya an kabayo may K, an lahat nan C pinalitan nan K. Masama tao iyan, mabuti Mamatay siya.*
 RELIGIOSO 2: *Marcelo, si Capitan Piton si Capitan Miguel at an Juez de Paz, ay Daratdagan nan racion.*
 MARCELO: *Hindi sila makakain en.*
 RELIGIOSO 2: *Hindi na racion ang sinasabi ko sa iyo na dagdagan ay an pagkain, Hindi, ano sa akin kundi sila kumain. Mabuti nga mamatay silan lahat. An racion na sinasabi ko sa inyo ay an palo, maramin palo na kailangan.*

"Walang Sugat" – Severino Reyes

- o Hermogenes Ilagan – "Dalagang Bukid," Ilagan Films
- o Pascual H. Poblete – "Amor Patria"
- o Juan K. Abad – "Tanikalang Ginto"
- o Jose Ma. Rivera – "Ang Mga Kamag-anak"
- o Juan Crisostomo Sotto – "Ang Kasalanan ng Patay"
- o Juan Matapang Cruz – "Hindi Ako Patay"
- o Aurelio Tolentino – "Kahapon, Ngayon, at Bukas"
- o Balagtasan
- o Balagtasan-balitaw – dulang Cebuano, pinaghalong duplo at balitaw
- o Batutian – mimetiko at satirikong pagtatalong patula
- o Bukanegan – balagtasan ng mga Ilokano
- o Crissotan – balagtasan ng mga Kapampangan

3. Panahon ng Ilaw at Panitik (1922-1934)

- o Nagsimula sa paglitaw ng magasing Liwayway.
- o Panahon ng pagpapalaganap o popularisasyon.
- o Sa pamamagitan ng "Parolang Ginto" ni Clodualdo del Mundo, pinipili ang pinakamagagaling na katha ng mga buwan at taon.
- o "Talaang Bughaw" naman ang buwanan at taunang pamimili ni Alejandro G. Abadilla ng pinakamahuhusay na tula at katha.
- o Kinilalang "Makata ng Manggagawa" si Amado V. Hernandez.

*Nangagtigil
ang gawain
sa bukirin
napahinga
ang makina
sa pabrika.
Natiwangwang
ang daunga't
pamilihan.
At sa madla
ay nagbanta
ang dalita.*

"Ang Aklasan" – Amado V. Hernandez

- o Hinangaan ang karikyan ng pananalitang ginagamit at katayugan ng diwang ipinapahayag ni Idefonso Santos.

4. Panahon ng Malasariling Pamahalaan (1935-1942)

- a. Pagsilang ng *Panitikan*, isang kapisanang itinuturing na siyang Sakdakista at aristokrata ng panulaang Filipino.
- b. Sinunog ng mga kasapi ng *Panitikan* ang mga akdang itinuring nilang basura na.

- c. Ganap nang nababakas ang tinatawag na katimpian sa larangan ng paglalarawan at sa pagpapahayag ng nadarama.
- d. Nagsimulang gumamit ng unang panauhan sa mga kuwento.
- e. Pagtalakay at paghahambing sa buhay-lunsod at buhay sa nayon.
- f. Pinagbagong-bihis ni AGA ang tula sa paggamit ng malayang taludturan at modernong tema.

- h. Mula sa "gintong panahon ng nobela" sa nakaraang panahon, nanlupaypay din ang nobela.

F. Panahon ng Hapones (1942-1945)

- a. Itinuturing itong "gintong panahon" ng maikling kuwento at ng dulang Tagalog.
- b. Ipinagbawal ang Ingles kayat nagtamasa ang mga vernacular na wika.
- c. Nabigyang-sigla ang Pambansang wika dahil sa pagtataguyod ng mananakop.
- d. Karaniwang damdaming makabayan ang mga naisulat ngunit ang mga manunulat ay ingat na ingat na hindi ito mahalata.
- e. Nabigyan ng diin ang katutubong kulay, ang pananalat at kadahupan ng pang-araw-araw na buhay.
- f. Isinaaklat ang mga itinuturing na pinakamahusay na Kathang Filipino noong 1943 – "25 Pinakamabubuting kathang Pilipino ng 1943"
- g. Namalasak ang haiku. Binuhay naman ni Ildefonso Santos ang tulang tanaga.
- h. Naisulat ang mahuhusay na kuwentong "Lupang Tinubuan" ni Narciso Reyes, "Uhaw ang Tigang na Lupa" ni Liwayway Arceo, at "Dugo at Utak" ni Cornelio S. Reyes.

G. Panahon ng Republika (1946-1972)

- a. Lumabas ang dalawang uri ng maikling katha – (1) ang komersiyal , at (2) ang pampanitikan
- b. Sinimulan ang taunang timpalak sa Tagalog at Ingles ng Carlos Palanca Memorial Awards noong 1950.
- c. Binigyang puwang ng maraming magasing komersiyal ang mga bagong mamunulat ng maikling kuwento.
- d. Nagkaroon ng maraming paksain ang mga manunulat : ang mga G.I. at ang mga babaeng hanggang piyer lamang, mga suliraning panlipunan, buhay-buhay sa mga barong-barong, sa mga estero, sa Tundo at sa Sapang-Palay.
- e. Nagkaroon ng tatak ng makabagong panahon ang mga akda:
Kalamnan o paksang-diwa
Pamamaran, porma at estilo
Paglalarawang-tauhan
Pananalita o lenggwahe
- f. Ilan sa mga pagbabago sa pamamaraan at porma sa balangkas ng kuwento:
 - o Uring may balangkas o bahagyang balangkas, ngunit ang tunay na dula ay wala sa mga pangyayaring nababasa kundi nasa paglalaro ng mga damdamin
 - o Uring walang balangkas at tila sinasadyang guluhin ang pagsasalaysay
 - o Uring ginagamitan ng daloy ng kamalayan (stream of consciousness)
 - o Uring pinuputol ang maikling kuwento pagkatapos na maihatid ang mga tauhan sa bungad ng pinakasukdol na pangyayari
 - o Uring ang maikling kuwento ay binubuo ng pansariling ulat ng bawat tauhan o pangyayari

- g. Nagkaroon ng mga pandulaang grupo:
Children's Museum and Library, Inc.
Philippine Educational Theater Association (PETA)
U.P. Mobile Theater
Arena Theater ni Severino Montano
- h. Nagkatoon din ng dalawang uri ng dula : (1) ang dulang romantiko, (2) dulang mapanghimagsik.
- i. Ang mga mandudula ay gumamit ng iba't ibang pamamaraan ng Realismong Panlipunan at Sikolohikal, ng Ekspresyonismo, at Absurdismo.
"Ang Paglilitis kay Mang Serapio" ni Paul Dumol
"Moses, Moses" ni Rogelio Sikat

H. Panahon ng Bagong Lipunan / Panahon ng Batas Militar (1972-1986)
Kathang naisulat sa panahong ito.

Buti pa sila at nakukuhang ngumisngis. Ako kaya, kangino puwedeng magreklamo? Sulatan ko kaya si Valencia? Baka naman sagutin ako nito ng "Uminom ka na lang ng kape." Si Marcos kaya? Santambak ang problema nito sa buhay, biro mong problemahin nito pati kapalaran ng Pilipinas, tapos ipasasagot pa ito sa kanya sa kasaysayan baling araw, paano ako nito mapapansin? Magreport kaya ako kay Carter, issue rin ito ng mga sinadistang estudyante, pero mahirap naming umingles. Baka interesado lang ito sa giyera na naluluma na.

"Utos ng Hari" – Jun Cruz Reyes

I. Panahon ng Ikaapat na Republika / Panahon Matapos ang EDSA
(1986 – hanggang sa kasalukuyan)

*Eksibit Blg. 1: Patalim, baril
o kahit na anong sandata,
patunay ng pagbabanta.*

*Eksibit Blg. 2: Panty na may mantsa,
patunay ng kabirhenan ng dalaga.*

*Eksibit Blg. 3: Sertipikasyon ng doctor,
patunay na –
a: sapilitan
b: lubusan
ang pagpasok ng ari,*

"Gahasa" – Joi Barrios

PART II - ANALYZING TEST ITEMS

Read the excerpt in the box to answer the item below. Choose the letter of the best answer.

The old people had ordered that the dancing should stop at ten o'clock but it was almost midnight before the carriages came lining up to the front door, the servants running to and fro with torches to light departing guests, while the girls who were staying were promptly herded upstairs in bedroom...

"May Day Eve" - Nick Joaquin

1. What Philippine literary period is used as context of the story?

- A. American Period
- B. Japanese Occupation
- C. Spanish Period
- D. Martial Law

Explanation: The correct answer is C, Spanish Period. This answer is hinted by the use of carriages (instead of cars) and torches (instead of electricity), the end of dance at 10 o'clock, the presence of servants, and the herding of girls. (A) American Period had already electricity in the city and party goers would usually have cars. (B) Japanese Occupation did not give the Filipinos the occasion to hold parties and dances. (D). Curfews during Martial Law was at 8 o'clock and private social dancing was mostly done in the afternoons.

*To say "Look what Life has done" is wrong,
People and things are seldom
Done to. They mostly do.*

"Inside Job" - Edith Tiempo

2. Which sentence best expresses the idea of the lines above?

- A. Life is what we make it.
- B. Life is too short to be wasted.
- C. People must be responsible for others.
- D. People seldom do things right.

Explanation: The correct answer is A, Life is what we make it. This is expressed by the last two lines. (B) Life is too short to be wasted, (C) People must be responsible for others, and (D) People seldom do things right are not mentioned nor implied in the given lines.

3. The idea expressed in the box below belongs to what school of thought?

*A poem is not a thought but a grace.
A poem has no meaning but loveliness.*

"Proem" - Jose Garcia Villa

- A. escapist art C. art with social consciousness
B. modern art D. art for art's sake

Explanation: The correct answer is D, art for art's sake, the aesthetic idea advocated and advanced by Jose Garcia Villa. (A) escapist art though may be considered an aspect of art for art's sake is not really an identified school of thought. (B) modern art is a general term that covers many aesthetic sensibilities. (C) art with social consciousness is directly opposed to the idea in the given lines.

4. Which sound device is **not** used in the last stanza of Carlos Angeles' poem "Dusk"?

*Far from the precinct of some fatuous fire
Streaking across the avenues like faith
Which reaffirms man's genius or desire –
And calmly smiles, and moves. The hour is late.*

- A. alliteration C. anaphora
B. assonance D. rhyme

5. What literary device is used in the closing paragraph of "Harvest," a short story written by Loreto Paras Sulit?

He was speaking to Tinay jokingly "Soon all your sampaguitas and camias will be gone my dear aunt because I shall be seeing Milia every night... and her father." He watched Fabian cleansing his face and arms and later wondered why it took his brother that long to wash his arms why he was rubbing them so hard as that...

- mystery from the bible*
- (A) allusion C. irony
B. foreshadowing D. sarcasm
6. Which figure of speech is shown in the line below taken from Irwin Castillo's "Tomorrow Is a Downhill Place" ?

The trees along the way were ruffling their wet feathers tensing their green wings in anticipation of the coming flight.

- A. personification C. simile
B. hyperbole D. metaphor
7. The narrative below is set during the

A trio of planes roared dangerously low. Shakily Lina and I dived into a shelter where a Chinese consul and his family crouched and bitterly they reproached us for crowding them in the already cramped space. Mother had run into another hole and ran out screaming for there was in it a man with half his face shot off. Outside the shelter we could hear Boni begging Please don't leave me... We were scattered in all directions.

"People in the War" - Gilda Cordero Fernando

- A. EDSA uprising
B. Vietnam War
(C) Japanese Occupation
D. Philippine Revolution of 1896
8. What is being developed in the excerpt taken from "Morning in Nagrebcan" by Manuel Arguilla?

Ambo was almost as tall as his older brother and he had a stout, husky legs. He ate the banana without peeling it.

"You foolish boy, remove the skin," Baldo said.

"I will not," Ambo said. "It's not your banana." He took a big bite and swallowed it with exaggerated relish.

"But the skin is tart. It tastes bad."

"You are not eating it," Ambo said. The rest of the banana vanished into his mouth.

- A. setting C. conflict
(B) characterization D. dialogue

General Education

9. In what part of the pyramid plot structure should the excerpt above belong?
- A. exposition C. crisis
B. complication D. denouement

- A. comic flair
- B. light-heartedness
- C. sobriety
- ☒ D. sense of humor

16. What is presented in the passage below?

With confident imagination he sees a vision of Earth whole and entire the globe revolving on its axis journeying around the sun through October and December and the months of the summertime. Earth: he pronounces the word to himself as if to savor its taste upon his tongue. Third planet from the sun... America Asia and Europe westward... the cities and the towns and the villages and all the people millions of them living now on earth... And all the stars in the sky.

"The Distance to Andromeda" - Gregorio Brillantes

- A. scientific observation
- B. personal experience
- ☒ C. metaphysical theme
- D. heavenly vision

17. What tone is established in this story excerpt below?

The letter announcing the visitation (a yearly descent upon the school by the superintendent the district supervisors and the division supervisors for "purposes of inspection and evaluation") had been delivered in the morning by a sleepy janitor to the principal. The party was the attached circular revealed at a hurried glance now at Pagkabuhay would be in Mapili by lunchtime and barring typhoons floods volcanic eruptions and other acts of God would be upon Pugad Lawin by afternoon.

"The Visitation of the Gods" - Gilda Cordero Fernando

- A. ironic ☒ B. humorous C. gloomy D. sarcastic

FLOR: *Please ask her to come and I'll buy all the tickets she wants. I have an official photographer and he could take my picture with the First Lady. She is such a sweet lady. Tell her I'll buy ten tickets and sell twenty to my friends if only she'd attend.*

MATIL: *I am sure she'll be pleased.*

FLOR: *But only on that condition. I'll buy as many tickets as she wants if she comes to my house. After all, my heart bleeds for those displaced people in Sapang Palay. I shall go there and visit them. I shall bring my photographer so I can send the picture to the papers. But I will not reveal my name, I shall wear a black veil covering my face and bring them tuyo and tapa and dilis. I could buy some stale bread from the bakeries and bring them too.*

"Call Me Flory" - Wilfredo Ma. Guerrero

18. This play exemplifies the characteristics of a

- A. romance C. tragedy
☒ B. satire D. farce

19. Who is the persona in the poem below?

*Orphaned by distances but filial to a photo-
Graph postmarked, overseas, thus did I began
My wellkept boyhood in a tidy house
a cozy house*

"Poems for My Father" - Federico Licsi Espino

- A. an OFW's son
 B. an orphaned child
 C. a photographer's daughter
 D. a young housekeeper
20. What sound device is employed in the excerpt below?

*so a ding-dong sell
 and a ding-dong buy
 imported cars and buses
 to transport the younger pop-
 ulate to point of demonstration*

"Riot Song" - Tita Lacambra Ayala

- A. anaphora
 B. assonance
 C. consonance
 D. onomatopoeia
21. What rhythmical device is used in this line from *The Small Key*? "...even the low square nipa house that stood in unashamed relief against the gray green haze of grass and leaves."
- A. alliteration
 B. assonance
 C. consonance
 D. anaphora
22. "A bamboo flute is heard far away. Once more we hear the turtle crying." What sense imagery is used in this description of the scene?
- A. visual
 B. auditory
 C. tactile
 D. olfactory
23. "SABINA (*In monotone*): Outside love, nothing lives! ..." What does Sabina mean by this line?
- A. Her love for Mr. George is forever.
 B. Her relationship with a married man causes her humiliation and embarrassment.
 C. It is better for her to die than to lose Mr. George.
 D. She hates Mr. George for lying to her.

24. Which comic technique is used in Agana's *New Yorker* in *Tondo*?

- A. mistaken identity
- B. physical blunder
- C. reversal of fortune
- ☒ D. ridiculous situation

25. What does Gonzalo mean by "a little longer" in this excerpt from Guerrero's *Three Rats*?

Adrian: *(Laughing)* I expect to live a little longer, Gonzalo.

Gonzalo: A little longer is right. *(Adrian's face slowly begins to get red. He feels a giddiness in his head – he presses his temples.)*

- A. He wants Adrian to apologize for his affair with Nita.
- ☒ B. The cyanide in Adrian's coffee is taking effect.
- C. Adrian is getting drunk and incoherent.
- D. His wife's infidelity makes him suffer in silence.

PART III - ENHANCING TEST TAKING SKILLS

DIRECTIONS: Read the excerpt, question, or incomplete statement after each number. Choose your answer to each question or incomplete statement from the choices that follow. Write the letter of your answer on your answer sheet.

1. Ano ang inilalarawan sa dalawang linyang ito?

*Kahit na tanghali ay tila rin gabi,
ang iisang ilaw ay ayaw magsindi.*

"Bayang Malaya" - Amado V. Hernandez

- A. bayan
B. bahay
C. brawnawt
D. bilangguan
2. Alin sa mga sumusunod ang **hindi totoo** hinggil sa sarswela?
- A. isang dulang musikal
B. sinasaniban ng sayaw at tugtugin
C. karaniwang paksa ang pag-aalsa
D. unang umunlad sa Espanya noong ika- 17 dantaon
3. Ang batutian ay isang mimetiko at satirikong pagtatalong patula na may kayarian ng isang dula. Ito ay ipinangalan sa makatang si
- A. Francisco Baltazar
B. Jose Corazon de Jesus
C. Jose de la Cruz
D. Crisostomo Sotto

4. Sa anong panahon naisulat ang mga taludtod na ito?

*Wala nang pamana itong Pilipinas
na layaw sa ina kundi pawing hiras;
tiis ay pasulong, patente'y nagkalat,
rekargo't impuesto'y nagsala-salabat.*

- A. Panahon ng Amerikano
C. Panahon ng Hapones
☒ B. Panahon ng Kastila
D. Panahon ng Batas ng Militar
5. Mula sa anong mga mamamayan ang tulang ito?

*Alam natin ang katotohanan
tayo man ay nasaan:
pagsapit ng hapon
lumulubog ang araw.*
"Ambahan Tungkol sa Paggawa"

- A. Tagalog
☒ B. Mangyan
C. Ivatan
D. Ilocano
6. Basahin ang mga linyang sumusunod.

*Huwag ninyo akong alukin
ng mga taludtod
kung ang tula ay isa lamang
pumpon ng mga salita.*

"Kung ang Tula Ay Isa Lamang" -
Jesus Manuel Santiago

Ang "ninyo" sa unang linya ay tumutukoy sa mga

- A. manunulat
B. ambibigkas
C. manlilimbag
☒ D. makata

7. Alin ang pinaka-angkop na buod ng halaw?

Ang pinakamabisang paraan ng paglupig sa isang bansa ay pagbihag sa kaniyang kaisipan. Ang tagumpay ng military ay hindi nangangahulugan ay pagsakop ng bansa.

"Ang Maling Edukasyon ng mga Filipino" - Renato Constantino

- A. Mas matindi ang pagkalupig ng isipan kaysa pagsakop sa teritoryo ng bansa.
 - ☒ B. Ganap ang pagsakop kung nagapi ng mga militar ang mamamayan.
 - C. Walang saysay ang lakas ng military sa tatag ng kultura ng bansa.
 - D. Nararapat labanan ang lahat ng uri ng pananakop ng nga dayuhan.
8. Anong kaisipan ang ipinapahiwatig ng dalawang linyang ito?

*Sa gitna ng salon, ang boses ng tanso ay tumatagiting,
Sinusundan-sundan ng apat na paang salit kung maglambing.*

"Three O'clock in the Morning" - Cirio H. Panganiban

- ☒ A. pagbabalatkayo
 - B. pagbabakasakali
 - C. pagtataksil
 - D. pagmamahalan
9. Sagutin ang bugtong.

*Nang bata pa'y paruparo
Nang tumanda ay latigo.*

- A. saging
- B. sinturon
- C. singkamas
- D. sitaw

Basahin ang bahagi ng nobela at sagutin ang tanong 10 at 11.

Nang mag-aalas singko ay hindi makalakad si Atong kahit walang dala. Hindi niya maitapak ang kaliwang paa niya nang dala ang buong bigat ng kanyang katawan.

- ___ Pa'no kaya akong makakauwi nito?
- ___ Ihahatid kita, kung gusto mo, ___ sabi ni Julio.
- ___ Sige na nga, pakisuyo. Sa bahay ka na tuloy tsumitsa.

Sa Mga Kuko ng Liwanag - Edgardo M. Reyes

10. Alin ang tumutukoy nang tama sa mga tauhan at tagpuan?

- ☒ A. manggagawa sa lungsod
- ☐ B. tambay sa kanto
- ☐ C. puno sa tanggapan
- ☐ D. magsasaka sa nayon

11. Ano ang ibig sabihin ng huling salitang ginamit?

- ☐ A. magpahinga
- ☐ C. matulog
- ☒ B. kumain
- ☐ D. maghintay

12. Anong kaugalian o paniniwala ang nilalaman ng awiting-bayang ito?

*Sitsiritsit, alibangbang
Salaginto, salagubang
Ang babae sa lansangan
Kung gumiri parang tandang.*

- ☐ A. Ang mga Filipina ay parang mga paruparo.
 - ☐ B. Ang mabuting babae ay dapat nasa lansangan.
 - ☐ C. Nasa loob dapat ng bahay ang kababaihan.
 - ☒ D. Ang nasa labas ng bahay ay haliparot.
- Basahin ang halaw upang masagot ang 13 at 14.

Ang karangalan, sa karaniwan, ay may kalangkap na mabigat na katungkulan, kaya bago pahikayat ang loob ng tao sa pagnanasa ng karangalan, ay ilingap muna ang mata sa katungkulan, at pagtimbang-timbangin kung makakayang pasanin.

Urbana at Felisa - P. Modesto de Castro

13. Ang karangalan na binabanggit ay ti ☒ C. kapangyarihan
- ☐ A. pag-uugali
 - ☐ B. karunungan
 - ☒ C. kapangyarihan
 - ☐ D. pinag-aralan
14. Aling pelikula ang may katumbas o katulad na tema?
- ☐ A. Batman
 - ☐ C. Zsa-Zsa Saturna
 - ☐ B. Superman
 - ☒ D. Spiderman

15. Saan nagmula ang halaw na ito?

Nakatagpo ni Baltog ang mga buwayang lumilipad sa Bicol at mga baboy-ramong kasintalaki ng mga elepante. Pinagpapatay niya ang mga ito.

- | | |
|---|----------------------------|
| ☒ A. epiko | C. kuwentong-bayan |
| B. korido | D. kuwento ng kababalaghan |

16. Anong uri ng sinaunang porma ng literatura ang nasa ibaba?

*Dagang malaki, dagang maliit
Heto ang ngipin kong sira at pangit
Bigyan mo ng magandang kapalit.*

- | | |
|--|------------|
| A. awiting-bayan | C. dalit |
| ☒ B. bulong | D. bugtong |

*Mahigit kang aba sa mapagpunuan
Ng hangal na puno at masamang asal,
Sapagkat ang haring may hangad sa yaman
Ay mariing hampas ng langit sa bayan.*

Florante at Laura - Francisco Baltazar

17. Alin ang tumpak na pagpapakahulugan ng siniping bahagi?

- ☒ A. Ang mga gahamang pinuno ay walang pinag-iba sa mga haring gahaman.
- ☐ B. Maiaking parusa sa bayan ang magkaroon ng punong gahaman at duhapang sa kayamanan.
- C. Maituturing na sabwatan ang pagkakaroon ng mga hangal na puno at ngitngit ng kalangitan.
- D. Mas malubha ang kasalanan ng mga taong pinagkatiwalaang mamuno ngunit naging gahaman.

18. Anong katotohanan hinggil sa kasaysayan ang ipinapakita sa tagpong ito ng nobela?

Sa liblib na aking kinatataguan ay nagdaan ang dalawang Makabebe na kasama ang mga Amerikano, at aking napakinggan sa kanila ang sumusunod na salitaan:

UNANG MAKABEBE: "Ito ang nuno ng tapang. Sino ang mag-aakalang makamatay pa ng walong Amerikano, ang koronel na itong halos ay naghihingalo na lamang?"

IKALAWANG MAKABEBE: "Sinasabi ng Amerikanong manggagamot na kung sa mga sugat daw lamang ay maaari pa siyang nabuhay, pagkat ang punglo'y hindi naman nakasira sa sangkap na mahahalaga sa loob ng katawan; ngunit, may kahirapan daw siyang iligtas dahil sa lubhang kakulangan ng dugo, kaya nawawala tuloy ang pag-asa dahil sa kahinaan ng katawan."

Ang Singsing ng Dalagang Marmol - Isabelo de los Reyes

- C. Ang kabayanihan ng mga rebolusyonaryo.
- D. Ang karahasan ng mga kasali sa digmaan.
- E. Ang pagtataksil sa bayan ng ilang mamamayan.
- F. Ang kalupitan ng Amerikanong mananakop.

Basamin ang halaw.

Tulad ng pista, ang dyipni ay bahagi ng buhay Filipino. Katunayan, ang Ford, Toyota, Volkswagen, at Chrysler ay mga kompanyang multinasyonal na sumakay sa popularidad ng dyipni at lumikha ng ganitong sasakyan. Ngunit dahil nilikha nang maramihan, wala sa mga ito ang sining o ang disenyong baroque. Sa halip, isahang lagyan ng kulay na lamang. May ilang drayber ng Tamaraw na sumubok na lagyan ng makulay na disenyo ang kanilang sasakyan upang makopya ang magic ng dyipni. Masyadong diretso ang linya ng mass produced na dyipni at hindi akma sa sensibilidad ng Pilipino.

"Alisin Ka Mo ang Dyipni? Teka Muna" - Valerio L. Nofuente

19. Ano ang pinupunto ng sanaysay?

- ☒ A. Ang dyipni ay bahagi ng pangkulturang pagkakakilanlan ng mga Filipino.
 - B. Ang dyipni ay nagtataglay ng kanluraning estilo kagaya ng baroque art.
 - C. Ang dyipni ay pilit ginagaya ng ibang mga bansa pero pawang nangabigo sila.
 - D. Ang dyipni ay may tatak ng parehong katutubo at dayuhang sensibilidad.
- Basahin ang halaw at sagutin ang huling tanong.

Sa mga epiko nati'y wala ang phenomenon ng himagsikan. Ngunit kung hindi tayo tututol nang malakas, kung hindi natin itataas an gating mga boses, kung hindi natin mauunawaan na ang salitang reconciliation ay matagal nang patay at ang salita dapat natin ngayon ay registration, baka lumihis ng landas an gating bayan. Baka mawala sa ating morpolohiya an gating kasaysayan. Sa halip na mapatay natin ang kontrabidang pamahalaan ay baka tayo ang mapatay ng mga mahihirap. Sa kanila nanggaling an gating mga epiko't maaari rin nilang baguhin ang morpolohiya, balarila, at gramatika ng mga ito.

"Si Lam-Ang, si Fernando Poe Jr., at si Aquino: Ilang Kuro-kuro Tungkol sa Epikong Filipino" - Isagani R. Cruz

20. Ano ang implikasyon ng kinatatakutan ng may-akdang kritiko?

- A. Ang masa ay karaniwang naaakit sa himagsikan.
- B. Ang mga epiko ay sandata sa paglaban ng mamamayan.
- C. Ang lipunan ay dapat sunud-sunuran sa mga epiko.
- ☒ D. Ang mga mahihirap ang mapagpasyang uri sa lipunan.

21. Which story has a circular plot?

- ☒ A. Dead Stars
- B. May Day Eve
- C. Magnificence
- D. Harvest

22. "But, alas, the heart forgets; the heart is distracted; and _____ passes; summer ends, the storms break over the rot-ripe orchards and the heart grows old; ..."

- A. May day eve
- B. Mayday midnight
- C. May night
- D. May-time

23. Alfredo Salazar undergoes epiphany at the end of Marquez-Benitez' story. What does epiphany mean?
- A. regret ☒ B. insight C. freedom D. confusion
24. "There was nothing to fear, for the man was always so gentle, so kind." What literary device is employed in this line from *Magnificence*?
- ☒ A. foreshadowing C. symbolism
B. *en medias res* D. flashback
25. "It was not quite five, and the bread was not yet ready." What does the bread symbolize in *Bread of Salt*?
- ☒ A. The boy's unreciprocated love for Aida.
B. The embarrassment of the boy in the presence of Aida.
C. The boy's dream of becoming a famous violinist.
D. The differences in the social status between Aida and the boy.

World Literature

Prepared by:

Dr. Ma. Antoinette C. Montealegre

Competencies:

1. show knowledge of the different genres of literature and the elements and conventions characteristic of each genre
2. apply interpretive and analytical skills in reading selected works in world literature
3. display knowledge and understanding of figures of speech and figurative language
4. point out the literary techniques and devices employed by authors
5. identify the theme/s and/or universal insights conveyed by different literary works in world literature
6. define some literary concepts evident in particular texts (e.g. in medias res, archetype, tragic flaw, etc.)

PART I - CONTENT UPDATE**A. Sumerian, Egyptian, and Hebrew Literature (3000 B.C. – 100 B.C.)**

1. **Gilgamesh.** The epic poem *Gilgamesh* is the first great heroic narrative of world literature. Its origins date back to the margins of prehistory, and its evolution spans millenia. Tablets containing portions of *Gilgamesh* have been found at sites throughout the Middle East and in all the languages written in cuneiform characters, wedge-shaped characters incised in clay or stone. The epic developed over a period of nearly a thousand years. The version discovered in the city of Nineveh amid the ruins of the great library of Assurbanipal, the last king of the Assyrian empire – what modern scholars call the Standard Version – circulated widely throughout the ancient Middle East for a millennium or more.

The epic narrates the legendary deeds of Gilgamesh, the king of Uruk, but it begins with a prologue that emphasizes not his adventures but wisdom he acquired and the monuments he constructed at the end of his epic journey. It also tells us that Gilgamesh was endowed by his divine creators with extraordinary strength, courage, and beauty. He is more god than man – 2/3 god and 1/3 human.

Gilgamesh is the epitome of a bad ruler: arrogant, oppressive, and brutal. The people of Uruk complain of his oppression to the Sumerian gods, and the gods' response is to create Enkidu as a foil to Gilgamesh. The goddess Aruru creates Enkidu to contend with Gilgamesh and absorb his energies. Gilgamesh and Enkidu fight savagely and for a long time, but no one emerges as the winner for both are strong and a match for each other. Later Enkidu becomes a faithful friend of Gilgamesh. Together they

set off to destroy Humbaba, the giant who guards the cedar forest. Both of them also kill the bull Ishtar sends to punish Gilgamesh for rejecting her advances. Enkidu is destined to die for helping to kill the bull and Humbaba. When he dies, Gilgamesh is so grief stricken that he embarks on a quest not for glory but for everlasting life. The death of Enkidu reveals to Gilgamesh the hollowness of mortal fame, and this leads him to undertake a solitary journey in search of immortality. He travels far and wide in search of the plant of immortality. When he finally gets it, he loses it to a snake which ate it while Gilgamesh sleeps.

From the Prologue

I will proclaim to the world the deeds of Gilgamesh. This was the man whom all things were known; this was the king who knew the countries of the world. He was wise, he saw mysteries and knew secret things, he brought us a tale of the days before the flood. He went on a long journey, was weary, worn-out, returning he rested, he engraved on a stone the whole story.

When the gods created Gilgamesh they gave him a perfect body. Shamash the glorious sun endowed him with beauty, Adad the god of the storm endowed him with courage, the great gods made his beauty perfect, surpassing all others, terrifying like a great wild bull. Two-thirds they made him god and one-third man.

2. **Ancient Egyptian Poetry.** The literature of ancient Egypt has survived only in scattered fragments, and because of the difficulty of the Egyptian language and writing system (a complex system of stylized pictographs called hieroglyphics), it is far less well known than either the art or the architecture.

The ancient Egyptians possessed a poetry that was rich and varied in both its subjects and its forms. The largest and earliest group of poems comes from the pyramids that were constructed in the period of the Old

Kingdom (ca. 2575-2130 B.C.). They include narratives, incantations, and invocations designed to help the pharaoh's soul on its journey to the other world. There were also lyrics and devotional poems that were composed during the millennium that includes all the dynasties of the Middle and New kingdoms (ca. 2130-1200 B.C.).

The flowering of ancient Egyptian culture came between 1570 -1085 B.C., the time of the New Kingdom in Egypt. One type of poetry that emerged in the New Kingdom is the pastoral poem which deals with the pleasures of simple rural life or that treats the longings and desires of simple people. The word pastoral comes from the Latin word for shepherd – *pastor* – but pastoral poetry is not merely about shepherds.

Sample of Egyptian poetry (excerpt only)

*When in splendor you first took your throne
high in the precinct of heaven, O living God, life truly began!
Now from eastern horizon risen and streaming,
you have flooded the world with your beauty.
You are majestic, awesome, bedazzling, exalted,
Overlord over all earth,
yet your rays, they touch lightly, compass the lands
to the limits of all your creation.
There in the Sun, you reach to the farthest of those
you would gather in for your Son, *whom you love;
Though you are far, your light is wide upon the earth;
and you shine in the faces of all who turn to follow your journeying.*

**Pharaoh Akhenaten
(Translated by John L. Foster)*

What inferences do you make about the speaker? How does the speaker portray God (line 3), the father of Pharaoh Akhenaten? What lines or words would support your answer? What figure of speech is used in 'you have flooded the world with your beauty'? What does it mean?

Below is an excerpt from an Egyptian love poem.

[Love of you is mixed deep in my vitals]

*Love of you is mixed deep in my vitals,
like water stirred into flour for bread,
Like simple compound in a sweet-tasting drug,
like pastry and honey mixed in perfection.*

Oh, hurry to look at your love!

*Be like horses charging in battle,
Like a gardener up with the sun
burning to watch his prize bud open.*

*High heaven causes a girl's lovelonging.
it is like being too far from the light,*

*Far from the hearth of familiar arms.
It is this being so tangled in you.*

(translated by John L. Foster)

Point out the lines that show the use of simile and metaphor. What do they mean? Why are they used by the speaker?

3. **The Bible: The Old Testament.** The religious attitudes of the Hebrews appear in the story that they told of the creation of the world and humankind. The most important example of Hebrew literature is the Jewish Bible (called by Christians the Old Testament in contrast to the New Testament).

The word **Bible** came from the Greek word **biblia**, meaning a collection of writings. Despite the diversity of the Bible, it is unified by a few constant themes. Among these are power, goodness, and mercy of one God; the covenant, or solemn agreement, into which God enters with the Hebrew people; the tendency of humans to commit sins; and the forgiveness they win from God. The Bible has also been of major importance for Muslims and Christians. One famous translation of the Bible was the English version done by a committee of scholars for King James (1611).

from Genesis 1

In the beginning God created the heaven and the earth. And the earth was without form, and void; and darkness was upon the face of the deep. And the spirit of God moved upon the face of the waters.

And God said, Let there be light: and there was light. And God saw the light, that it was good: and God divided the light from the darkness. And God called the light Day, and the darkness he called Night. And the evening and the morning were the first day.

And God said let there be a firmament in the midst of the waters, and let it divide the waters from the waters. And God made the firmament, and divided the waters which were under the firmament from the waters which were above the firmament: and it was so. And God called the firmament Heaven. And the evening and the morning were the second day. ...

(from King James Version)

4. **The Bible: The New Testament.** The collection known to Christians as the New Testament was formed by combining the four gospels of Matthew, Mark, Luke, and John with another book by Luke, The Acts of the Apostles, which is an account of Paul's missionary journeys to the cities of Greece and Asia Minor. The Gospel of John draws on different sources and also has greater theological density than the other three.

from Luke 15

Then drew near unto him all the publicans and sinners for to hear him. And the Pharisees and the scribes murmured, saying, This man receiveth sinners, and eateth with them.

And he spoke this parable unto them, saying, What man of you, having a hundred sheep, if he lose one of them, doth not leave the ninety and nine in the wilderness, and go after that which is lost, until he find it? And when he hath found it, he layeth it on his shoulders, rejoicing. And when he cometh home, he calleth together his friends and neighbours, saying unto them, Rejoice with me; for I have found my sheep which was lost. I say unto you that likewise joy shall be in heaven over one sinner that repenteth, more than over ninety and nine just persons, which need no repentance.

B. Persian and Arabic Literature (c.a. A.D. 600 – A.D. 1400)

Arabic Literature

By the time of Muhammad's birth, the Arabs already possessed a large body of poetry. For centuries, poets from all over Arabia had gathered to recite odes (**qasidas**) praising their own tribe or making fun of others. Even after the rise of Islam, Arabs continued to appreciate poetry. Arabic prose also began to develop, although the earliest works were religious in nature and dealt, directly or indirectly, with the text of the **Koran**. Islamic Arabs also enjoyed listening to fables and folktales. ***The Thousand and One Nights*** (also known as *The Arabian Nights*) is by far the most famous. This collection of stories puts together tales into one long narrative. One of the simplest and oldest tales in ***The Thousand and one Nights*** is "The Fisherman and the Jinnee."

from the Koran

- 1) *'God changes not what is in a people,
until they change what is in themselves.'*
- 2) *When the help of God arrives and victory,
And you see human beings entering God's religion in hordes
Then recite the praises for your Lord and seek forgiveness of Him.
Indeed, He is relenting.*

Persian Literature

The form of literature for which Persia is best known is poetry. In the 9th and 10th centuries, several poets attempted to write epic poems describing Persian history. The most famous of these poems is *The Shah-nama*, or "Epic of Kings," by Firdawsi. This epic is still considered a national treasure in Iran. The *Shah-nama* is presented as a history of Persia from the beginning of the world until the conquest of Iran by the Arabs. The most important hero is the warrior Rustam.

from Firdawsi's The Shah-nama

*'From sunrise till the shadows grew they strove
Until Suhrab, that maddened elephant,
Reached out, upleaping with a lion's spring ...'*

Another Persian poet is Omar Khayyam, who is also a mathematician and a scientist. He is probably the best known Islamic poet in the West. A collection of poetry called *The Rubaiyat* is attributed to him. His poems are written in a literary form known as the *rubai*. This form takes its name from the Arabic word for 'four,' because each poem consists of four lines, the first, second, and fourth of which rhyme with one another. The poet must use concise and vivid imagery to convey his message to the reader through the use of elaborate metaphor.

from The Rubaiyat of Omar Khayyam XXVIII
'With them the seed of Wisdom did I sow,
And with mine own hand wrought to make it grow;
And this was all the Harvest that I reap'd –
"I came like Water, and like the Wind I go."

C. Indian Literature (c. 1400 B.C. – c. A.D. 500)

Ancient Indians had no literary genres like the novel or the short story. Except for poetry and drama, most Sanskrit texts imitated the ***Rig-veda*** in attempting to convey general and timeless truths.

Hinduism, an Indian religion, claims the Vedas as the source of all truth and the basis of its religious beliefs. The earliest and most influential of these sacred texts is the ***Rig-veda***. Compiled around 1400 B.C., the ***Rig-veda*** is a collection of 1,028 hymns composed by different authors at different times. It also contains poems like the "Creation Hymn" which speculates about the origin and nature of the universe.

from the "Creation Hymn" of the Rig-veda.

- '1 There was neither non-existence nor existence then; there was neither the realm of space nor the sky which is beyond. What stirred? Where? In whose protection? Was there water, bottomlessly deep?*
- 2 There was neither death nor immortality then. There was no distinguishing sign of night and day. That one breathed, windless, by its own impulse. Other than that there was nothing beyond.'*

The ***Mahabharata*** is the world's longest epic. The myths and tales in this epic are woven into the fabric of its main story: the account of a fight over the rights to a kingdom. Two branches of a family, the Pandavas and the Kauravas, are involved in this dispute. When the five Pandava brothers are banished or exiled to the forest, they meet various characters who tell them instructive and entertaining stories. One such story is "Sibi" about how righteous behavior is rewarded.

The ***Panchatantra*** (The Five Books or The Five Strategies) attributed to Visnuśarman, is the best known collection of folktales and animal fables in Indian literature. It aimed to teach the young princes of India in the ancient times about political matters and interpersonal relationships in general.

Each of the five books of the Panchatantra begins with a frame story, whose characters tell each other stories illustrating the conduct appropriate to diverse social and political situations. The characters within the illustrative tales tell each other stories as well and so on, until the nested tales eventually lead back to the frame story.

From the Panchatantra – Book V
Ill-Considered Action

*Let the well-advised be done;
Ill-advised leave unbegun:
Else, remorse will be let loose,
As with lady and mongoose
"How was that?" asked Jewel. And they told the story of*

The Loyal Mongoose

There was once a Brahman named Godly in a certain town. His wife mothered a single son and a mongoose. And as she loved little ones, she cared for the mongoose also like a son, giving him milk from her breast, and salves, and baths, and so on. But she did not trust him, for she thought: "A mongoose is a nasty kind of creature. He might hurt my boy." Yes, there is sense in the proverb:

*A son will ever bring delight,
Though bent on folly, passion, spite,
Though shabby, naughty, and a fright.*

One day she tucked her son in bed, took a water-jar, and said to her husband: "Now, Professor, I am going for water. You must protect the boy from the mongoose." But when she was gone, the Brahman went off somewhere himself to beg food, leaving the house empty.

While he was gone, a black snake issued from his hole and, as fate would have it, crawled toward the baby's cradle. But the mongoose, feeling him to be a natural enemy, and fearing for the life of his baby brother, fell upon the vicious serpent halfway, joined the battle with him, tore him to bits, and tossed the pieces far and wide. Then, delighted with his own heroism, he ran, blood trickling from his mouth, to meet the mother; for he wished to show what he had done.

But when the mother saw him coming, saw his bloody mouth and his excitement, she feared that the villain must have eaten her baby boy, and without thinking twice, she angrily dropped the water-jar upon him, which killed him the moment it struck. There she left him without a second thought, and hurried home, ...

Sakuntala by Kalidasa is the most beloved of Indian plays. Rooted in the values of India's classical civilization, and at the same time articulating a profoundly human vision, the play about lovers parted and reunited transcends cultural particularities. The plot, adapted from an older epic tale, is simplicity itself.

On seeing the lovely maiden Sakuntala in the enchanting setting of the woodland hermitage presided over by the sage Kanva, Dushyanta inevitably falls in love with her. The young woman returns his passion. Circumstances

cause the lovers to part. A sage's curse and the loss of the king's signet ring result in the king's forgetting of his liaison with Shakuntala, and plunge her into further suffering, far away from her lover. The recovery of the ring jogs the Dushyanta's memory, and now it is his turn to suffer, not knowing where to find Shakuntala. With the intervention of the sages and gods, the two lovers are reunited together with their young son.

D. Chinese Literature (1000 B.C. – A.D. 1890)

In contrast to other ancient literary cultures, which begin with epics, prose legends or hymns to the gods, the Chinese tradition begins with *lyric poetry*. The *Classic of Poetry* (also known as the *Book of Songs*) is a collection of 305 songs representing the heritage of the Chou people. The earliest in the collection are believed to date from around 1000 B.C. and the latest from around 600 B.C., at which time it seems to have reached something like its present form.

There are temple hymns to the ancestors of the Chou ruling house, narrative ballads on the foundation and history of the dynasty, royal laments, songs of soldiers glorifying war and deploring war, love songs, marriage songs, hunting songs, songs of women whose husbands had deserted them, banquet songs, poems of mourning, and others. Many seem to have originated as folk songs, but these are mixed together with poems from the Chou aristocracy.

However simple the poems of the Book of Songs may appear on the surface, they embody the central values (if not the realities) of early Chinese civilization. Again and again the poems return to a fascination with timely action, to the need to speak out, to balances and exchanges, and to acts of explanation.

For example, a young woman tosses a man a piece of fruit as a love gift, and the young man answers with an exchange:

#64

*She cast a quince to me,
a costly garnet I returned;
it was no equal return,
but by this love will last.*

*She cast a peach to me,
costly opal I returned;
it was no equal return,
but by this love will last.*

The exchange is economically unequal, a jewel returned for fruit. But the young man acts at once to restore the exchange to balance, explaining that the jewel was not given as an object of value, but as a token and message, just as the fruit she threw had been a message.

from the Book of Songs

20

*Plums are falling,
seven are the fruits;
many men want me,
let me have a fine one.*

*Plums are falling,
three are the fruits;
many men want me,
let me have a steady one.*

*Plums are falling,
catch them in the basket;
many men want me,
let me be bride of one.*

What do the **plums** represent in the poem? What does each of the last line mean? What does each imply?

Along with poetry, the most highly valued Chinese literary works are philosophical texts. Of these books, the most notable are **The Analects** of Confucius and the **Tao Te Ching** of Lao Tzu – the principal works of Confucianism and Taoism, respectively.

The **Analects** represents the memory of Confucius's teachings and was probably not written down until many centuries after his death. In its present form the Analects consists of twenty "books" or chapters. It is a collection of

terse and sometimes apparently innocuous sayings as well as a few longer anecdotes. Throughout the Analects the reader is reminded that wisdom comes in fragments and fractions; the burden of understanding is placed on the reader. At the heart of the Analects is the hope that the members of society behave with a natural decency toward one another, respecting age and hierarchy and adapting to their changing roles.

from The Analects of Confucius

The Master said, "At fifteen I set my heart on learning; at thirty I took my stand; at forty I came to be free from doubts; at fifty I understood the decree of heaven; at sixty my ear was attuned; at seventy I followed my heart's desire without overstepping the line." (from Book II)

The Master said, "It is these things that cause me concern: failure to cultivate virtue, failure to go more deeply into what I have learned, inability, when I am told what is right, to move to where it is, and inability to reform myself when I have defects." (from Book VII)

What values or virtues are emphasized in the two teachings from the Analects?

The ***Tao Te Ching*** is widely regarded to be the most influential Taoist text. The title means "***The Classic of the Way and Its Power or Virtue.***" It is a foundational scripture of central importance in Taoism purportedly written by Laozi. The earliest text of the Tao Te Ching that has been excavated (written on bamboo tablets) dates back to the late 4th century B.C. It has been used as a ritual text throughout the history of religious Taoism.

The Tao Te Ching is not thematically ordered. However, the main themes of the text are repeatedly expressed using variant formulations, often with only a slight difference. The leading themes revolve around the nature of Tao and how to attain it. Tao is said to be unnameable and accomplishing great things through small means.

from the Tao Te Ching IX

*'Rather than fill it to the brim by keeping it upright
Better to have stopped in time;
Hammer it to a point
And the sharpness cannot be preserved forever;
There may be gold and jade to fill a hall
But there is none who can keep them.
To be overbearing when one has wealth and position
Is to bring calamity upon oneself.
To retire when the task is accomplished
Is the way of heaven.'*

What virtue or value is emphasized in this Taoist teaching? What metaphor is used in this text?

E. Japanese Literature (500 B.C. – A. D. 1890)

Poetry is one of the oldest and most popular means of expression and communication in the Japanese culture. Poetry has already existed for centuries as part of the oral tradition of the Japanese. The first anthology of Japanese poetry is the *Manyoshu*, or the *"Book of Ten Thousand Leaves."* This anthology, containing four thousand poems, includes the works by poets from a wide range of social classes, including the peasantry, the clergy, and the ruling class.

The poems of The Manyoshu were recorded using Chinese characters in three different ways: for meaning, for sound when read in Chinese, and for sound when read in Japanese. The anonymous poems in the collection, nearly two thousand, far outnumber those by any of the known poets. The collection includes poems that tell life in the wilderness, poems by fishermen, farewell poems, even poems by travelers to Korea.

from the *Manyōshū*

I Loved Her Like the Leaves
Kakinomoto Hitomaro

*'I loved her like the leaves,
The lush leaves of spring
That weighed the branches of the willows
Standing on the jutting bank
Where we two walked together
While she was of this world.
My life was built on her;
But man cannot flout
The laws of this world.
To the wide fields where the heat haze shimmers,
Hidden in a white cloud,
White as white mulberry scarf,
She soared like the morning bird
Hidden from our world like the setting sun. ...*

The above poem is an example of a **chōka**, a poem that consists of alternate lines of five and seven syllables with an additional seven-syllable line at the end. Unlike other Japanese verse forms, there is no limit to the number of lines in a **chōka**.

Another Japanese poetic form is the **tanka** which consists of five lines of five, seven, five, seven, seven syllables. This poetic form shows the Japanese preference for simplicity, suggestion, and irregularity. The most common subjects of a **tanka** are love and nature. **Tanka** poets generally exhibit restraint, relying on clear, powerful imagery to evoke an emotional response rather than using abstract words to directly express their feelings. The Japanese place more emphasis on the imagery used and the emotions evoked by a **tanka** than they do on the structure of the poems.

Here is an example of a tanka:

*'At the great sky
I gaze all my life:
For the rushing wind,
Though it howls as it goes,
Can never be seen.'*

- O. Mitsune

Still another Japanese poetic form is the **haiku**, which consists of three lines of five, seven, and five syllables. Originally it is the opening verse (the *hokku*) of a *renga*, a form of collaborative poetry, but later the haiku developed into a distinct literary form. Reflecting the dominant tastes of the Japanese culture, haiku are characterized by precision, simplicity, and suggestiveness. Almost all haiku contains a *kigo*, a seasonal word, such as cherry blossoms, snow, falling leaves.

Here are two examples of the haiku:

*'Melting snow:
And on the village
Fall the children.'
- Issa*

*An old pond:
a frog jumps in ---
the sound of water.
- Basho*

Appearing in the early part of the 8th century, the first works of Japanese prose, the **Kojiki**, or "Record of Ancient Matters," and **Nihon Shoki**, or "Chronicles of Japan," focused on Japanese history. Before Lady Murasaki Shikibu's **Tale of Genji** appeared, there was **The Tale of the Heike** written by an unknown author during the 13th century. Another important work of prose produced during the age of feudalism is **Essays in Idleness**, a loosely organized collection of insights, reflections, and observations, written during the 14th century by a Buddhist priest named Kenko.

from Essays in Idleness by Kenko

'How delightful it would be to converse intimately with someone of the same mind, sharing with him the pleasures of uninhibited conversation on the amusing and foolish things of this world, but such friends are hard to find.'

The Nō, the classical theater of Japan, is the world's extant professional theater. It is also among the world's gravest and most stylized. The word nō may be translated as "talent," "skill," or "accomplishment." Performed on an austere, undecorated stage of polished cypress, with no scenery and virtually no props, the ritual-like poetic dance-dramas of the Nō have been described as a theater free of the artifice of stagecraft. The small cast of actors, all males, wearing masks is accompanied by a chorus, and because the stage is bare with no trappings of representational theater, the actor's own talent or accomplishment (that is, his nō) became paramount.

Two other forms of drama emerged later: the *Joruri* (now called *Bunraku*) and *Kabuki*. Joruri is staged using puppets. Kabuki involves lively, melodramatic acting and is staged using elaborate and colorful costumes and sets.

F. Greek Literature (c. 800 B.C. – 323 B.C.) and Roman Literature (c. 300 B.C. – A.D. 500)

Greek Literature

The stories told in the Homeric poems are set in the age of the Trojan War, which archeologists date back to the 12th century B.C. The poems preserve some of the faded memories of the Mycenaean Age. This was the time of the final settlement of the Greek peoples, an age of invasion perhaps and migration which saw the foundation and growth of many small independent cities. The geography of Greece – a land of mountain barriers and scattered islands – encouraged this fragmentation.

Greek literature begins with two masterpieces, the *Iliad* and the *Odyssey* which are attributed to the poet Homer, about whom nothing is known except his name. Revered as statements of cultural identity, the *Iliad* and the *Odyssey* center on heroes who embody the values of ancient Greek culture.

The *Iliad* recounts only part of a long series of events in the Trojan War, which was fought, according to the legend, because of a quarrel among the gods and the resulting betrayal among mortals. All the action in the *Iliad* is, more or less directly, the consequence of Achilles' anger at being dishonored.

From the Iliad by Homer

'... Achilles of the swift feet spoke:

"O wrapped in shamelessness, with your mind forever in profit,
how shall any one of the Achaians readily obey you
either to go on a journey or to fight men strongly in battle?
I for my part did not come here for the sake of the Trojan
spearmen to fight against them, since to me they have done nothing.
Never yet have they driven away my cattle or my horses,
never in Phthia where the soil is rich and men grow great did they
spoil my harvest, since indeed there is much that lies between us,
the shadowy mountains and the echoing sea; but for your sake,
o great shamelessness, we followed, to do you favor,
you with the dog's eyes, to win you honor and Menelaos
from the Trojans. You forget all this or else you care nothing.
And now my prize you threaten in person to strip from me,
for whom I labored much, the gift of the sons of the Achaians.
Never, when the Achaians sack some well-founded citadel
of the Trojans, do I have a prize that is equal to your prize. ...'

Why does Achilles refer to Agamemnon as shameless? What figure of speech is evident in the line 'you with the dog's eyes'? 'there is much that lies between us/the shadowy mountains and the echoing sea'?

The *Odyssey* is concerned with the peace that followed the war and in particular with the return of the heroes who survived to their own kingdoms. Its subject is the long drawn-out return of Odysseus to Ithaca. He was destined to spend ten years wandering in unknown seas before he returned to his own kingdom. It celebrates return to ordinary life after all the excitement, toil, and danger. The *Odyssey* offers a more positive meditation on the nature of civilization and of the structure of political daily life as the Greeks experienced it. It does so by showing what a community has to lose by the absence of those structures and to gain by their affirmation.

*From the Odyssey – Book XXII
(Death in the Great Hall)*

*For they imagined as they wished – that it was a wild shot,
an unintended killing – fools, not to comprehend
they were already in the grip of death.
but glaring under his brows Odysseus answered:*

*"You yellow dogs, you thought I'd never make it
home from the land of Troy. You took my house to plunder,
twisted my maids to serve your beds. You dared
bid for my wife while I was still alive.
Contempt was all you had for the gods who rule wide heaven,
contempt for what men say of you hereafter.
Your last hour has come. You die in blood."*

*...
"Not for the whole treasure of your fathers,
all you enjoy, lands, flocks, or any gold
put up by others, would I hold my hand.
There will be killing till the score is paid.
You forced yourselves upon this house. Fight your way out,
or run for it, if you think you'll escape death.
I doubt one of you skins by."*

What does the scene reveal about the character of Odysseus? What lines will support your answer? What figure of speech is used in *'Your last hour has come.'*?

The Greeks are also known for their **lyric poetry**. One of the poets of the lyric is **Sappho** - singing or chanting poems to her own accompaniment on the lyre. The musical quality of her poems heightens their emotional quality.

An example of a lyric poem by Sappho:

'Awed by her splendor

*Stars near the lovely moon cover their ownbright faces
when sheis roundest and lights earth with her silver.'*

Greek drama reached its peak in the 5th century Athens. During that time, tragedies and comedies were performed in conjunction with the worship of Dionysus and fertility rituals connected with the seasons and the staple crops of the community. Tragedies dealt with universal issues and indirectly with contemporary politics, but the plots were taken from the same cycle of legends found in the Homeric epics. Themes such as war, incest, and murder were treated seriously.

One of the great Greek tragedians, aside from **Aeschylus** and **Euripides**, is **Sophocles**. He wrote the trilogy of **Oedipus Rex**, **Oedipus at Colonus**, and **Antigone**.

from Oedipus Rex by Sophocles

- Teiresias:* Alas, how terrible is wisdom when
it brings no profit to the man that's wise!
This I knew well, but had forgotten it,
else I would not have come here.
- Oedipus:* What is this?
How sad you are now that you have come!
- Teiresias:* Let me
go home. It will be easiest for us both
to bear our several destinies to the end
if you will follow my advice.
- Oedipus:* You'd rob us
of this your gift of prophecy? You talk
as one who had no care for law nor love
for Thebes who reared you.
- Teiresias:* Yes, but I see that even your words
miss the mark; therefore I must fear for mine.
- Oedipus:* For God's sake if you know anything,
do not turn from us; all of us kneel to you,
all of us here, your suppliants.
- Teiresias:* All of you here know nothing. I will not
bring to the light of day my troubles, mine –
rather than call them yours.
- Oedipus:* What do you mean?
You know of something but refuse to speak
Would you betray us and destroy the city?
- Teiresias:* I will not bring this pain upon us both,
neither on you nor on myself. Why is it
you question me and waste your labor? I
will tell you nothing.

What does Teiresias really want to say in lines 1-4? What is his attitude towards Oedipus? What line/s will support your answer?

Certain conditions must exist in tragedies. First, the character must be of high birth or noble status in society. Second, they must experience a series of events that threaten their positions. Finally, tragic character must suffer a tragic fall through his/her own actions. The gods interfere to some extent, but they never direct the plot or the characters' actions. Characters are responsible for their own actions – that is what renders tragedy tragic. Tragic characters choose their destinies. It is their choices that cause their downfall.

Oedipus Rex is famous for its dramatic irony, which is the contradiction between what the character thinks and what the audience knows to be true. Sophocles' use of dramatic irony brings out the play's knowledge motif. The knowledge Oedipus relentlessly seeks causes his downfall.

Roman Literature

Romans as well as Greeks venerated the Homeric epics, the most ancient texts of Greek literature. To take his place alongside Homer, *Virgil* situates his story at the time of the fall of Troy, and adopts conventions such as invoking the muse, involving Olympian gods in the action, and beginning the story *in medias res*. *The Aeneid* recombines and transforms the major works of Greek and Roman tradition to make a new, original, and fundamentally Roman work.

from The Aeneid by Virgil

(This is the part where Aeneas is about to leave Dido.

Aeneas has to fulfill the duty he is destined to do – to found Rome)

*'At this abruptly she broke off and ran
In sickness from his sight and the light of day
Leaving him at a loss, alarmed and mute
With all he meant to say. The maids in waiting
Caught her as she swooned and carried her
To bed in her marble chamber.
Duty-bound, Aeneas, though he struggled with desire
To calm and comfort her mind from grief,
And though he sighed his heart out, shaken still
With love of her, yet took the course heaven gave him
And went back to the fleet. ...'*

What do you infer about the value Virgil places on self-control as opposed to passion? This situation shows the conflict Aeneas undergoes in being a dutiful Roman and a husband.

Conflict is a struggle between opposing forces. Sometimes this struggle is internal, or within a character. At other times the struggle is external, or between the character and some outside force.

Another Roman writer is **Catullus** who is known for his lyric poems. He is a poet whose polished verses rivaled those of his Greek predecessors, including Sappho. A key element of Catullus' literary expression is his ability to make the emotions real in his lyric poems.

Here is a sample lyric poem of Catullus:

*'I crossed many lands and a lot of ocean
to get to this painful ceremony, my brother,
so I can finally give you gifts for the dead,
and waste time talking to some silent ashes
being that you're not here yourself with me.
Fate did wrong, my brother, to tear us apart.
But I bring you these offerings now anyway,
after the old custom our parents taught us.
Take them, soaked with your brother's tears,
and forever more, my brother, goodbye.*

What is the overall mood of the passage? What lines or words will support your answer?

G. The Middle Ages (A. D. 450 – 1300)

1. **The Song of Roland (Chanson de Roland).** This long historical poem about a medieval knight, Roland who is the nephew of King Charlemagne, is by far the best known and the most studied of all medieval poems. Central to the medieval epic are the deeds, or *gestes*, of heroic figures. *The Song of Roland* is an example of a *chanson de geste*, or song of deeds. This epic treats one of the greatest themes of medieval heroic literature: the deeds surrounding Charlemagne and his court.
2. **The Nibelungenlied is one of the great works of German literature.** This epic of murder and revenge highlights the relationship between Kriemhild and Siegfried. It is an epic which is a tragedy in two parts: the first describes the life and death of Siegfried and the second features the story of the vengeful Kriemhild.
3. **The Divine Comedy by Dante.** This epic is a poetic journey of a man struggling to reconcile himself to a bitter political exile through the triumph of love. It takes the reader to a journey that symbolically begins in a despairing world not yet redeemed by Christ's Crucifixion and ends with the poet's return as a man, renewed in hope, having beheld the beatific vision of divine grace.

H. The Renaissance (1300 – 1650)

1. **The Canterbury Tales** is a collection of stories written in Middle English by Geoffrey Chaucer at the end of the 14th century. The tales, mostly in verse, although some are in prose, are told as part of a story-telling contest by a group of pilgrims as they travel together on a journey from Southwark to the shrine of St. Thomas Becket at Canterbury Cathedral. The prize is a free meal at the Tabard Inn at Southwark on their return. Chaucer uses the tales and descriptions of the characters to paint an ironic and critical portrait of English society at the time, and particularly of the Church.

2. **Francesco Petrarca** or Petrarch was the greatest Italian poet of the 14th century. He was both well-versed in Italian and Latin. He wrote lyric poems, especially the sonnet and the *canzoni*, lyrics with intricate stanzas. Majority of his poems is dedicated to Laura. His poems contain a lot of oxymoron, a phrase that joins two logically contradictory terms like 'pleasant pain' or 'cruel kindness.' He also uses allegory, or extended metaphor; for instance, in one poem he compares his love to a dangerous voyage on a stormy sea, guided by a blind pilot.

from a Petrarchan Sonnet

*'She used to let her golden hair fly free
For the wind to toy and tangle and molest;
Her eyes were brighter than the radiant west.
(Seldom they shine so now.) I used to see
Pity look out of those deep eyes on me.
("It was false pity," you would now protest.)
I had love's tinder heaped within my breast;
What wonder that the flame burned furiously?'*

3. **The Decameron** by Boccaccio has delighted readers and inspired writers for half a millennium. It is a 14th century medieval allegory told as a frame story encompassing 100 short prose tales or *novelle* (singular: novella) by ten young people, three men and seven women, who are fleeing from plague-ridden Florence to a villa in the countryside for two weeks. The word *decameron* means 'ten days.' Rather than telling the stories directly, Boccaccio creates a fictional background or frame for the book. One famous story from this book is 'The Tale of the Falcon.'
4. **The Adventures of Don Quixote** by Miguel de Cervantes Saavedra is one famous work from the Renaissance. Don Quixote and Sancho Panza, the knight and the squire, ride from one ludicrous adventure to another in pursuit of the knight's dreams of glory. The central concern of the novel is the relationship between reality and fantasy.

5. The most important figure of the Renaissance is **William Shakespeare**. He wrote sonnets, comedies, tragedies, and historical plays. His major work in the second half of his career included a series of tragedies from **Julius Caesar** to **Coriolanus**. In the final phase of his career, he produced four plays which are now called romances, works that blend the happy ending of a comedy with elements of tragedy.

from Hamlet
William Shakespeare

*'To be, or not to be: that is the question:
Whether 'tis nobler in the mind to suffer
The slings and arrows of outrageous fortune,
Or to take arms against a sea of troubles.
And by opposing end them? To die: to sleep;
No more; and by a sleep to say we end
The heart-ache and the thousand natural shocks
That flesh is heir to? 'Tis a consummation
Devoutly to be wish'd. To die, to sleep;
To sleep: perchance to dream: ay, there's the rub;'*

Sonnet XXIX

*When in disgrace with fortune and men's eyes
I all alone beweepe my outcast state,
And trouble deaf Heaven with my bootless cries,
And look upon my self, and curse my fate,
Wishing me like to one more rich in hope,
Featur'd like him, like him with friends possess'd,
Desiring this man's art, and that man's scope
With what I most enjoy contented least;
Yet in these thoughts myself almost despising
Haply I think on thee, -- and then my state
(Like to the lark at break of day arising
From sullen earth) sings hymns at heaven's gate;
For thy sweet love rememb'red, such wealth brings,
That then I scorn to change my state with Kings.*

I. The Age of Rationalism (1650-1800)

The age was a time of progress and betterment in human affairs. Literature profited from rationalism, which left its mark on poets, essayists, playwrights, and journalists.

1. **Francis Bacon** was an English essayist, philosopher, and statesman. His collections of essays are written in clear English, and contain memorable maxims on such subjects as friendship, studies, truth, and adversity.

from Of Studies
Francis Bacon

'Studies serve for delight, for ornament, and for ability. Their chief use for delight, is in privateness and retiring; for ornament, is in discourse; and for ability, is in judgment and disposition of business. ... Some books are to be tasted, others to be swallowed, some few to be chewed and digested; ...'

2. **Gulliver's Travels** is **Jonathan Swift's** famous work. Swift was a master craftsman of irony and satire. His other works are *A Modest Proposal*, *A Tale of the Tub*, and *The Battle of the Books*.

Irony is the general name given to literary techniques that involve surprising, interesting, or amusing contradictions. Satire is writing that ridicules or holds in contempt the faults of individuals or of groups.

J. Romanticism, Realism, and Naturalism (1800 – 1890)

Romanticism was a literary movement that emerged in the late 1700's out of the revolutionary spirit fueled by the uprisings in America and France. The Romantics tended to be inspired by their imagination, inner feelings and

emotions. They wished to discard the dominant forms and approaches of the 18th century writers. They also showed a deep interest in ordinary people and favored the use of simple, common language.

Realism and **Naturalism** emerged during the middle of the 19th century. **Realism** sought to depict life as faithfully and accurately as possible. The Realists confronted many of the harsh realities of the 19th century world, often presenting pessimistic visions of the world.

Naturalism grew out of Realism. The Naturalists frequently depicted characters whose lives were shaped by forces of nature or society they could not understand and control. The naturalists believed that a person's fate is determined by heredity, chance, and the environment.

1. **William Blake's** poems have a charming simplicity that reveals his childlike imagination. He was a lover of flowers and animals as well as his fellowmen. Many of his poems show an appreciation of nature that marks him as a romanticist.

From Auguries of Innocence

*'To see the world in a grain of sand,
And a heaven in a wild flower;
Hold infinity in the palm of your hand,
And eternity in an hour.*

2. The short stories of **Guy de Maupassant** show a realistic depiction of life, its underlying pessimism, inescapable irony, surprise ending. His more popular works are ***The Necklace, A Piece of String, The Jewels,*** and ***Madame Sauvage.***

3. **Henrik Ibsen**, a Norwegian writer, was the creator of the modern, realistic prose drama. He was also one of the first writers to make drama a vehicle for social comment. He wrote the following dramas: *A Doll's House*, *Ghosts*, *An Enemy of the People*. The last one is about a man who comes into conflict with the people in the village because of a truth he wants to reveal, but he is pressured not to do it for political reasons.
4. **Leo Tolstoy** was regarded as the greatest 19th century Russian writer. He is remembered most for his novels *War and Peace* and *Anna Karenina* and for his short stories like *God Sees the Truth but Waits*; *Where Love is, There God is Also*, and *How Much Land Does a Man Need?* which probed human nature and its strengths and weaknesses.
5. **Edgar Allan Poe** is noted not only for being the greatest American short story writer, but also for having first standardized the short story as a literary type. His subjects were weird, often supernatural, with no bearing whatever on life as it is normally lived. The Raven, The Bells, and Annabel Lee are some of his popular poems. His popular short stories are The Cask of Amontillado, The Masque of the Red Death, Tell-Tale Heart, The Purloined Letter, and The Pit and the Pendulum.

K. The Modern World (1890 – 1945)

The time that ushered in the coming of modernism saw many changes and developments: technological revolution (the airplane, the automobile, the radio and the television, electricity, movies, new medical remedies), scientific breakthroughs (Mendel's work on heredity, Marie and Pierre Curie's breakthroughs concerning radioactivity, Einstein's theories), World War I, the rise of Nazism, attack on Pearl Harbor, the Holocaust.

Many writers turned away from the dominant literary forms and approaches of the past and began experimenting with new themes and techniques. The modernist writers tried to capture in their works the essence of modern life in both the form and content of their works.

1. **Luigi Pirandello** was both a dramatist and short story writer. His works dealt with the difficulties of achieving identity and questioned the distinction between appearance and reality. He is famous for his plays *Six Characters in Search of an Author* and *It is So (If You Think So)*. His short stories include *A Breath of Air*, *The Jar*, and *War* which particularly reflected his views on human nature and the emotional effects of war on people.
2. **Rabindranath Tagore** showed a deep awareness of the poverty and other hardships faced by so many of his people. He was also a vocal supporter of human and personal freedom. He was best known for his collection of poems called the *Gitanjali or Song Offerings*.

from the *Gitanjali*
Rabindranath Tagore

Where the mind is without fear and the head is held high;
Where knowledge is free;
Where the world has not been broken up
Into fragments by narrow domestic walls;
Where words come out from the depth of truth;
Where tireless striving stretches its arms towards perfection;
Where the clear stream of reason
has not lost its way into the dreary desert sand of dead habit;
Where the mind is led forward by thee into ever-widening thought and action—
Into that heaven of freedom, my Father, let my country awake.'

3. **Robert Frost** is ranked as one of the best modern American poets. His popular poems are *Mending Wall*, *The Road not Taken*, *Fire and Ice*, *Birches*, and *Stopping by Woods on a Snowy Evening*. His collection of poems includes *North of Boston*, *A Boy's Will*, and *A Further Range*.

Stopping by Woods on a Snowy Evening
Robert Frost

*Whose woods these are I think I know
His house is in the village though
He will not see me stopping here
To watch his woods fill up with snow.*

*My little horse must think it queer
To stop without a farmhouse near,
Between the woods and frozen lake
The darkest evening of the year.*

*He gives his harness bells a shake
To ask if there is some mistake.
The only other sound's the sweep
Of easy wind and downy flake.*

*The woods are lovely, dark and deep,
But I have promises to keep,
And miles to go before I sleep,
And miles to go before I sleep.*

Why does the persona stop in the woods? What figure of speech is used in lines 5-6? What is the central irony of the poem?

4. **Ernest Hemingway's** writings emphasize the disillusionment of American expatriates among whom he lived in Paris during the postwar period. He was part of the so-called 'lost generation' of writers who became preoccupied with the macabre, suffering, death, and loss of values. He wrote about peoples' struggles to maintain a sense of dignity while living in a seemingly hostile and confusing world.

His works include novels such as *Farewell to Arms*, *The Sun Also Rises*, *For Whom the Bells Toll*, *The Old Man and the Sea*, and *A Moveable Feast*. He also wrote numerous short stories like *Hills Like White Elephants*, *The Killers*, *A Clean, Well Lighted Place*, *Cat in the Rain*, and *In Another Country*.

5. **Anton Chekhov** is considered one of the greatest writers of the short story. He received a medical degree at the University of Moscow in 1884, but he soon neglected his medical practice in order to write. His numerous stories and plays gave him a commanding position in literary Russia. He gave a poignant illumination to such human experiences as loneliness, grief, hunger, and misery.

Among his famous works are the plays *The Bear* and *The Cherry Orchard*, and one of his most famous short stories is *The Lady with the Dog* which depicts what at first seems a casual liaison between a married man and a married woman. Neither expects anything lasting from the encounter, but they find themselves drawn back to each other, risking the security of their family lives.

6. **James Joyce** was an Irish author of the 20th century. He is best known for his novels *Ulysses* (1922) and *Finnegan's Wake* (1939), as well as the short story collection *Dubliners* (1914) and the semi-autobiographical

novel *A Portrait of the Artist as a Young Man* (1916). Some of his popular short stories are *Eveline*, *Araby*, and *Boarding House*.

From Eveline

She sat at the window watching the evening invade the avenue. Her head was leaned against the window curtains and in her nostrils was the odour of dusty cretonne. She was tired.

Home! She looked round the room, reviewing all its unfamiliar objects which she had dusted once a week for so many years, wondering where on earth all the dust came from. Perhaps she would never see again those familiar objects from which she never dreamed of being divided.

She had consented to go away, to leave her home. Was that wise? She tried to weigh each side of the question. In her home anyway she had shelter and food; she had those whom she had known all her life about her. Of course she had to work hard, both in the house and at business. What would they say of her in the Stores when they found out that she had run away with a fellow?

What figure of speech is used in '... the evening invade the avenue'? What is the mood of the persona? What words/passages point to this?

L. The Contemporary World (1946-to present)

1. William Faulkner wrote from the background of his native Mississippi where he lived most of his life. He is generally regarded as the most innovative American novelist of his time. He experimented with narrative chronology, explored multiple points of view, and delved deeply into the minds of his characters. His more notable novels are *The Sound and the Fury*, *As I Lay Dying*, and *Sanctuary*. His short story, *A Rose for Emily*, is one of his unforgettable works.

2. **Gabriel Garcia Marquez**, a Colombian writer, is one of the most innovative writers of the time. His style combines realistic storytelling with elements of folklore and fantasy. This style enabled him to depict the realities of Colombia. He wrote many novels and short stories. Among his novels, the most famous is *One Hundred Years of Solitude*. His short stories include *The Handsomest Drowned Man in the World*, *A Very Old Man with Enormous Wings*, and *Big Mama's Funeral*
3. The Chilean poet **Pablo Neruda** drew the inspiration for some of his best poems from objects that others hardly notice. Much of Neruda's later work expresses political sentiments. In 1971 he received the Nobel Prize for Literature. One of his famous poems is *The United Fruit Co.*

from The United Fruit Co.
Pablo Neruda

*When the trumpet sounded, it was
all prepared on the earth,
and Jehovah parceled out the earth
to Coca-Cola, Inc., Anaconda,
Ford Motors, and other entities:
The Fruit Company, Inc.
reserved for itself the most succulent,
the central coast of my own land,
the delicate waist of America.
it rechristened its territories
as the "Banana Republics"*

Why does Neruda use a biblical allegory in the first three lines? What tone does he want to achieve in using such allegory?

4. **Wole Soyinka** is a Nigerian novelist, poet, and playwright. Some consider him Africa's most distinguished playwright, when he won the Nobel Prize for Literature in 1986, the first African to be so honored. He is known for the following works: *Telephone Conversation* (a poem), *Ake: The Years of Childhood* (a memoir), and *The Interpreters* (a novel).

from Telephone Conversation
Wole Soyinka

*The price seemed reasonable, location
 Indifferent. The landlady swore she lived
 Off premises. Nothing remained
 But self-confession. "Madam," I warned,
 I hate a wasted journey – I am African."
 Silence. Silenced transmission of
 Pressurized good-breeding. Voice, when it came,
 Lipstick coated, long gold-rolled
 Cigarette-holder piped. Caught I was foully.
 "HOW DARK?" ... I had not misheard ... "ARE YOU LIGHT
 OR VERY DARK?" ...*

Why does the persona have to confess over the phone that he is African? Why is the landlady silent as soon as the persona confessed that he is African?

5. The Indonesian writer **Pramoedya Ananta Toer** wrote novels, short stories, essays, and histories of his homeland and his people. His works span the colonial period, Indonesia's struggle for independence, the Japanese occupation during WW II, as well as post-colonial authoritarian regimes of Sukarno and Suharto. Two of his best known works are *The Fugitive* (a novel) about how Indonesians lived and suffered during the Japanese occupation, and the short story *Inem* is about the traditions of Indonesia.

from *Inem*

Pramoedya Ananta Toer

Inem was my friend. She was eight, two years older than I was. She was just like all the other girls, except that she was thought to be rather pretty. People liked her. She was polite, natural, intelligent and a good worker. Because of this she quickly became well-known in the village and people began to say: "Inem would be a good daughter-in-law to have."

Then one day, as she boiled water in our kitchen, she told me: "Muk, I'm getting married."

"Really?" I said.

"Yes. Someone asked for me a week ago. My parents and kin have accepted him."

"Imagine being married!" I shouted.

It was true. Her mother came one day and talked to my mother. Inem had been entrusted to my parents. She helped with the cooking and looked after me and the others when we played.

Mother tried to dissuade her, but Inem's mother had other reasons. Finally she said: "I'm glad someone's asked for her at last. If we postponed this, perhaps no one would ask for her again. I'd be ashamed of her if she was an old maid. Perhaps she can make things easier for me when I'm old."

How would you characterize Inem's mother? What is she really worried about?

6. Siew Yue Killingley was a Malaysian poet, dramatist, teacher, and linguist. *A Question of Dowry* and *Everything's Arranged* published in *Twenty-Two Malaysian Stories* (1968) brought her immediate recognition and probably urged her to cultivate a literary career alongside her professional teaching and research duties.

from A Question of Dowry
Siew Yue Killingley

There was much excitement in Mrs. Ramachandran's household. The daughter of the house, Sivasothie, was going to be engaged. The festive air was laden with the spicy smell of curries and wades sizzled in the kwalli saucepan. The young lady of the house, as befitted her present condition, assumed a calm pose amidst the general bustle and noise. Mrs. Ramachandran flew here and there, as fast as her hundred and sixty pounds would allow her, and helped with her commanding suggestions.

'Don't put too much coconut milk in at once, Ayah! It's got to go in by stages. The last bit – the richest part, must be kept to the last! Now, Tamby, go out and play – but don't dirty your shirt. What will Uncle Thiruchelvam think if you're dirty?'

...
'We have to return the necklace.'

'Return it? Why, what will Thiruchelvam's mother and –'

Mr. Ramachandran raised his hand.

'There's something which I've wanted to tell you for some time, but I didn't want to worry you. We can't pay for the necklace. Do you remember the land we were going to sell to get the dowry and money for the necklace?'

'Oh, be careful, you old man! Do you want people to think that we have no money for our daughter?' Mrs. Ramachandran hissed in fierce whispers. ...

How would you characterize Mrs. Ramachandran? What is Mrs. Ramachandran's concern after learning they could not pay for the dowry?

Literary Terms/Concepts

1. **Allegory** – a story or a tale with two or more levels of meaning – a literal level and one or more symbolic levels. The events, setting, and characters in an allegory are symbols for ideas and qualities.
2. **Alliteration** – is the repetition of consonant sounds at the beginning of words or accented syllables.
3. **Allusion** – a reference to a well-known person, place, event, literary work, or work of art.
4. **Anaphora** – a sound device that repeats a word or words at the beginning of two or more successive clauses or verses.
5. **Anecdote** – a brief story about an interesting, amusing, or strange event.
6. **Antagonist** – a character or force in conflict with a main character, or protagonist. Not all stories contain antagonists.
7. **Aphorism** – a general truth or observation about life, usually stated concisely and pointedly. Often witty and wise, aphorisms appear in many kinds of works.
8. **Apostrophe** – a figure of speech in which a speaker directly addresses an absent person, or a personified quality, object, or idea.
9. **Aside** – in a play, it is a speech delivered by an actor in such a way that other characters on stage are presumed not to hear it.
10. **Assonance** – the repetition of vowel sounds in conjunction with dissimilar consonant sounds.
11. **Ballad** – a songlike poem that tells a story, often dealing with adventure and romance.
12. **Blank verse** – poetry written in unrhymed iambic pentameter. An iamb is a foot consisting of one weak stress followed by one strong stress.
13. **Caesura** – a pause or a break in the middle of a line of poetry.
14. **Climax** – the highest point of interest or suspense in a literary work.
15. **Conceit** – an unusual or surprising comparison between two different things.

16. **Connotation** – an association that a word calls to mind in addition to the dictionary meaning of the word.
17. **Consonance** – the repetition of consonant sounds at the ends of words or accented syllables.
18. **Denotation** – the objective meaning of a word, independent of other associations that the word brings to mind.
19. **Dialogue** – a conversation between characters. Writers use dialogue to reveal character, to present events, to add variety to narratives, and to arouse their readers' interest.
20. **Elegy** – a solemn and formal lyric poem about death, often one that mourns the passing of some particular person.
21. **Essay** – a short non-fiction work about a particular subject.
22. **Fiction** – prose writing that tells about imaginary characters and events. Short stories and novels are works of fiction.
23. **Figurative language** – writing or speech not meant to be taken literally.
24. **Figure of Speech** – an expression or a word used imaginatively rather than literally. Many writers use figures of speech – apostrophe, hyperbole, metaphor, simile, metonymy, synecdoche, personification, oxymoron.
25. **Flashback** – a section of a literary work that interrupts the chronological presentation of events to relate an event from an earlier time.
26. **Foil** – a character who provides a contrast to another character.
27. **Foreshadowing** – the use of clues that suggest events that have yet to occur.
28. **Free verse** – poetry that lacks a regular rhythmical pattern or meter.
29. **Hyperbole** – a deliberate exaggeration or overstatement. (e.g. There is a garden on her face.)
30. **Image** – a word or phrase that appeals to one or more of the five senses.
31. **Imagery** – the descriptive or figurative language used in literature to create word pictures for the reader. These pictures are created by details of sight, sound, taste, touch, smell, or movement.

- 32. Irony** – a contrast between what is stated and what is meant, or between what is expected to happen and what actually happens. In **verbal irony**, a word or a phrase is used to suggest the opposite of its usual meaning. In **dramatic irony**, there is a contradiction between what a character thinks and what the reader or audience knows to be true. In irony of situation, an event occurs that directly contradicts the expectations of the characters, of the reader, or of the audience.
- 33. Litotes** – a figure of speech that makes a deliberate understatement to affirm by negating its opposite. (e.g. Barbara Streisand is not a bad singer.)
- 34. Local color** – the use of characters and details unique to a particular place or geographic area.
- 35. Lyric poem** – a melodic poem that expresses the observations and feelings of a single speaker.
- 36. Metaphor** – a figure of speech in which one thing is spoken of as though it were something else. It expresses an indirect or implied comparison of two things which are not evidently comparable.
- 37. Metonymy** – a figure of speech that entails using a word that closely relates to a person or thing. (e.g. The pen is mightier than the sword.)
- 38. Mixed metaphor** – when two metaphors are jumbled together, e.g. *the thorns of life rained down on me*.
- 39. Onomatopoeia** – the use of words that imitate sounds, e.g. buzz, hiss, murmur, hum.
- 40. Oxymoron** – a figure of speech that combines two opposing or contradictory ideas. (e.g. freezing fire, cruel kindness)
- 41. Paradox** – a statement that seems to be contradictory but actually presents a truth. It is surprising or shocking to draw the readers' attention to what is being said, e.g. 'Because I could not stop for death/He kindly stopped for me.'
- 42. Parody** – a humorous imitation of a literary work, one that exaggerates or distorts the characteristic features of the original.
- 43. Personification** – a figure of speech that gives human traits to inanimate objects or ideas.

- 44. **Satire** – writing that ridicules or criticizes individuals, ideas, institutions, social conventions, or other works of art or literature.
- 45. **Simile** – a figure of speech that makes a direct comparison between two subjects using like or as.
- 46. **Sonnet** – a lyric poem composed of 14 iambic pentameter lines focusing on a single theme.
- 47. **Symbol** – anything that stands for or represents something else.
- 48. **Synecdoche** – a figure of speech in which a part of something is used to stand for the whole thing. (e.g. No roving foot shall crush thee here.)
- 49. **Theme** – a central message or insight into life revealed by a literary work.
- 50. **Tone** – the writer's attitude toward his or her subject, characters, or audience.

PART II - ANALYZING TEST ITEMS

20

Choose the best or correct answer.

Read the passage below and answer the questions that follow.

from Antigone by Sophocles

*Ismene: What's the matter? Trouble, clearly ...
You sound so dark, so grim.*

*Antigone: Why not? Our own brothers' burial!
Hasn't Creon graced one with all the rites,
disgraced the other? Eteocles, they say,
has been given full military honors,
rightly so – Creon has laid him in the earth
and he goes with glory down among the dead.
But the body of Polynices, who died miserably –
why, a city-wide proclamation, rumor has it,
forbids anyone to bury him, even mourn him.
he's to be left unwept, unburied, a lovely treasure
for birds that scan the field and feast to their heart's content.*

*Such, I hear, is the martial law our good Creon
lays down for you and me – yes, me, I tell you –
and he's coming here to alert the uninformed
in no uncertain terms,
and he won't treat the matter lightly. Whoever
disobeys in the least will die, his doom is sealed:
stoning to death inside the city walls!*

*There you have it. You'll soon show what you are,
Worth your breeding, Ismene, or a coward –
For all your royal blood.*

*Ismene: My poor sister, if things have come to this,
who am I to make or mend them, tell me,
what good am I to you?*

Antigone: Decide.

Will you share the labor, share the work?

Ismene: What work, what's the risk? What do you mean?

Antigone: [Raising her hands]

*Will you lift up his body with these bare hands
and lower it with me?*

*Ismene: What? You'd bury him –
when a law forbids the city?*

Antigone: Yes!

*He is my brother and – deny it as you will –
Your brother too.*

No one will ever convict me for a traitor.

1. What value is given importance by Antigone in wishing to give Polynices a proper burial such as the one accorded to Eteocles?

A. Filial piety	C. Obedience
B. Love of country	D. Humility

The best answer is A. Antigone clearly expresses the need to give her other brother Polynices a proper burial in spite of the order from King Creon not to touch Polynices' corpse. She is willing to defy the order of the king just so she can do right by her brother.

2. What would best describe the character of Antigone based on the excerpt?

A. sensitive and moody	B. brave and determined
C. kind and forgiving	D. unfeeling and mean

The best answer is B. Antigone is ready to defy King Creon's orders even at the pain of death. The punishment is nothing compared to what she will fulfill as a dutiful sister to Polynices.

3. Antigone seems to value more the idea that the _____.
- A. law of the dead must be respected over the law of the living
 - B. power of the king is limitless over his subjects
 - C. divine law is superior over human law
 - D. living help the dead to pass on to the after life

The best answer is C. Antigone uses the superiority of the divine law as her justification for her act of defiance against the will of the king. The last dialogue of Antigone in the excerpt evidently supports this.

4. The Greek word for 'overweening pride' is _____.
- A. hubris
 - B. hammaria
 - C. mimesis
 - D. peripeteia

The best answer is A. This kind of question asks for your prior knowledge. The correct answer is needed. In an interpretation question, the best answer is needed.

5. Creon suffers the consequence of his overweening pride. He lost his loved ones. This reversal of fortune of Creon is termed as _____.
- A. ananke
 - B. danke
 - C. mimesis
 - D. peripeteia

The best answer is D. Again this question asks for your prior knowledge. This calls for the use of your stock knowledge.

General Directions: Write the letter only of your answer.

1. Gilgamesh, Mahabharata, and Aeneid are examples of _____.
- A. a metrical romance
 - B. an epic
 - C. a metrical tale
 - D. an allegory
2. Which is not a lyric poem?
- A. ballad
 - B. sonnet
 - C. elegy
 - D. ode

Read the poem below and choose the best answer to the questions that follow.

VIII

- 1 *Whether at Naishapur or Babylon,*
 2 *Whether the Cup with sweet or bitter run,*
 3 *The Wine of Life keeps oozing drop by drop,*
 4 *The Leaves of Life keep falling one by one.*

from The Rubaiyat

3. The figure of speech used in Lines 3 and 4 is _____.

- A. personification C. simile
 (B) metaphor D. apostrophe

4. Lines 3 and 4 suggest that life is _____.

- (A) is short and temporary
 B. can be intoxicating and tiring
 C. can be sweet and beautiful
 D. is cruel and painful

Read the proverb and then choose the best answer to the questions that follow.

*The king who tastes his kingdom like
 Elixir, bit by bit,
 Who does not overtax its life,
 Will fully relish it.*

from the Panchatantra

5. The proverb implies that a king who rules well is one who _____.

- A. believes he is a god enjoying his power
 B. can make his country prosperous
 C. does not exact high taxes
 (D) treasures his kingdom not his position

6. The figure of speech used in lines 1-2 is _____.
- A. personification C. simile
B. metaphor D. apostrophe

Read the poem and choose the best answer to the questions that follow.

*Poverty's child—
He starts to grind the rice
And gazes at the moon.*

- Basho

7. The haiku suggests the idea that _____.
- A. nature offers the only consolation to a lonely life
B. life as symbolized by the rice is difficult for the child
C. humans are lucky to see the moon on a clear night
D. poverty makes the child feel hopeless and pitiful

Read the passage below from *The Iliad* and choose the best answer to the questions that follow.

[Achilles, still very angry because Briseis is going to be taken from him, speaks to Agamemnon after talking with the Goddess Athene who told him not to fight with Agamemnon.]

- 1 "You wine sack, with a dog's eyes, and with a deer's heart. Never
2 once have you taken courage in your heart to arm with your people
3 for battle, go into ambushade with the best of the Achaians [the Greeks].
4 No, for in such things you see death. Far better to your mind
5 is it, all along the widespread host of the Achaians
6 to take away the gifts of any man who speaks up against you.
7 King who feeds on your people, since you rule nonentities,
8 otherwise, son of Atreus, this were your last outrage.
9 ... And this shall be a great oath before you:
10 some day longing for Achilleus will come to the sons of the Achaians,
11 all of them. Then stricken at heart though you be, you will be able
12 to do nothing, when in their numbers before man-slaughtering Hektor
13 they drop and die. And then you will eat out the heart within you
14 in sorrow, that you did no honor to the best of the Achaians."

8. In lines 1-8 Achilles is saying that Agamemnon is _____.
 A. such an ugly man inside and out
 B. a drunkard, a greedy man, and a coward
 C. no better than a dog or a deer
 D. a worthless and an irresponsible person
9. In lines 10-14 Achilles, feeling angry, insulted and offended, predicts that without him _____.
 A. the Trojans will be defeated by the Achaians
 B. Agamemnon will die in the hands of Hektor
 C. all of the Achaians will suffer a tragic defeat
 D. Agamemnon will not gain fame as a hero

Identify the figure of speech used in these lines. Choose the correct answer.

10. 'My love is like a red, red rose'
 A. synecdoche
 B. metaphor
 C. metonymy
 D. simile
11. 'All eyes were on him'
 A. metonymy
 B. synecdoche
 C. personification
 D. hyperbole
12. 'The setting stars weigh down our heads toward sleep'
 A. hyperbole
 B. personification
 C. oxymoron
 D. litotes

Read the poem below and choose the best answer to the questions that follow.

From Africa by David Diop

- 1 *Africa, tell me, Africa*
 2 *Is this you?*
 3 *This back that is bent*
 4 *This back that breaks under the weight of humiliation*
 5 *This back trembling with red sears*
 6 *And saying yes to the whip of the midday sun*

13. The tone of the persona is _____.
A. ☒ angry and bitter
B. ironic and sarcastic
C. ☐ envious and spiteful
D. ☒ cautious and fearful
14. _____ is the figure of speech used in line 1.
A. Oxymoron
B. Metonymy
C. ☒ Apostrophe
D. Litotes
15. The word 'back' in lines 3-5 emphasizes and suggests the _____.
A. hard life of the black people in working on their land
B. ☒ suffering of Africa under the hands of the colonizers
C. tragic consequence of being born black and poor
D. ignorance of the Africans about their human rights
16. The word 'back' in lines 3-5 shows the use of the figure speech called _____.
A. metonymy
B. simile
C. metaphor
D. ☒ synecdoche

Read the passage below and then choose the best answer to the questions that follow.

It was in this apartment, also, that there stood against the western wall, a gigantic clock of ebony. Its pendulum swung to and fro with a dull, heavy, monotonous clang; and when the minute-hand made the circuit of the face, and the hour was to be stricken, there came from the brazen lungs of the clock a sound which was clear and loud and deep and exceedingly musical, but of so peculiar a note and emphasis that, at each lapse of an hour, the musicians of the orchestra were constrained to pause, momentarily, in their performance, to hearken the sound; and thus the waltzers perform ceased their evolutions; and there was a brief disconcert of the whole gay company; and while the chimes of the clock yet rang, it was observed that the giddiest grew pale, and the more aged and sedate passed their hands over their brows as if in confused reverie or meditation.

from The Masque of the Red Death by Edgar Allan Poe

17. The dominant atmosphere in the passage quoted is evidently _____.

- ☒ A. terrifying and horrifying C. dramatic and suspenseful-
☐ B. sad and tranquil D. tense and exciting

18. The image that helps the most to create the atmosphere is _____.

- A. the musicians who stopped performing
B. the waltzers who paused from their dancing
☒ C. the sound of the clock which chimed every hour
D. the older people who held their brows in confusion

19. The expression 'the brazen lungs of the clock' shows the use of _____ as a figure of speech.

- A. simile C. metaphor
☒ B. personification D. metonymy

20. The passage appeals the most to the sense of _____ to create the dominant atmosphere.

- ☒ A. hearing C. smell
☐ B. sight D. touch

21. The overriding issue tackled in the epic The Song of Roland is _____.

- A. good vs. evil
B. God is powerful
☒ C. loyalty to God and king
☒ D. man's place in this world

22. One of the questions which the epic Divine Comedy seeks for the readers to ponder upon is _____.

- ☒ A. What is the purpose of life?
☒ B. Is there heaven and hell?
C. Is there forgiveness?
D. Who is God?

23. These lines are taken from the poem _____ by _____.

*To see the world in a grain of sand,
And a heaven in a wild flower;
Hold infinity in the palm of your hand,
And eternity in an hour.*

- A. For Once Then Something – Robert Frost
- B. Auguries of Innocence – William Blake
- ☒ C. The Wild Honeysuckle – Philip Freneau
- D. Psalm of Life – Henry Wadsworth Longfellow

24. These are all written by Leo Tolstoy except _____.

- ☐ A. A Clean, Well Lighted Place
- ☒ B. How Much Land Does a Man Need?
- C. God Sees the Truth but Waits
- D. Where Love is, There God is Also

25. Gulliver's Travels is a kind of satire. A satire is a writing that _____.

- A. gives a sermon or a lecture to teach people to behave properly
- B. aims to entertain and give pleasure
- C. traces the etymology of things
- ☒ D. ridicules or holds in contempt the faults of individuals or groups

PART III - ENHANCING TEST TAKING SKILLS

Read the excerpt below from a poem and then choose the letter of the best answer to the questions that follow.

*"... Palm of my hand, soles of my feet
Are peroxide blond. Friction, caused –
Foolishly, madam –
By sitting down, has turned
My bottom raven black – One moment, madam! – sensing
Her receiver rearing on the thunderclap
About my ears – "Madam," I pleaded, "wouldn't you rather
See for yourself?"*

from Telephone Conversation by Wole Soyinka

- The tone of the persona in the passage is _____.
 A. angry and arrogant ☒ C. sarcastic and rude
 B. apologetic and polite D. respectful and considerate
- The lines that most convincingly support your answer are _____.
 A. lines 1-2 C. lines 5-6
 B. lines 3-4 ☒ D. lines 7-8

Read the passage below and choose the best answer to the questions that follow.

*Teiresias: I say thou art the murderer of the man 1
Whose murderer thou pursuest. 2
Oedipus: Thou shalt rue it 3
Twice to repeat so gross a calumny. 4
Teiresias: Must I say more to aggravate thy rage? 5
Oedipus: Say all thou wilt; it will be but waste of breath. 6*

*Teiresias: I say thou livest with thy nearest kin 7
In infamy, unwitting in thy shame. 8*
Oedipus: Think'st thou for aye unscathed to wag thy tongue? 9
Teiresias: Yea, if the might of truth can aught prevail. 10
*Oedipus: With other men, but not with thee, for thou 11
In ear, wit, eye, in everything blind. 12*
*Teiresias: Poor fool to utter gibes at me which all 13
Here present will cast back on thee ere long. 14*

From Oedipus Rex by Sophocles

3. The exchange of witty, biting dialogue in a drama just like what is in the excerpt from Oedipus Rex is an example of _____.
- A. stichomythia C. hubris
B. in medias res D. hammaria
4. Teiresias reveals in lines 1 and 2 that Oedipus is the man who murdered the former king of Thebes, but Oedipus does not know this. Everybody in the play knows that Oedipus is the murderer except himself. Sophocles, the dramatist, used _____ to emphasize the sad fate of Oedipus.
- A. epiphany C. mimesis
B. peripeteia D. irony
5. Based on his lines, Oedipus shows his _____ toward Teiresias.
- ☒ A. arrogance ☒ C. pity
B. respect D. hatred
6. On the other hand, Teiresias looks at ☒ C. pity with _____ in his heart.
- A. guilt ☒ C. pity
B. fear D. hatred

Read the excerpt below and choose the best answer to the questions that follow.

"It tastes like licorice," the girl said and put the glass down.

"That's the way with everything."

"Yes," said the girl. "Everything tastes of licorice. Especially all the things you've wanted so long for, like absinthe."

"Oh, cut it out."

"You started it," the girl said. I was being amused. I was having a fun time."

"Well, let's try and have a fine time."

"All right. I was trying. I said the mountains looked like white elephants. Wasn't that bright?"

"That was bright."

"I wanted to try this new drink. That's all we do, isn't it – look at things and try new drinks."

"I guess so."

The girl looked across at the hills.

"They're lovely hills," she said. "They don't really look like white elephants. I just meant the coloring of their skin through the trees."

"Should we have another drink?"

"All right."

The warm wind blew the bead curtain against the table.

"The beer's nice and cool," the man said.

"It's lovely," the girl said.

"It's really an awfully simple operation, Jig," the man said. "It's not really an operation at all."

The girl looked at the ground the table legs rested on.

"I know you wouldn't mind it, Jig. It's really not anything. It's just to let the air in."

The girl did not say anything.

"I'll go with you and I'll stay with you all the time. They just let the air in and then it's perfectly natural."

from Hills Like White Elephants by Ernest Hemingway

7. The characters in the story are actually confronted with a problem. It seems that the solution the man is suggesting is _____.

A. to break up

☒ C. to cool off

B. to get an abortion

D. to get married

9. In the exchange of the dialogue, the female character is evidently _____.
10. In the last part of the excerpt, the female character did not say anything to the man's suggestion. Her silence could mean that she _____.
11. The idea that a thing is like a white elephant means that it is _____.

Read the poem below and then choose the best answer to the questions that follow.

William Shakespeare

*When, in disgrace with fortune and men's eyes,
I all alone beweepe my outcast state,
And trouble deaf heaven with my bootless cries,
And look upon myself and curse my fate,
Wishing me like to one more rich in hope,
Featured like him, like him with friends possessed,
Desiring this man's art and that man's scope,
With what I most enjoy contented least;
Yet in these thoughts myself almost despising,
Haply I think on thee, -- and then my state,
Like to the lark at break of day arising
From sullen earth, sings hymns at heaven's gate;
For thy sweet love remembered such wealth brings
That then I scorn to change my state with kings*

12. In the first eight lines, the persona says that he _____.
- ☒ A. is poor and envious of people who have more wealth and talent
 - B. feels embarrassed every time he sees the person he loves
 - C. has been abandoned by God and he has no one else in this world
 - D. feels shy when other people look at him with pity in their eyes
13. In the last six lines of the poem, the persona compares himself to a lark. He realizes then that he _____.
- A. will remain poor all his life
 - C. is luckier than the lark
 - ☒ B. should be happy with his life
 - D. can be a king someday.
14. The use of 'deaf heaven' in line 3 is an example of a personification.
- A. metaphor
 - C. hyperbole
 - B. synecdoche
 - D. metonymy
15. The use of 'men's eyes' in line 1 is an example of a _____.
- A. metaphor
 - C. hyperbole
 - ☒ B. synecdoche
 - D. metonymy

Read the excerpt below and choose the best answer to answer the questions that follow.

From The Song of Roland (#171)

*Now Roland the Count feels: his sight is gone;
gets on his feet, draws on his final strength,
the color on his face lost now for good.
Before him stands a rock; and on that dark rock
in rage and bitterness he strikes ten blows:
the steel blade grates, it will not break, it stands unmarked.
"Ah!" said the Count, "Blessed Mary, your help!
Ah Durendal, good sword, your unlucky day,
for I am lost and cannot keep you in my care.
The battles I have won, fighting with you,
the mighty lands that holding you I conquered,
that Charles rules now, our King, whose beard is white!
Now you fall to another: it must not be
a man who'd run before another man!
For a long while a good vassal held you:
there'll never be the like in France's holy land."*

16. The narrator is perhaps _____.
- A. another soldier
 - ☒ C. a monk
 - B. Charles, the King
 - D. a vassal
17. Given the description in this scene, this is the _____ of the story.
- ☒ A. falling action
 - C. rising action
 - B. exposition
 - D. climax
18. Roland is saying good-bye to his sword in this scene. This shows the use of _____.
- A. hyperbole
 - C. oxymoron
 - B. personification
 - ☒ D. apostrophe
19. In this scene, Roland is evidently _____.
- A. relieved and contented
 - ☒ B. sad and regretful
 - C. angry and bitter
 - D. grateful and happy
20. The sword is precious to Roland as shown in this scene. The sword is a metaphor for Roland's _____.
- A. devotion and loyalty to the king
 - B. supremacy and skill in battle
 - ☒ C. courage and heroic conquests
 - D. faith and trust in the Lord
21. The characters Kriemhild and Siegfried are found in the epic _____.
- A. The Aeneid
 - ☒ B. The Nibelungenlied
 - C. The Shah-nama
 - D. El Cid
22. The Nymph's Reply to the Shepherd is a parody of _____.
- ☒ A. The Passionate Shepherd to His Love
 - B. Song to Celia
 - C. The Indian Serenade
 - ~~D. Ode to the West Wind~~

23. One outstanding and distinct feature of Latin American literature is the use of _____.

- A. the stream of consciousness technique
- B. local color
- ☒ C. magic realism
- D. flashback and flashforward

24. All are Nobel Prize winners except _____.

- A. William Faulkner
- B. Rabindranath Tagore
- C. Gabriel Garcia Marquez
- ☒ D. Chinua Achebe

25. The following passage is from _____ by Yoshida Kenko.

'Emptiness accommodates everything. I wonder if thought of all kinds intrude themselves at will on our minds because what we call our minds are vacant? If our mind were occupied, surely so many things would not enter them.'

| ☒ A. Essays in Idleness | C. Rig-veda |
| B. Bhagavad Gita | D. The Analects |

Komunikasyon sa Akademikong Filipino

Inihanda ni:
Arsenia R. Emperado, Ph.D.

Kasanayan:

Nagagamit nang may lalong
mataas na antas ng kasanayan
at kahusayan ang Filipino sa
akademikong pangangailangan.

BAHAGI I - BALIK-ARAL SA NILALAMAN: MGA BATAYANG KONSEPTO SA PAG-AARAL NG WIKA

1. Pagbibigay kahulugan sa wikang Filipino

Ang wikang Filipino kung ating susuriin ay maaaring pag-usapan at talakayin bilang:

- isang wika
 - pambansang lingua franca
 - wikang pambansa
 - wikang opisyal
- isang midyum
 - larangan ng edukasyon
 - larangan ng komunikasyon
- isang disiplina o aralin
 - elementarya
 - sekundarya
 - tersyarya
- Pambansang lingua franca, kung ginagamit upang magkaunawaan at makapag-ugnayan ang mga nag-uusap na may magkaibang katutubong wika na nagmula sa iba't ibang probinsya
- Wikang pambansa, ayon sa Saligang Batas ng 1987, Artikulo XIV Seksyon 6 na nagsasaad:

"Ang wikang pambansa ng Pilipinas ay Filipino. Samantalang nililalang, ito ay dapat payabungin at pagyamanin pa salig sa umiiral na wika sa Pilipinas at sa iba pang mga wika. Alinsunod sa mga tadhana ng batas at sang-ayon sa nararapat na maaaring ipasya ng kongreso, dapat magsagawa ng mga hakbangin ang pamahalaan upang ibunsod at puspusang itaguyod ang paggamit ng Filipino bilang midyum na opisyal ng komunikasyon at bilang wika ng pagtuturo sa sistemang pang-edukasyon"

- Wikang opisyal, ayon sa Seksyon 7:
"Ukol sa mga layunin ng komunikasyon at pagtuturo, ang mga wikang opisyal ng Pilipinas ay Filipino at, hangga't walang itinatadhana ang batas, Ingles."
 - Isang midyum, sa Seksyon 7, tiniyak ang mga wikang panturo. Bilang pagtugon sa batas, naglunsad ang Department of Education, Culture and Sports (dating Ministri ng Edukasyon, Kultura at Isports) ng palisi sa edukasyong bilinggwal na nakasaad sa DECS Order No. 52, s, 1987 (dating Kautusang Pangkagawaran Blg. 25, s, 1974).
 - Layunin ng kautusan ang pagtatamo ng kompetens sa Filipino at Ingles sa lebel pambansa sa pamamagitan ng pagtuturo ng dalawang wika at paggamit ng mga ito bilang midyum ng pagtuturo sa lahat ng antas ng edukasyon. Pangarap ng kinauukulan na magkaroon ng kasanayan ang buong sambayanang Pilipino sa wikang Filipino at kasanayan sa wikang Ingles upang matugunan ang pangangailangan ng bansa pati na rin ang pangangailangang global.
 - Bilang disiplina, hindi lamang wikang panturo, kundi mga tiyak na sabdyek / aralin mula antas elementarya hanggang kolehiyo
2. Ginagamit ng tao ang wika sa kanyang pag-iisip, sa kanyang pakikipag-ugnayan at pakikipag-usap sa ibang tao, at maging sa pakikipag-usap sa sarili. Samakatuwid, wika ang behikulo ng ating ekspresyon at komunikasyon na epektibong magagamit.
 3. Sa panahong maging ganap na ang pagkatuto ng tao ng kanyang wikang kinagisnan, nasa kanya na hindi lamang ang kakayahang bumuo ng anumang pangungusap na ibinabagay niya sa kahit ano pa mang sitwasyon kundi pati umunawa ng kahit ano ring pangungusap na maririnig niya sa unang pagkakataon sa kanyang wika.

4. Kaugnay ng nabanggit na kaisipan sa *Blg. 2*, ang pag-aaral ng isang wika tulad ng Filipino ay binubuo ng dalawang kakayahan:
 - kakayahang makabuo ng mga pahayag o pangungusap na may wastong kayariang pambalarila; tinatawag itong kakayahang *panlinggwistika* o *linguistic competence*
 - kakayahang maunawaan at magamit ang mga pangungusap na may wastong pambalarilang kayarian sa angkop na panlipunang kapaligiran ayon sa hinihingi ng sitwasyon; tinatawag itong kakayahang komunikatibo o *communicative competence*

5. Ang isang ispiker ng wika ay nag-aangkin ng ***kakayahang panlinggwistika*** o *linguistic competence* dahil nasa kanyang *subconscious* ang kabuuan ng pamamaraan ng pagbuo ng salita, pangungusap, at kombinasyon ng mga ito. Samakatuwid ang mga patern at mga tuntunin sa pagbuo ng mga pangungusap ang ***grammar*** ng isang wika.

6. Kaugnay ng kaisipan sa Big. 5, mahalagang maunawaan na lahat ng wika ay may grammar at nahahati sa sumusunod: ponolohiya, morpolohiya, sintaks, semantika
 - 6.1 Ponolohiya – patern o kumbinasyon ng mga tunog sa loob ng isang wika
 - ***Mga Ponemang Segmental*** - ito ang mga tunog na ginagamitan ng mga katumbas na letra o titik upang mabasa at mabigkas
 - Katinig - ipinakikita ang mga ponemang ito batay sa paraan ng artikulasyon (pamaraan ng pagpapalabas ng hangin) at punto ng artikulasyon (bahagi ng bibig na ginagamit para makalusot ang hangin)
 - Patinig - may limang pangunahing patinig ang Filipino (a, e, i, o, u); ang mga tunog /e/ at /i/, gayundin ng /o/ at /u/ - ay mga tunog na maaaring magkapalitan na hindi nababago ang kahulugan ng salita. Hal. babae – babai; noon – nuon

- Diptonggo - pinagsamang tunog ng isang patinig (a, e, i, o, u) at isang malapatinig (w, y). Hal. bahay, reyna, baliw, tuloy
- Klaster / kambal katinig - magkasunod na tunog katinig, karaniwang salitang hiram ang may ganitong tunog. Hal. *bruha*, *droga*, *globo*
- **Mga Ponemang Suprasegmental** - karaniwang hindi tinutumbasan ng mga letra sa pagsulat kundi mga simbolo lamang upang matukoy ang paraan ng pagbigkas
 - diin
 - tono, intonasyon, punto
 - hinto / antala
- **Alfabetong Filipino** - may 28 letra; tulad din ng tawag sa Ingles ang tawag sa bawat letra, maliban sa letrang ñ na bigkas - Kastila
- **Silabikasyon** - paghahati ng mga pantig sa wikang Filipino; mga halimbawang patern ng silabikasyon sa wikang ito:

PKK	-	eks - tra
KPKK	-	is - kawt
KKPK	-	trak
KKPKK	-	mag - drayb
KPKKK	-	a - nawns - ment

6.2 Morpolohiya - may kinalaman sa pagbuo ng salita

- Mga paraan ng pagbuo ng salita
 - a. paggamit ng salitang ugat- sariwa
 - b. paglalapi - napaka-sariwa
 - c. pag-uulit - maganda-ganda
 - d. pagtatambal - silid-aklatan
- Mga pagbabagong morpoponemiko
 - a. asimilasyon pang + bansa = pambansa
 - b. pagpapalit ano + ano = anu-ano
 - c. paglilipat y + in + akap = yinakap = niyakap

- d. pagkakaltas bili + han = bilihan = bilhan
- e. pagdaragdag paalala + han = paalalahan;
 paalalahan + an = paalalahanan
- f. pag-aangkop hintay + ka = teka
- Bahagi pa rin ng mga paraan ng pagbuo, pati ng pagpapalawak, ang mga bahagi ng pananalita ng wikang Filipino. Ginagamit sa iba't ibang pagpapahayag ang mga sumusunod na saklaw ng pambalarilang kayarian (*grammatical structures*):
- Mga Salitang Pangnilalaman (*Content Words*)
 - a. Mga Nominal
 - Pangngalan
 - Panghalip
 - b. Pandiwa
 - Pokus
 - Aspekto
 - c. Panuring
 - Pang-uri
 - Pang-abay
- Mga Salitang Pangkayarian (*Functional Words*)
 - a. Mga Pang-ugnay
 - Pangatnig
 - Pang-angkop
 - Pang-ukol
 - b. Mga pananda
 - Pantukoy
 - Pangawing

6.3 Sintaks - pagbuo at pagpapahaba ng mga pangungusap

- Batayang pangungusap at mga bahagi nito:
Panaguri
Paksa

Sa Filipino, normal o karaniwan ang pagsasabi muna ng panaguri, kasunod ang paksa tulad nito:

Kumakanta si Martin Nievera

(Panaguri + Paksa)

sa halip na:

Si Martin Nievera ay kumakanta

(paksa + ay + panaguri)

- Magagamit na panaguri ng pangungusap ang iba't ibang bahagi ng pananalita, kabilang ang nominal, pang-uri, pandiwa, at pang-abay, tulad ng mga sumusunod na halimbawa:

Pangungusap = Panaguri + Paksa

➤ Mga nominal

- ✓ Pangngalan - Doktor + ang kapitbahay ko.
- ✓ Panghalip - Sila + ang barkada ko.
- ✓ Panghalip Parnatlig - Iyon + ang alaga niyang aso.
- ✓ Pariralang Nominal - Ang dalagang iyan + ang nililiyag ko.

Pangungusap = Panaguri + Paksa

➤ Pang-uri

- ✓ Payak - Duwag + si Berto.
- ✓ Maylapi - Mataba + si Berto.
- ✓ Inuulit - Maligayang-maligaya + si Berto.
- ✓ Tambalan - Balat-sibuyas + si Berto.
- ✓ Pariralang Pang-uri - May makinis na balat + si Berto.

➤ Pandiwa

- ✓ Walang komplemento - Naglalaba + ang nanay.
- ✓ May komplemento - Naglilinis ng mesa sa kusina + ang nanay (aktor, layon, taga-tanggap, ganapan atbp)

➤ Pang-abay

- ✓ Pamanahon - Kamakalawa pa inilibing + ang napatay na sundalo.

- ✓ Pamaraan - Malikot matulog + ang sanggol.
- ✓ Panlunan - Sa Baguio nagbakasyon + ang mag-anak.
- Magagamit na paksa (simuno, topic, pinag-uusapan, sentro, pokus ng usapan) sa pangungusap ang mga pariralang nominal. Inihuhudyat ng nauunang pananda o marker ang (para sa pangngalang pambalana), si / sina (para sa mga tangi o personal na pangalan) ang paksa ng pangungusap sa Filipino.

Ginagamit ang ang sa anumang bahagi ng pananalita na ginawang nominal, maging ito ay pangngalan, pang-uri, pandiwa, o pang-abay.

Pangungusap = Panaguri + paksa

- a. Pariralang Pangngalan = Nagwawalis + ang Metro Aide.
- b. Pariralang Pang-uri = Nagwagi + ang pinakamataas sa lahat.
- c. Pariralang Pandiwa = Isabay mo + ang mga nahuli.
- d. Pariralang Pang-abay = Binati ko + ang nanalo kahapon.
- Sa mga pangungusap na verbal (kung saan pandiwa ang panaguri), nagiging pokus ng pangungusap ang paksa pagkat nagkakaroon ng semantic na relasyon ang pandiwa sa paksa.

Halimbawa:

Batayang Pangungusap (BP)

Naglinis (ng mesa) ang nanay (sa kusina).

Sa BP na ito, nakapokus sa aktor / tagaganap (ang nanay) ang pangungusap, at mga komplemento naman ang "ng mesa" (layon) "sa kusina" (ganapan).

Sa pagbabago ng panlapi, pansining maipopokus ang iba't ibang komplemento tulad ng sumusunod:

- ✓ Pokus sa layon: Nilinis ng nanay ang mesa sa kusina.
- ✓ Pokus sa ganapan: Pinaglinisan ng nanay ng mesa ang kusina.

- ✓ Pokus sa sanhi: Ikinapagod ng nanay ang paglilinis ng mesa sa kusina.
- ✓ Pokus sa instrumento: Ipinanlinis ng nanay ng mesa sa kusina ang tubig sa timba.
- ✓ Pokus sa direksyon: Puntahan mo ang kusina (na pinaglilinisang mesa ng nanay).
- Bukod pa sa ***batayang pangungusap***, na binubuo ng kompletong panaguri at paksa, mayroon pang ibang uri ng pangungusap sa wikang Filipino:
 - Pangungusap na Hango sa Batayang Pangungusap
 - **Nasa anyong tanong**
BP: Kumain na ang mga panauhin.
Mga tanong na hango sa BP
Masasagot ng Oo o Hindi
Kumain na ba ang mga panauhin?
Kumain na ang mga panauhin di ba?
Talaga bang kumain na ang mga panauhin?
Ano, kumain na ang mga panauhin?

Humihingi ng impormasyon

Sino ang kumain na?
Kailan kumain ang mga panauhin?
Paano kumain ang mga panauhin?
Saan pupunta ang mga panauhin?
Ano ang ginawa ng mga panauhin?
Ilang panauhin ang umalis na?

Masasagot ng mayroon o wala

May umalis na bang mga panauhin?
Wala pa bang umaalis na mga panauhin?

Humihingi ng alternatibo

Umalis na ba o hindi pa ang mga panauhin?

Alin ang gusto mo: iyan o ito?

Ano ang uunahin ko: ito ba o iyan?

- o **Mga Pangungusap na tiniyak ang panaguri**

Batayang Pangungusap (BP)	Hangong Pangungusap (HP)
Bakla ang nakita niya. (Sino ang nakita niya?)	Ang bakla ang nakita niya. (Tiniyak kung sino ang nakita.)

- o **Mga konstruksyong binaliktad o *inverted***

- a. Inverted ay - ito ang tinutukoy na di-karaniwang ayos sa Filipino na malimit gamitin sa mga nasusulat na *literature* at *formal* na rehistro.

Pangungusap = Paksa + ay ('y) + Panaguri

BP: Nagmeryenda na si Nanang.

HP: Si Nanang ay nagmeryenda na.

- b. Iba pang konstruksyong binaliktad o *inverted*

BP: Umalis na kahapon ang mga balikbayan.

HP: Kahapon, umalis na ang mga balikbayan (hindi ngayon).

- o **Mga Pangungusap na naghahayag ng negasyon**

BP: Umakyat ang mga bata.

HP: Hindi / Di-dapat umakyat ang mga bata.

Ayaw kong umakyat ang mga bata.

Huwag sanang umakyat ang mga bata.

- **Mga Pangungusap na Walang Tiyak na Paksa**

- o **Penominal** - tumutukoy sa kalagayang pangkalikasan
(Binubuo ng panaguring pandiwa na may kasamang pang-abay)
Umuulan! Lilindol daw.

- Temporal - nagsasaad ng kalagayan o panahong panandalian
(Binubuo ng pang-uri na may kasamang pang-abay)
Mainit! Kay init ngayon.
- Eksistensiyal - nagsasaad ng pagka-mayroon
May mga mag-aaral na sa awditoryum.
Alas diyes na.
Lunes ngayon.
Tag-araw.
Bagong Taon na naman.
- Ka-pandiwa - nagsasaad ng katatapos na kilos
Kaaalis lang niya.
- Pambating panlipunan - magagalang na pananalita ng
• pakikipagkapwa-tao
Kumusta ka?
Salamat.
- Panawag - panawag na pangkamag-anak
Hoy! Pssst! Tena! Manang!
- Pandamdin - nagpapahayag ng matinding damdamin
Aray ko! Sus! Aru! Ow, talaga!
- Modal - nangangahulugan ng "gusto" / "nais" /
"ibig"
Gusto kong matulog.

6.4 Semantika - may kinalaman sa interpretasyon ng mga kahulugan ng mga salita at pangungusap

Nabanggit na sa simula na binubuo ang grammar ng wika ng ponolohiya, morpolohiya, sintaks at panghuli, ng semantika. Tumutukoy ang naunang tatlo sa pag-aaral ng anyo (*form*) at patern ng wika, tumutukoy naman ang semantika sa pag-aaral ng kahulugan mismo sa wika.

- Paano ang pagbibigay o nairerepresenta sa isipan ng tao ang kahulugan?
 - denotasyon at konotasyon
Halimbawa: PASKO
 - Denotasyon: ika-25 ng Disyembre para sa mga kristiyano, araw na kapanganakan ni Kristo
 - Konotasyon: panahon ng pagbibigay ng mga regalo, pagpunta ng mga inaanak sa ninong at ninang, karoling ng mga bata, pagkain ng bibingka at puto-bumbong
 - sinonim, antonim, polisemi at homofon
 - sinonim - mga salitang magkapareho ng kahulugan
Halimbawa: payak - simple
magbili - magtinda
magkatulad - magkapareho
 - antonim - mga salitang magkasalungat ang kahulugan
Halimbawa: mataas - mababa
maliwanag - madilim
 - polisemi - mga salitang may dalawa o mahigit pang kahulugan na magka-ugnay
Halimbawa: marka
Mataas ang marka ng anak ko sa Ingles.
Nag-iwan ng marka ang kanyang kagat sa braso ng bata.
 - homofon - salitang magkapareho ng tunog o anyo subalit magkaiba ang kahulugan. Nagdudulot ng pagkalito o di kalinawan ang homofon sa pangungusap.
Halimbawa: bangka
(1) maliit na sasakyang pandagat na yari sa kahoy

(2) taong tagabigay ng baraha sa isang klase ng sugal
Pangungusap: Hindi pa dumarating ang bangka.
Mahirap alamin ang konteksto.

Sino/Ano ang tinutukoy?

Ang sasakyang pandagat o isang manunugal.

- parapreys
 - mga magkakaparehong kahulugan ng mga pangungusap.
 - 'Kumanta ang koro ng mga lumang kanta'
 - 'Mga lumang kanta ang kinanta ng koro'
 - 'Naglaro ang mga bata ng basketbol'
 - 'Nagbasketbol ang mga bata'

7. Matapos na matalakay ang mga batayang kaalaman sa ilalim ng una, ***kakayahang panlinggwistika***, dumako naman tayo sa ikalawa ang ***kakayahang pangkomunikatibo*** sa pag-aaral ng wika.
8. Hindi lamang naaayon sa kaalamang makagamit ng mga pangungusap na may wastong balarilakundi maykayahan paring ipakita at gamitin ang alin mang gawi ng pakikipag-usap (*speech behavior or speech acts*) na angkop at naaayon sa hinihingi ng sitwasyon ang kakayahang komunikatibo (*communicative competence*)
9. Kung kahulugang komunikatibo ang susuriin sa isang pahayag, tiyak na iuugnay ito sa tungkulin ng komunikasyon at ang kaugnay na gawi ng pagsasalita tulad ng ipinakikita ng sumusunod na tsart ni Gordon Wells.

Tungkulin ng Komunikasyon (Functions of Communication)	Gawi ng Pagsasalita (Speech or Communication Acts)
A. Pagkontrol sa kilos o gawi ng iba (Controlling function)	Pakikiusap, pag-utos, pagmumungkahi, pagpupunyagi, pagtanggap, pagbibigay babala.

B. Pagbabahagi ng damdamin (Sharing feelings)	Pakikiramay, pagpuri, pagsang-ayon, pahayag, paglibak, paninisi, pagsalungat.
K. Pagbibigay o pagkuha ng impormasyon (Getting factual information)	Pag-uulat, pagpapaliwanag, pagtukoy, pagtatanong, pagsagot
D. Pagpapanatili sa pakikipag- kapuwa at pagkakaroon ng interaksyon sa kapuwa (Ritualizing function)	Pagbati, pagpapakilala, pagbibiro, pagpapasalamat, paghingi ng paumanhin.
E. Pangangarap at paglikha (Imagining/Creating function)	Pagkukuwento, pagsasadula, pagsasatao, paghula

- Paano natin maipakikita na nagagamit natin ang wikang Filipino nang may lalong mataas na antas ng kasanayan at kahusayan?

Naririto ang mga halimbawa ng mga inaasahang kasanayan (Belvez, et al., 1990):

- A. Naisasagawa ang iba't ibang uri ng pagpapahayag o gawi ng pagsasalita kaugnay ng pagtugon sa iba't ibang tungkulin ng komunikasyong kinakaharap sa pang-araw-araw na sitwasyon.
1. Nagagamit ang angkop na pahayag sa pagdalo sa isang pagtitipon
 2. Nakasasali sa isang makabuluhang gawain ukol sa pagtatanong ng direksyon, tao o bagay.
 3. Malinaw na naipapahayag ang iba't ibang kaisipan ayon sa lugar o sitwasyong kinaroroonan.
 4. Nasasabi nang malinaw at may paggalang ang pagpapagawa ng isang bagay o gawain.

5. Nasasabi nang mabisa ang mga iniisip at niloloob.
6. Nakapaghahatid at nakapaghaharap nang mabisa ng iba't ibang impormasyon.
7. Naipapahayag at natutukoy ang mga saloobing moral.
8. Naisasagawa ang wastong pakikipagkapwa.
9. Nakalilikha nang pasalita ng ilang tugma, kuwento at patalastas.

B. Naisasagawa nang mabisa ang iba't ibang gawaing komunikasyon sa pag-aaral.

1. Nakakapakinig at nakalalahok sa isang talakayan ng panayam na napakinggan
2. Nakapagsasagawa at nakasasagot sa isang interbyu
3. Naibubuod ang balitang nabasa o napakinggan
4. Nalalagom ang kuwento, editoryal o patalastas na narinig
5. Nakapagbabalangkas at nakapag-uulat
6. Nakapagbibigay ng isang panuto at paglalarawan
7. Nakakasali nang mabisa sa isahang pagbigkas
8. Nakapag-uusap tungkol sa mga tsart, grap, mapa at larawang-guhit
9. Natutukoy ang pangunahing paksa ng mga narinig na paglalahad
10. Nakapagbibigay-katwiran, kuru-kuro o opinyon tungkol sa mga balita o pangyayaring narinig o nabasa
11. Nakapagsasagawa ng isang biglaang pagpapahayag (extemporaneous speech)
12. Nagsasabi nang makabuluhan sa isang pagpupulong
13. Nakapagbibigay ng isang gawaing padikta (Gagamiting paksa rito ang iba't ibang lawak ng pag-aaral sa kurikulum.)

C. Nakakapakinig at nakasasali sa iba't ibang talakayan kaugnay ng ibang lawak ng pag-aaral sa kurikulum

1. Naririnig nang may pang-unawa at natatalakay nang mabisa ang mga paksa tungkol sa kasaysayan, pamahalaan at konstitusyon
2. Nakapagpapahayag ng kaisipan at gawaing kaugnay ng musika, sining, kagandahang-asal at gawaing pantahanan

D. Sa pagsasalita at pagsulat ang wastong paggamit ng mga salitang karaniwan ay lubhang kailangan. Kailangang sumusunod ito sa mga alituntuning panggramatika. Nakatutulong sa maayos, malinaw at mabisang pagpapahayag kung wasto ang gamit ng mga salitang Filipino.

**BAHAGI II - PAGSUSURI SA MGA AYTEM
MGA TEKNIK SA PAGSAGOT NG MGA TANONG**

**Wastong Paggamit ng Ponemang Suprasegmental
(Tono, Haba, Diin, Antala)**

Item 1.

Alin sa mga sumusunod ang makapagpapabago ng kahulugan ng salitang / kasa.
ma / = 'companion'?

Baguhin ang _____ ng bigkas ng salita.

- A. tono
- B. diin
- C. haba
- D. antala

C ang tamang sagot.

Anotasyon

**Mga Teknik sa Pagtukoy ng Wastong Gamit ng Ponemang Suprasegmental
(Tono, Haba, Diin, Antala)**

Ang tamang sagot ay C.

May iba't ibang halaga sa bawat wika ang ponemang suprasegmental. May

mga wika na higit na mahalaga ang tono, tulad ng Mandarin at Thai na itinuturing na tone language. May mga wika naming higit na mahalaga ang diin, tulad ng Ingles. At may wika naming higit na mahalaga ang haba tulad ng Filipino.

Kapag binago ang haba ng pantig na - sa - sa /kasa . ma / companion, mababago ang kahulugan ng salita.

Opsyon A.

Tono, tumutukoy sa taas-baba na iniuukol natin sa pagbigkas ng pantig ng isang salita. Walang magiging pagbabago sa kahulugan kahit na baguhin pa ang tono.

- (a)
- ³ma
- ²ka
- ¹sa
- (b)
- ³sa
- ²ka
- ¹ma

Opsyon B.

Diin, tumutukoy sa lakas ng bigkas sa pantig ng salita. Kahit pagbaguhin ang lakas ng pagbigkas sa tatlong pantig na ka -, - sa - at - ma -, mananatili pa rin ang kahulugan ng salita.

Opsyon D.

Antala, ang saglit na pagtigil sa pagsasalita, wala pa rin itong magiging epekto sa kahulugan ng salitang / kasa . ma / = 'companion'

**Kawastuan sa Pagbuo ng Salita
(Kayarian ng Pangngalan)**

Item 2.

Sa pamamagitan ng iba't ibang paraan, maaaring makabuo ng mga pangngalan mula sa salitang-ugat na bayan. Aling salita ang di dapat maisama sa pangkat?

- A. bayan-bayan
- B. balikbayan
- C. kabayanan
- D. kabayanihan

Ang tamang sagot ay D.

**Anotasyon
Mga Teknik sa Pagtukoy ng Kawastuan sa Pagbuo ng Salita
(Kayarian ng Pangngalan)**

D ang tamang sagot.

Ang salitang ugat ay bayan. Ang salitang kabayanihan ay mula sa salitang-ugat na bayani.

Opsyon A.

Batay sa kayarian ng pagbuo ng salita ito ay halimbawa ng pangngalang inuulit. (bayan – bayan)

Opsyon B.

Balikbayan, halimbawa ng pangngalang tambalan. (balik + bayan)

Opsyon C.

Pangngalang maylapi / hinango ang tawag sa kabayanan.

**Kawastuan sa Pagbuo ng Pangungusap
(Gamit ang mga Uri ng Pandiwa)**

Item 3.

Alin sa mga sumusunod na pangungusap ang di wasto ang pagkabuo o walang kabuuan ang diwa?

- A. Kumulo ang tubig
- B. Nagpatay si Mang Gusting.
- C. Kumain siya.
- D. Kumain siya ng pansit luglog sa palengke.

Ang tamang sagot ay B.

Anotasyon

**Mga Teknik sa Pagtukoy ng Kawastuan sa Pagbuo ng Pangungusap
(Gamit ang mga Uri ng Pandiwa)**

B ang tamang sagot.

May tatlong uri ng pandiwa:

- a) pandiwang katawanin
- b) pandiwang ganap na palipat
- c) pandiwang di-sapilitang palipat

Ganap na palipat yaong pandiwang may kasamang tuwirang layon. Sa ganitong uri ng pandiwa ay hindi maaaring alisin ang tuwirang layon nang hindi masisira ang kabuuan ng diwa ng pangungusap.

Kaya't sa pangungusap na ***Nagpatay si Mang Gusting*** kulang at di buo ang kaisipan dahil kulang ng tuwirang layon. Upang maging wasto:

Nagpatay ng baboy/manok si Mang Gusting.

Opsyon A.

Ito ay isang halimbawa ng pandiwang katawanin, yaong pandiwang likas na di nangangailangan o di malalagyan ng tuwirang layon.

Mga Opsyon C at D.

Mga halimbawa ng mga pandiwang di sapilitang palipat, yaong maaaring mayroon tulad ng Opsyon D at walang kasamang tuwirang layon tulad ng Opsyon C.

Item 4.

Likas na palahanga ang mga mamamayang Filipino. Nagpapahayag tayo ng paghanga at pagpuri sa iba't ibang pagkakataon at gumagamit tayo ng iba't ibang ekspresyon. Kung magkaminsan, ginagamit natin ang ekspresyon sa paghanga upang batiin ang taong / kaibigang ating nasasalubong.

Alin sa mga sumusunod na pahayag ang angkop at mabuting gamitin sa ganitong pagkakataon?

- A. Napakapayat mo ngayon, a. Naospital ka ba?
- B. Diyos Ko! Bakit nagkaganyan ka? Ang taba-taba mo!

- C. Ang ganda naman ng damit mo! Saan ba ang lakad mo?
- D. Ang kyut-kyut mo! Para kang bibinyagan!

Ang tamang sagot ay C

Anotasyon

**Mga Teknik sa Pagtukoy ng Wastong Pagbabahagi ng Damdamin
(Pagpuri)**

Basahin nang mabuti ang tanong.

1. Ituon ang pansin sa hinihinging tungkuling pangwika. (Pagbabahagi ng Damdamin - Pagpuri)
2. Pag-aralang mabuti ang mga pagpipiliang sagot.
3. Ang tamang sagot ay C. Isang magandang gawi ang pagiging matapat kung tayo'y pumupuri sa ating kapwa. Karaniwan, pinupuri natin ang kasuotan ng kausap kung talagang dapat purihin.

Mga Opsyon A at D. Dapat tayong mag-ingat tungkol sa pagbati ng pangangatawan ng kapwa. Mangyari, may mga taong ayaw mababati ang paglaki ng katawan (pagtaba) o pagpayat kaya.

Opsyon D. Kung hindi rin lang tapat sa ating kalooban ang sasabihin, mas mainam na huwag nang kumibo.

4. Iba pang kaisipan:
 - Gumagamit tayo ng iba't ibang kaantasan ng pang-uri sa pagpapahayag ng paghanga. Tatlo ang kaantasan ng mga pang-uri:

- a) Lantay – nasa payak na anyo at walang paghahambing na nagaganap.
Halimbawa: Ang ganda naman ng damit mo!
- b) Pahambing – kung nagtutulad sa dalawang tao o bagay; nahahati sa dalawang uri - magkatulad at di magkatulad; sa tao/bagay na magkatulad ginagamit ang sing, magsing, kasing, magkasing sa pagpapahayag; sa tao/bagay na di magkatulad ginagamit ang lalo, higit, kaysa, di gaano, di tulad ng, ni tulad, di gaya ng atbp.
- c) pasukdol – kung naghahambing ng isang tao, bagay, pook o pangyayari sa dalawa o higit pang tao o bagay; ginagamit ang mga panlaping napaka, pinaka- at ka-an.

Wika Ayon sa Pormalidad ng Pagkagamit

Item 5.

Basahin ang sumusunod na dayalogo/usapan. Kilalanin mo ang salita / pangungusap ayon sa pormalidad ng pagkagamit.

Ang Pasahero at ang Drayber

Pasahero: Mama, ito ho ang bayad!

Drayber : Saan ito!

Pasahero: Isa lang ho.

Drayber : Ilan 'to?

Pasahero: Sa España lang ho.

Uriin ang istilo ng usapan gamit ang batayan: wika ayon sa pormalidad ng pagkagamit.

- A. *formal* o seryoso
- B. *intimeyt* o kilalang-kilala
- C. konsultatibo o sumasangguni
- D. kaswal

Anotasyon

Mga Teknik sa Pagtukoy ng Wika ayon sa Pormalidad ng Pagkagamit

Upang maisagawa ang mabisang pakikipagkomunikasyon gamit ang wikang Filipino, dapat na makilala ng tagagamit ng wika/ispiker ang katangian ng iba't ibang istilo/barayti ng wika para maunawaan kung paano ito gagamitin para sa mabisang interaksyon sa angkop na sitwasyon.

Opsyon D ang tamang sagot.

Sa pag-uuri sa istilo ng wika o pahayag batay sa pormalidad ng pagkagamit, binibigyan ng konsiderasyon ang paksa, papel na ginagampanan at lugar, kung bakit nagkakaroon ng pagbabago sa istilo ng wika.

- paksa - Kaisipang pinag-uusapan (bayad sa pasahe)
- papel na ginagampanan - Ano ang relasyon ng nag-uusap?
(drayber -pasahero)
- lugar - Nasaan ang pag-uusap?(sa loob ng dyip) Ano ang palatandaan ng istilo ng usapang kaswal?
- walang ingat sa pagpili ng mga salita
- bahagyang mababa ang sosyal na pamantayan

Opsyon A.

Iba ang katangian ng istilong pormal:

- nakaplano, iskripted
- gumagamit ng mga buong pahayag/pangungusap
- mga pangungusap na may kaayusang gramatikal

Opsyon B.

Katangian ng istilong intimeyt:

- usapan sa pamilya, mga mahal sa buhay at pinakamatalapit na kaibigan
- pagtatapat ng pinakatatagong lihim

Opsyon C.

Katangian ng istilong konsultatibo o sumasangguni:

- transaksyong pangnegosyo, usapang doktor-pasyente, usapang guro mag-aaral

Item

6. May mga pagkakataon na maaaring palitan ng ibang ponema / tunog ang isang ponema nang hindi magbabago ang kahulugan ng salita tulad ng

- | | |
|------------------|--------------------|
| A. ewan – iwan | C. lalaki – lalake |
| B. diles – riles | D. uso – oso |

7. Piliin ang salitang may diptonggo.

- | | |
|-----------|-----------|
| A. Yoyong | C. lawa |
| B. kamay | D. tihaya |

8. May iba't ibang posisyon ang kinalalagyan ng pantlapi sa salita. Anong uri ng pantlapi ang matatagpuan sa salitang 'ipagsumigawan'?

- | | |
|------------|------------|
| A. unlapi | C. hulapi |
| B. gitlapi | D. laguhan |

9. Alin ang dapat alisin sa pangkat?

- | | |
|----------------------|------------------|
| A. kahali-halina | C. kaakit-akit |
| B. kabighani-bighani | D. kaliga-ligaya |

10. Ano ang kasalungat / antonim ng matatag?

- | | |
|------------|------------|
| A. matibay | C. mabuway |
| B. malakas | D. mataba |

11. Lagyan ng kapares ang salita upang makabuo ng pagpaparis na magkasama kagaya ng sumusunod:
langit at lupa
liwanag at dilim
puno at dulo
sanhi at _____
A. dahilan
B. buhay
C. buti
D. bunga
12. Alin ang salitang may karaniwang kahulugan dala ng diksyunaryo o ginagamit sa pinakakaraniwan at simpleng pahayag?
A. Makunat ang taong iyan.
B. "Ayaw ko ng bola," ang sabi ng bata.
C. Berde ang kanyang utak.
D. "Ayaw ko ng bola," ang sabi ng dalaga.
13. Alin sa mga sumusunod na salita ang may klaster?
A. diyes
B. diyip
C. daram
D. drakula
14. Anong pagbabagong morpoponemiko ang matatagpuan sa salitang bakuran?
A. pagpapalit ng ponema
B. asimilasyon
C. paglilipat diin
D. metatesis
15. Ano ang pormasyon ng pantig sa mga titik na pahilig? prin sesa
A. K K P K
B. K K P
C. K P K
D. K P
16. Ang mga kasamahan mo ay nagsasabing higit na mainam daw magtrabaho sa ibang bansa pagkatapos ng pag-aaral sa Pilipinas. Iba naman ang nasa isipan mo. Paano mo sisimulang ilahad nang magalang ang iyong lubusang pagsalungat?
A. "Parang maling-mali ka"
B. "Sa puntong iyan, tama ka, pero"
C. "Nirerespeto ko ang opinyon mo, pero"
D. "Sa isip ko tama ka"

Pinag-uusapan ng iyong mga kaibigan ang pornograpiya sa mga sining (pelikula, babasahin at iba pa). Nais mong magdagdag ng ibang punto sa argumento. Paano mo ito sisimulan?

- A. "Pahintulutan mong wakasan ko "
- B. "Bilang paglalahat "
- C. "Pero kung tutuusin"
- D. "Bukod pa riyan"

18. May mahalagang bagay kayong naiwan sa bahay. Nais ninyong tumawag sa telepono. Hihingi kayo ng pahintulot sa kalihim ng inyong dekanong upang magamit ang telepono. Ano ang magandang simula?

- A. "Sige na"
- B. "Sa kabuuan"
- C. "Sa maikling sabi"
- D. "Maaari po bang"

19. Sa pangungusap sa ibaba, nilalagyan ng isang bar (/) ang isang saglit na paghinto at ng dobleng bar (//) ang katapusan ng pahayag. Ano ang ibig sabihin ng pangungusap na ito? Tito / Juan Anton ang pangalan niya. //

- A. Sinasabi ang buong pangalan ng ipinakikilala.
- ☒ B. Kinakausap si Tito, o kaya'y isang tiyo, at ipinakikilala si Juan Anton.
- C. Kausap ang isang tiyo na Juan ang pangalan. Ipinakikilala si Anton.
- E. Lahat tama.

Para sa Item 20 – 22. Anong gawi ng pagsasalita ang ginagampanan ng mga sumusunod na pahayag?

20. "Kumusta ka na?"

- | | |
|--------------|-------------------|
| A. pagbati | C. pagpapasalamat |
| B. pagbibiro | D. pagpapakilala |

21. "Pumunta ka't baka dumating din ako."

- | | |
|---------------|-----------------|
| A. pakikiusap | C. pagtanggap |
| B. pag-uutos | D. pagpupunyagi |

Para sa Item 22 – 23. Anong tungkulin ng komunikasyon ang ginagampanan ng mga sumusunod na pahayag?

22. "Tungkol saan ang talakayan ninyo?"

- A. pagkuha ng impormasyon
- B. pagbabahagi ng damdamin
- C. pagkontrol ng kilos ng iba
- D. paglikha

23. "Tena't may klase pa tayo."

- A. pagpapanatili sa pakikipagkapwa
- B. pagbabahagi ng damdamin
- C. pangangarap o paglikha
- D. pagkontrol sa kilos ng iba

24. Alin sa mga sumusunod ang di-pormal na pahayag?

- A. Paalam na po.
- B. Hay! Kumusta ka?
- C. May maitutulong po ba ako?
- D. Ipagpatawad mo.

25. Alin ang di-tahas o matalinghagang pahayag?

- A. Mainit ngayon. Buksan mo ang bentilador.
- B. Tumigil ka na sa iyong pagsasalita.
- C. Nakapapaso ang init ng araw ngayon.
- D. Malamig ang panahon. Umuulan.

**BAHAGI III - PAGLINANG NG KASANAYAN SA
PAGKUHA NG PAGSUSULIT**

1. Isang paraan upang maipakita ang pagkokontrast ng mga ponema / tunog ay ang paggamit ng pares minimal. Alin ang di-dapat isama sa pangkat?
A. lasa - tasa C. bibi - bibe
B. mesa - misa D. tela - tila
2. May ponema / tunog na malayang nagpapalitan. Alin ang di dapat isama sa pangkat?
A. pinanunuod - pinanunood
B. karsada - kalsada
C. marusing - madusing
D. loro - lolo
3. Alin sa mga sumusunod na salita ang magbabago ang kahulugan kapag inalis ang gitling?
A. may-ari C. pag-asa
B. pag-ibig D. tag-ulan
4. May sadyang gamit ang gitling sa palabaybayang Filipino. Alin ang di-dapat gamitan ng gitling?
A. gabi-gabi C. taga-Bulacan
B. paru-paro D. ika-10
5. Alin sa mga sumusunod na pangngalan ang inuulit?
A. sarisari C. lapulapu
B. gamugamo D. sabi-sabi

6. Alin ang batayang pangungusap sa sumusunod na pahayag?
- A. Ang mag-aaral na babaing iyon ay iskolar.
 - B. Ang mag-aaral ay iskolar.
 - C. Ang mag-aaral na babae ay iskolar.
 - D. Ang matalinong mag-aaral ay iskolar.
7. Ang batayang pangungusap ay Umalis ang mag-anak. Alin sa mga sumusunod na pahayag ang may pampalawak na pang-abay?
- A. Umalis ang mayamang mag-anak.
 - B. Umalis ang mag-anak na iyon.
 - C. Umalis agad ang mag-anak.
 - D. Ang mag-anak na nagmamadali ay umalis.
8. Alin sa mga sumusunod na pahayag ang may pang-anggit?
- A. Kalabaw raw ni Kuya ang nawala.
 - B. Kalabaw ni Kuya sa bukid ang nawala.
 - C. Ang kalabaw na mataba ni Kuya ang nawala.
 - D. walang tamang sagot.
9. Alin sa mga sumusunod na salita ang may diptonggo?
- A. salaysay
 - B. aliwan
 - C. sayawan
 - D. luya
10. Ano ang katangian ng mga sumusunod na salita?
Magbasa, umibig, maligaya, paalis.
Pare-parehong may _____.
- A. unlapi
 - B. gitlapi
 - C. hulapi
 - D. taguhan
11. Alin sa pangkat ng salita ang ginamitan ng hulapi?
- A. lupa, bayani, bandila, langit
 - B. maglaro, umalis, matakot, palayo
 - C. sumayaw, lumakad, sinagot, ginawa
 - D. ibigin, sulatan, sabihin, sabihan

12. Alin sa mga sumusunod na salita ang maykaltas o nawawalang ponema / tunog?

- A. dalhin
- B. hagkan
- C. teka
- D. tena

Para sa Item 13– 15 Aling pahayag ang tumutukoy sa kalagayan / sitwasyon sa ibaba.

13. Ipinakilala mo ang iyong kasintahan sa isang Duktur at kay Jenny.

- A. Jenny / ang *girlfriend* ko / Duktur.
- B. Duktur / Jenny / ang *girlfriend* ko.
- C. Duktur Jenny / ang *girlfriend* ko.
- D. Lahat tama.

14. Ayaw mong tanggapin na si Rolly ang nanalo sa paligsahan.

- A. Hindi si Rolly / ang kampeon.
- B. Hindi / si Rolly ang kampeon.
- C. Hindi si Rolly ang kampeon.//
- D. walang tamang sagot

15. Itinuturo sa pulis ang salarin.

- A. Tinyente Magtanggol Luis / siya ang salarin.
- B. Tinyente Magtanggol / Luis / siya ang salarin.
- C. Tinyente / Magtanggol Luis / siya ang salarin.
- D. Lahat tama.

16. Alin sa mga sumusunod na pahayag ng paghingi ng tawad ang di-pormal?

- A. Pasensiya ka na.
- B. Patawarin mo ako.
- C. Pagsisikapan kong di na mangyari itong muli.
- D. Huwag ka nang magalit Hindi ko na gagawin muli.

17.

Naglilinis ng bakuran ang mga lalaki samantalang nagluluto ang mga babae.

Iti ay halimbawa ng pangungusap na may kayariang _____.

- A. tambalan
- B. payak
- C. hugnayan
- D. langkapan

18. Pangulo ka ng Kabataang Baranggay sa inyong lugar. Tumawag ka ng isang ispesyal na pulong na dinaluhan ng mga kasapi.
Ano ang angkop na sabihin upang mapasimulan ang pulong?
- A. Puwede bang simulan na natin ang pulong?
 - B. Mangyaring sumaaayos ang kapulungan.
 - C. Bukas na ang hapag.
 - D. Mangyaring tumahimik ang lahat.
19. Bagong lipat ka sa isang lugar. Hindi mo pa alam kung paano pupunta sa bayan. Balak mong magtanong sa pulis. Paano mo ito sasabihin?
- A. Mamang pulis, saan po kaya ako makasasakay papuntang bayan?
 - B. Mamang pulis, ituro ninyo nga sa akin ang sakayan papuntang bayan?
 - C. Mamang pulis, saan ba ako sasakay papuntang bayan?
 - D. Saan ba ang sakayan papuntang bayan?
20. Alin sa sumusunod na mga salita ang wasto ang pagkabaybay?
- A. panbukid
 - B. pambukid
 - C. pam-bukid
 - D. pangbukid
21. Alin ang di-wasto ang pagkabaybay sa mga sumusunod na salita?
- A. kasingganda
 - B. mangagawa
 - C. hatinggabi
 - D. alalahanin
22. Matagal ka nang nakikipag-usap sa telepono. Sinenyasan ka ng iyong pinsan na tapusin mo na ang iyong pakikipag-usap. Paano mo ito sasabihin?
- A. Ibaba mo na ang telepono. Kailangang tumawag ang pinsan ko.
 - B. Sige na. Nagagalit na ang pinsan ko.
 - C. Mamaya na uli tayo mag-usap. Gagamitin kasi ng pinsan ko ang telepono.
 - D. Sige. Tama na ang kuwento.
23. Alin sa mga halimbawa ang di-dapat isama sa pangkat ng pangungusap na walang paksa.
- A. Ang tapang mo pala!
 - B. Aray!
 - C. Umuulan
 - D. Ginto ang alahas.

24. Alin sa mga pangungusap ang pokus sa aktor / tagaganap?

- A. Bumili ng laruan si Gel sa SM para sa kanyang inaanak.
- B. Binili ni Gel ang laruan sa SM para sa kanyang inaanak.
- C. Binilhan ni Gel ng laruan ang SM para sa kanyang inaanak.
- D. Ibinili ni Gel ng laruan ang kanyang inaanak sa SM.

25. Alin ang tamang pangungusap na patanong na hango sa batayang pangungusap na pasalaysay?

BP: Mamamasyal sila sa Biyernes.

- A. Saan sila mamamasyal?
- B. Kanino sila pupunta?
- C. Bakit sila mamamasyal?
- D. Kailan sila mamamasyal?

Pagbasa at Pagsulat tungo sa Pananaliksik

Inihanda ni:

Arsenia R. Emperado, Ph.D.

Kasanayan:

- Nababasa nang may wastong pag-unawa ang mga teksto sa iba't ibang disiplina
- Nagagamit nang mahusay ang Filipino sa pagbuo ng isang sulating pananaliksik

BAHAGI I - BALIK-ARAL SA NILALAMAN MGA BATAYANG KONSEPTO

1. Pagpapakahulugan sa pagbasa

- Pagkilala at pagkuha ng mga ideya at kaisipan sa mga simbolong nakalimbag upang mabigkas nang pasalita ang mga ito. Pag-unawa ito sa wika ng awtor o manunulat ng mga nakasulat na simbolo (Semorlan, et al., 1999).
- Sinasabing unang hakbang sa pagtatamo ng kaalaman. Tumutukoy sa kognitibong proseso ng pag-unawa sa mensahe ng wikang nakasulat. Isang proseso ng pagkuhang muli at pag-unawa sa mensahe ng ilang anyo ng nakaimbak na mga impormasyon o mga ideya (Alejo, et al., 2005).
- Mahalagang salik sa pagbasa ang papel ng dating kaalaman o ang teorya ng iskema. Inumpisahan ni Barlett (1932) at nilinang nina Anderson (1977) at Rumelhart (1981) ang teoryang ito na nagsasaad na nakaiimpluwensiya nang malaki sa pag-unawa kung ano ang mga alam na o hindi alam ng mambabasa.

Mga uri ng iskema:

- content o nilalaman (tumutukoy sa mga sistema ng tunay na katotohanan, balyus at kombensiyong kultural)
- formal (tinatawag ding tekstwal na iskema, na may kaugnayan sa kaalamang retorikal na istruktura ng teksto at mga genre ng panitikan tulad ng mga nobela, maikling kwento, dula, resipe, patalastas, talambuhay, liham, jornal, atbp.)
- linggwistika (tinatawag ding iskema ng wika, na tumutukoy sa istruktura ng wika, bokabularyo, impleksiyong gramatikal at mga gamit pang-ugnay (cohesive devices).

2. Pagpapakahulugan sa pagsulat
 - Paggawa o pagbuo ng mga titik, simbolo, at mga salita. Isang paraan upang ang mga mahahalagang bagay na hindi matandaan ay muling mapagbalikan sa isipan (Lorenzo, et al., 2001).
 - Isang mabagal at kompleks na proseso at itinuturing na isang sining na nangangailangan ng malalim na pag-unawa at pag-iisip (Badayos, 2000).
3. Makatutulong sa lalong pagkakamit ng mabisang pagpapahayag at pagsulat ng apat na anyo ng pagpapahayag:
 - a. paglalahad (nagbibigay impormasyon at nagpapaliwanag)
 - b. paglalarawan (nagpapalutang ng mga katangian)
 - c. pagsasalaysay (nagkukuwento)
 - d. pangangatuwiran (nanghihikeyat na isaalang-alang ang pananaw ng manunulat)
4. Tinatawag din ng ilan ang apat na anyo ng pagpapahayag bilang genre ng wika. Samantalang, tinatawag na genre ng nakasulat na teksto ang maikling kuwento, sanaysay, mga alamat, talumpati, talambuhay, mga tula, atbp.
5. Ang genre ng nakasulat na teksto ay may dalawang anyo sa paggamit ng salita:
 - anyong tuluyan
 - sanaysay - talambuhay - editorial - anekdota - ulat
 - balita - alamat - dula - pabula - mito
 - salaysayin - talumpati - atbp.
 - anyong patula
 - tulang pandamdamin/liriko: elehiya, oda, kantahin, soneto
 - tulang pasalaysay: epiko, awit, kurido
 - tulang pandulaan

6. Napakahaiaga para sa kasaysayan sa pagbasa at pagsulat ang patuloy na pagpapayaman, pagdaragdag ng bokabularyo/talasalitaan ng mga mag-aaral. Naririto ang ilang paraan sa pagpapalawak ng bokabularyo:

- kaanyuan/kayarian/pagbuo ng mga salita
 - pagkakabit ng iba't ibang uri ng panlapi sa salitang-ugat upang mabigyan ng iba't ibang kahulugan ang mga ito

Halimbawa:

pag-uunlapi	=	umisip
paggigittlapi	=	tumulong
paghuhulapi	=	linisin
pag-uunlapi + paggigittlapi	=	ikinuha
pag-uunlapi + paghuhulapi	=	pagsabihan
paggigittlapi + paghuhulapi	=	tinabasan
pag-uunlapi, paggigittlapi at paghuhulapi	=	pinagsumikapan

- pag-uulit ng salita
 - parsyal → *kani-kanila*
 - ganap → *tuwang-tuwa*
- tambalang salita → *bahay-kubo*
- salitang balbal → *oks, tsekot*
- salitang kolokyal → *syota, datung*
- panghihiram ng mga salita → *axis, xerox*
- paghahambing ng mga magkakatulad at magkakaibang salita

Halimbawa:

malapad at maluwang makipot at maluwag

- paggamit ng tayutay → *parang anghel*
- paggamit ng idyomatikong pahayag → *kamay na bakal*
- ugnayan ng mga salita
- paggamit ng *context clue*
- paggamit ng diksyunaryo

7. Mga pamamaraan sa pagpapaunlad ng pag-unawa sa pagbasa ng mga tekstong akademiko:
- ***pagbasang pahapyaw (skimming)*** – isang paraang ginagamit ng mambabasa upang makuha ang nilalaman ng teksto o materyal sa mabilisang paraan. Hindi nito pinagtutuunan ang detalye, kundi ang kabuuang paksa o pangunahing kaisipan ng isang artikulo o seleksyon para makabuo ng buod o lagom ng binabasa. Higit na mahaba ang oras para sa *skimming* kaysa *scanning*.
 - ***pagbasang pasurl (scanning)*** – ito naman ang palaktaw-laktaw na pagbabasa na isinasagawa ng mambabasa upang mabilis na matukoy o matagpuan ang isang tiyak na impormasyon tulad ng pangalan, lugar, bilang o petsa. Hindi rin masinsinan ang pagbabasa ng teksto. Sa sandaling makita ang impormasyong hinahanap, hindi na ipagpapatuloy ang pagbasa.
 - ***pagbuo ng prediksyon o hinuha*** – bumubuo ng palagay o implikasyon ang isang bumabasa batay sa mga pahiwatig o implikasyong ibinibigay ng manunulat at tagapagsalita; hindi tuwirang sinasabi ng may-akda ang nais niyang sabihin kayat kailangang matuklasan ng mambabasa ang nakatagong kahulugan ng mga salita sa teksto.
 - ***paglalahat o paglalagom*** – naisasagawang maisaayos ang mga impormasyong nakuha sa teksto sa pamamagitan ng pagbubuod, pagbabalangkas at pagtatala.
 - ***pagbuo ng kongklusyon*** – nakabubuo ng kongklusyon sa pamamagitan ng mahahalagang detalyeng makukuha sa teksto; pagkatapos, gagamitin ang mga detalyeng nabanggit upang maiugnay sa mga karanasang bunga ng obserbasyon o dili kaya'y nabasa ng mambabasa.
 - ***pagsuri at pagkilala ng mga ideyang katotohanan at opinyon***
 - ✓ Kahulugan ng katotohanan (fact)
 - a. ang nagawang bagay
 - b. kasalukuyang ginagawa, binubuo, ginagampanan
 - c. aktwal na umiiral, subhektibo o obhektibo man ang konsiderasyon

- ✓ Kahulugan ng opinyon (Silapan at Fabros III, 1999)
 - a. pagpili, paghiling, o malayang pagpili
 - b. kuru-kuro, pala-palagay na batay sa punto de bista ng isang tao; maaaring mali ito sa pamamaraan ng iba, subalit isang katotohanan sa nagpapahayag nito
 - c. isang paniniwala na mas malakas pa sa impresyon
 - d. mas mahina sa positibong kaalaman, na batay sa obserbasyon at eksperimento
 - e. isang panghuhusga
- ***pagkilala sa hulwaran o istilong ginamit ng awtor sa pagsulat*** – kasanayan ito sa pagsusuri kung anong hulwaran o istilo ang ginamit ng awtor upang mabuo at maipahayag ang mga kaalaman o ideya sa mga babasahing teksto; maaari rin namang alamin ang layunin, saloobin at panauhan (*point of view*) ng manunulat tungkol sa kanyang isinulat. Nagbigay sina Montgomery at Moreau (2003) nasa Alejo, et al., (2005: 107) ng pitong anyo ng tekstong ekspositori. Tingnan ang talahanayan sa ibaba.

Anyo	Paglalarawan	Karaniwang Aplikasyon
Paglalarawan	Tinipong katibayan sa paksa. Paggamit ng pang-uri at pang-abay	Saklaw ang lahat ng pang-akademikong gawain, sining, musika, P.E.
Pagtatala	Pag-iisa-isa ng mga halimbawa na may kaugnayan sa paksa	Agham, Matematika
Pagsusunod-sunod	Pagpapahayag ng kaayusan ng mga hakbang, proseso o pamamaraan	Agham, Matematika

Sanhi/Bunga	Pagpapaliwanag kung bakit nangyari ang isang bagay. May naunang pangyayari at may sumunod na pangyayari	Kasaysayan
Problema/Solusyon	Pagbibigay ng problemang maaaring malutas nang mahigit sa isang solusyon. Kailangang ipahayag ang problema at magmungkahi ng plano kung paano ito malulutas	Agham
Paghahambing at Pagkokontrast	Pagpapakita ng pagkakatulad o pagkakaiba ng dalawa o mahigit pang sangkap o bahagi. Kagalingan at kahinaan, sang-ayon at di-sang-ayon, sinang-ayunan at sinalungat na pananaw.	Agham Panlipunan, Heograpiya

- *pagsusulat ng akda o seleksyon sa pamamagitan ng pagbabasa* – layunin nito na maisulat ang naging epekto ng binasa sa sariling damdamin, kuru-kuro, kaisipan at ugali ng mambabasa.

Samakatuwid, lahat ng uri ng paksa ay sinasaklaw nito at lahat ng uri ng tao ay maaaring tagabasa nito.

Naririto ang mga halimbawang uri ng sulatin: -

1. personal na uri – impormal na anyo
2. mapanuri o kritikal – pormal na anyo

Maaari rin namang ganito ang sulatin:

1. pinaikling pagsulat ng katha na tinatawag na presi na ang ibig sabihin ay mahigpit na pinanatili ang mga pangunahing kaisipan, ayos ng pagkakasulat, pananaw ng sumulat at himig ng orihinal (Silapan at Fabros III, 1999: 117).
 2. hawig o parapreys – isang pagpapaliwanag ng isang akda o babasahin na tangkang ibigay ang kahulugan upang maunawaan sa higit na madaling paraan; karaniwan itong ginagawa sa mga tula o kasabihan sapagkat hindi lantad ang mensahe.
- **analisis at balidasyon ng kaalaman** – isang paraang lumilinanag sa kasanayan sa pag-unawa ng mga mag-aaral upang analisahin/tayahin/ ebalweytin ang mga ebidensya ng pangyayari; mula rito makabubuo ng pangangatuwirang pasaklaw o pangangatuwirang pabuod
 - **pagtukoy sa damdamin, tono, layunin, at pananaw ng teksto** – naririto ang dapat tandaan sa pagtukoy ng damdamin, tono, layunin at pananaw:
 - ✓ ang himig (mood) ng isang teksto, ang damdaming nadarama ng bumabasa
(halimbawa: *pagkatakot, pagkainis, pagkalungkot, pagtataka o pag-aalinlangan*)
 - ✓ tono (tone) ng isang teksto, ang saloobin ng awtor tungkol sa paksang initalahad
(halimbawa: *mapagbiro, malungkot o nang-uuyam*)
 - ✓ layunin o pananaw ng pagkakasulat, karaniwang nasisinag sa tono o dili kaya'y sa himig
 - ✓ uri ng istilo
 - pormal o di-pormal
 - obhetibo o subhetibo
 - positibo o negatibo
 - **pagbibigay interpretasyon sa mapa, tsart, grap at talahanayan** – naririto ang mga patnubay upang mabasa ang mga ito nang mabisa:

- ✓ basahing mabuti ang legend na karaniwang makikita sa mapa
- ✓ basahin ang mga impormasyon sa gilid at ibaba ng grap
- ✓ basahin ang pamagat at subseksyon ng teksto

- ***pag-uuri ng mga ideya/detalye***

ang pangunahing ideya – ito ang pinakamahalagang diwa tungkol sa pinag-uusapan sa isang talata maging ito ay nasa anyong paglalahad, paglalarawan, pagsasalaysay o pangangatuwiran

- Nagagawang malinaw ang isang kumplikado o masalimuot na paksa sa pamamagitan ng mga pangungusap na tiyakang sumusuporta sa pangunahing ideya.
- Tinatawag na mga pangunahing detalye ang mga pangungusap na sumusuporta upang mabuo ang pangunahing diwa ng talata.
- Tinatawag namang mga maliit na kaugnay na detalye ang mga pangungusap na nagpapaliwanag sa mga pangunahing detalye.

Paksa o Pangunahing Ideya

Halimbawa - - -

bahay

Pangunahing Detalye

duplex, bungalow, chalet, bahay-kubo

Kaugnay na Maliit na Detalye

pintura, bintana, pinto, kurtina

- ***pagkilala ng pamaksang pangungusap***

- Ang pamaksang pangungusap ay pangungusap na kumakatawan sa sentral na ideya sa loob ng isang talata.
 - Pangungusap itong kumokontrol sa diwa ng talata na nakatutulong sa kalinawan at kaisahan ng ideya.
 - May 2 bahagi ang paksang pangungusap, simuno at panaguri; sa iba'y tinatawag itong *topic* at *comment*.
- May dalawang uri ng pamaksang pangungusap: lantad at di-lantad
Matatagpuan ang lantad na pamaksang pangungusap sa –
unahan - una't hulihan
gitna - hulihan ng talata
lalo na kung ang mga talata ay naglalahad at nangangatuwiran
- Bakit nasa unahang posisyon ang pamaksang pangungusap?
— kung ang pangkalahatang ideya ay pinalawak ng mga argumento o ng mga tiyak na halimbawa o ilustrasyon
- Bakit nasa gitna?
— kung naghahambing o nagbibigay impormasyon
- Bakit sa unahan at hulihan?
— kung ibig magbigay-diin sa ideyang naipahayag sa una
— nagbibigay ito ng impresyon ng kabuuan ng ideya
- Bakit sa hulihan?
— kung ang pruwera, ilustrasyon, halimbawa at mga detalye ay naipakita muna bago ipahayag ang proposisyon
- Ipinahihiwatig lamang ang pamaksang pangungusap sa uring di-lantad lalo pa't ito ay talatang *naglalarawan* at *nagsasalaysay*.

8. Pananaliksik/Reserts – mapanuri at kritikal na pag-aaral tungkol sa isang isyu, konsepto at problema.
9. Mga mapaghahanguan ng paksa
- | | | |
|-----------------|------------|--------------|
| - sarili | - internet | - dyaryo |
| - magasin | - radio | - tv (cable) |
| - mga awtoridad | - kaibigan | - kakilala |
| - kaklase | - guro | |
10. Magsisilbing proposal ng sulating pananaliksik ang konseptong papel. Binubuo ito ng apat na bahagi:
- Rasyunal (*rationale*)
 - Layunin
 - Metodolohiya
 - Inaasahang *output* o resulta
11. May dalawang panimulang gawain sa pananaliksik
- Paghahanap ng materyales
 - Paggawa ng pansamantalang bibliograpi
13. Mula sa paghahanap ng datos, susunod ang pagdedesisyon sa *format* at uri ng balangkas na gagawim para mabuo ang pansamantalang balangkas ng napili mong paksa.
14. Magiging batayan ng maayos na dokumentasyon ang anyo o klase ng tala tulad ng:
- | | | |
|----------------|-------------------------------|------------------------|
| direktong sipi | - buod ng tala | - presi |
| sipi ng sipi | - hawig (<i>paraphrase</i>) | - salin/sariling salin |

15. Sa kasalukuyang konteksto ng pananaliksik, mahalaga ang interbyu bilang bagong bukal ng impormasyon kayat dapat na batid ng mananaliksik ang mga hakbang sa mabisang gamit nito.
16. Dalawang bagay naman ang may bigat sa pananaliksik:
- proseso ng pagbuo ng mga bagong *insights* o kabatiran
 - panghihikayat upang tanggapin ng iba na totoo at wasto ang bagong ideyang natuklasan.
17. Upang magkaroon ng kabuluhan ang anumang ideya o kinalabasan ng pananaliksik kailangang maisulat ito sa isang maayos at mabisang paraan na binibigyang pansin ang mga sumusunod:
- iba't ibang prinsipyo sa pagsulat ng burador
 - ang wastong dokumentasyon ng pananaliksik
 - presentasyon ng papel sa maayos na estilo at *format*.

BAHAGI II - PAGSUSURI SA MGA AYTEM MGA TEKNIK SA PAGSAGOT NG MGA TANONG

Kasanayan sa Pagkuha ng Pangunahin at Kaugnay na Detalye

Panuto: Basahin at unawain ang sumusunod na talata.

Item 1

Totoong kailangan ng tao ang salapi sa kanyang pang-araw-araw na pangangailangan. Hindi siya mabubuhay nang maayos sa daigdig na ito kung wala siyang salapi ngunit may pangyayaring ang salapi ang nagiging ugat ng mga kasamaan. Maraming tao ang nagpapatayan, marami ring nakukulang dahil sa pagnanakaw at marami ring pamilya ang nawawasak nang dahil sa salapi. Hindi dapat maging gahaman sa salapi sapagkat magbubunga ito ng kapahamakan at maaaring humantong sa kamatayan.

1. Ano ang paksa o pangunahing ideya ng talata?
 - A. Ang Ugat ng mga Kasamaan
 - B. Ang Pang-araw-araw na Pangangailangan
 - C. Ang Pagkagahaman ng Tao sa Salapi
 - D. Ang Pangangailangan ng Tao sa Salapi
2. Ano ang pangunahing detalye?
 - A. pang-araw-araw na pangangailangan
 - B. pangangailangan sa salapi
 - C. kawalan ng salapi
 - D. pangangailangan ng tao

3. Alin sa mga sumusunod ang hindi kaugnay ng maliliit na detalye?
- A. hindi totoong kailangan ng tao ang salapi
 - B. hindi mabubuhay ang tao nang maayos kung walang salapi
 - C. ang salapi ang nagiging ugat ng mga kasamaan
 - D. hindi dapat maging gahaman ang tao sa salapi

Ang tamang sagot sa:

- 1. D
- 2. B
- 3. A

Anotasyon

Mga Teknik sa Pagkuha ng Pangunahin at Kaugnay na Detalye

Sa pagbasa gumagamit tayo ng Organizational Strategies. Ito ay proseso ng pagpili ng mahahalagang detalye at ang paggamit sa mga ito upang makabuo ng ugnayan ng mga ideya.

PAG-UNAWA SA PANGUNAHING IDEYA

Ang pag-unawa sa pangunahing ideya ay nakatutulong upang makabuo ng isang balangkas para sa pagsasaayos, pag-unawa, at pagtanda sa mga mahahalagang detalye. Kung wala ito, mawawalan ng pokus ang mambabasa at mawawalan ng direksyon kung paano gagamitin ang mga detalye.

Mga hakbang sa pagbuo ng pangunahing ideya:

- 1. Gamitin/Suriin ang pamagat o ang unang pangungusap upang makagawa ng hipotesis sa kung ano ang pangunahing ideya ng teksto.
Opsyon D ang tamang sagot. Halimbawa: Ang salapi sa buhay ng tao.

2. Basahin ang bawat pangungusap at pansinin kung sumusuporta ito sa hipotesis. Kung hindi, rebisahin ang hipotesis.
3. Kung hindi makagawa ng hipotesis sa kung ano ang pangunahing ideya, tingnan kung ano ang karaniwan o common sa lahat ng pangungusap.
4. Bumuo ng isang pangungusap na magpapaliwanag ng hipotesis o nagpapakitang ito ang ibig sabihin ng lahat ng pangungusap sa talata/teksto. Opsyon B ang tamang sagot. Halimbawa: pangangailangan sa salapi.
5. Sa mga pamilyar na paksa tulad ng Item 1, maaaring himay-himayin ang teksto. Maaari rin namang magsagawa ng listing o paglilista. Maaari rin namang gumamit ng graphic organizer tulad ng nasa ibaba kung kinakailangan.

•Sa item 1 ganito ang paglilistang lalabas.

Kasanayan sa Pagkilala sa Hulwaran o Istilo ng Awtor sa Pagsulat

Item 2.

Tuklasin kung paano naisasalin ng awtor ang kanyang iniisip sa anyong pasulat upang ang makababasa nito ay magaganyak na mag-isip, kumilos at matuto.

Kilalanin kung anong istilo o hulwaran ang ginamit ng awtor sa pagsulat ng pang-akademikong babasahing matatagpuan sa ibaba.

Artikulo:

Tatlong (3) Sangkap ng Memorya

- 1 Inilalarawan ng teorya nina Atkinson at Shiffren noong 1968 at nina Waugh at Norman noong 1965 ang kayarian ng memorya bilang sistema ng magkakaugnay na sangkap na may kakayahang mag-imbak ng impormasyon.
- 2 Ang unang sangkap ng memorya ay ang *sensory register*. Dito'y naiimbak sa maikling panahon ang lahat ng pagpasok ng istimulo. Sapagkat di pa ganap ang istimulasyong pandama, malamang itong masira agad o madaling mawaglit sa paglipas ng panahon. Halimbawa, ang istimulong biswal ay maaaring masira sa loob ng 50 m sec.
- 3 Ang pangalawang sangkap ay ang panandaliang memorya na nakapag-iingat ng impormasyon nang mga 30 segundo. Naiaayos sa pandinig ang impormasyon sa panandaliang memorya. Ang kakayahan ng panandaliang memorya o *short term memory* (stm) ay hanggang pito lang ang impormasyon. Kaya nga, kung malaki ang kakayahang magbatid ng impormasyon, lalong maraming kaalaman ang maiingat.
- 4 Ang permanenteng memorya o memoryang panghabang panahon o *long term memory* (ltm) ay ang pangatlong sangkap. Ang paglilipat ng impormasyon (ltm) buhat sa (stm) ay nagaganap sa pamamagitan ng pag-eensayo sa patuloy na pag-uulit sa kahulugan ng istimulo hanggang sa maging pangmatagalan ang memorya.
- 5 Upang matandaan ang anumang bagay, tatlong proseso ang kailangan; ang pagpapahayag, pag-iimbak at pagbawi. Sa pagpapahayag, inihahanda ang istimulong iimbakan, lito'y tumutukoy sa pagbabago ng istimulo upang mag-anyong maaaring ingatan sa sistemang kognitibo. Ang pag-iimbak ay ang proseso ng pag-iingat ng impormasyon para magamit.

Mula sa: Pagbasa at Pagsulat

Anotasyon

Mga Teknik sa Pagkilala sa Hulwaran o Istilo ng Awtor sa Pagsulat

Mahalaga ang pagkilala ng mga hulwaran o istilo sa pagsulat. Nasusuri agad ng mambabasa kung anong impormasyon ang maaaring ilahad ng awtor na nakatutulong sa kanya (mambabasa) sa pag-unawa at paggunita ng mga impormasyon.

Opsyon A ang tamang sagot. Ang modelo ng enumerasyon o paglilista o pag-iisa-isa o pagtatala ay tumutukoy sa talaan o listahan ng mga ideya, katotohanan o detalye tungkol sa pangunahing ideya. Maaaring magkapalitan ang kaayusan ng mga ideya o detalye subalit hindi mababago ang kahulugan.

Halimbawa – tatlong sangkap ng memorya

- unang sangkap – sensory register
- pangalawang sangkap – panandaliang memorya
- pangatlong sangkap – permanenteng memorya

Opsyon B. Ang hulwang pagsusunod-sunod ay may tatlong uri:

- sekvensyal – sekvens o serye ang mga pangyayari na patungo sa kongklusyon.
- kronolohikal – paglilista ng mga hakbang o pangyayari ayon sa pagkapangyayari sa kwento o kasaysayan.
- proseso o paraan – nagpapaliwanag ng hakbang/pamamaraan na kailangang sundin upang makakuha ng magandang resulta

Opsyon C. Isang anyo ng pagsusulat na nagbibigay pakahulugan sa isang paksa nang mahaba at detalyado ang hulwang depinisyon.

Opsyon D. Paghahambing at pagkokontrast – sa una, ipinaliliwanag ang pagkakatulad; sa pagkokontrast, ipinaliliwanag naman ang pagkakaiba.

Item 3.

1. Ang pagkagiliw natin sa mga imported na bagay ay malala nang tulad ng kanser. Dahil sa ganitong mentalidad ng mga Pilipino, ang ating industriya ay hindi umuunlad. Hindi lamang ito, ang mga negosyante at mangangalakal sa paggawa – sila ay nag-aalalang maliit ang kanilang kikitain sa kanilang negosyo dahil sa kakulangan ng kaalaman nila sa teknolohiya at kasangkapan.
2. Isa pa'y naakit na silang ilagak ang kanilang salapi sa lalong madaling mapagkakakitaang produkto tulad ng asukal, tabako, abaka at troso.
3. Ang nangyari tuloy ay tayo ang angkatan ng mga likas na kagamitan ng produksyon.
4. Tayo rin ang naging angkatan ng kanilang mga tapos na produktong ginagamit sa produksyon. Tayo rin ang bagsakan ng kanilang mga tapos na produkto. Binibili nila sa atin ang mga pangunahing kagamitan sa produksyon nang mura at pagkatapos ay ipagbibili nila rito ng mahal ang mga tapos na produkto.

Anong hulwaran ng organisasyon o paano inilahad ng awtor ang mga impormasyon o ideya sa teksto?

- A. pagbibigay depinisyon
- B. enumerasyon o pag-iisa-isa
- C. paghahambing at kontrast
- D. sanhi at bunga

Ang tamang sagot – D.

Anotasyon

Ang tamang sagot, D. Sanhi at bunga.

May mga bagay na upang maunawaang mabuti, ang kailangang ipaliwanag ay kung ano ang pinanggagalingan. Ang pagpapaliwanag na ito ay ang tinatawag na paraang pagpapakilala ng pinagmulan, sanhi at bunga. Hindi ito magagawa sa pamamagitan ng hula-hula lamang.

Maaari kang makabuo ng talata sa pamamagitan ng simpleng pagtatanong: ***Bakit nangyari ito o bakit nagkaganoon?*** Ninanais nating malaman ang dahilan ng isang bagay o pangyayari.

Sa Item 3

Ang sanhi (pinagmulan/dahilan ng isang bagay): Ang pagkagiliw natin sa mga imported na bagay

Ang bunga (kinalabasan): ang industriyang Pilipino ay hindi umuunlad.

Opsyon A. Isang karaniwang paraan pa sa pagbuo ng talata ay ang pagbibigay ng *depinisyon/katuturan*.

Sapagkat ang wika ay buhay, kaya laging tumatanggap ng mga bagong salita. Sa talatang binasa, ginamit ang salitang imported. Sa ating pakikisangkot sa industriyalisadong bansa upang makaagapay tayo sa kanilang kaunlaran, malawakan ang dating ng mga bago o hiram na salita.

Subalit hindi gumamit ang manunulat ng pagbibigay depinisyon / katuturan sa pagbuo ng teksto. Gayunpaman, dapat tandaan na hindi lamang mga bagong salita, ang dapat bigyang katuturan. Depende ito sa pangangailangan. Maaaring karaniwan ang salita pero may teknikal na kahulugang dapat manggaling sa diksyunaryo.

Ipagpalagay nating nais nating makita kung paano gagamitin ng awtor ang hulwarang pagbibigay depinisyon sa paglalahad ng impormasyon sa teksto. Gamitin natin ang salitang imported na bagay.

Dalawang paraan ang maaari niyang gamitin sa pagbibigay depinisyon sa salitang imported.

a. Pormal - sa pagbibigay katuturan dapat na maipakita ang sumusunod:

- sa anong uri ito kabilang
- ano ang ikinaiba niya sa iba pang kauri nito

Halimbawa: imported na bagay

Uri-----

isang bagay na inangkat
o nagmula sa ibang bansa

Ikinaiba-----

at hindi gawa sa Pilipinas

b. Di-pormal - maaaring gamitin ang palasak na pamamaraan:

- pagbibigay halimbawa
imported na sigarilyo - Marlboro
imported na tsokolate - MM
imported na sapatos - Florsheim
imported na bag - Gucci

Opsyon B. Enumerasyon o pag-iisa-isa – hindi ito ginamit ng manunulat.

Ang enumerasyon ay simpleng pag-iisa-isa ng mga bagay na inilalahad.

Halimbawa:

Nais mong ipaalam ang mga bolpen mong ginagamit, isa-isahin mong isulat ang mga brand.

Rotring, Bic, Pilot, Panda, Reynolds

Maaari mong ayusin ang pag-iisa-isa ng mga bagay sa paraang paalpabeto.

Bic, Panda, Pilot, Reynolds, Rotring

Opsyon C. Paghahambing at Kontrast – hindi ito ginamit sa pagbuo ng talata.

Ginagamit ito sa mga paksang di-masyadong kilala o di-nalalaman. Upang makilala, inihahambing at ikinokontrast ito sa mga paksang kilala.

Halimbawa:

Margaret Thatcher

-

Gloria Macapagal Arroyo

(di-masyadong kilala)

(kilala)

Kasanayan sa Pagbuo ng Hinuha o Palagay

Item 4.

- 1 Sitwasyon: Nagkaroon ng suliranin si Nena tungkol sa kalusugan ng anak.
- 2 Kolustrum ang tawag sa unang labas ng gatas ng ina. Ito ay malapot, manilaw-nilaw at masustansya. Ito ay may anti-bodies na panlaban sa pagtatae, pulmunya at iba pang sakit na maaaring dumapo sa bagong silang na sanggol. Mainam din ang kolustrum pamurga at laksatibo o pampalabas ng "taon".
- 3 Ganito ang ginawa ni Nena.
- 4 Kapanganakan pa lamang ni Nena. Napansin niyang manilaw-nilaw ang gatas na lumalabas sa kanya. Inisip niyang panis ito. Hindi niya ito ipinasuso sa kanyang sanggol. Makaraan ang isang buwan, napansin ni Nena na malimit magtae ang kanyang sanggol. Hindi naman ito tinutubuan ng ngipin. Mahina rin ang katawan ng kanyang sanggol.

1. Bakit nagkaroon ng suliranin si Nena?
 - A. Hindi pinasuse ang bata
 - B. Walang gatas si Nena
 - C. Panis ang gatas ni Nena
 - D. Mahina ang gatas ni Nena
2. Paano ipinahiwatig (implikasyon) ng may-akda/manunulat na may suliranin sa kalusugan ang bata?
 - A. malimit magtae
 - B. tinubuan ng ngipin
 - C. payat ang katawan
 - D. manilaw-nilaw
3. Mula sa pahiwatig, ano sa palagay mo ang kalagayan ng anak ni Nena?
 - A. malambing
 - B. masakitin
 - C. masayahin
 - D. matampuhin

Ang tamang sagot sa:

1. - A
2. - A
3. - B

Anotasyon

Mga Teknik sa Pagbuo ng Hinuha o Palagay

Inilalarawan ni Kenneth Goodman na ang pagbasa ay isang saykolinggwistikong larong pahulaan. Samakatuwid, sa larong ito, ang mambabasa ang "taya". Mamimili siya ng pinakakaunting pahiwatig na kailangan niya sa pagbibigay ng hinuha. Sa Item 4, ipinakita lamang ng manunulat ang mga palatandaan o pahiwatig at hindi tiyakang sinabi o ipinahayag ang kalagayan ng bata. Sa pagkakataong ito inferential comprehension ang gagawin ng mambabasa. Ito'y kinapapalooban ng masusing pagbabasa at matalinong panghuhula sa ipinahihiwatig ng may-akda.

Pagbuo ng Hinuha:

Ayon kina Winnie, Graham, at Prock (nabanggit kay Gunning, 1996) may daiawang uri ng pagbuo ng hinuha: *schema-based at text-based*.

- Sa *schema-based inference*, hinahayaan ang mambabasa na magdagdag sa nilalaman ng teksto ng mga impormasyon batay sa ipinahihiwatig ng may-akda.
- Sa *text-based inference*, nangangailangan ito ng pagbuo ng impormasyon sa pamamagitan ng "pagtatagpi" ng dalawa o mahigit pang bahagi o piraso ng pangyayari/impormasyon mula sa teksto.

Kasanayan sa Pagbuo ng Balangkas

Mga Prinsipyo ng Pagbabalangkas

Malaki ang naitutulong ng balangkas sa pagbibigay gabay at direksyon sa pananaliksik. Basahing mabuti at suriin ang bawat bahagi.

Item 5. Alin sa mga naririto ang sumusunod sa prinsipyo ng pagbabalangkas?

5.1 Ukol sa pamagat ng mga bahagi

- A. I. Simula
A.
B.

B. II. Naidudulot ng beer sa tao at lipunan
A. Kabutihang naidudulot
B. Kapinsalaang naidudulot

C. II. Katawan

D. III. Wakas

B ang tamang sagot.

Anotasyon

Mga Teknik sa Pagsunod sa mga Prinsipyo ng Pagbabalangkas

Ang tamang sagot ay B.

Mga ideya ang talagang inilalagay sa bahaging ito.

Opsyon A, C at D:

Hindi gumagamit ng Simula, Katawan, at Wakas bilang pangunahing bahagi o heading ng isang balangkas.

5.2 Ukol sa pangunahin at di- pangunahing ideya

- A. I. Gamit ng *computer*
 - A. Kalikasan
 - B. Katangian
- B. I. Kalikasan ng *computer*
 - A. Katangian
 - B. Gamit
- C. I. Katangian ng *computer*
 - A. Kalikasan
 - B. Gamit
- D. Walang tamang sagot

B ang tamang sagot.

Anotasyon

Mga Teknik sa Pagsunod sa mga Prinsipyo ng Pagbabalangkas

Item 5.2

B ang tamang sagot.

Tiyakin na ang mga ideyang ilalagay sa Bahagi I, II, at III ay talagang pangunahin, pangkalahatan o pinakamahalagang ideya at hindi pansuporta o di-pangunahing ideya.

Sa maikling salita, tiyakin ang mga posisyon ng pangunahin at pansuportang ideya.

Opsyon A at C, higit na malawak ang sakiaw ng kalikasan kaysa gamit at katangian.

5.3 Ukol sa paralelismo ng mga ideya

- | |
|--|
| <p>A. I. Kapinsalaang dulot ng beer sa tao</p> <p style="padding-left: 40px;">A. Pangkalusugan</p> <p style="padding-left: 40px;">B. Pangkultura</p> <p>B. II. Kapinsalaang dulot ng beer sa tao</p> <p style="padding-left: 40px;">A. Pangkalusugan</p> <p style="padding-left: 40px;">B. Kultura</p> <p>C. II. Panahon ng Martial Law</p> <p style="padding-left: 40px;">III. Iba't ibang panahon</p> <p>D. II. Panahon ng Pananakop</p> <p style="padding-left: 40px;">A. Kastila</p> |
|--|

A ang tamang sagot.

Anotasyon

Mga Teknik sa Pagsunod sa mga Prinsipyo ng Pagbabalangkas

Item 5.3

Opsyon A ang tamang sagot.

Nakatutulong sa ikalilina hindi lamang ng baiangkas kundi pati na ng ideya at ng nilalaman nito kung magagamit ang paralelismo sa pagpapahayag tulad ng sa istruktura ng dalawang salita: pangkalusugan at pangkultura.

Parehong gumamit ng panlaping pang-. Samakatuwid, gumamit ng paralel na konstruksyon ng mga ideya / salita.

Opsyon B. Walang paralelismo sa istruktura ng mga salitang: pangkalusugan at kultural.

Gumamit ng panlapi ang una (pangkalusugan) at hindi naman gumamit ang ikalawa (kultural).

Opsyon C. May paralelismo rin ayon sa kronolohiya. Di-parallel ang dalawang pahayag sa Opsyon C. Sa una, binanggit ang tiyak na panahon. Dapat tiyak ang panahon sa III. Halimbawa: Panahon ng Edsa Revolution.

Opsyon D. Bitin ang ideya sa opsyong ito. Kung may A, dapat may B. Hindi dapat hayaang bitin ang mga ideya sa bawat bahagi ng baiangkas. Tiyaking may di-bababa sa dalawang ideya sa bawat lebel ng balangkas.

5.4 Ukol sa pagiging konsistent ng uri ng balangkas

- A. II. Kalikasan ng beer
 - A. Mga katangian nito
 - B. May mga uri ito.
- B. II. Kalikasan ng beer
 - A. Katangian
 - B. Uri
- C. II. Mga Uri ng Bawal na Gamot
 - A. Narkotiko
 - B. *Hallucinogens* – kasama rito ang LSD, *mescaline* at *psilocybin*.
- D. III. Mga Uri ng Bawal na Gamot
 - A. *Depressants* tulad ng *barbiturates* at *hypnotics*
 - B. *Stimulants*

B ang tamang sagot.

Anotasyon

Mga Teknik sa Pagsunod sa mga Prinsipyo ng Pagbabalangkas

Item 5.4

Opsyon B ang tamang sagot.

Kailangang maging konsistent ang anyo o ang mga bahagi ng sang balangkas. Sa B, balangkas papaksa ang uring ginamit, bawat bahagi ay binubuo ng mga salita kaya't konsistent ang uri.

Opsyon A. Di-konsistent ang mga bahagi. Sa una, papaksa; ang ikalawa naman ay papangungusap.

Opsyon C. Di-konsistent ang mga bahagi. Sa una, papaksa; papangungusap ang huli.

Opsyon D. Di-konsistent sa istruktura. Sa una, papangungusap; papaksa sa ikalawa.

5.5 Iba pang bagay na dapat ding maging konsistent.

Ang Aming Pamantasan

- A. I. Ang lokasyon nito
 - A. Ang layo
 - B. Ang laki
- B. II. Ang nakaraan nito.
 - A. Pagkakatatag.
 - B. Pag-unlad.
- C. III. Ang kalagayan nito sa kasatukuyan
 - A. Mga gusali
 - B. Mga guro
 - C. Mga mag-aaral
 - D. Lahat tama ang sagot.

Aling bahagi ng balangkas ang may mali?

B ang tamang sagot.

Anotasyon

Mga Teknik sa Pagsunod sa mga Prinsipyo ng Pagbabalangkas

Item 5.5

Opsyon B ang tamang sagot.

Hindi lamang sa uri ng balangkas dapat maging konsistent ang mga bahagi kundi pati na rin sa bantas at *format*.

May depekto o mali ang bahaging ito:

II A at II B kaysa II a at II b

Dapat walang tuldok (*period*) sa pangunahin at sumusuportang ideya.

Opsyon A at C ay may wastong pagkakaayos ng ideya pati na sa bantas at format.

Item 6.

Sa pagpili ng paksa, suriin mong mabuti kung ang saklaw nito ay lubhang napakalawak at hindi mo kayang isakatuparan. Kinakailangan, kung gayon, na ito'y limitahan mo lamang sa aspektong maisasagawa mo sa loob ng itinakdang panahon. Halimbawang nais mong talakayin ang tungkol sa paksang *polyusyon sa tubig sa Pilipinas*. Malawak ang saklaw ng paksang ito. Maaaring paliitin ang saklaw ng paksa sa pamamagitan ng pagsasaalang-aalang lamang sa alinman sa mga sumusunod na subtopic o aspekto. Alin sa mga sumusunod ang hindi maliit ang saklaw ng paksa?

- A. Ang kahalagahan ng pagkontrol ng polyusyon sa mga ilog at lawa
- B. Ang bahaging ginagampanan ng mga industriya at mga ahensya ng pamahalaan sa pagdurumi ng mga ilog at lawa
- C. Ang talaorasan (*time table*) sa pagkontrol ng polyusyon sa mga ilog at lawa
- D. Ang epekto ng polyusyon sa buong Pilipinas

Item 7.

Halimbawang ang napili mong paksa mula sa talaang ibinigay ng guro ay - PAGHAHALAMAN. Pinaliit mo ito at ang tiyak na paksa ay MGA HALAMANG GAMOT. Upang malinang ang pagtalakay sa paksa, kailangang maghanda ng mga katanungang nagsusuri, tumitiyak, nagbibigay sintesis (pagbubuo) tumutuntong sa pinagmulan, naghahambing o kaya'y nagtatatag. Alin sa mga sumusunod na tanong ang hindi nagsaalang-alang sa patnubay na nabanggit sa itaas?

- A. Paano nakikilala ang mga halamang gamot?
- B. Ibigay ang kahulugan ng halamang gamot.
- C. Anu-anong halamang gamot ang magagamit sa iba't ibang sakit?
- ☒ D. Gaano nakatutulong sa ordinaryong mamamayang Pilipino ang mga halamang gamot?

Item 8.

Pagkatapos mong mapili ang paksa, ang pagsisiyasat ng mga materyales sa aklatan na mapagkukunan ng mga kinakailangan mong impormasyon ang isusunod mong hakbang. Suriin mong mabuti ang pagkakasunud-sunod ng mga kard. Pagkatapos, piliin kung anong kard ang kinapapalooban ng binabanggit na paksa sa ibaba.

Population

- A. ABI – AU
- B. PAIN – PLUM
- C. POL – PUT
- D. QUA – QUO

Item 9.

Narito naman ang talaan ng pinagsamang *Author – Title Cards*. Piliin kung anong drawer ang kinapapalooban ng sumusunod na awtor ng aklat.

Peters, Edward I.

- A. Ead – Eys
B. PAC – PLUM

- C. POE – PYT
D. QAF – QUIRK

Para sa Item 10 – 11. Sa pananaliksik, nagsisilbi na ring isang *proposal* ang konseptong papel na nabuo. Binubuo ito ng apat na bahagi: I – rasyunal II – layunin III – metodolohiya at IV – inaasahang *output* o resulta. Ang mga pahayag sa ibaba ay hindi nakaayos batay sa format na nabanggit sa unahan. Alin sa sumusunod ang tama ang pagkakaayos?

Item 10.

1. Mag-iinterbyu ng mga *hematologist*, mga doktor na espesyalista sa pagsusuri ng dugo.
2. Sisiyasatin ang mga sanhi ng leukemia.
3. Batay sa DOH, panlima ang leukemia sa sanhi ng kamatayan ng mga Pilipino.
4. Bubuo ng modyul kaugnay ng sakit na ito.

- A. 3 – 4 – 1 – 2
B. 2 – 3 – 1 – 4

- C. 3 – 2 – 1 – 4
D. 2 – 3 – 4 – 1

Item 11.

1. Pakikipanayam sa mga namumuno sa lokal na pamahalaan kaugnay ng kanilang environmental campaign.
2. Malaking suliranin ang maruruming ilog sa lalawigan ng Bulacan.
3. Tatangkaing sugpuin ang patuloy na karumihan ng mga ilog.
4. Pagpapalabas ng sirkulasyon ng babasahin ukol sa wastong pangangalaga sa kapaligiran.

- A. 2 – 3 – 1 – 4
B. 3 – 2 – 4 – 1

- C. 1 – 4 – 3 – 2
D. 4 – 2 – 1 – 2

Item 12.

Narrito ang mga impormasyong bibliyograpikal. Piliin ang tamang pormat.

Simplicio P. Bisa

Retorika para sa mabisa at masining na pagsulat

De La Salle University Press, Inc.

1999

Maynila

- D. Bisa, Simplicio P. (1999). Retorika para sa mabisa at Retorika Masining na pagsulat. De La Salle University Press.

Para sa Item 13 – 15. Basahin at unawain ang artikulo.

(Mga Proseso/Daynamik na Development ng Grupo)

Artikulo:

Pamumuno
Leadership*Ano ang pamumuno?*

Kapag iniisip mo ang tungkol sa pamumuno, ano ang pumapasok sa iyong isipan? Ang walang takot na tagapag-utos na opisyal na pinamumunuan ang kanyang tropa patungo sa labanan? Ang presidente ng Amerika na nagtatalumpati sa kanyang bansa sa pamamagitan ng telebisyon pangnasyonal? Ang pinuno na representante ng mga estudyante? Maaari ring iniisip mo ang namumuno ng komite o lupon na iyong kinabibilangan. Kadalasan, ang pag-aaral tungkol sa pamumuno ay nakasentro sa mga taong naging matagumpay sa pagkakaroon ng posisyong namumuno. Ayon sa mga mananaliksik, sa pamamagitan ng pagtingin sa mga matatagumpay na mga pinuno ay maaari nilang kilalanin at alamin ang mga kadahilanan o mga indibidwal na katangian na makapagsasabi ng mga abilidad at kakayahan ng tamang pamumuno. Ang pag-alam sa mga katangiang ito ay malaki ang magiging kahalagahan sa larangan ng negosyo, gobyerno, o sa militar na may responsibilidad sa pagtataguyod o pagbibigay sa ibang tao ng posisyon ng pagkalider.

*Mula sa: Semorlan, et al. (1999). Pagbasa at Pagsulat
sa Iba't Ibang Disiplina.
d. 119 - 120*

Item 13.

Halimbawa ito ng artikulo/babasahing may hulwarang _____.

- | | |
|-----------------|----------------------------------|
| A. pag-iisa-isa | C. paghahambing at pagkokontrast |
| B. depinasyon | D. problema at solusyon |

Item 14.

Aling salita ang walang kaugnayan sa pangunahing ideya ng artikulo?

A. pinuno

C. presidente

B. tagapag-utos

D. mananaliksik

Item 15.

Gamit ang *graphic organizer* anu-anong salita ang maiuugnay sa *pamumuno*?

A. tropa, bansa, komite

B. opisyal, presidente, kinatawan

C. militar, gobyerno, negosyo

D. walang tamang sagot

Para sa Item 16 – 18. Basahin at unawain ang artikulo.

Artikulo (Sosyolohiya)

Relihiyon

- 1 Ang sikolohiya ng relihiyon ay ang pag-aaral ng mutwal na interaksyon ng relihiyoso at ibang sosyal na institusyon. Ang relihiyon ay sinasabing matatag na kasagutan ng mga tao laban sa supernatural na bagay kahit na ang ilang mga gawain ay nagpapakita ng paniniwala sa ritwal na sistema.
- 2 Ang relihiyong sibil o *civil religion* ay tumutukoy sa sistema nang malawak na paniniwalang panrelihiyon, maaaring hindi ipapahayag nang buo ng isang grupo, at sinasabing may malaking impluwensya sa pulitikal na buhay ng mga Amerikano.
- 3 Ang mga klasipikasyon ng simbahan sa kulto, sekta, denominasyons (denominasyon) at ekleasyas (ecclessias) ay nagpapakita ng iba't ibang paraan sa pag-uugnay sa lipunan. Ang sekta ay nagpapataw ng mahigpit na modelo ng hulwarang asal sa mga miyembro nito pero naghahanap

ng pagpapahintulot imbes na pagbabago mula sa lipunan. Ang kulto ay maaaring maghanap ng transpormasyon sa komunidad at kaasalang nagpopokus sa pagbup ng maganda at nararapat na ekspiryensya ng grupo. Ang denominasyon ay isang pangunahing relihiyosong grupo na nagnanals ng paghihiwalay ng simbahan at estado upang ito ay maging impluwensyal kahit hindi dominante. Ang eklesya ay isang simbahan na nagbibigay-pansin sa ispiritwal na ekspresyon ng buong komunidad.

- 4 Ang lumalabas na tungkulin ng relihiyon ay naipapakita sa obhetibong pagiipit sa mga tao at paghikayat sa kanila na ipakita o gawin ang mga gawaing panrelihiyon at suportahan ang simbahan. Ang nakatagong tungkulin ay kadalasang hindi nakikita, maaaring ito ay pabor o hindi sa mga nakikita o obhetibong pinapakita o kinikilala ng simbahan. Binubuo ng mga natatagong tungkulin ang pagbibigay ng tulong sa mga nangangailangan.

*Hango sa: Semorlan, et al. (1999).
Pagbasa at Pagsulat sa Iba't Ibang Disiplina.
d. 126 - 127*

Item 16.

Kiialanin ang mga istilong ginamit ng awtor sa paglalahad ng teksto. Alin ang dapat pang idagdag? Depinisyon, pag-iisa-isa o enumerasyon, _____

- A. Paghahambing at pagkokontrast
- B. Problema at solusyon
- C. Pagsusunud-sunod (paraan o proseso)
- D. Walang tamang sagot

Item 17.

Anong uri ng klasipikasyon ang inilalahad dito?

- A. lipunan
- B. pamahalaan
- C. simbahan
- D. paaralan

Item 18.

Kung gagamitin ang graphic organizer na nasa ibaba, makatutulong ito upang maiayos mo ang impormasyong nabasa.

IBA'T IBANG PARAAN NG PAG-UUGNAY SA LIPUNAN

KLASIPIKASYON	KATANGIAN
1	
2	
3	
4	

Alin ang maliwanag na nagpapakita ng pagkakatulad at pagkakaiba ng impormasyon?

- A. Kulto, sekta, denominasyon, eklesyas
- B. Sekta – modelo ng huwarang aral
Kulto – transpormasyon sa komunidad
Denominasyon – paghihiwalay ng simbahan at estado
Eklesyas – ispiritwal na ekspresyon
- C. Sekta – nagpapataw
Kulto – naghahanap
Denominasyon – nagnanais
Eklesyas – nagbibigay pansin
- D. Sekta – modelo
Kulto – ekspiryensya
Denominasyon – impluwensiyal
Eklesyas – ekspresyon

Para sa Item 19 – 20. Basahin at unawain.

Saklaw (Abnormal na Sikolohiya)

May dalawang epekto ng pagkakahiyang sa gamot. Ekis na pagkakahiyang at baligtad na pagkakahiyang. Ang Ekis na pagkakahiyang ay kung saan ang isang tao ay nagpapakita ng pagkakahiyang sa isang gamot at magpapakita din ng pagkakahiyang sa ibang gamot na pareho lamang ang epekto. Ang Baligtad na pagkakahiyang naman ay nagpapakita ng pagkakahiyang kahit na mababa ang dosage ng gamot.

*Mula sa: Semorlan, et al.
(1999). Pagbasa at Pagsulat
sa Iba't Ibang Disiplina.
d. 107*

Item 19.

Anong dalawang bagay ang pinaghahambing?

- | | |
|-----------------|-------------------------|
| A. uri ng tao | C. pagkahiyang sa gamot |
| B. uri ng gamut | D. dosage ng gamot |

Item 20.

Paano nagkakaiba ang dalawang bagay na pinaghahambing sa Item 19?

- | | |
|-----------|----------|
| A. dosage | C. gamot |
| B. epekto | D. tao |

Item 21.

Ano ang pinakaangkop na damdaming napapaloob sa sumusunod na pahayag?
Marahil malapit na akong suwertehin. Sa susunod na buwan, higit na maraming tiket ang aking bibilhin.

- | | |
|-------------------|---------------------|
| A. panghihinayang | C. kawalang pag-asa |
| B. pag-asa | D. kasiyahan |

Item 23.

Anong damdamin ang ipinahihiwatig ng sumusunod na pahayag?
Hustisya! Meron pa ba niyan?

A. pagmamahal

C. panghihinayang

B. pag-asam

D. poot

Para sa Item 24 – 25. Basahin at unawain.

Artikulo: (Abnormal na Sikolohiya)

Ang Istorya ni Anne: Isang kaso ng Pagkabingi

- 1 Si Anne ay isang batang babae na naging bingi dahil sa tensyon sa pamilya. Ang kanyang relasyon sa kanyang ina ay malayo, at ang pagkabingi ay isang pag-iwas sa boses ng kanyang ina. Si Anne ay hindi nagpapakita ng reaksiyon sa mga biglang malalakas na tunog. Nagpapakita siya ng tagong reaksiyon sa mga tunog sa unang pagsubok na sinukat sa pamamagitan ng elektro myogram (EMG). Ang unang pagsubok ng EMG ay may reaksiyon mula sa leeg matapos ang malakas na tunog. Matapos ang 60 na segundo, sa pangalawang pagkakataon ay wala siyang reaksiyon.
- 2 Sa dahilan na kayang bumasa ni Anne ng galaw ng labi, pinagsama ng therapist ang pagkokondisyon at suhestiyon na nagsasabi kay Anne na malapit na siyang makarinig.
- 3 Minsan sa isang aksidente na muntik nang kumitil sa buhay ni Anne, ang kanyang pandinig ay nanunumbalik nang nadinig niya ang busina ng trak.

Mula sa: Semorlan, et al. 1999.
Pagbasa at Pagsulat sa Iba't ibang Disiplina.

d 107

Item 24.

Pagkatapos mong basahin ang artikulo, anong kaisipian ang nabuo mo?

- A. maaaring magdulot ng pagkabingi ang aksidente
- B. isang pambihirang kaso ang pagkabingi ni Anne
- C. ang bingi ay nakababasa ng galaw ng labi
- D. maaaring pagsamahin ang pagkokondisyon at suhestiyon upang gumaling ang isang bingi

Item 25.

Gamit ang ugnayang sanhi – bunga, piliin ang angkop para sa istorya ni Anne.

- A. walang reaksiyon → pagkabingi
- B. malakas na tunog → pagkabingi
- C. dulot ng aksidente → pagkabingi
- D. tensyon sa pamilya → pagkabingi

BAHAGI III - PAGLINANG NG KASANAYAN SA PAGKUHA NG PAGSUSULIT

Item 1.

Kilalanin ang mga salita sa pamamagitan ng paghahambing ng mga magkakatulad na kahulugan. Alin ang di-dapat maisama sa pangkat?

- A. Maganda at masining ang kaniyang maikling kuwento.
- B. Makitid at makipot ang landas patungo sa kalangitan.
- C. Matalas at matalim ang dila ng babae.
- D. Matamis at mapait ang pag-ibig.

Item 2.

Lahat ng pares ng salita ay magkakatulad ang kahulugan maliban sa isang pares. Alin ang di-dapat maisama sa pangkat?

- A. Malupit at mabagsik ang pinunong iyon.
- B. Ayaw kong pag-usapan ninuman ang saya at lungkot na aming naranasan.
- C. Matibay at matatag ang asawa ni Francis Magalona.
- D. Mapag-imbot at mapaghangad ang kapatid niya sa ama.

Para sa Item 3 – 4. May mga salitang halos magkakasingkahulugan subalit may mga tiyak na disiplinang kinauugnayan. Suriin ang mga salita upang magamit sa tiyak na larangang kinauugnayan.

Item 3.

Ang saluhan ay sa pagkain

Ang saliwang ay sa musika

Ang ningning ay nakasisilaw

Ang liwanag ay _____

- A. nakabubulag C. masangsang
B. nagmumulat D. malinamnam

Item 4.

Ang maawain ay sa tao
Ang matalas ay sa itak na bagong hasa
Ang kislap ay kutitap
Ang kinang ay sa _____

- A. kalawakan C. bahaghari
B. alapaap D. alahas

Item 5.

Nagbibigay ang mga salitang nilalapan, ng kahulugang tila, para o halos.
Aling salita ang di dapat maisama sa pangkat?

- A. malapot C. malasutla
B. malarosas D. malakanin

Item 6.

May dalawang paraan ng paglalarawan: ang *masining* at ang *karaniwan*. Sa mga sumusunod na pahayag tukuyin ang halimbawa ng isang karaniwang paglalarawan.

- A. Malalaki at mabibilog ang pakwan.
B. Amoy pinipig ang simoy ng hangin.
C. Nadama niya ang matinding sakit na nagpapakirod ng buo niyang katawan.
D. Saklot ng matinding takot ang inang nakatingin sa nakahandusay na anak.

Para sa Item 7 – 8. May mga salitang magkasingkahulugan ngunit bawat isa ay may tiyak na gamit at hindi maaaring pagpalitin. Suriin ang ugnayan ng salita

Item 7.

Alin sa mga sumusunod na pahayag ang naiiba ang diwa?

- A. Matavog ang lipad ng saranggola.
- B. Matangkad ang kaniyang bayaw.
- C. Mataas ang pader ng kanilang kapitbahay.
- D. Malaki ang puno ng niyog.

Item 8.

- A. Bansot ang halamang nabili mo sa naglalako.
- B. Mababa ang pagtingin niya sa lalaking lasenggero.
- C. Hamak na hamak ang itsura niya.
- D. Pandak ang tintera ng isda sa palengke.

Item 9.

Mga halimbawa ito ng mga salitang may nagkakaiba/nagkakasalungat na kahulugan. Alin sa mga pares na ito ang hindi kabilang sa pangkat?

- A. Malinis at marumi ang mga damit sa sampayan.
- B. Langit at lupa ang kanilang agwat sa buhay.
- C. Mabuti at marangal ang hanapbuhay ng kanyang Ninang sa Australia.
- D. Katulad nila'y tubig at langis na di-pwedeng pagsamahin.

Item 10.

Sa mga pares ng salita alin ang may magkatulad na kahulugang magagamit sa paglalarawan ng isang panauhin sa isang handaan?

- ☒ A. matakaw at masiba
- C. marami at kakaunti
- B. matangkad at pandak
- D. malapit at malayo

Item 11.

Kung ang salitang ugat na bata ay gagamitan ng iba't ibang panlapi, magbibigay ito ng iba't ibang kahulugan. Alin sa mga sumusunod ang hindi dapat maisama sa pangkat batay sa kaanyuan ng salita?

- A. mabata
- B. magbata

- C. binata
- D. pagkabata

Item 12.

Sa pagbubuo ng salita, alin sa mga sumusunod ang tumutukoy sa tatlo o higit pang kaanak na ang iba ay nagdadala sa iba pa sa relasyon na tinutukoy ng salitang ugat?

- A. mag-aaral
- B. magkakasama

- C. magkapitbahay
- D. mag-aama

Para sa Item 13 - 17.

item 13.

Basahin ang teksto sa ibaba.

Artikulo: (Malikhaing Sining at Musika)

Sa Kulay (colors)

May isang araling tinatalakay sa kursong ito tungkol sa mga kulay na pwedeng gamitin. Ito ay ang kahalagahan ng mga kulay. Sa pagtuturo tungkol sa kulay, maaaring gamitin itong pagkukuwento para lalong maintindihan ng mga bata ang leksyon. Halimbawa ng kwento; minsan daw, nag-away-away ang mga kulay. Nagsalita ang kulay berde at ang sabi, siya raw ang pinaka-importanteng kulay dahil ang kalawakan na sinasaka ay kulay berde at ang mga gulay rin ay kulay berde. Ngunit hindi sumang-ayon ang kulay asul dahil para sa kanya siya ang pinaka-importanteng kulay dahil ang kalangitan daw ay kulay asul. Subalit hindi sumang-ayon ang kulay dilaw, siya raw ang pinaka-importanteng kulay dahil ang kulay ng araw ay dilaw. Ngunit sumagot naman ang kulay kahel, sabi niya siya raw ang pinaka-importanteng kulay dahil ang lahat ng kulay kahel ay nagbibigay

ng sustansiya sa kalusugan. Patuloy ang kanilang naging pagtatalo. Hanggang dumating ang kulog at bumuhos ang ulan. Pagkatapos ay may tinig na nagsalita. "magkapit kamay kayo." At ano ang nakita nila? Isang bahaghari na tinataglay ang kulay nila. Naging mas malaki at malapad sila at nagkaroon ng pagkakaisa.

Mula sa: Pagbasa at Pagsulat
Sa Iba't ibang Disiplina (1999).
Semorlan et al d. 213 - 214

Ibigay ang pangunahing ideya na ipinahihiwatig ng awtor.

- A. kahalagahan ng mga kulay
- B. pagtatalo ng mga kulay
- C. sama-samang pakikisama at pagkakaisa
- D. ang kulay ay bahaghari

Item 14 - 17. Gamit ang *graphic organizer* na T-chart paghambingin mo ang mga kulay. Piliin ang titik ng tamang sagot sa mga tanong na makatutulong sa pagbuo nito.

URI NG KULAY	KATANGIAN
14. kahel	A. kalawakan B. kalangitan C. sustansiya sa kalusugan D. gulay
15. berde	A. kalawakan na sinasaka B. pinaka-importante C. kapayapaan A. D. bahaghari

URI NG KULAY	KATANGIAN
16. dilaw	A. sustansiya sa kalusugan B. araw C. kalangitan D. gulay
17. asul	A. kalawakan ng sinasaka B. pinaka-importante C. kalusugan D. kalangitan

Item 18. Basahin at unawain.

Artikulo: (Produksyong Pantelebisyon at Panradyo)

Programang Pantelebisyon para sa Kabataan
Television Shows For the Youth

1. Ating isa-isahin at suriin ang mga programang pantelebisyon para sa mga kabataan: Nandiyan ang *Teen Talk*, na tumatalakay ng mga maseselang suliranin ng mga tinedyer, *Kada*, at ang *Five and Up*, na nagpapakita ng mga iba't ibang balita sa larangan ng isports, showbiz, at iba pa. Ang mga programang ito ay tumatalakay sa buhay ng mga kabataan, mga problema at masasayang karanasan ng isang tinedyer. Sa pamamagitan ng panonood ng mga programang ito, mas madaling makahambing ang mga kabataan sa kanilang pinanonood.
2. Samantala, kung katatawanan naman ang kanilang hanap, nariyan ang *Tropang Trumpo* at Ang TV. Hindi lamang nakapagbibigay ng aliw, saya at aral ang mga programang ito, pati rin ang mga artista sa mga nasabing programa ay nagsisilbing mga mabubuting modelo sa mga kabataan natin ngayon.

Mula sa: Pagbasa at Pagsulat
Sa Iba't ibang Disiplina (1999).
Serforian et al d.145

Anong katangian ng hulwaran o istilo ng organisasyon ng teksto ang ginamit ng awtor?

- A. pagtatala o paglilita
- B. pagsusunod-sunod
- C. depinisyon
- D. sanhi at bunga

Item 19. Basahin ang pangunahing ideya sa kahon:

Programang Pantelebisyon para sa Kabataan

Alin sa mga sumusunod ang hindi halimbawa ng pangunahing ideya?

- A. *Teen Talk*
- B. *Kada*
- C. *Five and Up*
- D. Ang programang ito ay tumatalakay sa buhay ng kabataan.

Item 20.

Alin naman sa mga sumusunod ang hindi nagpapaliwanag sa pangunahing ideya?

- A. Tumatalakay sa maseselang suliranin ng mga tinedyer
- B. Nagpapakita ng mga iba't ibang balita
- C. Tropang Trumpo, Ang TV
- D. Nagsisilbing modelo sa kabataan natin ngayon

Item 21.

Ang mga pangungusap sa ibaba ay magkaugnay MALIBAN sa isa. Alin ang pangungusap na ito?

- A. Pangarap niyang makarating sa ibang bansa.
- B. Masarap magbakasyon sa ibang bansa.
- C. Isang araw, may nabasa siyang anunsyo na nangangailangan ng mga manggagawa sa ibang bansa.
- D. Dali-dali niyang kinuha ang adres ng kompanya at sumulat siya upang magprisinta.

Item 22. Basahin at unawain.

Artikulo (Kahalagahan ng Pag-aaral ng Ekonomiks)

Ngunit Ano Ba ang Demand at Suplay?

- 1 Ang demand ay nagsasaad ng dami ng produkto at serbisyong ninanais bilhin ng isang mamimili, sa iba't ibang alternatibong presyo sa isang takdang panahon. Sa sistema ng bilihan, halos ang lahat ng bagay ay may demand. May demand sa damit, sa sapatos, pagkain, pabango, bahay, shampoo at lahat pa. Halimbawa, ang demand sa bigas ay nagsasaad ng dami ng bigas (sa kilo) na bibilhin ng mga mamimili sa presyong (ilang piso bawat kilo) itinakda ang bilihan sa isang takdang panahon.
- 2 Ang suplay naman ay ang dami ng produkto o serbisyong handang ipagbili ng mga negosyante sa bilihan sa bawat alternatibong presyo sa isang takdang panahon. Kung may demand sa lahat ng bagay, ito ay tumutugon sa sistema ng bilihan sa pamamagitan ng panghihikayat sa mga negosyante upang gumawa at isuplay ang mga produkto at serbisyong may demand.

*Mula sa: Pagbasa at Pagsulat
Sa Iba't ibang Disiplina (1999).
Semorlan, et al., d. 183*

Saan nagkakaiba ang depinisyon ng salitang demand at suplay?

- | | |
|-----------------------|------------------------|
| A. dami ng produkto | C. takdang panahon |
| B. sistema ng bilihan | D. walang tamang sagot |

Item 22. Basahin at unawain.

Sa Makati at Dibisorya,
Denims ang Hanap Nila
Valerio L. Nofuente

Hindi mapasubaliang ang may tangan ng korona sa larangan ng moda sa damit ay maong o denims. Tila uniporme ng Pinoy ang pantalong maong lalo na sa mga siyudad, at matatagpuang namamayani sa mga kampus, pabrika, opisina, subdibisyon at pook-iskwater. Ito'y isinusuot ng traysikel *boy at executive, disc jockey* at kanto *boy*, naka-*Mercedes Benz* at naka-dyip, babae, bakla, matrona at mukhang tatay, estudyante at *drop-out*.

Mula sa: *Likha (1998).*
Santos, Benilda d. 99

Anong kongklusyon ang mabubuo mo pagkatapos mabasa ang artikulo?

- A. Usong kasuotan ang maong
- B. Matatagpuan sa Makati at Dibisorya
- C. Lahat ng uri ng tao'y nagsusuot ng maong
- D. Inihahambing ito sa uniporme

Item 24. Basahin at unawain.

Artikulo (Matematikang Pangnegosyo)

Pagkuha ng Persentahe

1. Sa paghahanap-buhay at gayundin sa pang-araw-araw nating pamumuhay ay kalimitan tayong nagkukumpara ng mga bagay lalo na ng mga numero at halaga. Maaari, halimbawa, pagkumparahin ang paglaki ng populasyon ngayong taon. Sa mga ganitong pagkakataon ay gumagamit tayo ng pormula sa pagkuha ng persentahe o kung gaano kalaki ang isang bagay na dagdag sa kabuuan.

2. Ang kompyutasyon sa pagkuha ng interes, mga diskawnt, buwis, komisyon, at paglaki ng produksyon ay nakabase sa pagkuha ng persentahe. Ang mga problema ukol sa pagkuha ng persentahe ay nagtataglay ng tatlong elemento: ang beys, kung anong tinutukoy sa problema; and reyt, ang halaga o digri ng isang bagay katulad ng reyt ng interest; reyt ng paglaki at iba pa, at ang persentahe, dami o bilang ng aytem na isinalalarawan ng reyt.
3. Ang pormula sa pagkuha ng persentahe ay ang pagmumultiply ng beys at reyt ($PP = P \cdot R$; kung saan P = persentahe B = beys R = reyt). Halimbawa ng ganitong aplikasyon ay kung pagkukumparahin ang populasyon noong 1985 at 1986. Gaano karami ang halaga ng paglaki ng populasyon noong 1986 kung ito'y lumaki ng labintatlong porsyento (13%) mula sa populasyong 5 bilyon noong 1985? Ang sagot ay 65,000,000 ($P = 5b \cdot .13$). Ang ibig sabihin nito ay noong 1986 ay naragdagan ng 650,000,000 ang populasyon at naging 5,650,000,000 na ito. Mahalaga ang pagkuha ng persentahe para sa mga rekord at istatistiks.

*Mula sa: Pagbasa at Pagsulat
Sa Iba't Ibang Disiplina (1999).
Semorlan et al., p. 188-189*

1. Alin sa mga sumusunod na terminolohiya ang **hindi** ginamit sa tekstong binasa kaugnay ng matematikang pangnegosyo?

A. persentahe	C. produksyon
B. komisyon	D. kultura
2. Alin sa mga sumusunod na salita ang **hindi** hiniram sa Ingles?

A. beys	C. istatistiks
B. reyt	D. pormula

Item 25. Suriin at bigyan ng interpretasyon ang *bar graph* sa ibaba.

**KABUANG BILANG NG
MAGSISIPAGTAPOS
SY 2008-2009**

Gamitin ang *bar graph* upang matulungan ka sa pagsagot sa mga tanong na nasa ibaba.

- Aling kolehiyo ang may pinakamataas na bilang ng magsisipagtapos?
 - CASS
 - CED
 - CLLL
 - COS
- Alin namang kolehiyo ang may pinakamababang bilang ng mga magsisipagtapos?
 - CASS
 - CED
 - CLLL
 - COS
- Ilan ang bilang ng kolehiyo?
 - 4
 - 2
 - 1
 - 3
- Anong taong pampaaralan ang datos ng magsisipagtapos?
 - 2008-2009
 - 2009-2010
 - 2007-2008
 - 2006-2007

Masining na Pagpapahayag

Inihanda ni:

Arsenia R. Emperado, Ph.D.

Kasanayan:

Nagagamit ang angkop
na repertwa ng wika sa
pagpapahayag ng kaalaman,
karanasan at saloobin.

BAHAGI I - BALIK-ARAL SA NILALAMAN: MGA BATAYANG KONSEPTO

1. Sa lahat ng uri ng gawain, kailangan ng tao ang makipagtalastasan sa kanyang kapwa. Isinasagawa ito sa dalawang paraan- pagpapahayag na **pasalita** at **pagpapahayag na pasulat**.
2. Ang retorika ay may mahalagang papel sa **masining** at **mabisang pagpapahayag**. (Bisa, 1999:2)
 - Anumang may sining ay maganda; maganda kung ang mga salitang gagamitin ay magsasaalang-alang sa himig o tono, sa ritmo, sa talinhaga, sa diksyon.
 - Anumang mabisa ay nagbibigay ng mabuti o magandang resulta o bunga; mabisa kung magiging paraan ang paggamit ng wika para makapaghatid ng maliwanag na impormasyon, makapagpahayag ng makabuluhang ideya, at makapagkintal ng mga impresyon sa isipan ng mambabasa o tagapakinig.
3. Samakatuwid sa paggamit ng dalawang salitang nabanggit sa kaisipan Big. 2 kaugnay ng wika, ang masining at mabisang pagpapahayag ay ang maayos, maganda, malinaw, tama at epektibong pagpapahayag ng ano mang naiisip, nadarama sa paraang maaaring pasalita o pasulat.
4. Dalawang mahahalagang bagay ang hindi maaaring paghiwalayin sa pag-aarai ng masining-at mabisang pagpapahayag:
 - **retorika**¹ (Ayon sa klasikong depinisyon) (Badayos, 2001:4)
 - a. agham ng pagpapahinuod (Socrates, 350 BC)
 - b. kakayahan sa pagwawari o paglilirip sa bawat pagkakataon ng anumang paraan ng paghimok (Aristotle)
 - c. ang sining ng argumentatibong komposisyon (Richard Whatley)

- **retorika²** (Ayon sa kontemporaryong depinisyon)
 - ang pinakamabisang pagpili/ paggamit ng mga salita upang makabuo ng isang makabuluhan at epektibong mensahe
 - **grammar/balarila** – ang wastong gamit/pagkakaayos ng mga salita upang makabuo ng mga pangungusap na gramatikal
5. Kung gayon sa mga kaalamang pambalarila (tulad ng wastong gamit, tamang mga panuring, pandiwa, atbp.) nakasalalay ang kawastuan at kalinawan ng ating pagsasalita at pagsulat. Kahit na maganda ang pahayag kung hindi wasto ang mga gamit at ugnayan ng mga salita, hindi lamang makababawas iyon sa kalinawan ng pahayag kundi gayundin sa pagiging kaakit-akit nito. Samakatuwid, kasama ng retorika ang balarila para makamit ang mabisang pagpapahayag.
6. Paano ba ginagamit ang **retorika** sa proseso ng mabisang pagpapahayag?
- **Paggamit ng mga alusyon at talinghaga**
Alusyon - mga karunungan bayan na minana pa natin sa ating mga ninuno.
Nagdaragdag ito ng kasiningan sa pagpapahayag tulad ng mga sumusunod:
 - a) **Salawikain** - Matalinghaga ang salawikain at karaniwang kapupulutan ng aral hinggil sa buhay at pamumuhay. Ito ay mga taludtod na may sukat at tugma. Itinuturing na hiyas ng ating wika ang mga salawikain sapagkat tulad ng isang hiyas, ito ay nakapagpapaganda ng pagpapahayag.
Halimbawa:
Aanhin ko ang bahay na bato kung ang nakatira ay kwago.
(Ito ay tungkol sa maayos na pakikitungo sa kapwa tao o sa mga kapitbahay.)

- b) Kasabihan – Mga bukambibig na hinango mula sa karanasan ng buhay na nagsisilbing patnubay sa mga dapat na ugaliin ng tao. Naglalaman ng mga kaisipang nagpapahayag ng mga katotohanan na sadyang may pagkakaugnayan ang buhay sa kaasalan ng tao.

Halimbawa:

Pili nang pili, nauwi sa bungi.

(Sa kapipili o sobrang pagkapihikan maaaring matapat sa pangit o may kapansanan.)

Mahahalagang pahayag din na kinuha o hinugot sa mga akda ng kilalang tao o lider ng bansa.

Mga halimbawa:

Ang katapatan ko sa aking partido ay magwawakas sa pagsisimula ng katapatan ko sa aking bayan. (M.L. Quezon)

Ang kabataan ang pag-asa ng bayan. (Jose P. Rizal)

- c) Kawikaan – Iba ang kawikaan kaysa salawikain. Ang kawikaan ay hindi nagtataglay ng talinghaga kaya tiyak ang kahulugan. Karaniwan nang binubuo ito ng taludtod o mga taludtod na maaaring may sukat at tugma at maaari ring wala.

Mga halimbawa:

Nasa Diyos ang awa, nasa tao ang gawa.

Huwag ipagpabukas ang kaya mong gawin ngayon.

- **Paggamit ng mga salitang ginagamit na idyoma/ sawikain**

Mga lipon ng salita na ang dalang kahulugan ay iba kaysa sa kahulugang literal ng mga salitang bumubuo nito. Nakatutulong sa mabisa, makulay at makahulugang pagpapahayag ang paggamit ng idyoma.

Pinakapuso ng lahat ng salita ang idyoma (Santiago, 1994). Kapag inalis ang mga idyoma ng isang wika, masisira ang komunikasyon ng mga taong gumagamit nito. Yumayaman at yumayabong ang isang pahayag kung ginagamitan ng idyoma na minana pa natin sa ating mga ninuno.

Gayunpaman kung susuriin ang kahulugan ng bawat salita, tila mali at lihis ito sa mga tuntuning pambalarila.

Ayon kay David Minsberg (nasa Tanauan, et al., 2003:4) maaaring malaman ang kahulugan ng bawat idyoma sa pamamagitan ng:

- a) pag-unawa sa kaugnayan nito sa ibang bagay
- b) pagsuri sa kaugnayan nito sa ibang salita sa loob ng pangungusap
- c) paggamit nito nang malimit hanggang sa ito'y maging bahagi na ng sariling bokabularyo

Mga halimbawa:

naghugas ng kamay

buhay alamang

buwaya sa katihan

- **Paggamit ng tayutay/patalinghagang anyo ng pagpapahayag**

Iniugnay ang kaalamang retorika sa patalinghagang pagpapahayag o sa ibang salita'y **tayutay**.

Tayutay - Isang pahayag na sadyang masining at kaakit-akit. Naghahayag ito ng makulay at mabisang pagpapakahulugan.

Pangunahing layunin ng retorika na makapagpahayag nang maganda, masining, at maayos.

Ang mga sumusunod ay mga uri ng patalinghagang pagpapahayag o tayutay:

- a) Pagtutulad (simile) – paggamit ng tuwirang pagkukumpara ng dalawang bagay na magkaiba ng uri.

Halimbawa:

Ang tren ay parang alupihan.

- b) Pagwawangis (metaphor) – paggamit ng mga pahayag na nagpapahiwatig ng pagkukumpara ng dalawang bagay na magkaiba ng uri. Hindi na ito ginagamitan ng mga pariralang tulad ng,

kawangis ng, gaya ng, animo'y, atbp.

Halimbawa:

Tinik siya sa lalamunan ni Angelo.

- c) Pagbibigay-katauhan (*personification*) – pagsasalin ng mga katangian ng tao sa isang bagay. Naipapahayag ito sa pamamagitan ng paggamit ng pandiwa.

Halimbawa:

Sumasayaw ang mga aion sa karagatan.

- d) Pagmamalabis (*hyperbole*) - isang pahayag na eksaherado o labis sa katotohanan.

Halimbawa:

Nagliliyab ang mga mata ng galit na galit na lalaki.

- e) Pagtawag (*apostrophe*) – isang pabulalas na pagkausap sa isang tao (karaniwang patay o wala sa isang tiyak na pook) o isang bagay o bahagi ng kalikasan na binibigyan ng katangiang pantao.

Halimbawa:

Pag –ibig! Masdan ang ginawa mo.

- f) Pagpapalit-tawag (*metonymy*) - paggamit ng isang salitang panumbas o nagpapahiwatig ng kahulugan ng di-tinukoy na salita; ang pagpapalit ng katawagan o ngalan sa bagay na tinutukoy.

Halimbawa:

Malalim na pilat ang naiwan sa kanyang puso.

- g) Pagpapalit-saklaw (*synecdoche*) – pagbanggit sa bahagi bilang pagtukoy sa kabuuan; maaari rin namang nag-iisang tao ang kumakatawan sa isang pangkat.

Halimbawa:

Isang kayumanggi ang pinarangalan sa larangan ng boksing.

- h) Paghihimig (*onomatopoeia*) – paggamit ng mga salitang ang tunog ay gumagagad sa inilalarawan; naipapahiwatig dito ang kahulugan sa pamamagitan ng tunog o himig ng mga salita.

Halimbawa:

Kumalabog sa matigas na lupa ang bumagsak na kargamento mula sa trak.

- i) Pagsalungat/oksimoron/epigram (oxymoron) – paggamit ng dalawang salitang magkasalungat o pahayag na nagsasalungatan.

Mga halimbawa:

*tumatawa'y umiiyak
may lungkot at tuwa
mabuting kaaway*

- j) Paralelismo (parallelism) – paggamit ng inihahanay na kaisipan sa magkakahawig na istruktura, tulad ng:

*sama-samang nabubuhay
sama-samang namamatay*

- k) Paglumanay (euphemism) – paggamit ng mga salitang nagpapaganda ng pangit na pahayag; pagpapahayag na gumagamit ng mga malumanay at magagandang pananalita upang tukuyin ang isang pangyayari na maaaring kung sasabihin nang tiyakan ay masakit o pangit sa pandinig.

Halimbawa:

Ang babaeng naglalaro ng apoy (nagtataksil) ay humantong sa isang makabagbag damdaming tagpo sa harap ng kapitbahay.

7. Paano naman ginagamit ang balarila sa proseso ng mabisang pagpapahayag? Saklaw ng balarila o **grammar** ang mga sumusunod: (1) tamang gamit ng mga salita; (2) tamang pag-aaral ng anyo at uri ng mga salita; (3) tamang pagkakaugnay ng mga salita sa isang pahayag upang makabuo ng malinaw na kaisipan o diwa.

• **Paggamit ng mga tamang salita**

A. ang *ng* at *nang*

ng

- a. ginagamit bilang pantukoy

(Maluwang ang looban **ng** simbahan.)

- b. ginagamit bilang pang-ukol na ang katumbas ay *tamang pagkakaugnay ng mga salita sa isang pahayag upang makabuo ng malinaw na kaisipan o diwa.*
(Pinalo niya **ng** kahoy ang magnanakaw.)
- c. ginagamit bilang pang-ukol na ang katumbas ay sa
(Ang mga iskawt ay nagpunta **ng** Baguio.)
- d. ginagamit bilang pang-ukol na nagpapakilala ng pangngalang paari
(Tumanggap **ng** plake ang kanyang anak.)
- e. ginagamit bilang tagatanggap ng kilos
(Ayaw siyang layuan **ng** agam-agam.)
- f. ginagamit na pananda sa tuwirang layon ng pandiwang palipat
(Gumagawa siya **ng** manika.)
- g. ginagamit na pananda ng aktor o tagaganap ng pandiwa sa tinig na balintiyak
(Tinulungan **ng** kapatid ang kanyang ina sa pagluluto.)
- h. ginagamit kapag nagsasaad ng pagmamay-ari ng isang bagay o katangian
(Nabali ang mga paa **ng** mesa.)

nang

- a. ginagamit bilang pang-abay
(Itinali **nang** mahigpit ang bihag.)
- b. ginagamit bilang salitang nangangahulugan din ng "para" o "upang"
(Sumulat ka nang sumulat ng mga kuwento **nang** manalo ka sa patimpalak.)
- c. ginagamit bilang salitang panggitna sa mga salitang inuulit
(Iyak **nang** iyak ang dalagang malungkot.)
- d. ginagamit na pangatnig sa mga hugnayang pangungusap at ito rin ang panimula ng katulong na sugnay:
(Maghugas ka ng pinggan **nang** makakain na kayo.)

B. ang *din* at *rin*, *daw* at *raw*

rin at *raw*

Ginagamit kung ang sinusundang salita ay nagtatapos sa patinig at sa malapatinig na w at y.

(siya raw / rin

ikaw raw / rin

tinalakay raw / rin)

din at *daw*

Ginagamit kung ang salitang sinusundan ay nagtatapos sa katinig maliban sa /w/ at /y/.

(takot din / daw

malakas din / daw)

C. ang *sina* at *sila*

a. sina – ginagamit kapag ito ay sinusundan ng mga pangngalan na tinutukoy sa pangungusap.

(Nagliliinis sina Gel at Lisette ng bahay.)

b. sila – ginagamit bilahag panghalip na panao.

(Umalis na sila kangina pang umaga.)

D. *pinto*, *pintuan*

a. pinto – bahagi ng daanan na isinasara at ibinubukas

(Isinara niya ang pinto upang hindi makapasok ang magnanakaw.)

b. pintuan – ang kinalalagyan ng pinto

(Hindi pa napipinturahan ang pinto sa pintuan.)

E. *pahirin*, *pahiran*

a. pahirin – alisin sa pamamagitan ng pamunas o sa pamamagitan ng kamay.

(Pahirin mo ang sipon sa kanyang ilong.)

b. pahiran – lagyan ng isang bagay sa pamamagitan ng pamunas o sa pamamagitan ng kamay.

(Pahiran mo ng langis ang natutuyo mong balat.)

F. *may at mayroon*

may - Ginagamit ang **may** kung ang sumusunod o kasunod na salita ay:

- pangngalan
(May tao sa tanghalan.)
- pandiwa
(May pumatay sa mga ipis na nasa kabinet.)
- pang-uri
(May mataas na sapatos ang guro niya.)
- pantukoy
(May mga panoorin sa patyo ng simbahan.)
- pang-ukol na sa
(May sa daga ang anak mong iyan.)

mayroon - Ginagamit ang **mayroon** kung:

- sinusundan ng panghalip
(Mayroon kayong libreng gamot sa baranggay.)
- sinusundan ng isang kataga
(Mayroon yatang pagsusulit ngayon.)
- bilang panagot sa tanong
(May kapatid ka pa ba? Mayroon.)

• **Pag-aaral ng anyo at uri ng mga salita**

Nabanggit na, na may dalawang uri ng pagpapahayag: pasalita at pasulat. Bakit tayo nagsusulat? Mahalaga ang katanungang ito sapagkat kasangkot na sa iba't ibang layunin ng pagsulat ang ating mambabasa. Kapag nabanggit ang mambabasa, isinasaalang-alang na rin ang **uri ng wikang gagamitin**, pati na ang **tono at istilo ng pagpapahayag**.

Ang mga salita ay may kaantasan din. Isinasaalang-alang ng mga aral sa wika ang kaantasang ito. Sa gayon ang mga salitang bibitiwan o gagamitin ay bumabagay sa kanyang katayuan, sa hinihingi ng panahon at pook at sa okasyong dinadaluhan.

Sa ganang kabagayang ito ng mga salita, masasabing may **pormal** at **di-pormal** na mga salita.

Salitang pormal - mga salitang istandard dahil ito'y kinikilala, tinatanggap at ginagamit ng karamihang nakapag-aral sa wika.

Nasa ilalaim ng uring ito ang:

- a. Pambansa - mga salitang ginagamit sa mga aklat at babasahing may sirkulasyon sa buong kapuluan at lahat ng paaralan.
- b. Pampanitikan – mga salitang matayog, malalim, mabigat, makulay at sadyang mataas ang uri. Ito ang mga salitang ginagamit ng mga manunulat at dalubwika.

Salitang hindi pormal o impormal - mga salitang karaniwan at palasak na ginagamit sa mga pang-araw-araw na pakikipag-usap at pakikipagsulatan sa mga kakilala at kaibigan.

Kasama dito ang:

- a. Lalawiganin – mga salitang kilala at saklaw lamang ng pook na pinaggagamitan nito; tatak ito ng mga maka- rehiyonal na kaugalian ng tao.
- b. Balbal – tinatawag ding slang sa Ingles. Tinatawag ding salitang-kanto, salitang-lansangan, salita ng mga bakla.
- c. Kolokyal (*colloquial*) – mga pang araw-araw na mga salita ngunit may kagaspangan at pagka- bulgar, bagamat may anyong repinado at malinis ayon sa kung sino ang nagsasalita.

Halimbawa:

PORMAL	KOLOKHAL
saan naroon	sanaron
naroon, naroroon	naron
nasaan	nasan
kaniya	kanya
kani-kaniya	kanya-kanya
almirol	almidon, almirol
aywan	ewan
piyesta	pista

PORMAL		DI - PORMAL	
Pambansa	Pampanitikan	Lalawiganin	Balbal
kapatid baliw	kapusod nasisiraang-bait	tugang (Bikol) buang (Bisaya)	utol buwang

- ang tono ng mga salitang gagamitin ay maaaring paupay, malisyoso, seryoso, nakikiusap o maaaring *neutral*
- Tamang pagkakaugnay ng mga salita sa isang pahayag upang makabuo ng malinaw na kaisipan o diwa.

Kailangan ang kaisahan sa pangungusap para maging epektibo ito. Narito ang ilang patnubay upang magawa ang kaisahan sa pangungusap (Tumangan, et al., 1997:21-22):

- a. Huwag pagsamahin sa pangungusap ang hindi magkakaugnay na kaisipan.
- b. Ang pagtataglay ng maraming kaisipan sa pangungusap ay labag sa kaisahan ng pangungusap dahil lumalabo ang pangunahing isipang ipinahahayag.
- c. Gawing malinaw sa pangungusap kung alin ang pangunahing sugnay at ang panulong na sugnay.
- d. Huwag ilayo ang salitang panuring sa tinuturingan ng salita.
- e. Ilapit ang panghalip na pamanggit sa pangngalang kinakatawan nito
- f. Sa Filipino, nauuna ang panaguri kaysa sa simuno sa karaniwang ayos ng pangungusap.

Sa kabilang banda, nagiging malinaw ang mga pangungusap ng talata kapag may wastong paglilipat-diwa. May mga salita at pariralang ginagamit sa paglilipat-diwa na nakatutulong upang maunawaan ang tamang pagkakaugnay-ugnay ng mga pangungusap. Sa bawat kaisipang lilipat, naririto ang angkop na salita o pariralang maaaring gamitin:

- a. kaisipang idinaragdag – *at, saka, pati, gayundin*
- b. kaisipang sumasalungat – *ngunit, subalit, datapwat, bagaman, kahiman, sa kabilang dako*
- c. kaisipang naghahambing – *katulad, kawangis ng, animo'y, anaki'y*
- d. kaisipang nagbubuod – *sa katagang sabi, sa madaling sabi, kaya nga*
- e. kaisipang nagsasabi ng bunga o kinalabasan – *sa wakas, sa dakong huli, kung gayon, sa ganoon*
- f. paglipas ng panahon – *noon, habang, di-naglaon, samantala, sa di-kawasa, hanggang*

• Mga uri ng pagpapahayag / diskurso

Maraming paraan ng pagpapahayag na maisasagawa sa paraang pasalita o pasulat na makatutulong upang makaakit at maging mabisa ang ating pagpapahayag.

- a. paglaiahad – hangarin nito na magpaliwanag nang obhetibo o walang pagkampi na may sapat na detalye na pawang pampalawak ng kaalaman sa paksang binibigyang linaw nang iubos na maunawaan ng may interes (Arrogante, 1994:117).
- b. paglalarawan – hangarin nito na sa pamamagitan ng mga angkop na salita, maipakita ang kaanyuan at kabuuan ng tao, bagay, sitwasyon, insidente o senaryo.
- c. pagsasalaysay – hangarin nito na mag – ulat ng mga pangyayari sa isang maayos na pagkakahayanay (Tumangan, et al., 1986:3).
- d. pangangatwiran – hangarin nito na hikayatin ang iba pa na tanggapin ang katotohanan o kawastuan ng isang paninindigan o diii kaya'y baguhin ang kanilang pag-iisip o impluwensyahan ang kanilang pag-uugali at pagkilos sa pamamagitan ng mga makatwirang pahayag (Semorlan, et al., 1999: 155).

**BAHAGI II - PAGESUSURI SA MGA AYTEM
MGA TEKNIK SA PAGESAGOT NG MGA TANONG**

Kompetensi: Nagagamit ang angkop na repertwa ng wika sa pagpapahayag ng kaalaman, karanasan at saloobin.

**Paggamit ng mga Alusyon
(Pamamaraang panretorika)**

Item 1.

Bilang isang sining ng mahusay na pagsulat, ang retorika ay nagsasaalang-alang sa maingat na pagpili ng pananalita, sa mabisang paghahanay ng mga ito at sa paggamit ng iba pang kasangkapang panretorika. Alin sa mga sumusunod na pangungusap ang gumamit ng alusyon bilang pamamaraang panretorika?

- A. Pinagdarayo ng maraming tao taun-taon ang Antipolo.
- B. Ang Antipolo ay isang bayan sa Rizal na pinagdarayo ng maraming tao taun-taon.
- C. Ang Antipolo, ang Lourdes ng Pilipinas, ay pinagdarayo ng maraming tao taun-taon.
- D. Lahat tama ang sagot.

C ang tamang sagot.

Anotasyon

**Mga Teknik sa Pagtukoy ng Wastong Paggamit ng
Alusyon Bilang Pamamaraang Panretorika**

Basahin nang mabuti ang tanong.

Ituon ang pansin sa hinihinging kasanayan.

Pag-aralang mabuti ang mga pagpipiliang sagot.

Ang tamang sagot ay C.

Gumamit ang pangungusap ng kasangkapan/pamamaraang panretorika.

Alusyon – pamamaraang panretorika na gumagamit ng “pagtukoy sa isang tao, pook, katotohanan, kaisipan o pangyayari na iniingatan sa pinakatagong sulok ng alaala ng isang taong may pinag-aralan.” (Alejandro, 1970, nasa Bisa, 1999)

Mga uri ng alusyon at mga halimbawa nito (Bisa, 1999):

Alusyon sa heograpiya: Ang Bulkang Mayon ang Fujiyama ng Pilipinas.

Alusyon sa Bibliya: Ang hukom ay naging isang Solomon sa paghatol sa kaso ng dalawang babaeng kapwa nagsasabing sila ang ina ng batang babae.

Alusyon sa mitolohiya: Si Florante ay binanggit sa Florante at Laura na isang Adonis o kaya'y isang Narciso.

Alusyon sa literatura: Isa siyang makabagong Simoun nang bumalik sa sariling bayan..

Opsyon A. Ito ay isang halimbawa ng payak na pangungusap subalit hindi gumagamit ng alusyon.

Opsyon B. Halimbawa ito ng isang pangungusap na may kaganapang pansimuno, *isang bayan sa Rizal*.

May isang sugnay na di-makapag-iisa na ginagamit na pang-uri, *na pinagdarayo ng maraming tao taun-taon*.

Wala ring alusyong ginamit.

**Paggamit ng mga Tayutay
(Pamamaraan ng Patalinghagang Pagpapahayag)**

Item 2.

Nagkita ang magkaibigan sa mall. Nagkumustahan, nagbalitaan tungkol sa kani-kanilang buhay. Kapwa ina, nagpalitan sila ng karanasan tungkol sa kanilang mga anak. Sabi ng isa:

"Ang batang si Angeli ay napakahirap unawain, hinahanap ako ngunit itinataboy kapag dumating, inaantok daw siya ngunit ayaw matulog, nagugutom siya ngunit ayaw kumain, ayaw ng maingay ngunit ayaw rin ng tahimik dahil naluiungkot daw siya."

Anong uri ng tayutay ang ginamit upang maging mabisa ang paglalarawan?

- A. pag-uyam (*irony*)
- B. pagtatambis o tambisan (*antithesis*)
- C. pagtangi (*litotes*)
- D. pagsasalungat (*epigram/oxymoron*)

B ang tamang sagot.

Anotasyon**Mga Teknik sa Pagtukoy ng Wastong Paggamit ng
Alusyon Bilang Pamamaraang Panretorika**

Ang tamang sagot ay B.

Ang pagtatambis o tambisan (*antithesis*) ay ang paglalahad ng isang bagay laban sa iba namang bagay na nagkakasalungat upang higit na maging mabisa ang pangingibabaw ng isang kaisipang natatangi.

Halimbawa: *Mahirap kausap ang taong iyan, ngayon ay oo, mamaya ay hindi.*

Opsyon A. Gumagamit ang pag-uyam (*irony*) ng mga salitang nangungutya sa tao o bagay sa pamamagitan ng mga salitang tila kapuri-puri ngunit ang tunay na kahulugan ay mauunawaan ayon sa paraan ng pagsasalita ng isang tao.

Halimbawa: *Kay sipag mong mag-aral, palagi kang bagsak sa pagsusulit.*

Opsyon C. Gumagamit ang pagtanggi (*litotes*) ng salitang hindi sa pagpapahayag upang maipahiwatig ang lalong makahulugang di-pagsang-ayon sa sinasabi ng salitang sumusunod.

Halimbawa: *Hindi siya bulag para hindi makita ang mga mali mo.*

Opsyon D. Kahawig ng pagtatambis ang pagsalungat (*epigram*) ngunit higit itong maikli kaysa sa pagtatambis. Magkasalungat ang kahulugan ng mga salitang pinag-uugnay sa uring ito.

Halimbawa: Itinutulak ng bibig, kinakabig naman ng dibdib.

**Ang Balarila sa Proseso ng Mabisang Pagpapahayag
(Paggamit ng Tamang Salita)**

Item 3.

Isinasaalang-alang sa gramatika/balarila ang mga bahagi at tungkulin ng mga salita sa pangungusap. Hadlang sa malinaw na pagpapahayag ang maling gamit ng salita. May mga salitang magkasing-anyo subalit may iba, tiyak at angkop na gamit. May mga pagkakataon na nagkakapalit ang gamit ng salita sa pangungusap.

Sa mga pahayag na sumusunod, alin ang pangungusap na di-angkop ang gamit ng salitang *nang*?

- A. Mag-aral kayong mabuti nang makapasa kayong magkakapatid.
- B. Umalis nang maaga ang dalaga.
- C. Magsikap nang magsikap upang lalong umunlad.
- D. Gumagawa ang magkakapatid nang takdang aralin.

D ang tamang sagot.

**Anotasyon
Paggamit ng Tamang Salita**

Ang tamang sagot ay D.

Ng at hindi nang ang dapat gamitin. Ginagamit ang ng bilang pananda sa tuwirang layon ng pandiwang palipat.

Halimbawa: *Nagtanim ng mga gulay sa kanilang bakuran si Daphne.*

Opsyon A. Karaniwang ginagamit na pangatnig sa mga hugnayang pangungusap at ito ang panimula ng katulong na sugnay.

nang (pangatnig) makapasa kayong magkakapatid (pantulong na sugnay)

Opsyon B. Ginagamit bilang pang-abay. Ito ay nanggaling sa *na* at inaangkupan ng *ng* at inilalagay sa pagitan ng pandiwa at ng panuring nito.

Opsyon C. Ginagamit ang *nang* sa gitna ng dalawang salitang-ugat na inuulit (*dasal nang dasal*), dalawang pawatas (*magdasal nang magdasal*) at dalawang pandiwang inuulit (*mag-abuloy nang mag-abuloy*).

Item 4.

Hindi maitatanggi na sa ating pang-araw-araw na karanasan sa pakikipag-usap, higit nating ibig kausapin at pakinggan ang isang taong malinaw na nakapagpapahayag ng anumang nais niyang sabihin sapagkat madali natin siyang mauunawaan.

Alin sa mga sumusunod na pahayag ang maayos at tama ang pagkagamit ng mga salita?

- A. Nag-aaral magsalita ng bata.
- B. Ang Pangulo ay hinahagupit ang mga pinunong nagsasamantala sa kanilang tungkulin.
- C. Mali ang guro sa kanyang mga eskuwela magdisiplina.
- D. Ang tao ay nabubuhay nang hindi para sa sarili lamang.

U ang tamang sagot.

Anotasyon

Mga Teknik sa Pagtukoy ng Wastong Pagkagamit ng mga Salita

Ang tamang sagot ay D.

Tungkol sa kailanan ng pandiwa, hindi nagdudulot ng kalabuan sa diwa ng mga pangungusap kung ang maramihang simuno ay gamitan ng isahang pandiwa tulad ng: *Ang mga mag-aaral ay tumungo sa aklatan.*

Ngunit dapat tandaan na ang isahang simuno ay hindi maaaring gamitan ng maramihang pandiwa. Hindi wastong sabihin: *Ang tao ay nangabubuhay nang hindi para sa sarili lamang.*

Opsyon A. Karaniwan nang nagkakamali sa gamit ng *ang* at *ng*.

Ginagamit ang panandang *ang* para tukuyin ang isang pangngalang ginagamit na simuno/paksa ng pangungusap o kaukulang palagyo.

Halimbawa: *Nag-aaral magsalita ang bata.*

Kapag maramihan, sinasamahan ang *ang* ng mga.

Halimbawa: *Nag-aaral magsalita ang mga bata.*

Opsyon B. Upang maging malinaw at tama ang pangungusap, dapat na ang maging simuno ng pangungusap ay *ang mga pinunong nagsasamantala sa kanilang tungkulin.*

Kaya, dapat ganito ang pangungusap:

Ang mga pinunong nagsasamantala sa kanilang tungkulin ay hinahagupit ng Pangulo.

Maaari rin namang –

Hinahagupit ng Pangulo ang mga pinunong nagsasamantala sa kanilang tungkulin.

Dalawa ang tinig ng pandiwa:

- Tahasan – ang simuno ng pangungusap ang gumagawa ng kilos na sinasabi ng pandiwa.

Halimbawa: Ang paaralan ay mahigpit na nagpapatupad ng tuntunin sa pagsusuot ng uniporme.

- Balintiyak – hindi gumagawa ng kilos ang simuno, kung hindi ito ang tumatanggap ng kilos na isinasaad ng pandiwa.

Halimbawa: Ang tuntunin sa pagsuot ng uniporme ay mahigpit na ipinapatupad ng paaralan.

Opsyon C. Kabilang ang mga pang-uri at pang-abay sa mga panuring. Maaaring nasa anyo ng salita, parirala o sugnay.

Sa pagbubuo ng pangungusap, hanggat maaari dapat na malapit ang mga panuring sa salitang tinuturingan.

Halimbawa: *Maling magdisiplina ang guro sa kanyang eskuwela.*

Kaysa:

Mali ang guro sa kanyang mga eskuwela magdisiplina.

**Batayan ng Mabisang Pagpapahayag
(Kasanayan sa Pagbuo ng Tama at Mabisang Pangungusap)**

Item 5.

Ang mga pangungusap na hindi tama o hindi mabuti ang pagkabuo ay malabo at hindi mauunawaan. Maaaring ang maling pagbubuo ng mga pangungusap ay dahilan sa kakulangan ng kaalaman sa mga sugnay. Suriin ang gamit ng sugnay na di-makapag-iisa sa ibaba.

Sila ay dumating nang umuulan nang malakas.

- A. Ginagamit na simuno ng isang pangungusap.
- B. Ginagamit na tuwirang layon ng isang pangungusap.
- C. Ginagamit na pang-uri na nagbibigay turing sa pangngalan o panghalip.
- D. Ginagamit na pantulong sa isang sugnay na makapag-iisa.

D ang tamang sagot.

**Anotasyon
Kasanayan sa Pagbuo ng Tama at Mabisang Pangungusap**

Ang tamang sagot ay D.

- Ang sugnay ay kalipunan ng mga salita na maaaring may buong diwa at maaari rin namang wala subalit nagagamit na bahagi ng isang pangungusap. May dalawang uri ng sugnay. (Rubin, et al., 1987)
 - a. Sugnay na makapag-iisa ang tawag sa sugnay na nagbibigay ng buong diwa. Tinatawag din itong punong sugnay, pangunahing

sugnay at malayang sugnay. Ang isang payak na pangungusap ay isang sugnay na makapag-iisa.

Halimbawa:

Mahina ang produkyson ng langis.

Magkakaroon tayo ng pagkakaisa.

- b. Sugnay na di-makapag-iisa — tinatawag din itong sugnay na pantulong at sugnay na di-malaya. May iba't iba itong gamit: (Nasa opsyon A, B, C at D).
- Ginagamit itong pantulong sa isang sugnay na makapag-iisa upang makabuo ng hugnayang pangungusap.

Opsyon A.

- Ginagamit na simuno ng pangungusap.

Halimbawa:

Mga manggagamot ang magbibigay lunas sa mga maysakit.

Si Prop. Villafuente ang mahusay na puno ng Kagawaran ng Filipino.

Opsyon B.

- Ginagamit na tuwirang layon ng isang pangungusap.

Halimbawa:

Napagkasunduan na, na ikaw ang direktor ng seminar.

Alam ng lahat na wala kang kasalanan.

Opsyon C.

- Ginagamit na pang-uri kapag nagbibigay turing sa pangngalan o panghalip. Kung ginagamit na pang-uri ang sugnay, ito ay nagsisimula sa mga panghalip na pamanggit na -g, -ng, o na.

Halimbawa:

Isa sa mga suliranin ng bayan ang mga pinunong mahilig mangurakot sa kabang bayan.

Item 6.

Isa pang nakapagpapaganda at nakapagdaragdag ng kasiningan sa pagpapahayag ay ang mga karununganang bayan na minana pa natin sa ating mga ninuno. Nagsisilbi itong tagapagpaalala ng mabuting kaasalan at kaugalian. Basahin ang halimbawang kawikaan.

Pagkataas-taas man ng lipad, siyang lagapak kung bumagsak.

Maaari mong gamitin ang halimbawang kawikaan upang ipaalala ang ugaling

- A. pagpapakumbaba
- B. pagtitiyaga
- C. paglingap sa mahirap
- D. pagiging tapat sa kaibigan

Item 7.

Galit na galit ang iyong lola. Nalaman kasi niyang nabundol ng motorsiklo ang iyong kapatid subalit nagwalang-bahala lamang sa nangyari ang iyong ama. Sa ating kaugalian at kultura anong pasawikaing pagpapahayag ang naglalarawan sa ikinilos ng ama?

- A. di-mahapayang gatang
- B. naghalukipkip ng kamay
- C. nagdilal ng mata
- D. nagbuhat ng sariling bangko

Item 8.

Sa iyang mga kapitbahay, si Beth ang itinuturing mong pinakamalapit sa iyo. Alin sa mga sumusunod na pasawikain/idyomatikong pahayag ang di angkop gamitin kung ipalalarawan sa iyo si Beth?

- A. asal-hudas
- B. kahiramang-suklay
- C. kabungguang-balikat
- D. kaututang-dila

Item 9.

Pinapayuhan ka ng iyang tiyahin na huwag maging bulanggugo. Hindi bale na raw _____, upang makaipon ka ng pera at may magamit sa oras ng pangangailangan.

- A. ahas na tulog
- B. may uwang sa puwit
- C. mahaba ang dila
- ☒ D. puti ang tainga

Item 10.

Naatasan ang inyong samahan na pumili sa baranggay ng mga taong pagkakalooban ng pamaskong regalo. Alin sa mga sumusunod na mga katangian ang maaaring isama bilang isa sa mga batayan ng pagpili?

- A. kukulu-kulo ang tiyan
- B. halang ang bituka
- C. mababaw ang luha
- D. sanga-sangang dila

Basahin ang mga sumusunod na pahayag mula sa mga piling akda. Suriin ang mga tayutay na ginamit.

Item 11.

Ang pangalan ni Derang ay isang mabangong bulaklak sa kanyang kanayon, at ang kanyang kabuhayan ay isang bukas na aklat sa Tulikan.

Mula sa: Nagbibihis na ang Nayon
ni: Brigido C. Batungbakal

Piliin ang uri ng tayutay na ginamit sa akda.

- A. pagtutulad (*simile*)
- B. pagwawangis (*metaphor*)
- C. pagmamalabis (*hyperbole*)
- D. pagbibigay katauhan (*personification*)

Item 12.

Kalupitan ay palasong bumabalik,
Kaapiha'y tila gatong, nagliliyab.
Katipuna'y naging tabak ng himagsik,
At ang baya'y sumiklab sa Balintawak.

Mula sa: Bonifacio
ni: Amado V. Hernandez

Anong uri ng tayutay ang ginamit sa ikalawang taludtod ng saknong?

- A. pagmamalabis
- B. pagbibigay katauhan
- C. pagwawangis
- D. pagtutulad

Item 13.

Ngunit hindi kumikilos sa pagkakahiga ang batang babae. Nakatitig lamang ito sa maaliwalas na mukha ng langit. Nagtaka ang batang lalaki.

*Mula sa: Bagong Paraiso
ni: Efren R. Abueg*

Piliin ang tayutay sa nabanggit na pahayag at tukuyin ang uri.

- A. paglumanay
- B. paglilipat-wika
- C. pagpapalit tawag
- D. pagpapalit saklaw

Item 14.

Kung minsan sa panahong masamang masama ang iyong loob nasasambit mo ang ganitong pahayag: "Kayo ang puno at dulo ng aking mga kasawian sa buhay."

Ang puno at dulo ay dalawang salitang magkasalungat na itinuturing nating halimbawa ng tayutay na:

- A. pagsalungat (*epigram/oxymoron*)
- B. paralelismo
- C. pag-uyam
- D. pagwawangis

Para sa Item 15 – 17.

Item 15.

Ang mga pahayag na sumusunod ay nalikom mula sa kalipunan ng mga pang-umagang pahayagan. Bilang guro, balak mong gamiting bahagi ng mga pagsasanay sa wastong gamit ang mga sumusunod. Ganito ang iyong panuto: Suriin ang pahayag na may di-wastong gamit ng salita at di-angkop na maisama sa pangkat.

- A. *Subukin* mo ang pabangong ito at napakahusay.
- B. *Susubukin* namin kung may talino ka sa pag-awit.
- C. *Subukan* mo ang ginagawa ng mga alkalde sa pulong.

☒ D. Aalis sila nang maaga at *susubukin* nila ang ginagawang pagsasanay ng kalaban nilang koponan sa basketbol.

Item 16.

- A. *Namatay* ang ilaw at naghari ang kadiliman sa buong kapaligiran.
- B. *Napatay* pala ng baranggay tanod ang magnanakaw.
- ☒ C. Ang binata ay *napatay* sa biglang dalamhating sumapit sa kanyang buhay.
- D. *Napatay* ng pusa ang daga.

Item 17.

- A. *Bumangon* ka na at nang makaalis na tayo.
- B. *Nagbangon* siya ng mga punong saging na ibinuwal ng bagyo.
- C. *Sumakay* ka na at aalis na ang traysikel.
- ☒ D. *Sasakay* sila ng kabang-kabang bigas sa trak.

Item 18.

Narinig mong ipinagmamapuri ng inyong kapitbahay sa iyong ina ang nabili niyang blusa sa SM. Nang tanungin ang nagmamapuri kung maraming tao, ganito ang kanyang naging tugon:

"Ang nagkakagulong grupo ng mga tao sa *midnight sale ng SM* ay nagpapaalala sa hitsura ng mga langgam na nabulabog sa kanilang taguan."

Ang pahayag na nabanggit ay isang anyo ng

- A. paglalarawan
- B. pagsasalaysay
- C. pangangatuwiran
- D. paglalahad

Item 19.

Malapit na ang tag-init. Namimili ang isang samahan ng lugar na mapupuntahan para sa isang *educational trip*. Narito ang pahayag ng kanilang pangulo:

"Mas sulit na magbakasyon sa Baguio kaysa sa Boracay. Mapatutunayan ito kung ikukumpara ang pagkain, akomodasyon, tanawin, presyo ng mga bilihin at serbisyo sa dalawang lugar – mga bagay na dapat timbangin ng sinumang mga bakasyonista."

Anong batayang anyo ng pagpapahayag ang ginamit ng pangulo ng samahan upang mahikayat ang kasamahan na tanggapin ang kawastuan ng kanyang paninindigan?

- A. paglalahad
- B. pagsasalaysay
- C. paglalarawan
- D. pangangatwiran

Item 20.

Mabigat ang loob ng mga nakatira sa Maynila na lumipat at tumira sa probinsya kahit pa may proyekong pabahay ang pamahalaan doon. Para sa marami sa kanila:

"Mas magandang tumira sa lungsod kapag pinansyal at ekonomikong aspekto ang pag-uusapan. Malaki ang oportunidad dito para sa paghahanapbuhay."

Anong batayang anyo ng pagpapahayag ang makaiimpluwensiya sa kanilang pag-iisip na maaaring makapagpabago sa kanilang pag-uugali at pagkilos?

- A. paglalahad
- B. pangangatuwiran
- C. pagsasalaysay
- D. paglalarawan

Nagiging malinaw ang mga pangungusap ng talata kapag may wastong paglilipat-diwa. Sa bawat isipang lilipat, may angkop na salita o pariralang ginagamit.

Para sa Item 21 – 24. Gawing isang pangungusap ang mga sumusunod na pares ng pangungusap sa pamamagitan ng paggamit ng angkop na pag-ugnay (pangatnig o transisyunal na ekspresyon).

Item 21.

Hinampas ng malakas na hangin ang kanilang bangkang sinasakyan. Patuloy pa rin sila sa paglalayag.

- A. gayundin
- B. sa kabila nito
- C. walang duda
- D. bilang patunay

Item 22.

Lalo silang huhusay. Susunod sila sa namumuno.

- A. samantala
- B. walang alinlangan
- C. kapag
- D. kaya

Item 23.

Nagkaroon sila ng pagdiriwang. Ang lahat ay nagalak.

- A. sa kabilang dako
- B. bukod dito
- C. hanggang
- D. kung gayon

Item 24.

Ang mga masisipag ay nakinabang. Ang mga tamad ay nawalan.

- A. ngunit
- B. sa kabuuan
- C. sa wakas
- D. sa ganang akin

Item 25.

Higit na malinaw ang daloy ng kaisipan sa binabasa kapag ang mga pasulat na pangungusap ay gumagamit ng mga tamang bantas.

Piliin ang wastong bantas na dapat gamitin kapag hindi pinag-uugnay ng pangatnig ang mga sugnay ng tambalang pangungusap tulad ng sumusunod.

Ang Diyos ang Siyang nagbigay ng buhay__ Siya rin ang may karapatang bumawi niyon.

- A. ;
- B. ,
- C. ;
- D. ,

**BAHAGI III - PAGLINANG NG KASANAYAN
SA PAGKUHA NG PAGSUSULIT**

1. Masarap pakinggan ang ating matatanda sa kanilang pangangaral dahil sa ang bawat pangaral na kanilang ibinibigay ay may kasunod na mga salawikain/kawikaan na nakararagdag sa kasiningan ng pagpapahayag tulad ng:

Kapag may isinuksok, may madudukot.

Maaari mong gamiting panawag pansin sa panimula ng komposisyon ang salawikain o kawikaan. Ang halimbawang ibinigay ay bagay sa komposisyon ukol sa _____.

- A. katipiran
B. kasipagan
C. katapangan
D. katamaran
2. Paano mo ilalarawan ang isang ahente na mahusay kumumbinsi o humikayat sa pamamagitan ng mga salita?
- A. may tali ang dila
B. matamis ang dila
C. mahaba ang dila
D. may dilang anghel
3. Kapag napagod tayø sa katañanaw sa taong ating hinihintay, sinasabi natin:
- A. "Nanghahaba na ang aking leeg sa katañanaw sa iyo."
B. "Itaga mo sa bato."
C. "Itanim mo sa iyong isip."
D. "Ilista mo sa tubig."

4. Sa awit na:

"O, ang babae kapag minamahal
May kursunada'y aayaw-ayaw
Pag panay ang dalaw ay nayayamot
Huwag mong dalawin, dadabog-dabog."

Anong uri ng tayutay ang matatagpuan?

- A. pag-uyam
- B. pagtawag
- C. pagsalungat
- D. pagtatambis

5. Kung ang *pagpapalit-tawag (metonymy)* ay nagpapalit ng katawagan o pangaian sa bagay na tinutukoy, alin sa mga sumusunod na halimbawa ang di-dapat maisama sa pangkat?

- A. Tatlong baso ang nainom ni Gel dahil sa matinding uhaw.
- B. Natanggap ni Lisette ang hampas ng langit sa mabibigat niyang kasalanan.
- C. Dapat nating igalang ang puting buhok.
- D. Ang kahabag-habag na payong ay nahulog sa kanal.

6. Isa pang sangkap na nagbibigay buhay at kulay sa pakikipagtalastasan ay ang paggamit ng tanong retorikal. Magagamit ito sa pagsisimula at pagwawakas ng isang komposisyon. Kung ang paksa ng iyong komposisyon ay tungkol sa tao, alin sa mga sumusunod na pahayag ang di-angkop gamitin?

- A. Ang hayop ba'y may talinong katulad ng tao?
- B. May lalaki kayang makatatagal na makisama sa isang babaeng bungangera, tamad, bulagsak sa kabuhayan, at mabagsik sa anak?
- C. Ang tao bang hindi marunong lumingon sa pinanggalingan ay inaasahan mong magtagumpay?
- D. Ang isa kayang matalinong propesyunal ay agad maniniwala sa mga sabi-sabi?

7. Alin sa mga sumusunod na pahayag ang pangit sa pandinig at maaari pang mapaganda sa pamamagitan ng paglumanay o (*euphemism*)?
 - A. Hinalay kagabi sa kanyang pag-uwi ang babaeng nagtatrabaho sa call center.
 - ☒ B. Buntis ka ba?
 - C. Matabil ang kanyang bibig.
 - D. Ang bunso niyang anak ay sumakabilang buhay.
8. Isa pa sa sinasadyang paglayo sa paggamit ng mga karaniwang salita upang maging kaakit-akit at mabisa ang pagpapahayag ay ang pagtawag (*apostrophe*). Kahawig ito ng pagbibigay-katauhan (*personification*). Dito, ginagawa ang pakikipag-usap sa karaniwang bagay na tila ba nakikipag-usap sa tao.

Alin sa mga sumusunod na pahayag ang di-dapat maisama sa pangkat?

 - A. Hangin, pumarito ka at pawiin ang matinding init.
 - B. Buwan, sumikat ka na at pawiin ang kadilimang lumulukob sa kapaligiran.
 - ☒ C. Hinaplos ng hangin ang nagpupuyos niyang damdamin.
 - D. Pag-asa, halika at tugunin ang mga tanong kong magbibigay-buhay sa akin.
9. Kung ikaw ay gagamit ng *paghihimig (onomatopoeia)* sa pahayag na ito, alin sa mga sumusunod na tunog o himig ng mga salita ang angkop na piliin mo?

_____ ang hanging dumating dala ng malakas na bagyo.

- A. Dumadagundong
- B. Kumakalabog
- C. Rumaragasa
- D. Umuugong

Para sa Item 10 – 11:

10. Tayong mga tao ay sadyang mausisa. Habang hindi tayo nasisiyahan sa mga sagot sa ating katanungan, mahalaga ang paglalahad. Sa pang-araw-araw na pakikipag-usap ang karaniwang salitang ating ginagamit ay nabibigyan ng napakaraming kahulugan.

Piliin ang taglay na kahulugan na iba kaysa karaniwang pakahulugan sa mga sumusunod na pahayag.

Mataas ang kanilang paminggalan.

- A. ambisyoso
- B. maramot
- C. kuripot
- D. kumain diii

11.

Malakas ang hangin ni Erni, siya na naman ang bida.

- A. matalino
- B. mayabang
- C. madaldal
- D. matapang

Para sa Item 12 – 13

Kailangang maging maingat sa pagpili ng mga salitang gagamitin sa pagpapahayag. May mga salita tayo na kung titingnan ay tila wasto sa kahulugan subalit maituturing na mali kaya't hindi matatanggap at lumalabag sa tuntunin ng mabuting pagpapahayag.

Piliin sa mga sumusunod na pahayag ang di-wasto ang pagkapili at di-angkop ang mga salitang ginamit kayat di-dapat maisama sa pangkat.

12. A. Kumakain na ang mga panauhin.
B. Malakas lumamon ang baboy niya.
C. Lumalamon na ang mga panauhin.
D. Lahat tama ang sagot.
13. A. Magandang malasin ang Lawa ng Laguna.
B. Maluwang ang bibig ng mama.
C. May pilat sa mukha si Annie.
D. May pilat sa pagmumukha si Annie.

Para sa Item 14 – 15

Naisipan ng inyong guro na magpabasa ng mga talata upang pagalawin ang inyong guniguni nang makita ang isang larawang buhay na buhay sa pamamagitan ng isang masining na paglalarawan. Basahing mabuti.

14.

Nilanghap niya ang hangin. Inihatid sa kanya ang bango ng sari-saring bulaklak sa halamanan. Kilalang-kilala niya ang mabagsik na halimuyak ng dama de noche. Nalanghap ang matamis na amoy ng sampaguita, at ang mailap at mahinhing bango ng mga rosas. Manaka-naka ay sumasalit ang masansang na amoy ng bulaklak ng sanggumay. Hindi kataka-taka, kahit gabi ay naglalamay ang mga kulisap sa pagsimsim ng mga bulaklak.

Sa halimbawang babasahin binibigyang-pokus ang kabuuang detalye ng mga bagay-bagay na nakatatawag-pansin sa _____ ng bumabasa.

- A. paningin
B. pandinig
C. panlasa
D. pang-amoy

15.

Napuno ang silid ng malambing na tugtugin. Nauna ang pasakalye sa piyano at sinundan ng nanunuot sa damdaming hilis ng mga biyulin, kasabay ang taginting ng klarinete, trumpeta, at iba pang instrumentong hinihipan. Sa simula'y banayad ang kumpas na para kang dinuduyan. Subalit unti-unting bumibilis hanggang sa ang iyong mga paa ay hikayatin sa pagsayaw.

Sa sumunod na babasahin nakatawag pansin naman sa _____ ng bumabasa ang kabuuang detalye kaugnay ng bagay na inilarawan.

- A. paningin
- B. pandinig
- C. panlasa
- D. pang-amoy

16. Gamit na gamit ang masining na paglalarawan sa akdang malikhain tulad ng maikling kuwento. Basahin at suriin kung paano inilalarawan ang isang tauhan sa akda.

Kapag sa isang umpukan ng mga kababaihan sa Sapang Nabao, halimbawa'y sa isang ponda o sa isang sesyon ng kutuhan ng magkakalapit-bahay, ay nakarinig ka ng isang kaylakas at pandalas ng pagsasalita, tiyak na si Nana Goring na Bunganga iyon. Kung ibig mong ang isang balita ay kumalat na tila siga sa kugunan, kay Nana Goring na Bunganga mo iyon sabihin.

"Ang Maghangad ng Kagitna",

A.P. Tumangan

Tagumpay, Setyembre 13, 1972

Alin sa mga sumusunod na idyomatikong pahayag ang angkop gamitin upang ilarawan ang tauhan sa kuwento?

- A. sanga-sangang dila
- B. mahaba ang dila
- C. di-mahapayang gatang
- D. makapal ang mukha

17. Pinagsalaysay ka sa harap ng klase. Isinaalang-alang mo ang wika, nilalaman at pormat. Ganito mo sinimulan ang iyong salaysay.

Ang buhay ay parang gulong, minsan nasa ibabaw ka;
minsan nama'y nasailalim ka.

Anong uri ng panimula ito?

- A. Pagsisimula sa usapan
- B. Pagsisimula sa tunggalian
- C. Pagsisimula sa isang katotohanan na tinatanggap ng lahat
- D. Pagsisimula sa paglalarawan

18. Nabasa mo ito mula sa akda ng isang batikang manunulat. Inilarawan niya ang pangunahing tauhan sa kuwento.

Siya si Uyukan. Isa siyang batang Negrito. Maliit lamang siya. Tatlong talampakan at walong dali lamang ang taas. Nakabahag. Kulot na kulot ang kanyang buhok.

Mula sa: Labuyo
ni: Reyrialdo A. Duque

Anong karaniwang pamaraan ng paglalarawan sa pangunahing tauhan ang ginamit ng may-akda?

- A. Mga bahagi ng katawan ng tauhan
- B. Kaisipang naghahari sa kanya
- C. Mga ikinikilos niya sa harap ng mga pangyayari
- D. Damdaming kanyang ginigising sa mga kasamang tauhan

19. Dahil sa kahirapang nararanasan ng mga mamamayan lalo sa panig ng mga magulang, sumasang-ayon sila sa argumentong ito:

Dapat makialam ang CHED sa taun-taong pagtaas ng tuition fee.

Sa pagsusuri sa pangungusap na ito, anong anyo ng pagpapahayag ang dapat isaalang-alang upang makabuo ng isang lohikal at makabuluhang kaisipan?

- A. pangangatuwiran
 - B. paglalarawan
 - C. pagsasalaysay
 - D. paglalahad
20. Sa maikling kuwento o salaysay karaniwang limitado ang panahon ng manunulat di-tulad sa nobela. Kailangang maipakita niya ang patuloy na pag-unlad ng mga pangyayari sa akda sa pamamagitan ng pagpapahiwatig ng kilos o galaw sa bawat salita, usapan at paglalarawang gagamitin.

Alin sa mga sumusunod na pandiwa ang hindi nagsasaad ng tiyak na kilos?

- A. lumundag
 - B. tumalon
 - C. sumugod
 - D. lumakad
21. Alin sa mga sumusunod na pahayag ang gumamit ng literal na kahulugan ng mga salita?
- A. Mabigat ang kanyang bibig, kaya huwag mo siyang asahang bumati sa iyo.
 - B. Nagalit ang ama sa anak na sinungaling.
 - C. Tunay na magaan ang kanyang katawan sapagkat buong araw na siya'y gumagawa.
 - D. Sumunod siya sa utos, ngunit isang bakol ang mukha.

Sa mabisang pagpapahayag, isa sa saklaw ng grammar o balarila ay ang tamang pagkakaugnay ng mga salita upang makabuo ng malinaw na kaisipang panggramatika.

Para sa Item 22 – 23.

Piliin ang pangungusap na may pinakawastong pagkakaugnayan o pagkakasunod-sunod ng mga salita.

22. A. Dala siya ng isang pumpon ng bulaklak nang magbalik.
 B. Nagbalik ang isang pumpon ng bulaklak na dala niya.
 C. Nagbalik siya dala ang isang pumpon ng bulaklak.
 D. Nagbalik na dala siya ng isang pumpon ng bulaklak.
23. A. Naramdaman ang aking matinding pamamanhid sa binti ko.
 B. Sa aking binti ko naramdaman ang matinding pamamanhid.
 C. Matinding pamamanhid ko sa binti ang aking naramdaman.
 D. Naramdaman ko sa aking binti ang matinding pamamanhid.

Para sa Item 24 – 25.

Isa sa mga kailanganin ng isang mabuting pagsulat ay pagbabalangkas. Gabay ito sa pagdebelop ng kaisipan. Suriin ang mga hulwarang balangkas sa ibaba.

24.

- I. Ang kabataan ay may malaking maitutulong sa bayan.
 A. Dapat silang sumali sa mga proyekto ng pamahalaan.
 B. Dapat nilang iwasan ang mga bisyo.
 C. Dapat nilang sundin ang mga payo ng mga nakatatanda.
 D. Dapat silang magkaroon ng ambisyon sa buhay.

Ang halimbawang balangkas ay mauuri-na _____.

- A. paparirala
- B. papangungusap
- C. patalata
- D. papaksa

25.

Polyusyon

- A. Katuturan nito
- B. Mga pinagmumulan ng polyusyon
- C. Mga pook na may polyusyon
- D. Polyusyon, kaaway ng tao

Ang hulwarang balangkas na nasa unahan ay makatutulong upang maging malinaw ang patutunguhan ng komposisyon. Halimbawa naman ito ng balangkas na _____.

- A. papaksa
- B. patalata
- C. paparirala
- D. papangungusap

Fundamentals of Mathematics

Prepared by:
Atty. Antonio V. Ferrer

PART I - CONTENT UPDATE

The Number System

Counting numbers – numbers that we use in counting; also called natural numbers. Using the roster method, $N = \{1, 2, 3, 4, 5, \dots\}$

Whole numbers – union of the number zero and the set of counting numbers. Again using the roster method, $W = \{0, 1, 2, 3, 4, 5, \dots\}$

Integers – the union of the set of counting numbers, their negatives, and zero. Using the roster method, $I = \{\dots -2, -1, 0, 1, 2, 3, 4, 5, \dots\}$

Operations on Integers

I. Addition

- Like signs – add the absolute values, and prefix the negative sign if the addends are negative

- **Unlike signs** – get the absolute values of the numbers and subtract the smaller absolute value from the other and prefix the negative sign if the negative addend has the larger absolute value

eg. $-4 + (-6) = -10$

$$-2 + 7 = 7 - 2 = 5$$

$$3 + (-9) = -(9 - 3) = -6$$

- II. Subtraction** – If the minuend and subtrahend are both positive and the minuend is greater than the subtrahend, proceed to subtract forthwith. Otherwise, change the sign of the supposed subtrahend and proceed as in addition.

eg. $8 - 3 = 5$

$$4 - 5 = 4 + -(5) = -1$$

- III. Multiplication (Division)** - to multiply (or divide) two integers with

- **Like signs** – get the product (or quotient) of their absolute values
- **Unlike signs** – get the negative of the product (or quotient) of their absolute values

eg. $-5 \times -4 = 20$

$$-3 \times (2) = -6$$

$$12 \div (-3) = -4$$

Divisibility Rules

- 2: Number ends with 0, 2, 4, 6 or 8, meaning the number is even

e.g. 512

- 3: Sum of the digits (digital root) is divisible by 3.

e.g. 216

- 4: Last two digits form a number that is divisible by 4.

e.g. 1012

- 5: Last digit is 0 or 5.

e.g. 340

- 6: Divisible by 2 and 3.
e.g. 192
- 7: Difference obtained after subtracting twice the last digit from the number formed by the remaining digits is divisible by 7.
e.g. 364
- 8: Last three digits form a number that is divisible by 8.
e.g. 1024
- 9: Sum of the digital root is divisible by 9
e.g. 423
- 10: Last digit is 0
e.g. 3540
- 11: Difference between the sum of the 1st, 3rd, 5th, ... digits, and the sum of the of the 2nd, 4th, 6th, ... digits is divisible by 11.
e.g. 90816
- 12: Divisible by both 3 and 4.
e.g. 4128.
- 13: The sum of four times the last digit and the number formed by the remaining digits is divisible by 13
e.g. 182 is divisible by 13 since 4 times 2 is 8, and $18 + 8 = 26$ which is divisible by 13.

Note:

Divisibility rules for two or more relatively prime numbers (GCF is 1) may be combined to serve as a divisibility rule for their product.

- e.g. The rules for 3, 4, and 13 may be combined to serve as the rule for their product - 156 since 3, 4, and 13 are relatively prime.

Prime and Composite Numbers

Prime – counting number that has exactly two factors

e.g. 2, 3, 5, 7, 11, 13, 17, 19, ...

Composite – counting number that has more than two factors

e.g. 4, 6, 8, 9, 10, 12, 14, 15, ...

*Note that 1 is neither prime nor composite and that 2 is the only even prime.

Prime Factorization

- refers to both the process as well as to the result of the process of expressing a counting number as the product of its prime factors
- if the counting number is already prime, its prime factorization is the number itself

e.g. 126: $2 \times 3^2 \times 7$

Methods of getting the prime factorization of numbers

Repeated division by primes

e.g.

2	126
3	63
3	21
	7

Thus, the prime factorization for 126 is $2 \times 3^2 \times 7$.

Factor Tree

e.g. Again using 126:.

Thus, again, the prime factorization for 126 is $2 \times 3^2 \times 7$.

Greatest Common Factor (GCF) – largest whole number divisor of the given numbers. The GCF of two numbers, say a and b , is denoted by (a,b) .

e.g. The GCF of 8 and 28 is 4

Methods of finding the GCF

Intersection of Sets Method – for each of the given numbers, list their factors from least to greatest and pick out the greatest factor that is common to all lists.

e.g. Find (8, 28)

8: {1, 2, 4, 8}

28: {1, 2, 4, 7, 14, 28},

The GCF is thus 4.

Prime factorization – write the prime factorization for each of the given numbers so that common, and only common, prime factors are in the same column. The GCF is the product of the lowest powers occurring in columns common to all prime factorizations

e.g. Find (12, 15, 90)

12: $2^2 \times 3$

15: 3×5

90: $2 \times 3^2 \times 5$

$3 = 3 \text{ (GCF)}$

Euclidean Algorithm (may be used if we are looking for the GCF of only two numbers). The procedure may be best understood through an illustration.

e.g. For 24 and 28

1. Divide the larger number by the other. $28 \div 24 = 1$, with a remainder of 4.
2. If there is a remainder, divide the last divisor by this remainder. $24 \div 4 = 6$, with no remainder. Repeat this step until no remainder is left.
3. The GCF is the last divisor. The GCF is thus 4.

Least Common Multiple (LCM) of two or more counting numbers – the smallest non-zero number that is a multiple of the given numbers. The LCM of two number, say a and b, is denoted by $[a, b]$.

e.g. The LCM of 5, 6 and 8 is 120 because it is the smallest non-zero number that is a multiple of 5, 6 and 8.

Methods of finding the LCM

Intersection of Sets Method – for each of the given numbers, list their multiples from least to greatest, and pick out the smallest non-zero multiple that is common to all lists.

e.g. Find $[12, 15, 30]$

12: $\{0, 12, 24, 36, 48, 60, 72, 84, 96, 108, 120, \dots\}$

15: $\{0, 15, 30, 45, 60, 75, 90, 105, 120, 135, \dots\}$

30: $\{0, 30, 60, 90, 120, 150, \dots\}$

Prime Factorization – write the prime factorization for each of the given numbers so that common, and only common, prime factors are in the same column. The LCM is the product of the highest powers occurring in a column of any of the prime factorizations.

e.g. Again, for 12, 15 and 30, we have

$$12: 2^2 \times 3$$

$$15: 3 \times 5$$

$$30: 2 \times 3 \times 5$$

$$2^2 \times 3 \times 5 = 60 \text{ (LCM)}$$

Euclidean Algorithm – the LCM of two numbers may be obtained by dividing their product by their GCF. In symbols,

$$[a,b] = \frac{(a \times b)}{(a,b)}$$

e.g. Find the LCM of 12 and 15.

$$[12,15] = (12 \times 15) / (12,15) = 180/3 = 60$$

Repeated Division – The task is to divide the two numbers by a common prime factor and dividing the resulting quotients also by a common prime factor. This step is repeated until the resulting quotients are already relatively prime (GCF=1). The LCM is product of the prime divisors and the relatively prime quotients. This may better understood through an illustration

e.g. 12 and 30

2	12	30
3	6	15
	2	5

The LCM is therefore 60.

Fractions

Meanings

- a. part of a whole or group
- b. indicated division
- c. ratio

Kinds of Fractions

As to relation between the numerator and the denominator

- a. Proper – the numerator is less than the denominator. e.g. $\frac{3}{4}$
- b. Improper – the numerator is equal to or greater than the denominator. e.g. $\frac{5}{3}$

As to relation of the denominators of two or more fractions

- a. Similar – the denominators are equal. e.g. $\frac{2}{5}$ and $\frac{4}{5}$
- b. Dissimilar – the denominators are not equal. e.g. $\frac{3}{7}$ and $\frac{4}{9}$

Other classes

- a. Equivalent – fractions having the same value e.g. $\frac{3}{7}$ and $\frac{9}{21}$
- b. Mixed – composed of a whole number and a proper fraction (e.g. $5 \frac{1}{4}$)

Rules involving Zero

- a. Zero numerator and non-zero denominator – the value is zero
- b. Zero denominator – no value, undefined
- c. Zero value – the numerator is zero

Operations on Fractions

- 1. Multiplication – multiply numerator by numerator and denominator by denominator to get the numerator and denominator respectively of the product

e.g.
$$\frac{3}{5} \times \frac{1}{4} = \frac{3}{20}$$

2. Division – multiply the supposed dividend by the reciprocal of the supposed divisor.

$$\text{e.g. } \frac{4}{5} \div \frac{3}{7} = \frac{4}{5} \times \frac{7}{3} = \frac{28}{15}$$

3. Addition (Subtraction)

- a. Similar Fractions – add (subtract) the numerators and copy the common denominator

$$\text{e.g. } \frac{3}{11} + \frac{2}{11} = \frac{5}{11}$$

- b. Dissimilar Fractions – use a common denominator (preferably the least) to make the addends (minuend and subtrahend) similar and do as in the preceding rule.

$$\text{e.g. } \frac{1}{5} + \frac{2}{7} = \frac{7}{35} + \frac{10}{35} = \frac{17}{35}$$

Simplifying Fractions

A fraction is in simplest form if the numerator and the denominator are relatively prime (their GCF is 1). Thus, to simplify fractions, express both the numerator and the denominator as products of a number and their GCF. The fraction is then decomposed into two fractions one of which has the GCF both as its numerator and its denominator. This fraction reduces to 1. The other fraction thus is the desired simplest form.

e.g. Simplify

$$\frac{16}{28} = \frac{4 \times 4}{4 \times 7} = \frac{4}{4} \times \frac{4}{7} = \frac{4}{7}$$

Ordering Fractions

Two fractions are equivalent if their cross products are equal. Otherwise, that fraction the numerator of which was used to get the greater of the two cross products is the larger fraction.

e.g. $\frac{3}{4} = \frac{15}{20}$

Since the two cross products $3(20)$ and $4(15)$ are both 60 and therefore equal, the two fractions are equivalent.

On the other hand, for the two fractions below, the left cross product is $7(8)$ or 56 while the right cross-product is 66. Thus, the fraction on the right is greater.

e.g. $\frac{7}{22} < \frac{3}{8}$

Decimals

The place value chart

hundred thousands	ten thousands	thousands	hundreds	tens	ones	tenths	hundredths	thousandths	ten thousandths	hundred thousandths
100000	10000	1000	100	10	1	0.1	0.01	0.001	0.0001	0.00001

Operations on decimals

Addition (Subtraction)

Addition of decimals is facilitated by writing them in a column so that their decimal points are aligned. Thus aligned, digits with the same place values would be in the same column, and the addends (or the minuend and the subtrahend) are added (or subtracted) as if they were whole numbers, the decimal point in the sum (difference) in the same position as the addends (minuend and subtrahend).

Multiplication

Multiply the numbers as if they were whole and so place the decimal point in the result as to have as many decimal places in it as there are in the factors combined.

e.g. To multiply

21.4×0.32 , we write

$$214 \times 32 = 6848$$

Since there are a total of 3 decimal places in the factors, we place the decimal point between 6 and 8 to have also 3 decimal places in the result. Thus, $21.4 \times 0.32 = 6.848$

Division

To divide a

- decimal by a whole number, do as in dividing whole numbers but writing the decimal point directly above that of the dividend
- number by a decimal, multiply both dividend and divisor by that power of ten such that the divisor becomes the least whole number, and then proceed as in (a) above.

• Conversion

1. Fractions to Decimals

Divide the numerator by the denominator

$$\text{e.g. } 5/8 = 0.625$$

2. Decimals to Percents

Multiply by 100%. The same result may be had by moving the decimal point two places to the right and prefixing the % sign.

$$\begin{aligned}\text{e.g. } 0.625 &= 0.625 \times 100\% \\ &= 62.5\%\end{aligned}$$

3. Percents to Decimals

Divide by 100%. The same result may be had by removing the % sign and moving the decimal point two places to the left.

$$\text{e.g. } 62.5\% = 62.5\% \div 100\% = .625$$

4. Decimals to Fractions

a. Terminating Decimals

Multiply the decimal by a fraction the numerator and denominator of which are both equal to such power of ten with as many zeroes as there are decimal places in the given decimal, and then simplify.

e.g.

$$0.625 = 0.625 \times \frac{1000}{1000} = \frac{625}{1000} = \frac{5}{8}$$

b. Repeating Decimals

The procedure is outlined below together with an example to illustrate each step.

To convert $x = 0.1\overline{6}$

1. Multiply the number by such power of 10 as would move one repeating portion across the decimal point.

$$100x = 16.\overline{6}$$

2. Multiply the number by such power of 10 as would move the repeating portion next to the decimal point.

$$10x = 1.\overline{6}$$

3. Subtract the result of step 2 from that of step 1.

$$90x = 15$$

4. Simplify

$$x = \frac{15}{90} = \frac{1}{6}$$

Ratio and Proportion

Ratio – comparison of two numbers a and b , where $b \neq 0$, and expressed as “ a to b ”, or “ $a:b$ ”, or “ a/b ”.

Proportion – a statement of equality between two ratios

Given two equal ratios, one comparing a to b and another comparing c to d , the proportion may be expressed thus:

$$a : b :: c : d, \text{ or alternatively, } a/b = c/d.$$

In either of the above forms, a and d are referred to as extremes, while b and c are referred to as the means.

Note: If $a/b = c/d$, its alternation ($a/c = b/d$) and inversion ($b/a = d/c$) are both true provided $a, b, c, d \neq 0$.

Finding the missing term of a proportion – As ratios may be treated as fractions, and proportions as equations relating two equivalent fractions, then a missing term of a proportion may be found by equating the cross products and solving for the unknown. Stated differently, the product of the means equals the product of the extremes. In symbols, given the proportion $a : b :: c : d$,

$$ad = bc.$$

e.g. Find k in $3:5 :: k:30$.

Solution; $ad = bc$

$$3(30) = 5k$$

$$k = 18$$

Word Problems Involving

Direct Proportion – the ratios of two quantities being compared is constant.

e.g. Five bananas weigh as much as 3 star apples. At this rate, how many star apples will weigh as much as 30 bananas?

The ratio of the weight of bananas to that of apples is $5:3$.

We thus have

$$b_1 : a_1 = b_2 : a_2$$

$$5:3 = 30:a_2$$

$$5a_2 = 3(30)$$

$$a_2 = 18$$

Inverse Proportion – the product of two quantities being compared is constant.

e.g. If 10 of a certain car model running for 3 hours use up 150 liters of gas, how many of the same car model running for 6 hours will use up the same amount of gas?

$$a = r \times t$$

$$r_1 \times t_1 = r_2 \times t_2$$

$$10 \times 3 = r_2 \times 6$$

$$5 = r_2$$

Partitive Proportion

If a quantity q is to be partitioned into $p_1, p_2, p_3, \dots, p_n$, so that the partitions are in the ratio $a_1 : a_2 : a_3 : \dots : a_n$,

then the size of the k^{th} partition may be computed as follows:

e.g. If 24 hours is to be partitioned into 3 parts so that the parts are in the ratio 1 : 2 : 5, how many hours would the third part be?

$$p_3 = \frac{5}{1+2+5} \times 24$$

$$= \frac{5}{8} \times 24 = 15$$

Per Cent – literally meaning "per hundred", it is one way of writing fractions in which the denominator which is required to be 100 is written as "%", and read as "per cent".

e.g. $\frac{3}{4} = \frac{75}{100} = 75\%$

Percentage, Base and Rate – in the statement 15 is 30% of 50, three quantities are involved – Percentage (P), Rate (R), and Base (B).

Percentage is that which bears to the base in the same ratio as the rate.

The statement "15 is 30% of 50", is telling us that 15 (the percentage) bears to 50 (the base) in the same ratio as 30% (the rate). In symbols, $15 = 30\% \times 50$.

The basic formula $P = R \times B$, has two other useful forms: $R = P/B$ and $B = P/R$.

ELEMENTARY ALGEBRA

A. Properties of Real Numbers

1. Closure Property – For any real numbers a and b , $a + b$ and $a \times b$ are also real numbers
2. Commutative Property – For any real numbers a and b , $a + b = b + a$ and $a \times b = b \times a$.
3. Associative Property – For any real numbers a , b , and c ,
 $(a + b) + c = a + (b + c)$ and $(a \times b) \times c = a \times (b \times c)$
4. Existence of Identity Elements – For any real number a , there exist real numbers 0 and 1 , such that $a + 0 = a$ and $a \times 1 = a$.
5. Existence of Inverses – For any real number a , there exists a $-a$ such that $a + -a = 0$, and a $1/a$ such that $a \times 1/a = 1$.
6. Distributive Property – For any real numbers a , b and c , $a(b + c) = ab + ac$.

B. Properties of Equality

1. Reflexive – if a is a real number, $a = a$.
2. Symmetric – if a and b are real numbers and $a = b$, then $b = a$.
3. Transitive – if a , b and c are real numbers and $a = b$ and $b = c$, then $a = c$.

C. Some Basic Terms

1. Variable – any symbol that is used to represent an element of a set. e.g. x , y , θ .
2. Domain – the set of all elements represented by a particular variable
3. Constant – a symbol with only one element in its variable. e.g. 3 , -2 , π
4. Algebraic expression – a constant, a variable, or any combination of constants and variables involving indicated operations (addition, subtraction, multiplication, division, raising to a power, or extraction of a root) on them.

e.g. -4 , $25x^2$, -1 , $3x^3$, $-2xy + y^2$, $\frac{x - y}{4}$, $2x - \frac{1}{y}$

5. Polynomial – an algebraic expression consisting only of non-negative integer powers of variables, and with no variable in a denominator. Among the examples of the algebraic expression above, only the last is not polynomial
6. Term of a polynomial – a constant or a constant multiplied by non-negative integer powers of variables. A polynomial with only 1 item is monomial; polynomial with 2 is a binomial and a polynomial with 3 is a trinomial.
 e.g. $-24x^2y^3z^4$ is a monomial
 $2x^2 - 3y + xy^3$ is a trinomial
7. Numerical Coefficient – that constant that is multiplied by the non-negative powers of variables in a term.
8. Literal Coefficient – the non-negative powers of variables in a term
 e.g. In $-2x^3y^2$, the numeral coefficient is -2, while the literal coefficient is x^3y^2
9. Similar terms – terms with the same literal coefficient. If the terms are not similar, they are said to be dissimilar.
10. Degree of a term – sum of the exponents of all variable factors of a term
11. Degree of a polynomial – degree of that term of the polynomial with the highest degree

D. Evaluating Algebraic Expressions

Evaluating algebraic expressions refers to the process of finding the value of the expression upon substitution of the given values for the respective variables.

e.g. Evaluate $x^2y^3 - 2y^2 + 4$ when $x = 2$ and $y = -1$

$$(2)^2(-1)^3 - 2(-1)^2 + 4$$

$$4(-1) - 2(1) + 4$$

$$-2$$

Equation – statement expressing in symbols the relationship of equality between two quantities

Linear Equations in one variable – an equation that can be written in the form $ax + b = 0$, where a and b are constants and $a \neq 0$.

e.g. $3x - 4 = 0$, $4 - 2x = 3x + 5$

Addition and Subtraction Property of Eq. (APE, SPE)

If a , b and c are real numbers and $a = b$, then

$$a + c = b + c,$$

$$a - c = b - c.$$

Multiplication and Division Property of Eq. (MPE, DPE)

If a , b and c are real numbers and $a = b$, then

$$a \times c = b \times c,$$

$$a/c = b/c, \text{ provided } c \neq 0.$$

Solution of an equation – refers to an element of the domain of the variable that makes the equation true

Solving Linear Equations – refers to the process of finding, through the use of the properties of equality, all the solutions of the equation

Some Pointers in solving linear equations

1. Simplify each side of the equation by
 - a. removing grouping symbols using the distributive law
 - b. removing fractions by multiplying both sides of the equation by the LCD of all fractions
3. Use the APE/SPE to have all variables only on one side of the equation and the constants on the other
4. Use the MPE/DPE to make the numerical coefficient of the variable equal to 1.

Solving Word Problems Involving Linear Equations

Some Pointers

1. Read the problem carefully.
2. Determine what is to be found.
3. Choose a variable to represent an unknown, usually that which needs to be found.
4. Translate word phrases to algebraic expressions.
5. Formulate the equation.
6. Solve the equation.
7. Solve the problem.

Example 1.

Three times the sum of a number and five is 21. What is the number?

$$3(x + 5) = 21$$

$$3x + 15 = 21$$

$$x = 2$$

Example no. 2.

Arman is twice as old as Andrea. Two years ago, Arman was three times as old as Andrea. Find their ages now.

$$m = 2n$$

$$m - 2 = 3(n - 2)$$

$$2n - 2 = 3n - 6$$

$$4 = n$$

Inequalities

Inequality – a statement that says one quantity is less than ($<$) or greater than ($>$) another (strict inequality). In some instances, however, one quantity may be less than or equal to ($\leq$), or greater than or equal to ($\geq$) to another.

e.g. $3 < 5x - 2$, $4x - 5 \geq x + 15$

Compound Inequality – a compound statement that says one quantity is less than (or greater than) another but is greater than (or less than) a third.

e.g. $-4 < 2x - 3 \leq 9$

Properties of Inequality

1. Trichotomy – If a and b are real numbers, then $a < b$, $a = b$, or $a > b$.
2. Transitive – If $a < b$ and $b < c$, then $a < c$.
If $a > b$ and $b > c$, then $a > c$.
3. Addition Property – If a , b and c are real numbers and $a < b$, then $a + c < b + c$.
If a , b and c are real numbers and $a > b$, then $a + c > b + c$.

Solution of a Linear Inequality – an element of the domain of the variable which makes the inequality true

Solving a Linear Inequality – the process of finding, through the use of the properties of inequality, all the solutions of the inequality

Note: Solving a linear inequality is similar to solving linear equations except that instead of using the properties of equality, we use the properties of inequality.

e.g. $-4 \leq 2x - 3 \leq 9$

$$-4 + 3 \leq 2x - 3 + 3 \leq 9 + 3$$

$$-1 \leq 2x \leq 12$$

$$-1/2 \leq x \leq 6$$

Word Problems Involving Linear Inequalities – the steps in solving word problems involving linear inequalities are the same as those in solving word problems involving linear equations except that, again, instead of using the properties of equality, we use the properties of inequality.

e.g. Ani's grades in the last four tests were 85, 89, 90 and 93. What must be her grade in the fifth and last test to get an average of at least 90?

Solution $90 \leq \frac{85 + 89 + 90 + 93 + g_5}{5}$

$$90 \leq \frac{357 + g_5}{5}$$

$$450 \leq 357 + g_5$$

$$93 \leq g_5$$

PART II - ANALYZING TEST ITEMS

- How many $\frac{1}{16}$ are there in $2\frac{5}{8}$?
A. 42
B. 44
C. 46
D. 48
- A blue neon light blinks every 4 seconds. A red one blinks every 5 seconds while a green one blinks every 6 seconds. How many times will they blink together in half an hour?
A. 1
B. 5
C. 10
D. 30
- Which of the following is divisible by 3, but not by 9?
A. 11, 070
B. 40, 206
C. 45, 072
D. 19, 386
- The distance between two towns on a given map is $2\frac{3}{4}$ cm. If $\frac{1}{2}$ cm represents 6 km, what is the distance between the two towns?
A. 18 km
B. 33 km
C. 36 km
D. 42 km
- Margo paid P400 for a blouse. If the blouse was sold at 20% discount, what was its original price?
A. P80
B. P480
C. P500
D. P540
- In a sequence of starts and stops, an elevator travels from the first floor to the fifth floor and then to the second floor. From there, the elevator travels to the fourth floor and then to the third floor. If the floors are 4 meters apart, how far has the elevator traveled?
A. 24 m
B. 36 m
C. 40 m
D. 60 m

24. Which of the following gives the prime factorization of 54?
- A. 22×32 C. 23×33
 B. 2×33 D. 23×3
25. A boat travels 8 kph in still water. If it can travel a given distance upstream in 5 hours and the same distance downstream in 3 hours, what is the rate of the current?
- A. 2 kph C. 6 kph
 B. 5 kph D. 9 kph
26. What is the value of $x - 6$ if $2(x - 3) + 5 = 19$?
- A. -1 C. 16
 B. 4 D. 20
27. Apo weighs one third as much as her mother Angela. If Apo weighs 43.5 lbs., how much does Angela weigh?
- A. 62.5 lbs. C. 130.5 lbs.
 B. 95.7 lbs. D. 150 lbs.
28. Lucille is 4 times as old as Nicole. Six years from now, she will be twice as old as Nicole. How old are they now?
- A. Lucille 12; Nicole 3 C. Lucille 3, Nicole 12
 B. Lucille 16; Nicole 4 D. Lucille 4, Nicole 16
29. The sum of two numbers is 52 and their difference is 20. What is the larger number?
- A. 16 C. 36
 B. 26 D. 46
30. Two numbers are in the ratio 4:3. What are the numbers if their sum is 84?
- A. 36 and 48 C. 24 and 63
 B. 36 and 24 D. 12 and 36

7. The distance from C to D is 24 km. The distance from B to C is $\frac{2}{3}$ of the distance from C to D. The distance from A to B is $\frac{3}{8}$ of the distance from B to C. What is the distance from A to B?

A. 4 km

C. 6 km

B. 5 km

D. 8 km

8. Jason buys a refrigerator for P7 920. She pays $\frac{1}{3}$ of the price in cash and the balance in 12 equal monthly installments. How much will he pay each month?

A. P300

C. P400

B. P350

D. P440

9. Mang Pedro delivers 210 kg of vegetables to two distributors. If $\frac{2}{5}$ of the vegetables goes to Manang Jo, how many kilograms of vegetables does the other distributor receive?

A. 84

C. 126

B. 116

D. 132

10. A 210-cm stick is cut so that one part is $\frac{3}{4}$ of the other. How many cm is the shorter part?

A. 120

C. 80

B. 90

D. 70

11. Find the GCF of 12, 32, and 56.

A. 2

C. 6

B. 4

D. 56

12. Two bells ring at 8 A.M. For the rest of the day, one bell rings every half hour whereas the other rings every 45 minutes. What time will both bells ring at the same time again?

A. 9:00 AM

C. 9:30 AM

B. 9:45 AM

D. 10:00 AM

13. What digit can be inserted in the blank so that the number 59__172 would be divisible by 3?
A. 1
B. 2
C. 3
D. 7
14. Jeff had fewer than 100 blocks. When he laid them out into four equal rows, he had three blocks left, but when he laid them out into nine equal rows, he had none left. How many blocks did Jeff have?
A. 54
B. 63
C. 72
D. 91
15. One prime factor of 42 is 3. What are its other prime factors?
A. 2 and 3
B. 3 and 5
C. 2 and 7
D. 3 and 7
16. If there are 18 mangoes and 45 bananas in a fruit basket, what is the ratio of the number of mangoes to the number of bananas?
A. 2 : 5
B. 4 : 7
C. 2 : 3
D. 3 : 7
17. A $3\frac{1}{2}$ meter ribbon is cut into four pieces in the ratio 1:2:3:4. Find the length of the longest piece.
A. 35 cm
B. 70 cm
C. 100 cm
D. 140 cm
18. What number can replace x in the proportion $1 : x = x : 64$?
A. 2
B. 4
C. 6
D. 8
19. In a certain municipality the real estate tax is P5.00 for every P1,000 of the assessed value of the property. Find the assessed value of a property if a tax of P1250 is levied on it.
A. P62.50
B. P6,250
C. P250.000
D. P500,000
20. A tank of water supplies the needs of 5 children for 6 days. How many days' need for water will the tank of water supply if there were only 3 children?
A. 3.6
B. 5
C. 8
D. 10

21. A man gives 10% of his monthly earnings to the church. Another 70% is spent on food, electricity, water and other bills. After paying all these, he still has P2,000. How much does he earn in a month?
- A. P5,000 C. P10,000
B. P8,000 D. P12,000
22. Raffy deposited P10,000 at 5% annual interest. How much will it gain in 2 $\frac{1}{2}$ years?
- A. P1,250 C. P1,500
B. P1,350 D. P1,750
23. In a candy jar are 15 lemons, 12 chocolates, and 3 mints. What percent of the candies are mints?
- A. 10% C. 12.5%
B. 12% D. 15%
24. A particular model of a cell phone sold for P4,000 in 2010. Two years later, the same model sold for only P2,800. What was the percent decrease in the price?
- A. 15% C. 30%
B. 20% D. 35%
25. Based on the graph, how much of the P25,000 monthly income of the Faria family goes to food?
- A. P6,250 C. P10,050
B. P11,250 D. P12,450
- | Category | Percentage |
|----------|------------|
| rent | 25% |
| bills | 30% |
| food | 45% |
26. When a certain number is subtracted from 176, the result is the same as when 21 is added to 4 times the number. What is the number?
- A. 11 ~~44 - 65~~ C. 31 ~~176 - 145~~
B. 22 ~~88 - 90~~ D. 52 ~~278 - 230~~
27. Which property of real numbers does the statement $(a + b) + c = a + (b + c)$ illustrate?
- A. Associative C. Commutative
B. Closure D. Distributive

- A. 6
B. 8
C. 13
D. 15

29. Andrea can encode a 100-page thesis in 24 hours, while Ani can do the same task in 16 hours. How many hours will it take them to finish the job if they work together?

- A. $9\frac{3}{5}$ C. 11
B. 10 D. 20

30. If Justine can run 3 km in an hour, how far can she run in 45 mins?

- A. 1.75 km
B. 2.15 km
C. 2.5 km.
D. 2.25 km.

Contemporary Mathematics

Prepared by:
Dr. Gladys C. Nivera

Competencies:

1. Plane Geometry
 - 1.1 Show a working knowledge of basic terms and concepts in Plane Geometry
 - 1.1.1 Lines and curves, perpendicular and parallel lines
 - 1.1.2 Angles, angle properties
 - 1.1.3 Special triangles and quadrilaterals
 - 1.1.4 Polygons
 - 1.2 Solve problems involving the basic terms and concepts in Plane Geometry.
2. Statistics and Probability
 - 2.1 Show mastery and knowledge of basic terms and concepts in statistics and probability
 - 2.1.1 Counting techniques
 - 2.1.2 Probability of an event
 - 2.1.3 Measure of central tendency
 - 2.1.4 Measure of variability
 - 2.2 Solve, evaluate, and manipulate symbolic and numerical problems in elementary algebra by applying fundamental rules, principles and processes.

PART I - CONTENT UPDATE**Introduction**

This part focuses on the concepts identified in the LET competencies for Gen ED Mathematics. It provides a review of the definitions, formulas, operations, postulates, and theorems in Geometry and Statistics. However, in an effort to effectively guide students to a deeper understanding of the concepts involved, it begins with the foundations and gives a wider, more comprehensive discussion than those specifically identified by the competencies.

GEOMETRY**BASIC DEFINITIONS**

Undefined terms: the basic geometric concepts for which no definitions are given.

These are the points, lines and planes.

Collinear points: points that lie on the same line.

Coplanar points: points that lie on the same plane.

Space: the set of all points.

Line segment: a part of a line consisting of two endpoints and all the points in between them.

Ray: a part of a line having one endpoint and extending infinitely in one direction.

Opposite rays: rays with a common endpoint but extending in opposite directions.

Congruent segments: Two segments having the same measure or length.

Angle: formed by two non-collinear rays with a common endpoint. The two rays are the sides of the angle. The common endpoint of the two rays is the vertex of the angle.

POSTULATES

Space contains at least 4 noncoplanar points.

Every plane contains at least three noncollinear points.

Every line contains at least two points.

Two points determine a line.

Three noncollinear points determine a plane.

If two points are in a plane, then the line containing the points are in the same plane.

If two lines intersect, then their intersection is a point.

If two planes intersect, then their intersection is a line.

POLYGONS

Polygon: a closed plane figure formed by fitting together segments end to end with each segment intersecting exactly two others.

Diagonal of a polygon: a line segment that connects two nonconsecutive vertices.

Convex polygon: no diagonal is in the exterior of the polygon.

Concave polygon: at least one diagonal is in the exterior of the polygon.

Equilateral polygon: all the sides have equal lengths.

Equiangular polygon: all the angles have equal measure.

Regular polygon: it is both equilateral and equiangular.

Interior angles of a polygon: the angles formed by the sides of a polygon.

Exterior angles of a polygon: the angles formed in the exterior of the polygon when its sides are extended.

THEOREMS

Angle-Sum Theorems for Triangles: The sum of the measures of the three angles of any triangle is 180° .

Angle-Sum Theorems for Quadrilaterals: The sum of the measures of the four angles of any quadrilateral is 360° .

Angle-Sum Theorems for Polygons: The sum (s) of the measures of the interior angles of any polygon with n sides is given by $s = (n - 2)180^\circ$.

Exterior Angle Theorem for Polygons: The sum of the measures of the exterior angles of a convex polygon (one at each vertex) is 180° .

TRIANGLES

Classifying Triangles According to Sides

a. **Scalene:** No two of its sides are congruent.

b. **Isosceles:** At least two of its sides are congruent.

The two congruent sides are the **legs**. The third side is called the **base**. The angle opposite the base is the **vertex**. The angles adjacent to the base are the **base angles**.

c. **Equilateral:** All of its sides are congruent.

Classifying Triangles According to Angles

a. **Acute:** all of its angles are acute.

b. **Right:** has one right angle.

The **hypotenuse** is the longest side. The **legs** are the other two sides.

c. **Obtuse:** One of its angles is obtuse.

d. **Equiangular:** all of its angles are congruent.

Secondary Parts of a Triangle

Altitude of a triangle: a segment from a vertex perpendicular to the line that contains the opposite side.

Median of a triangle: a segment from one vertex to the midpoint of the opposite side.

Concurrent lines: Three or more lines that meet at the same point.

QUADRILATERALS.

A quadrilateral is a four-sided polygon.

Kinds of Quadrilaterals

A quadrilateral is a **parallelogram** if and only if one of the following is satisfied:

1. Both pairs of opposite sides are parallel.
2. Both pairs of opposite sides are congruent.
3. Both pairs of opposite angles are congruent.
4. Consecutive angles are supplementary.
5. Diagonals bisect each other.
6. Each diagonal divides the quadrilateral into two congruent triangles.

A quadrilateral is a **rectangle** if and only if it is a parallelogram and one of the following is satisfied:

1. It has four right angles.
2. Its diagonals are congruent.

A quadrilateral is a **rhombus** if and only if it is a parallelogram and one of the following is satisfied:

1. Its sides are all congruent.
2. Its diagonals are perpendicular.
3. Its diagonals bisect the angles of the quadrilateral.

A quadrilateral is a **square** if it is both a rhombus and a rectangle.

A quadrilateral is **trapezoid** if it has a pair of parallel opposite sides. The parallel sides are the **bases** and the non-parallel sides are its **legs**. If the legs are congruent, the trapezoid is said to be an **isosceles trapezoid**.

A trapezoid is isosceles if it satisfies one of the following:

1. Its legs are congruent.
2. Each pair of base angles is congruent.
3. Diagonals are congruent.

CIRCLES

Circle: the set of all points in a plane at a given distance (radius) from a given point (center) in the plane.

Radius: the line segment from the center to any point of the circle.

Chord: a line segment whose endpoints lie on the circle.

Diameter: a chord containing the center.

Secant: a line that intersects the circle in two points.

Tangent: a line lying on the same plane as the circle that intersects the circle in exactly one point.

Point of Tangency: The point where the tangent touches the circle.

Congruent circles: two or more circles having the same radius.

Concentric circles: two or more coplanar circles sharing the same center.

RELATIONS INVOLVING SEGMENTS AND ANGLES

Segment-Addition Postulate:

Point Y is between X and Z if and only if X, Y, and Z are collinear and $XY + YZ = XZ$.

Midpoint of the segment: A point that bisects a segment, or divides a segment into two congruent segments.

Bisector of the line segment: A ray, line or line segment that contains the midpoint.

Angle bisector: A ray that contains the vertex and divides the angle into two congruent parts.

• PERPENDICULAR LINES AND BISECTOR OF A LINE

Perpendicular lines: two lines that intersect at right angles.

Perpendicular bisector of a segment: the line which is perpendicular to the segment at its midpoint.

Theorem: The shortest segment from a point to the lines is the perpendicular segment.

ANGLE PAIRS

Adjacent angles: two angles with a common vertex, a common side, and no common interior points.

Supplementary angles: two angles whose measures have a sum of 180° .

Complementary angles: two angles whose measures have a sum of 90° .

Vertical angles: Two angles are vertical if and only if their sides form two pairs of opposite rays and their angles are nonadjacent formed by two intersecting lines.

Linear pair: two angles which are adjacent and supplementary.

Theorems:

Supplements of congruent angles are congruent.

Complements of congruent angles are congruent.

Vertical angles are congruent.

ANGLES AND SIDES OF A TRIANGLE

Exterior angle of a triangle: an angle which forms a linear pair with one of the triangle's interior angles.

Remote interior angles: two interior angles of the triangle not adjacent to the exterior angle.

Theorems:

The measure of an exterior angle of a triangle is equal to the sum of the measures of the two remote interior angles.

The sum of the lengths of any two sides of a triangle is greater than the length of the third side.

In a triangle, if one side is longer than the other side, the angle opposite the longer side is the larger angle.

In a triangle, if one angle is larger than the other angle, the side opposite the larger angle is the longer side.

PARALLEL LINES AND TRANSVERSALS

Intersecting lines: coplanar lines having a point in common

Perpendicular lines: lines that intersect at right angles

Parallel lines: coplanar lines that do not intersect

Skew lines: noncoplanar lines that do not intersect

Transversal line: a line intersecting two or more coplanar lines at different points

Interior angles: $\angle 3, \angle 4, \angle 5, \angle 6$

Exterior angles: $\angle 1, \angle 2, \angle 7, \angle 8$

Corresponding angles: $\angle 1$ and $\angle 5, \angle 2$ and $\angle 6, \angle 3$ and $\angle 7, \angle 4$ and $\angle 8$

Alternate interior angles: $\angle 3$ and $\angle 6, \angle 4$ and $\angle 5$

Alternate exterior angles: $\angle 1$ and $\angle 8, \angle 2$ and $\angle 7$

Same-side interior angles: $\angle 3$ and $\angle 5, \angle 4$ and $\angle 6$

Postulates:

If parallel lines are cut by a transversal, then:

1. *The alternate interior angles are congruent.*
2. *The corresponding angles are congruent.*
3. *The alternate exterior angles are congruent.*
4. *The same-side interior angles are supplementary.*

COUNTING TECHNIQUES

Experiment: any activity that can be done repeatedly (e.g. tossing a coin, rolling a die).

Sample space: the set of all possible outcomes in an experiment.

Example: In rolling a die, the sample space is $S = \{1, 2, 3, 4, 5, 6\}$.

Sample point: an element of the sample space.

Example: In rolling a die, there are 6 sample points.

Counting Sample Points

1. Fundamental Principle of Counting (FPC)

If a choice consists of k steps, of which the first can be performed in n_1 ways, for each of these the second can be performed in n_2 ways, for each of these the third can be performed in n_3 ways..., and for each of these the k th can be made in n_k ways, then the whole choice can be made in $n_1 n_2 n_3 \dots n_k$ ways.

Example: In how many ways can two dice fall? Ans. : $6 \cdot 6 = 36$ ways

2. Permutation

Permutation is an arrangement of objects wherein the order is important.

a. Linear Permutation

If n objects are to be arranged r objects at a time, then the number of distinct arrangements is given by the formula

$${}_n P_r = \frac{n!}{(n-r)!}, \quad n \geq r.$$

Example: In how many can the first, second and third winners may be chosen in a beauty pageant with 10 contestants?

$${}_{10} P_3 = \frac{10!}{(10-3)!} = 10 \cdot 9 \cdot 8 = 720 \text{ ways}$$

b. Circular Permutation

If n objects are to be arranged in a circular manner, then the number of distinct arrangements is $(n - 1)!$

$$\text{Answer: } (7 - 1)! = 6!$$

c. **Permutation with Repetitions**

The number of distinct permutations of n things of which p are of one kind, q are of a second kind, ... r of a k th kind is

$$P = \frac{n!}{p!q! \dots r!} \text{ where } p + q + \dots + r = n.$$

Example: How many different permutations are there in the word COMMITTEE if all letters are to be taken?

$$P = \frac{9!}{2!2!2!} = 45\,360$$

3. **Combination**

Combination is the arrangement of objects regardless of order. In other words, the order of arranging the objects is not important. If n objects are to be arranged r at a time, the number of distinct combinations is given by the formula:

$${}_nC_r = \frac{n!}{r!(n-r)!}, \quad n \geq r.$$

Example: In how many ways can a committee of 4 be chosen from 6 persons?

Answer:

$${}_6C_4 = \frac{6!}{4!(6-4)!} = 15 \text{ ways}$$

PROBABILITY

Probability: the likelihood of the occurrence of an event.

If E is any event, then the probability of an event denoted by $P(E)$ has a value between 0 and 1, inclusive. In symbol,

$$0 \leq P(E) \leq 1$$

If $P(E) = 1$, then E is sure to happen.

If $P(E) = 0$, then E is impossible to happen.

Moreover, the probability that E will not happen is $P(E')$, then $P(E) + P(E') = 1$.

1. Theoretical Probability

Theoretically, the probability of an event E, denoted by P(E), is defined as

$$P(E) = \frac{n(E)}{n(S)}$$

where $n(E)$ = number of favorable outcomes

$n(S)$ = number of possible outcomes

2. Experimental Probability

The probability of an event may also be obtained experimentally. Suppose we want to find out the probability of obtaining a tail in a toss of coin. We can perform an experiment by tossing the coin 50 times and record the number of occurrences of tail. Suppose that tail occurred 24 times, then the probability of getting a tail based on this experiment is

$$P(\text{tail}) = \frac{24}{50}$$

STATISTICS

Statistics is the branch of mathematics used to summarize quantities of data and help investigators draw sound conclusions. Its two main branches are descriptive statistics and inferential statistics.

A sample is a specified set of measurements or data, which is drawn from a much larger body of measurements or data called the population.

Kinds of Sampling

1. Random sampling techniques are used to ensure that every member of the population has an equal chance of being included in the sample. A random sample is said to be representative of the entire population. The two methods of random sampling are lottery method and the use of the table of random sampling.
2. Systematic sampling is a technique which selects every n th element of the

population for the sample, with the starting point determined at random from the first n elements.

3. **Stratified random sampling** is a technique of selecting simple random samples from mutually exclusive groupings or strata of the population.

Graphical Representations of Data

1. **Histogram** - a graphical picture of a frequency distribution consisting of a series of vertical columns or rectangles, each drawn with a base equal to the class interval and a height corresponding to the class frequency. The bars of a histogram are joined together, that is, there are no spaces between bars.
2. **Bar Chart**- uses rectangles or bars to represent discrete classes of data. The length of each bar corresponds to the frequency or percentage of the given class or category. The categories are in turn placed in either horizontal
3. **Frequency Polygon**- a special type of line graph, where each class frequency is plotted directly above the midpoint or class mark of its class interval and lines are then drawn to connect the points.
4. **Pie Chart**- an effective way of presenting categorized (qualitative) distributions, where a circle is divided into sectors - pie-shaped pieces - which are proportional in size to the corresponding frequencies or percentages.
5. **Pictogram**- known as picture graph where picture symbols are used to represent values.

MEASURES OF CENTRAL TENDENCY

A measure of central tendency is a single, central value that summarizes a set of numerical data. The measures of central tendency are the mean, median and mode.

MEASURES OF VARIABILITY

A measure of variation or variability describes how large the differences between the individuals are on a trait. The common measures of variability are range and standard deviation.

Measures of Central Tendency	Definition	How to find	Advantages	Disadvantages
Mean	The sum of the data divided by the number of data	<i>Ungrouped data:</i> $\bar{X} = \frac{\sum x}{N}$ <i>Grouped Data:</i> $\bar{X} = \frac{\sum xf}{N}$	A single, unique value that is representative of all the scores Stable from group to group May be used in further computations	Not appropriate for skewed distribution as it is affected by extreme scores or outliers
Median	The middle number of the set when the data are arranged in numerical order	<i>Ungrouped data:</i> The middle for the $\left(\frac{N+1}{2}\right)$ th score <i>Grouped Data:</i> $Md_n = L + \left(\frac{\frac{n}{2} - cf}{f}\right) i$	More stable from group to group than the mode Appropriate for skewed distribution	Not necessarily representative of all scores Unstable from group to group Cannot be used in further analyses
Mode	The number that occurs most frequently in the data	<i>Ungrouped data:</i> The most frequent score <i>Grouped Data:</i> The class mark of the class interval with the highest frequency	Easy to obtain	Not necessarily representative of all scores Cannot be used in further analyses

Measures of Variation	Definition	How to find	Advantages	Disadvantages
Range	The difference between the highest score and the lowest score	<i>Ungrouped data:</i> $R = HS - LS$ <i>Grouped Data:</i> $R = \text{Upper Limit of the Highest Class Interval} - \text{Lower Limit of the Lowest Class Interval}$	Easy to compute Gives a unique value Easy to understand	Unstable Not representative of the set of data Not used in further computations
Standard deviation	The square root of the variance of the set of data	<i>Ungrouped data:</i> $S = \sqrt{\frac{\sum (x - \bar{x})^2}{n - 1}}$ <i>Grouped Data:</i> $S = \sqrt{\frac{\sum f(x - \bar{x})^2}{n - 1}}$	Most stable Gives a unique value Most representative Used in further computations	Affected by extreme scores More difficult to compute and understand

PART II - ANALYZING TEST ITEMS

Directions: Choose the best answer from the choices given. Write the corresponding letter of your choice.

- Which of the following statements is TRUE?
 - The endpoint of $\overleftrightarrow{SR}$ is R.
 - Opposite rays are collinear.
 - A line has length and width.
 - The length of a ray can be measured.
- Which of these triangles CANNOT be a right triangle?
 - obtuse
 - scalene
 - isosceles
 - equilateral
- In triangle BED, with right angle at B, what is the hypotenuse?
 - $\overline{BE}$
 - $\overline{ED}$
 - $\overline{BD}$
 - cannot be determined
- Refer to the figure. Given: $m \angle 2 = 62^\circ$ and $m \angle 3 = 92^\circ$. Find $m \angle 4$.

- 36°
 - 105°
 - 134°
 - 154°
- ARGO is a parallelogram. If $m \angle A = 77^\circ$, then $m \angle G =$ _____.
 - 77°
 - 103°
 - 113°
 - 123°

6. Which of the following statements are true?

- I. A square is a rectangle.
- II. square is a rhombus.
- III. parallelogram is a rhombus.
- IV. rectangle is a parallelogram.

A. I and II only

C. I, II and IV only

B. I and IV only

D. I, II, III and IV

For item 7, refer to this figure:

7. If lines r and s are parallel, which of the following pairs of angles are congruent?

A. $\angle 3$ and $\angle 6$

C. $\angle 2$ and $\angle 7$

B. $\angle 5$ and $\angle 6$

D. $\angle 4$ and $\angle 6$

8. Find the measure of angle 1 in the figure.

A. 25°

B. 45°

C. 126°

D. 155°

9. The complement of the angle is three times the angle. What is the measure of the angle?

A. 22.5°

B. 45°

C. 67.5°

D. 135°

10. What is the measure of each interior angle of a regular heptagon?

A. 128.6°

B. 140.5°

C. 720°

D. 900°

11. The angles of a triangle are in the ratio 1: 3: 5. What is the largest angle?
A. 20° B. 60° C. 80° D. 100°
12. Which of these figures cannot be the sides of a triangle?
A. 1, 3, 3 B. 1, 1, 1 C. 6, 12, 8 D. 5, 10, 4
13. The area of a square is 144 cm^2 . What is its perimeter?
A. 12 cm B. 15 cm C. 48 cm D. 72 cm
14. What is the area of the largest circle that can be cut out of a square paper whose side is 40 cm?
A. 62.8 cm^2 B. 84 cm^2 C. 524 cm^2 D. $1\,256 \text{ cm}^2$
15. The graph shows the number of socks, belts, handkerchiefs, and neckties sold by a store in one week.

The names of the items are missing from the graph. Socks were the item most often sold, and fewer neckties than any other item were sold. More belts than handkerchiefs were sold. How many belts were sold?

- A. 80 B. 90 C. 120 D. 140

16. A card is picked at random from an ordinary deck of cards. Find the probability of picking a black ace?
A. $\frac{1}{2}$ B. $\frac{1}{4}$ C. $\frac{1}{13}$ D. $\frac{1}{26}$
17. A card is picked at random from an ordinary deck of cards. Find the probability of picking a card that is not a heart?
A. $\frac{1}{13}$ B. $\frac{1}{4}$ C. $\frac{1}{2}$ D. $\frac{3}{4}$
18. Each of the six faces of a certain cube is painted either green or blue. When the cube is tossed, the probability of the cube landing with the blue face up is $\frac{2}{3}$. How many faces are green?
A. One B. Two C. Three D. Four
19. A card is selected at random from 50 cards numbered from 1 to 50. What is the probability that the number on the card is a prime number?
A. $\frac{3}{10}$ B. $\frac{2}{5}$ C. $\frac{8}{25}$ D. $\frac{7}{25}$
20. A pair of dice is thrown. What is the probability of throwing a double number (e.g. 3, 3)?
A. $\frac{1}{3}$ B. $\frac{1}{6}$ C. $\frac{1}{12}$ D. $\frac{1}{36}$
21. In how many ways can the first, second, and third places be chosen from a group of 9 contestants?
A. 72 B. 504 C. 720 D. 9!
22. In how many ways can 6 people be seated around a circular table?
A. 720 B. 600 C. 540 D. 120
23. How many combinations can be made from the letters A, B, C, and D if the letters are taken 2 at a time?
A. 3 B. 4 C. 5 D. 6
24. In how many ways can two swimmers be chosen from a group of six swimmers?
A. 15 B. 30 C. 45 D. 90
25. A coffee shop offers 5 flavors of coffee: mocha, cappuccino, espresso, vanilla, and latte. Coffee may be served hot or cold and it comes in tall, regular and short sizes. In how many ways can the customer order his/her coffee?
3 ways B. 10 ways C. 24 ways D. 30 ways

26. Find the number of distinct permutations of the letters in the word 'CLASS'?
- A. 60 B. 120 C. 180 D. 360
27. How many 3-digit numbers can be formed from the digits 1-8, if the digits can be repeated?
- A. 336 B. 436 C. 512 D. 524
28. How many 3-digit numbers can be formed from 1, 2, 3, 4, 5 if the 3-digit numbers form odd numbers and the digits are repeated?
- A. 75 B. 100 C. 112 D. 125
29. How many sets of answers are possible for an 6-item true or false test?
- A. 12 B. 36 C. 64 D. 128
30. Mario had three test scores of 78, 76, and 74, while Kristyn had scores of 72, 82, and 74. How did Mario's average (mean) score compare with Kristyn's average score.
- A. Mario was 1 point higher. C. Both averages were the same.
B. Mario was 1 point lower. D. Mario was 2 points lower.

For items 31-33:

Mr. Marquez gave a mathematics test to a group of students. The distribution of the scores is as follows:

SCORES	FREQUENCY
21-25	2
16- 20	5
11 - 15	12
6- 10	4
1- 5	1

31. How many pupils took the test?
- A. 25 B. 24 C. 22 D. 12
32. What is the size of the interval of the frequency distribution?
- A. 2 B. 3 C. 4 D. 5

33. What is the computed mean value?

13.6

B. 14.1

C. 12

D. 15.4

34. Which of the following classes performed best and with the least variability in the test?

Classes	Mean	Standard Deviation
I- Magalang	24.7	2.16
I - Masunurin	26.4	2.53
I - Masipag	25.7	2.87
I - Matipid	26.4	2.72

A. I-Magalang

C. I-Masipag

B. I-Masunurin

D. I-Matipid

35. The table shows the student's grades and the corresponding number of units for each subject.

SUBJECTS	UNITS (Weight)	GRADE
Filipino	3	88
English	3	90
Math	3	94
Science	5	91
Araling Panlipunan	3	87
Computer	2	96
PE	1	90

What is the mean (average) of the grades?

A. 88.9

B. 89

C. 90

D. 90.7

PART III - ENHANCING TEST TAKING SKILLS

Directions: Choose the best answer from the choices given. Write the corresponding letter of your choice.

- An angle is 55.5° . What is the measure of its supplement?
 2A. 4.5° B. 34.5° C. 114.5° D. 124.5°
- Given: $RS = 5$, $RT = 16$, and $ST = 11$. Which of these points is between the other two?
 A. R B. S C. T D. any point
- What is the altitude of this figure?

- Which refers to a pair of noncoplanar lines?
 A. $\overline{AD}$ B. $\overline{BE}$ C. $\overline{AC}$ D. $\overline{DF}$
- Which refers to a pair of noncoplanar lines?
 A. perpendicular C. parallel
 B. coinciding D. skew
- Which of the following is a convex hexagon?
 A. B. C. D.
- Which of the following quadrilaterals best describes a square?
 A. Its diagonals are perpendicular to each other.
 B. It is an equiangular rhombus.
 C. Its diagonals are congruent.
 D. It has four right angles.

For item 7-8, refer to this figure:

7. If lines r and s are parallel, which of the following pairs of angles are congruent?
 - A. $\angle 1$ and $\angle 4$
 - B. $\angle 5$ and $\angle 7$
 - C. $\angle 3$ and $\angle 6$
 - D. $\angle 3$ and $\angle 8$
8. If lines r and s are parallel and $m\angle 2 = 42^\circ$, what is the measure of $\angle 6$?
 - A. 42°
 - B. 48°
 - C. 132°
 - D. 138°
9. Two angles are supplementary. One of the angles is four times larger than the other. What is the measure of the larger angle?
 - A. 18°
 - B. 36°
 - C. 72°
 - D. 144°
10. Find the value of x in the figure at the right.

11. Which of the following statements is TRUE?
 - A. Adjacent angles form a linear pair.
 - B. Supplementary angles form a linear pair.
 - C. Angles that form a linear pair are supplementary.
 - D. Two angles that form a linear pair are adjacent and complementary.
12. If $\triangle ANT$ is an isosceles triangle with right angle at T , then
 - A. $\overline{AT}$ is the hypotenuse.
 - B. $m\angle ANT = 45^\circ$
 - C. $AT = AN$
 - D. $AT = \frac{1}{2} AN$

13. What is the sum of the measures of the interior angles of a regular octagon?
A. 1260° B. 1080° C. 145° D. 135°
14. Marco has two sticks of lengths 9 cm and 12 cm. He needs a third stick to form a right triangle. What could be the length of the third stick?
A. 12 cm B. 13 cm C. 14 cm D. 15
15. A man jogs around a circular path whose diameter is 50 m. About how many times will he have to go around the circular path to jog a distance of $1\frac{1}{2}$ km?
A. 5 times B. 10 times C. 12 times D. 15 times
16. The volume of a cube is 1000 cm^3 . What is its surface area?
A. 10 cm^2 B. 100 cm^2 C. 600 cm^2 D. 625 cm^2
17. The area of the Great Circle of a sphere is 314 cm^2 . Find the volume of the sphere.
A. 4186.7 cm^3 C. 5865.5 cm^3
B. 5116 cm^3 D. 6212.3 cm^3
18. The figure below shows a spinner with 12 sectors. When someone spins the arrow, it is equally likely to stop on any sector.

$\frac{1}{2}$ of the sectors are blue, $\frac{1}{12}$ are green, $\frac{1}{4}$ are orange, and $\frac{1}{6}$ are red. If a person spins the arrow, on which color sector does the spinner have the least probability to stop?

- A. Blue B. green C. orange D. red

19. What is the probability of getting a prime number when a die is tossed?
A. $\frac{1}{6}$ B. $\frac{1}{4}$ C. $\frac{1}{3}$ D. $\frac{1}{2}$
20. In a candy jar, there are 15 lemons, 12 chocolates and 3 mints. If a candy is picked at random, what is the probability of getting a chocolate?
A. $\frac{1}{2}$ B. $\frac{2}{5}$ C. $\frac{1}{6}$ D. $\frac{1}{10}$
21. When you flip a coin thrice, what is the probability of getting at least 2 heads?
A. $\frac{3}{4}$ B. $\frac{1}{2}$ C. $\frac{3}{8}$ D. $\frac{1}{4}$
22. How many sets of answers are possible for a true or false test with 10 questions?
A. 1024 B. 512 C. 256 D. 2
23. The mean score of a set of 30 tests is 85. Find the sum of the 30 test scores.
A. 2 250 B. 2 360 C. 2 550 D. 3 240
24. A shoe manufacturer conducted a survey of the average shoe size among women to help him decide what shoe size to put on display. What measure of central tendency would be most appropriate for his purpose?
A. mean B. mode C. median D. any of the three
25. In how many ways can 5 basketball players be chosen from a group of 9 players?
A. 126 B. 212 C. 15 120 D. 362 880
26. How many 4-digit numbers can you write using the digits 8, 4, 3 and 5 if the digits may appear more than once in each number?
A. 22 B. 24 C. 224 D. 256
27. You are to form 3-digit numbers from the digits 1, 2, 3, 4, and 5. What is the probability of selecting "152" if repetition of digits is not allowed?
A. $\frac{1}{30}$ B. $\frac{1}{40}$ C. $\frac{1}{50}$ D. $\frac{1}{60}$
28. Suppose that a family has 2 children. What is the probability that the family has at least 1 girl?
A. $\frac{3}{4}$ B. $\frac{1}{2}$ C. $\frac{1}{3}$ D. $\frac{1}{4}$
29. In how many ways can 4 people be seated in a row of 4 vacant chairs if they can sit anywhere?
A. 120 B. 90 C. 64 D. 24

30 Find the number of distinct permutations of the letters in the word 'MISSION'?

- A. 270 B. 720 C. 1260 D. 5040

31. The following polygon shows a shop's monthly sales of umbrellas for the year.

How many more umbrellas were sold in June than in November?

- A. 45 B. 35 C. 30 D. 20

For items 32-34: The scores of 10 students who took the qualifying exam for a major mathematics competition are as follows:

Student	A	B	C	D	E	F	G	H	I	J
Score	18	32	10	15	27	18	23	28	29	30

32. What is the median score?

- A. 18 B. 20 C. 23 D. 25

33. What is the mode of the scores?

- A. 18 B. 20 C. 23 D. 25

34. What is the range of scores?

- A. 18 B. 22 C. 23 D. 25

35. The table shows the student's grades and the corresponding number of units for each subject.

SUBJECTS	UNITS (Weight)	GRADE
Filipino	1.2	86
English	1.5	89
Math	1.5	94
Science	1.8	93
Araling Panlipunan	1.2	88
TLE	1.2	87
MSEP	1.2	93
EP	0.6	92

What is the mean (average) of the grades?

- A. 89.85 B. 90.12 C. 90.38 D. 91.02

Natural Science

Prepared by:
Dr. Leticia V. Catris

Competencies:

1. use scientific knowledge to explain natural phenomena and protect man's environment
2. use scientific inquiry to investigate materials, events and phenomena in the natural world (designing experiments, collecting, organizing, analyzing and interpreting data, making conclusions, and communicating results)
3. identify scientific traits and attitudes exhibited in various situations
4. analyze the impact of technology on non-living and living things
5. analyze advantages and disadvantages of different solutions to particular problems

PART I - CONTENT UPDATE**INTRODUCTION**

Scientific knowledge and skills are essential for socio-economic and cultural development. While the required knowledge may or may not be generated wholly, we must have the capacity to make use of it.

Today, the amount of scientific and technological knowledge has transformed societies. With the advent of information and communication technology, information can be relayed to other parts of the world in just a matter of seconds. The inventions in telecommunications and transportations have drawn the world smaller and smaller. Moreover, technology has enabled humans to do things which were thought to be impossible before like exploring the universe, stem cloning, in-vitro fertilization, etc... The recent breakthroughs in genetic mapping have made it possible to identify the useful and bad genes that will result to the breeding of a better species. Life has been increasingly influenced by science and technology in our pursuit of a more comfortable lifestyle. *BUT* the transformations have not been entirely beneficial.

To better understand the innumerable transformations in science and its applications would require at one extreme, scientists and technologists of high caliber and at the other, a scientifically and technologically literate population. Science can be a vehicle to inculcate values on the proper use of technology that bring both advantages and disadvantages.

The scientifically literate person understands and appreciates the joint enterprises of science and technology, their interrelationships, and their impacts on society and the environment. Some of the factors involved in the interrelationships among science, technology, society, and the environment are:

A. Science and Technology

There is a distinction between science and technology, although they often overlap and depend on each other. Science deals with generating and ordering conceptual knowledge. Technology deals with design and development, and the application of scientific or technological knowledge, often in response to social and human needs. Technology does not just provide tools for science, however; it also may provide motivation and direction for theory and research. For example, the theory of the conservation of energy was developed technological problem of increasing the efficiency of commercial steam engines. The mapping of the locations of the entire set of genes in human DNA has been motivated by the technology of genetic engineering, which both makes such mapping possible and provides a reason for doing so. The invention of the microscope led to new discoveries about cells.

B. Scientists and Technologists are human

Scientists see patterns in phenomena as making the world understandable; technologists see them as making the world manipulable. Scientists seek to show that theories fit the data; technologists (engineers) seek to demonstrate that designs work. Scientists cannot provide answers to all questions; engineers cannot design solutions for all problems. Outside of their specialized fields, scientists and technologists may not exhibit strong development of all or even most of the dimensions of scientific literacy. Vocations in science and technology are open to most people.

Example: By researching the biographies of famous scientists, students can begin to appreciate the human elements of science and technology.

C. Impact of Science and Technology

Scientific and technological developments have real and direct effects on every person's life. Some effects are desirable; others are not. Some of the desirable effects may have undesirable side effects. In essence, there seems to be a trade-off principle working in which gains are accompanied by losses.

Example: As our society continues to increase its demands on energy consumption and consumer goods, we are likely to attain a higher standard of living while allowing further deterioration of the environment to occur. The different areas of technology represent areas of technological activity in wider world.

D. Science, Technology, and the Environment

Science and technology can be used to monitor environmental quality. Society has the ability and responsibility to educate and to regulate environmental quality and the wise usage of natural resources, to ensure quality of life for this and the succeeding generations.

Example: Everyone should share in the responsibility of conserving energy

E. Public Understanding Gap

A considerable gap exists between scientific and technological knowledge, and public understanding of it. Constant effort is required by scientists, technologists, and educators to minimize this gap.

Examples: Some people mistakenly believe that irradiation causes food to become radioactive. Buttermilk is often mistakenly regarded as having a high caloric content. Folklore has it that the best time to plant potatoes is during the full moon. Many believe that technology is simply applied science.

F. Variable Positions

Scientific thought and knowledge can be used to support different positions. It is normal for scientists and technologists to disagree among themselves, even though they may invoke the same scientific theories and data.

Examples: The debate about the possibility of cold fusion illustrated variable positions among scientists.

There is a debate about whether or not controlled burning techniques should be used in national parks.

G. Limitations of Science and Technology

Science and technology cannot guarantee a solution to any specific problem. In fact, the ultimate solution of any problem is usually impossible, and a partial or temporary solution is all that is ever possible. Solutions to problems can not necessarily be legislated, bought, or guaranteed by the allocation of resources. Some things are not amenable to the approaches of science and technology.

Example: The solutions that technology now proposes for nuclear waste storage often have significant limitations and are, at best, only short-term solutions until better ones can be found.

H. Social Influence on Science and Technology

The selection of problems investigated by scientific and technological research is influenced by the needs, interests, and financial support of society.

Example: The race to put a person on the moon illustrates how priorities can determine the extent to which the study of particular scientific and technological problems are sanctioned and thus allowed to be investigated.

I. Technology Controlled by Society

Although science requires freedom to inquire, applications of scientific knowledge and of technological products and practices are ultimately determined by society. Scientists and technologists have a responsibility to inform the public of the possible consequences of such applications. A need to search for consequences of scientific and technological innovations exists.

Examples: Einstein's famous letter to President Roosevelt, warning about the possibility of developing nuclear weapons, and his pacifist views, illustrate the responsibility that scientists must have as members of society. Governments must make decisions regarding the support and funding of important scientific research.

J. Science, Technology, and Other Realms

Although there are distinctive characteristics of the knowledge and processes that characterize science and technology, there are many connections to, and overlaps with, other realms of human knowledge and understanding.

Example: The Uncertainty Principle in science, the Hawthorne Effect in social psychology all express similar types of ideas within the realm of their own disciplines.

WHAT IS THE NATURE OF SCIENCE AND TECHNOLOGY?

SCIENCE is a systematized body of knowledge based on nature and the facts of life. The contents or facts of this knowledge are gathered through keen observation and relentless experimentations. The ideas generated are also products of further investigations. Science involves the human attempt to generate testable concepts, generalizations and theories which explain natural phenomena and have predictable capabilities.

Scientists share certain basic beliefs and attitudes about what they do and how they view their work. This is the **nature of science** and what can be learned about it.

- **The World Is Understandable**

Science presumes that the things and events in the universe occur in regular patterns that are understandable through careful, systematic study. For instance, the same principles of motion and gravitation that explain the motion of falling objects on the surface of the earth also explain the motion of the moon and the planets.

- **Scientific Knowledge Is Durable**

Although scientists reject the notion of attaining absolute truth and accept some uncertainty as part of nature, most scientific knowledge is durable.

- For example, in formulating the theory of relativity, Albert Einstein did not discard the Newtonian laws of motion but rather showed that they are only approximations of limited application within a more general concept. Moreover, the growing ability of scientists to make accurate predictions about natural phenomena provides convincing evidence that we really are progressing our understanding of how the world works. Continuity and stability are as characteristic of science as change is.

- **Science Cannot Provide Complete Answers to All Questions**

There are many matters that cannot usefully be examined in a scientific way. There are, for instance, beliefs that—by their very nature—cannot be proved or disproved (such as the existence of supernatural powers and beings, or the true purposes of life). In other cases, a scientific approach that may be valid is likely to be rejected as irrelevant by people who hold on to certain beliefs (such as in miracles, fortune-telling, astrology, and superstition). Nor do scientists have the means to settle issues concerning good and evil, although they can sometimes contribute to the discussion of such issues by identifying the likely consequences of particular actions, which may be helpful in weighing alternatives.

TECHNOLOGY is the application of scientific theories, laws, concepts, and principles. It is described as the means by which humans control or modify their environment which can be traced to Paleolithic cultures when humans shaped tools out of stone. Technology provides the eyes and ears of science. The electronic computer, for example, has led to substantial progress in the study of weather systems, demographic patterns, gene structure, and other complex systems that would not have been possible.

- **All Technologies Involve Control**

All systems, from the simplest to the most complex, require control to keep them operating properly. For example, a baking oven is a fairly simple system

that compares the information from a temperature sensor to a control setting and turns the heating element up or down to keep the temperature within a small range. Moreover, almost all but the simplest household appliances used today include microprocessors to control their performance.

- **Technologies Always Have Side Effects**

In addition to its intended benefits, every design is likely to have unintended side effects in its production and application. The effects of ordinary technologies may be individually small but collectively significant. Refrigerators, for example, have had a predictably favorable impact on diet and on food distribution systems. Because there are so many refrigerators, however, the tiny leakage of a gas used in their cooling systems may have substantial adverse effects on the earth's atmosphere.

Humankind has been using the technological enterprise to change our world to accommodate our needs—new metal alloys; devices for agriculture, transportation, health, and communication; and technological advances such as seedless grapes, powdered milk, biodegradable soap, plastics, and Styrofoam.

The images of science sit easily with the images of modernization—electronic devices, robotics, nuclear energy, in-vitro fertilization, jet planes, space explorations, genetic engineering—on one end, the recognition of environmental pollution, resource depletion and urbanization—on the other side.

- **All Technological Systems Can Fail**

Most modern technological systems, from transistor-radios to airliners, have been engineered and produced to be remarkably reliable. Failure is rare enough to be surprising. Yet the larger and more complex a system is, the more ways there are in which it can go wrong—and the more widespread the possible effects of failure.

- Examples of such “fail-safe” designs are bombs that cannot explode when the fuse malfunctions or automobile windows that shatter into rounded, connected chunks rather than into sharp, flying fragments. All of the means of preventing or minimizing failure are likely to increase cost. But no matter what precautions are taken or resources invested, risk of technological failure can never be reduced to zero.

WHAT ARE THE BASIC CONCEPTS AND PRINCIPLES OF SCIENCE AND TECHNOLOGY?

A scientifically literate person has working knowledge of the basic concepts and principles of the natural sciences. Scientific knowledge is holistic, i.e., it is gathered by various branches of science contributing to an over-all conceptual scheme which is internally consistent.

- **Life Science (Biology)** - deals with living things and their parts and actions. Smaller branches of life science include:
 - **Zoology** – the study of animals
 - **Botany** – the study of plants
- **Earth Science** – deals with the study of the Earth and its rocks, oceans, volcanoes, earthquakes, atmosphere, and other features. This includes astronomy, that explore nature beyond the Earth. This study objects such as stars, planets and moons.
- **Physical Science** – deals with the study of matter. This includes:
 - **Chemistry** – explore what substances are made of and how they change and combine.
 - **Physics** – explore the study of relationship between matter and energy.

The scientific enterprise comprises at least two factors: processes and products. The products of science include the facts, concepts, theories, laws, and applications that occur as a result of doing science—that is, scientific content

Scientific Facts: Below are some notions considered to be facts:

1. The earth rotates on its axis once every 24 hours.
2. Seventy-six percent of all animal species are insects.
3. Green plants contain chlorophyll in the cells of their leaves.
4. Water molecules are made of hydrogen and oxygen atoms.
5. A freely falling object accelerates toward the earth at the rate of 9.8 m/s^2
6. The temperature at which pure water freezes is 0° Celsius or $32^\circ \text{ Fahrenheit}$.

Scientific Concepts: These are ideas that combine several facts or observations. A concept is an "observed regularity in events or objects" (Novak, 1984).

1. Green plants need light in order to grow. - relates the two observations of light to the amount of growth of green plants
2. The human body uses food for energy and growth.
3. Some chemicals fizz when they come into contact with other chemicals.
4. It takes more force to slide a book on sandpaper than on smooth paper.
5. Running water cuts gullies in soft rock.
6. Heavy marble roll farther than light marbles when both are given the same push.

Scientific Theories: Theories are developed to explain concepts or other observed regularities. These are proven hypothesis (tentative answers to questions).

Here are some examples of theories:

1. The Kinetic Molecular Theory: Molecules are in motion, and the rate of motion varies with temperature.
2. Einstein's General Theory of Relativity: The faster an object goes, the greater its mass becomes.

3. Theory of Evolution: Species adapt to their environments, and those that are most fit survive.
4. Theory of Plate Tectonics: The outer shell of the earth consists of several moving plates on which the oceans and continents lie.
5. Cellular theory of life: Living things are made of cells.

Scientific Laws: are statements generally accepted to be true, universal, and absolute. They can be expressed in terms of a single mathematical equation. They don't really need any complex external proofs; they are accepted at face value based upon the fact that they have always been observed to be true.

Some examples of scientific laws:

1. Newton's Laws of Motion: Inertia, Acceleration and Interaction
2. The Law of Universal Gravitation: All objects attract all other objects with a force that depends on their masses and the distance between them.
3. The Law of Conservation of Energy: Energy can neither be created nor destroyed; they can only be transformed from one form to another
4. The Law of Conservation of Matter and Energy: The sum of matter and energy in the universe is constant.
5. The Law of Segregation: During reproduction, the two factors that control each trait separate (segregate), with one factor from each pair passed to the offspring.

CONCEPTS IN PHYSICAL SCIENCE

A. Energy

- Energy has always been defined as the ability to do work. Energy makes change; it does things for us. In strict scientific terms energy is classified into two main forms: kinetic and potential energy.

- Kinetic energy is defined as the energy of a moving object. Speeding cars, a waterfall, a rock falling from a cliff or the ticking of a clock are examples of objects that have kinetic energy. The various forms include electrical energy, mechanical energy, thermal energy, radiant energy.
- **Electrical energy** is the movement of electrical charges. All matter is made of tiny particles called atoms. These are made up of even smaller particles: electrons, protons, and neutrons. When a force is applied, some of the electrons move. Electrical charges moving through a wire is called electricity. Lightning is another example of electrical energy.
 - **Mechanical energy** is the movement of objects and substances from one place to another when a force is applied according to Newton's Laws of Motion.
 - **Thermal energy** is the internal energy in substances—the vibration and movement of the atoms and molecules within substances. This pertains to the kinetic energy of the molecules within an object. It is technically incorrect to refer to heat as thermal energy. Objects possess thermal energy; heat is the transfer of energy from one object to another. It is an evidence of energy.
 - **Radiant energy** is electromagnetic energy that travels in transverse waves. Radiant energy includes visible light, x-rays, gamma rays and radio waves. Light is one type of radiant energy and is another evidence of energy.
- Potential energy is defined as the energy in matter due to its position or the arrangement of its parts. The various forms of potential energy include gravitational potential energy, stored mechanical (elastic potential) energy, chemical potential energy, and nuclear energy.
- **Chemical Energy** is energy stored in the bonds of atoms and molecules. It is the energy that holds these particles together. The energy stored in gasoline is released by burning. A motorboat uses this released energy to turn its propeller. There are many examples of chemical potential

energy being converted to kinetic energy to do work. Energy in food is used by our bodies to move. A lighted firecracker explodes with a loud sound when chemical energy is released.

- Gravitational Energy is the energy of position or place. A rock resting at the top of a hill contains gravitational potential energy. Water in a reservoir behind a dam, is an example of gravitational potential energy. When something is lifted or suspended in air, work is done on the object against the pull of gravity. This work is converted gravitational potential energy.
- Stored Mechanical Energy is energy in stretched rubber bands, in compressed springs, trampolines, and even our skin. They have the potential to do work or resist being stretched out of shape.
- Nuclear Energy is energy stored in the nucleus of an atom and can be released when the nuclei are combined or split apart. Nuclear power plants split the nuclei of uranium atoms in a process called fission. The sun combines the nuclei of hydrogen atoms in a process called fusion.

➤ One of the reasons energy is hard to conceptualize is that it is constantly changing from one form to another. When this happens it is called an *energy transformation*.

- The law of conservation of energy says that energy is neither created nor destroyed. When we use energy, it doesn't disappear. We change it from one form of energy into another.
- A car engine burns gasoline, converting the chemical energy in gasoline into mechanical energy. Solar cells change radiant energy into electrical energy. Energy changes form, but the total amount of energy in the universe stays the same.

- Converting one form of energy into another form always involves a loss of usable energy. The total amount of energy available for transformation is almost always decreasing.
 - The human body is like a machine, and the fuel is food. Food gives the energy to move, breathe, and think. But the body is not very efficient at converting food into useful work. The rest of the energy is lost as heat.
 - Almost all of the energy stored in the molecules of gasoline used during an automobile trip goes, by way of friction and exhaust, into producing a slightly warmer car, road, and air.
 - When energy is transformed into heat energy that diffuses all over, further transformations is less likely to occur. Energy follows a one-way path. It enters the living system in the form electromagnetic waves - light and leaves as heat.
- Energy sources are classified into two groups—**renewable** and **nonrenewable**. Renewable energy sources include biomass, geothermal energy, hydropower, solar energy, and wind energy. They can be replenished in a short time. Nonrenewable energy supplies are limited. Petroleum, for example, was formed millions of years ago from the remains of ancient sea plants and animals.
- Classification of energy

- Sound, motion, thermal energy, and light are not easily classified as kinetic and potential energy. They are evidences of energy.
 - Light is an electromagnetic radiation and has no mass, hence, it has neither kinetic nor potential energy.
 - Sound is produced when a force causes an object or substance to vibrate—the energy is transferred through the substance in a wave.
 - The human ear can hear only those sounds caused by objects vibrating between about 20 decibels (vibs/sec) and about 16,000 decibels.
 - Ultrasonic waves are sound waves that vibrate very fast with frequencies too high to be detected by the human ear. They have greater penetrating power than audible sound waves and can be used to see *in utero* fetuses and the functioning of human hearts.
 - Heat consists of moving molecules in air or in an object, and mechanical energy is the combination of kinetic and potential energy of a moving object. A pendulum has mechanical energy; it continually converts kinetic energy into gravitational potential energy and back into kinetic energy as it swings back and forth.

B. Structure of Matter

- Matter is anything that occupies space and has mass. They differ greatly in shape, density, flexibility, texture, toughness, and color; in their ability to give off, absorb, bend, or reflect light; in what form they take at different temperatures; in their responses to each other; and in hundreds of other ways.
 - **Homogeneous system** is characterized by a one-phase system whose characteristics are uniform throughout. These are observed either as a pure substance or in solutions. An example of a homogeneous substance would be pure water, which contains only the compound H_2O or pure table salt that contains only the compound $NaCl$. Two or more gases will always mix to form just one phase.

- **Elements** are the simplest form of matter since they cannot be decomposed further even through chemical means. Elements are further classified into metal, non-metal and metalloid. Some characteristics of metal: luster, malleability and ductility, high tensile strength, good conductors of heat and electricity.
- **Nonmetals** are characterized as are poor conductors (thus, making them good insulators) of heat and electricity, neither malleable nor ductile, brittle. (if in the solid phase)
- **Compounds** are pure substances that are composed of two or more elements, which are chemically combined in a definite ratio by mass. There are two ways of grouping compounds – as organic or inorganic; and as acid, base or neutral. Basically, carbon-containing compounds are organic. Sugar, acetone, acetic acid, methane, ethylene, alcohol are organic compounds. However, carbides, carbonates, bicarbonates, cyanides, carbon dioxide and carbon monoxide are exemptions.
- **Inorganic compounds** are those compounds that do not contain carbon. Salt, lye and water are some examples.
- **Acids** are usually distinguished from **bases** through the use of **indicators**. Indicators are either weak organic acids or bases that change color over a range of pH values. Litmus is a common indicator. Acid turns the color of blue litmus to red while base turns red to blue. Bases turn red litmus paper to blue. Acids when dissolved in water yield hydrogen ions (H^+) while bases yield hydroxide ions (OH^-). Unlike acids and bases, neutral compounds do not change the color of indicators.
- **Solution** is the only homogeneous mixture, made up of two or more pure substances that are physically combined. Alloys are solid solutions which are combinations of metals. Salt and water forms a liquid solution while air is a mixture of gases. Solutions contain a solvent (the material that does the dissolving of another material) and

a solute (the material that is dissolved). Water is called the "universal solvent" because it dissolves many substances. The warmer the solvent, the more solute that can be dissolved.

- **Heterogeneous system** is characterized by the presence of two or more distinct phases, which have different properties.
 - **Colloids and suspensions are heterogeneous.** Of the three types of mixtures, only colloids exhibit Tyndall effect. Tyndall effect is the scattering of light.
 - **Suspensions are mixtures of a solid, liquid and/or gas materials.** Examples of suspensions are soil particles in water, halo-halo, oil in water.

➤ The components of mixtures can be separated by **ordinary physical processes**. The choice of separation technique is dependent on the type of mixture and the characteristics of its components.

- Filtration is a separation technique that is being used in separating insoluble material from the liquid by allowing the mixture to pass through a filter paper. Other methods of separating insoluble solids from a liquid include: decantation, centrifugation and sedimentation.
- Two immiscible liquids can be separated by using a separatory funnel. Whereas, a mixture that is composed of a metal and a non-metal can be easily separated by using a magnet.
- A mixture that is made up of two solids can be separated either by using a sieve or by dissolution. On the other hand, soluble solids from a liquid can be separated through evaporation or distillation.

➤ Classification of matter according to composition:

- Mixtures of substances in the waters, land, and air may result to some major environmental problems:
 - Water Pollution - contamination of water by foreign matter such as microorganisms, chemicals, industrial or other wastes or sewage.
 - Euthrophication - a natural or artificial process on which a body of water contains high concentrations of chemical elements required for life making the producers bloom directly nourishing most bacteria than aquatic organisms like fishes. This results to red tides.
 - Green House Effect: a process in which sunlight is not capable of escaping the earth's atmosphere due to suspended particles in air resulting to global warming

Force and Motion

- Forces are interaction between two bodies. They can either be contact or non-contact force.
- **Contact forces** result when two bodies directly touch each other as in walking, running, playing, writing and pushing objects where friction is observed.
 - Friction is a force that opposes the natural motion of an object. It is often described as the resistance an object meets when its surface rubs against another surface. It acts in a direction opposite the natural motion of the moving object.
 - There are 3 types of frictional forces depending on the type of motion that occurs between two surfaces. Static friction - if there is no relative motion between two surfaces. Kinetic friction is the type of friction that opposes sliding motion; is weaker than static friction. The friction force that exists in rolling motion is called **rolling friction**. This is the weakest frictional force that opposes motion.

- **Non-contact forces** are forces that occur when the fields around objects interact with another field located around another body. The bodies themselves are not directly touching each other, but only their fields interact with one another.
- **Gravitational force** is observed when earth is attracted to the sun, earth also pulls the sun. An object falling freely in the air is acted upon by a force of gravity that cause it to accelerate. ($g = 9.8 \text{ m/s}^2$)
 - Gravity is the force behind rainfall, the power of rivers, the pulse of tides; it pulls the planets and stars toward their centers to form spheres, holds planets in orbit, and gathers cosmic dust together to start the process of star formation.
 - Gravitational forces involve a gravitational field that affects space around any mass. The strength of the field around an object is proportional to its mass and diminishes with distance from its center. ($F = G m_1 m_2 / r^2$) where $G = 6.67 \times 10^{-11} \text{ Nm/kg}^2$
 - **Electrostatic force** is the interaction between the electric field of one charged body another charged body
 - On an atomic scale, electric forces between oppositely charged protons and electrons hold atoms and molecules together
 - An electrically insulating material such as glass or rubber does not ordinarily allow any passage of charges through it. An electrically conducting material such as copper will offer very little resistance to the motion of charges, so electric forces acting on it readily produce a current of charges. (Most electrical wires are a combination of extremes: a very good conductor covered by a very good insulator.)
 - **Magnetic force** is the interaction between magnetic fields pulling or pushing each other – like poles attract each other, unlike poles, repel each other.

- Magnetic forces are very closely related to electric forces—hence the term "electromagnetic force". Both are thought of as acting by means of fields: an electric charge has an electric field in the space around it that affects other charges, and a magnet has a magnetic field around it that affects other magnets.
 - Moving electric charges produce magnetic fields. For example, electric currents circulating in the earth's core give the earth an extensive magnetic field, which we detect from the orientation of our compass needles.
- The interplay of electric and magnetic forces is also the basis of many technological design, such as electric motors (in which currents produce motion), generators (in which motion produces currents), and television tubes (in which a beam of moving electric charges is bent back and forth by a periodically changing magnetic field). More generally, a changing electric field induces a magnetic field, and vice versa.
- When an unbalanced force does act on an object, the object's motion changes. It may change its speed or its direction of motion or both. The greater the amount of unbalanced force, the more rapidly a given object's speed or direction of motion changes; the more massive an object is, the less rapidly its speed or direction changes in response to any given force.
- Sir Isaac Newton developed three laws of motion that explains force and motion.
- 1st Law of Motion - an object at rest remains at rest and an object in motion remains in motion in a straight line and at constant speed unless acted upon by an external unbalanced force. (Inertia) ex: This is the reason for seat belts and air bags as safety devices in cars. (Law of Inertia)
 - 2nd Law of Motion - force is directly proportional to mass and acceleration ($F = ma$) (Law of Acceleration)

- **3rd Law of motion:** states that for every force there is an equal and opposite force. This is the familiar "action-reaction" system and it governs the movement of rockets and jet airplanes (Law of Interaction)
- Some complicated motions can be described not in terms of forces directly but in terms of the pattern of motion, such as vibrations and waves. Examples are sound waves, light waves, earthquakes, or surface waves on water.
- Wave behavior can be described in terms of how fast the disturbance propagates (speed, v), and in terms of the distance between successive peaks of the disturbance (wavelength, λ). Wavelength can greatly influence how a wave interacts with matter—how well it is transmitted, absorbed, reflected, or diffracted.
- Electromagnetic waves include the regions from longest wavelength-radio waves, microwaves, radiant heat or infrared radiation, visible light (red, orange, yellow, green, blue, indigo, violet), ultraviolet radiation, x rays, and gamma rays – shortest wavelength.
- Atmospheric gas, ozone, absorbs some of the ultraviolet radiation in sunlight—the wavelengths that produce burning, tanning, and cancer in the skin of human beings.
- Ultrasonic waves are sound waves that vibrate very fast. Their frequencies are too high to be detected by the human ear. Ultrasonic sound waves have greater penetrating power than audible sound waves and can be used to see in utero fetuses and the functioning of human hearts.
- Doppler effects are evident in the apparent change in pitch of an automobile horn as it passes the observer. The change in the wavelength of light from stars and galaxies also illustrates Doppler. Because the light emitted from most of them

shifts toward longer wavelengths (that is, toward the red end of the spectrum), astronomers conclude that galaxies are all moving away from one another—and hence that we are in a generally expanding universe. (Doppler shift)

EARTH AND SPACE SCIENCE

- Earth is a fairly small planet. The distance of the earth from the sun ensures that energy reaches the planet at a rate sufficient to sustain life. The earth is mostly rock, with three-fourths of its surface covered by a relatively thin layer of water and the entire planet enveloped by a thin blanket of air. Bulges in the water layer are raised on both sides of the planet by the gravitational pull of the moon and sun, producing high tides about twice a day along ocean shores. Similar bulges are produced in the blanket of air as well.
- The earth is approximately 1.28×10^4 km in diameter at the equator. The diameter at the poles is approximately 70 km less than at the equator because of its rapid rotation on its axis (equatorial bulge).
- The motion of the earth and its position with regard to the sun and the moon has noticeable effects. The earth's one-year revolution around the sun, because of the tilt of the earth's axis, changes how directly sunlight falls on one part or another of the earth.
- This difference in heating different parts of the earth's surface produces seasonal variations in climate. The rotation of the planet on its axis every 24 hours produces the planet's night-and-day cycle. The combination of the earth's motion and the moon's own orbit around the earth, once in about $27\frac{1}{3}$, results in the phases of the moon (new moon, 1st quarter, full moon, last quarter).

- Transfer of heat energy at the interfaces of the atmosphere with the land and oceans produces layers at different temperatures in both the air and the oceans. These layers rise or sink or mix, giving rise to winds and ocean currents that carry heat energy between warm and cool regions. The earth's rotation curves the flow of winds and ocean currents, which are further deflected by the shape of the land.
 - The water cycle plays an important part in determining climatic patterns—evaporating from the surface, rising and cooling, condensing into clouds and then into snow or rain, and falling again to the surface, where it collects in rivers, lakes, and porous layers of rock. There are also large areas on the earth's surface covered by thick ice (such as Antarctica), which interacts with the atmosphere and oceans in affecting worldwide variations in climate.
- Fresh water is an essential resource for daily life and industrial processes, obtained from rivers and lakes and from water that moves below the earth's surface (groundwater). Many sources of fresh water cannot be used because they have been polluted. It can be very expensive to clean up polluted air and water, restore destroyed forests and fishing grounds, or restore or preserve eroded soils of poorly managed agricultural areas.
- Although the oceans and atmosphere are very large and have a great capacity to absorb and recycle materials naturally, they do have their limits. They have only a finite capacity to withstand change without generating major ecological alterations that may also have adverse effects on human activities. Wind, tides, and solar radiation can also be harnessed to provide sources of energy.
- Forces within the earth cause continual changes on its surface. The solid crust of the earth—including both the continents and ocean basins—consists of separate sections that overlie a hot, almost molten layer.

- The theory of plate tectonics is a unifying theory of the continental drift and seafloor spreading theories. The current position of continents on the globe is thought to be the result of the break-up and subsequent movement of the plates making up the super continent, Pangea, about 250 million years ago. Pangea is formed from the collision of continents that formed from the original crust of the earth and started moving around 2 ½ billion years ago.
- The surface of the earth undergoes continuous cycles of building structures and tearing them down. Weathering is process of wearing structures down while erosion refers to moving the weathered materials. Canyons, gullies, and valleys are the result of weathering and erosion by rivers and streams.
- Human activities have changed the earth's land surface, oceans, and atmosphere. For instance, reducing the amount of forest cover on the earth's surface has led to a dramatic increase in atmospheric carbon dioxide, which in turn may be leading to increased average temperature of the earth's atmosphere and surface.
- Smoke and other substances from human activity interact chemically with the atmosphere and produce undesirable effects such as smog, acid rain, and an increase in the damaging ultraviolet radiation that penetrates the atmosphere.
- Intensive farming has stripped land of vegetation and topsoil, creating virtual deserts in some parts of the world.

The Universe

- The earth has existed for only about a third of the history of the universe and is in comparison a mere speck in space.

- Our sun is a medium-sized star orbiting near the edge of the arm of an ordinary disk-shaped galaxy of stars, the Milky Way. Our galaxy contains many billion stars, and the universe contains many billion such galaxies.
- The entire contents of the known universe expanded explosively into existence from a single hot, dense, chaotic mass more than ten billion years ago. Stars coalesced out of clouds of the lightest elements (hydrogen and helium), heated up from the energy of falling together, and began releasing nuclear energy from the fusion of light elements into heavier ones in their extremely hot, dense cores.
- There are also a great many smaller bodies of rock and ice orbiting the sun. Some of those that the earth encounters in its yearly orbit around the sun glow and disintegrate from friction as they plunge into the atmosphere—and sometimes impact the ground.
- Other chunks of rock mixed with ice have such long and off-center orbits that they periodically come very close to the sun, where some of their surface material is boiled off by the sun's radiation and pushed into a long illuminated tail that we see as a comet.
- In studying the universe, a variety of tools are used. These tools include radio and x-ray telescopes that are sensitive to a broad spectrum of information coming to us from space. Computers can undertake increasingly complicated calculations of gravitational systems or nuclear reactions, finding patterns in data and deducing the implications of theories. Space probes send back detailed pictures and other data from distant planets in our own solar system; and huge "atom smashers" that simulate conditions in the early universe and probe the inner workings of atoms.

CONCEPTS IN BIOLOGICAL SCIENCE

Living organisms are made of the same components as all other matter, involve the same kind of transformations of energy, and move using the same basic kinds of forces.

The Cellular Theory of Life

- Living things are made of cells. Some organisms such as bacterium, an amoeba and a paramecium, are made of single cells (unicellular organisms); others are multicellular.
- Complex organisms are made of different kinds of cells specialized to carry out specific functions, all working together to accomplish the total needs of life (Ex: cells specialized for growing hair, secreting digestive juices, making bones and muscles, and carrying oxygen)
 - A group of similar cells performing similar functions form tissues (ex. are human tissues are muscle tissue, blood tissue and bone tissue).
 - A group of tissues working together forms an organ. Examples of human organs are stomach, the biceps muscle, and the heart.
 - Several organs working together form a system. All the systems make up the organism. Examples of human systems include the circulatory system, the digestive system, and the muscular system. Plant systems include the root system, leaf system and the stem system.
- The cell is the fundamental unit of life, made up of a protoplasm, enclosed by a plasma membrane, and containing organelles.
 - The plasma membrane provides form and structure for the cell, and permits inward passage of waste products.
 - The nucleus is the control center of the cell and contains the chromosomes, which are made of genes, which, in turn, are made of DNA. Most directions for cellular activity are given by the DNA in the nucleus.

- The cytoplasm in the cell includes all the material outside the nucleus.
- In plants cells, the plasma membrane is surrounded by a cell wall made of cellulose to provide rigidity for the cells because plants do not have a skeletal structure.
 - Plant cells also contain plastids, tiny colored bodies that provide color and are used for storage or as chemical factories. Chloroplasts are plastids that contain chlorophyll, which is used in making food. When the green leaves die in autumn, the chlorophyll fades and other plastids can be seen, resulting in the brightly colored fall foliage.
- Cells have basic living functions, some of which are: (1) to manufacture proteins and other materials to help build the cell; (2) to manufacture energy; and (3) to reproduce.
 - Green plants have the unique capability of manufacturing their own food in the presence of light from water, minerals, and carbon dioxide in a process called photosynthesis. The products of this reaction are glucose (energy), H_2O , and O_2 . (Photosynthesis)
 - Both oxygen and glucose are used in energy production. All cells, including animal and plant cells, use oxygen for manufacturing energy and release carbon dioxide as a waste product. Thus, oxygen is used by both plants and animal cells, and carbon dioxide is given off by both plants and animal cells.
- Cells reproduce either by mitosis (somatic cells) or meiosis (sex cells)
 - Mitosis produce two new cells whose chromosomes are the same in number as the parent cell (diploid)
 - Meiosis produce two new cells with half the number of chromosomes as the parent cell (haploid)

Structure and Function of Plants

- Plants contain organs called roots, stems, leaves, and flowers.
 - The roots provide anchorage for the plant and, through tiny root hairs, enable plants to absorb water and nutritional elements from the soil.
 - The stems transport the nutrients to the leaves through specialized cells
 - The leaves are the food- manufacturing sites of the plants.

- Flowers are the sexual reproductive organs of the plants.
 - The petals attract insects and birds to help disperse pollen for cross-fertilization.
 - The male reproductive organ is the stamen, which manufactures the pollen.
 - The female reproductive organ is the pistil, which has a sticky top called a stigma to capture the pollen; a style to transport the pollen nucleus to the ovary; and the ovary, which manufactures the ovules.
 - When the pollen nuclei join the ovule nuclei, fertilized seeds result.

- Plants move in response to gravity, light, touch, water, temperature and some chemicals
 - Roots pointing downward shows plants respond to gravity (geotropism).
 - Plants also tend to grow toward areas with the most light, causing them to bend; houseplants bend toward the light and forest plants grow tall, reaching for the sun. (phototropism)
 - Some plants, (mimosa pudica) have leaves that quickly close when touched (thigmotropism).

Structure and Function of Animals

- The basic functions of all animals include nutrition, respiration, excretion, circulation, response, movement, regulation, and reproduction.
 - The digestive system takes food in, processes it for use by cells, and eliminates indigestible materials.

- The respiratory system is adapted for extracting the required oxygen either from the air or from water and removing carbon dioxide.
- Excretion is accomplished through kidneys and other excretory organs that extract liquid waste from body fluids and eliminate it from the organism.
- A complex circulatory system ensures that nutrients, gases, and regulatory hormones are transported from the specialized systems to each individual cell and that wastes can be removed from each cell and delivered to the excretory and respiratory organs.
- Regulatory glands secrete hormones to keep all cells working harmoniously.
- An intricate network of nerves and often a central brain structure coordinate all systems and permit movement, thought, and interaction with the environment.
- The muscular system allows the organism to move.
- A skeletal system provides rigidity in animals that do not otherwise have the required structure. Skeletons may be made of bone, cartilage, or water (such as hydroskeletons in certain worms). Some animals, such as crayfish and lobsters, have exoskeletons (external skeletons) that are made of chitin.
- Reproduction is accomplished either sexually or asexually through specialized organs and specialized systems that ensure perpetuation of the species.

E. Reproduction, Life Cycles, and Heredity

- Reproduction occurs in two ways: asexually and sexually.
 - In asexual reproduction, organisms are derived from only one parent (bacteria, algae, molds, fungi, many lower plants, protozoans, sponges, and coelenterates as well as in a few higher order animals).
 - Sexual reproduction requires the union of a male gamete (reproductive cell) and a female gamete.
 - Chromosomes are made of genes with strands of DNA (deoxyribonucleic acid). DNA carries the code of life, which is the code for protein

production.

- Chromosomes come in pairs, with a gene for each trait on each member of the pair; thus each trait is determined by two genes that may be dominant or recessive.
 - Dominant traits in humans include unattached earlobes, brown eyes, curly hair, polydactyly (more than 10 fingers or toes), and the ability to curl one's tongue.
 - Recessive traits include attached earlobes, blue or hazel eyes, straight hair, the normal number of fingers and toes, and the inability to curl one's tongue.
- Living organisms move through definite life cycles: they come into being, they grow, they may metamorphose, they mature, they reproduce, and they die.

Genetics and Evolution

- When gametes are formed, abnormal (or mutant) genes can be formed by erroneous duplication of the DNA, by physical transformation of the positions of molecules making up the DNA strands, or by external causes such as radiation, X-rays, or gamma rays.
- The basic principle of evolution is "survival of the fittest". This means that the individuals best adapted to the environment generally produce the greatest number of offspring.
- The theory of evolution offers an explanation for the immense diversity of life found on earth, through the process of natural selection; organisms adapt better to their environments.

G. Ecology

- Ecology is the study of the interactions of organisms with their environment and with each other. The environment in which living organisms exist is called the biosphere, and includes land, water, and air.

- The basic unit of ecological study is the ecosystem, a community of living organisms and their nonliving environment, interacting with each other. It is the environment through which energy flows and minerals recycle.
 - A balanced ecosystem has three fundamental characteristics: (1) there is a relatively constant source of energy (the sun); (2) The sun's energy is converted to glucose, which is needed by the living organisms; (3) Organic matter and nutrients are successfully recycled.
- Energy is transmitted through an ecosystem primarily by means of the food chain. Plants are the sources of all food in any ecosystem since they manufacture their own food. Some animals are herbivores, some are omnivores while others are carnivores. *(energy follows a one-way path)*
- Recycling of organic matter and nutrients within an ecosystem occurs as plants and animals excrete waste materials back into their environment and die. Microorganisms recycle all this material back to the environment. *(biogeochemical cycles)*
- Humans may upset the balance in ecosystems. Air and water pollution result to the death of some organisms. Increased levels of carbon dioxide may cause localized or global warming, upsetting the balance of energy. Increased CFC levels reduce the thickness of the ozone layer, causing increased levels of ultraviolet radiation.

WHAT ARE THE PROCESSES OF SCIENCE AND TECHNOLOGY?

A scientifically literate person has acquired and regularly practices the basic and integrated science process skills. There simply is no fixed set of steps that scientists always follow, no one path that leads them unerringly to scientific knowledge. Scientists use the scientific method to search for cause and effect relationships in nature. In other words, they design an experiment so that changes to one item cause something else to vary in a predictable way.

Steps in the Scientific Method

ASKING QUESTION – Identifying the problem

Asking question based on the inference made to identify the problem related to the observation; an investigation usually begins with an observation of a phenomenon.

To make their observations, scientists use their own senses, instruments (such as microscopes) that enhance those senses, and instruments that tap characteristics quite different from what humans can sense (such as magnetic fields). Scientists observe passively (earthquakes, bird migrations), make collections (rocks, shells), and actively probe the world (as by boring into the earth's crust or administering experimental medicines).

FORMULATING A HYPOTHESIS

A hypothesis is a proposed explanation for a phenomenon. Normally, it is a general statement about the relationship between the manipulated variable and a responding variable in order to explain the questions ask.

IDENTIFYING AND CONTROLLING VARIABLES

A variable is a factor that affects other factors in an experiment. In a scientific investigation, we need to identify all related variables. This step is to test the

consistency in the experiment and to relate the manipulated variable to the responding variable.

There are three types of variable, namely

- i. Manipulated variable — the factor that is purposely changed in an experiment
- ii. Responding variable — the factor that changes with the manipulated variable
- iii. Fixed variables — the factors that are kept constant throughout an experiment

This is to ensure that other factors do not affect the results of the experiment.

One can control conditions deliberately and precisely to obtain evidence. For example, controlling the temperature, changing the concentration of chemicals, or choosing which organisms mate with which others. By varying just one condition at a time, one can hope to identify its exclusive effects on what happens.

Often, however, control of conditions may be impractical (as in studying stars), or unethical (as in studying people), or likely to distort the natural phenomena (as in studying wild animals in captivity). In such cases, observations have to be made over a wide range of naturally occurring conditions to infer what the influence of various factors might be.

DESIGNING AND CONDUCTING THE EXPERIMENT

Always keep in mind that the main purpose of the experiment is to test the hypothesis

Decide how to carry out the experiment, including determine the material, apparatus, experiment set ups and the procedures to take. The experiment tests whether your hypothesis is true or false. It is important for the experiment to be a fair test.

Conduct a fair test by making sure that you change only one factor at a time while keeping all other conditions the same. Repeat the experiments several times to make sure that the first results weren't just an accident.

ANALYZING AND INTERPRETING DATA

After collecting the data, you will need to analyze the results of the experiment. The results can be presented in various forms, such as a table, graph or chart.

MAKING A CONCLUSION

Draw conclusions based on the observations and results. State whether the hypothesis is true or false.

WHAT ARE THE ATTITUDES AND VALUES EXHIBITED BY A SCIENTIST?

Science is in many respects the systematic application of some highly regarded human values—integrity, diligence, fairness, curiosity, openness to new ideas, skepticism, and imagination. Science particularly strongly fosters three of these attitudes and values—curiosity, openness to new ideas (the joy of discovery and the satisfaction of intellectual growth throughout life) and informed skepticism (borne out by the evidence, is logically consistent with other principles that are not in question, explains more than its rival theories, and has the potential to lead to new knowledge).

As a social activity, science inevitably reflects social values and viewpoints. The strongly held traditions of accurate recordkeeping, openness, and replication, blended by the critical review of one's work by peers, serve to keep the vast majority of scientists well within the bounds of ethical professional behavior.

WHAT ARE DIFFERENT TECHNOLOGICAL SYSTEMS?

- **Materials Technology** – this involves the use and development of materials to achieve a desired result ... construction, preservation and recycling of materials.
 - The characteristics of natural materials could be changed by processing, such as the tanning of leather and the firing of clay. Plastics are synthesized and designed to make automobile and space vehicle parts, food packaging and fabrics, artificial hip joints and dissolving stitches.
 - The disposal of used materials has become a problem. Some used materials, such as organic wastes, can be returned safely to the environment. But some materials, such as plastics, are not easily recycled nor do they decompose quickly when returned to the environment. Radioactive waste so hazardous for such a long time that how best to dispose of them is not clear.
- **Biotechnology** – involves agriculture, tissue culture, food production, health and the environment, industrial processes, genetic engineering
 - The success of genetic engineering has helped to increase the natural variability within plant species by using radiation to induce mutations, so that there are more choices for selective breeding. For example, plants can be given the genetic program for synthesizing substances that give them resistance to insect predators.
 - The widespread use of insecticides, herbicides, and fungicides has greatly increased useful farm output. However, their effectiveness may diminish as organisms develop genetically determined resistance to them, thereby requiring increased amounts of pesticides or the development of new ones.
 - An alternative to the chemical control of pests is introducing organisms from other ecosystems in an effort to reduce the number of pests in the agricultural ecosystem (such as by using foreign insects that feed on local weeds).

- Process Technology – this include chemical and industrial processes, mechanical systems, manufacturing, and transportation. Increasing automation requires less direct labor and fewer skilled crafts, but more engineering, computer programming, quality control, supervision, and maintenance. Automation reduces the workers' control and may eliminate some workers' jobs even while it creates others. Flexibility and skill in learning a succession of new job roles have become increasingly important as the pace of technological change quickens.
- Electronic/Control technology – this involves the design and production of simple circuits, robotics, and control systems, electronic devices.
 - With the invention of devices to generate and control electric current, information could be encoded and conveyed over long distances by wires. With radio waves, the same information could be encoded as changes in wave pattern and distributed in all directions through the atmosphere without the need of connecting wires. The efficient control of light waves in lasers has made possible the encoding and transmitting of information as pulses in light intensity over optical fibers.
 - Robots are used to perform the tasks of mass production. Instructions for processing are used to control the processes electronically, rather than having to be interpreted and carried out by people.
- Information and Communication Technology- this deals with locating and acquiring, storing, sorting, receiving communication information in variety of forms, data collection techniques, storage and data search programs, and generation models.
 - Computers can provide control that is as good as, or more precise and rapid than, human control. The operation of automobile engines, the flight control of aircraft and spacecraft, and the aiming and firing of weapons can be computerized to take account of more information and to respond much

more rapidly than a human operator could. However, there are also risks that the information entered may contain errors and its speed of response may exceed human ability to monitor or judge the output.

- Information storage also involves issues of privacy and security. Computer-managed information systems require means for ensuring that information cannot be changed or lost accidentally.

➤ Health Technology - is concerned with reducing the exposure of humans to conditions that threaten health, as well as with increasing the body's resistance to such conditions and minimizing the harmful effects that do occur.

- Sanitation measures include containment and disposal of garbage, construction of sewers and sewage processing plants, purification of water and milk supplies, quarantine of infectious patients, chemical reduction of insect and microorganism populations (insecticides and antiseptics), and suppression of the population of rats, flies, and mosquitoes that carry microorganisms.
- Vaccination has been the most effective means of preventing early death from disease. It is used to enhance the human body's natural defenses against disease. -- weakened or killed disease microorganisms injected into the blood may arouse the body's immune system to create antibodies that subsequently will incapacitate live microorganisms if they try to invade.
- The detection, diagnosis, and monitoring of disease are improved by different kinds of technology. A look inside the body has been provided by imaging devices that use slender probes to supply visible light or (from outside the body) magnetic fields, infrared radiation, sound waves, x rays, or nuclear radiation.
- Techniques for mapping the location of genes on chromosomes make it possible to detect disease-related genes in children or in prospective parents

- The modern treatment of many diseases also is improved by science-based technologies. Knowledge of chemistry, for example, has improved our understanding of how drugs and naturally occurring body chemicals work, how to synthesize them in large quantities, and how to supply the body with the proper dosage.
- Substances have been identified that are most damaging to certain kinds of cancer cells. Knowledge of the biological effects of finely controlled beams of light, ultrasound, x rays, and nuclear radiation (all at much greater intensities than are used for imaging) has led to technological alternatives to scalpels and cauterization.
- Tissue/ organ transplants make it possible to replace some body parts and to implant devices for electrically pacing the heart, sensing internal conditions, or slowly dispensing drugs at optimal times.
- Improved medical technologies raise ethical and economic issues. The combined results of improved technology in public health, medicine, and agriculture have increased human longevity and population size thus increasing the challenge of providing all humans with adequate food, shelter, health care, and employment, and it places ever more strain on the environment.
- The developing technology of diagnosing, monitoring, and treating diseases and malfunctions increases society's ability to keep people living when they otherwise would have been unable to sustain their lives themselves.

PART II - ANALYZING TEST ITEMS

MULTIPLE CHOICE: Choose the letter of the answer that best completes each statement:

1. Which of the following is an important factor in explaining why seasons occur on Earth?
A. Earth rotates on its axis C. Earth's axis is tilted
B. The sun rotates on its axis D. The sun's axis is tilted.

A. this causes day and night
B. the sun does not rotate
C. the tilted axis causes the uneven distribution of heat from the sun
D. the sun is not tilted
2. Which of the following is an orderly, systematic approach to problem solving?
A. conclusion C. experiment
B. hypothesis D. scientific method

A. Conclusion is the answer to the problem
B. Hypothesis is an educated guess solve
C. Experiment is performing an activity to analyze the problem
D. Scientific method is an approach to a problem step-by-step
3. What is the correct order for steps in the scientific method?
A. gather data, formulate hypothesis, have a question, develop method, draw conclusion
B. formulate hypothesis, have a question, draw conclusion, gather data, develop method
C. have a question, formulate hypothesis, develop method, gather data, draw conclusion

- D. develop method, have a question, formulate hypothesis, draw conclusion, gather data

Answer: C The scientific method is a step-by-step process of arriving at solutions to problems. A problem is given a tentative solution with a hypothesis which has to be tested through experimentation and data gathering before a conclusion is drawn.

4. Which of the following statements is not true of energy in the biosphere?

- A. Energy flows a one-way path
- B. Energy is conserved in the biosphere
- C. Energy follows a cycle through the web of life
- D. Energy leaves the living system in the form of heat

- A. true – energy enters the biosphere in the form of light and leaves the biosphere in the form of heat
- B. true – all energy in the biosphere is conserved; energy can neither be created nor destroyed, it can only be transformed from one form to another
- C. Not true – since energy follows a one-way path
- D. true – heat is released as energy is transferred in the biosphere

5. A set of chimes made from pipes of different lengths hang as shown: Which of the pipes will give the lowest pitch when struck by a hammer?

- A. Pipe X
- B. Pipe Y
- C. All pipes will give the same note
- D. You cannot tell without trying

- A. pipes that produce low pitches are very long
- B. pipes that produce high pitches are short
- C. pipes of different lengths give different pitch
- D. The length of the pipes determine the pitch

6. Which of the following technologies serve as alternatives to scalpels and cauterization?
 - i. Lasers ii. Inoculation iii. Ultrasound iv. Radiation

A. i, and iii B. i, ii, iv C. ii, iii, iv D. ii, and iv
7. Which of the following is an example of a physical change?
 - A. burning metal
 - B. changing of iodine crystals into a violet gas
 - C. formation of two gases during electrolysis of water
 - D. formation of a black solid from heated iron and sulfur
8. Good weather usually prevails in a high-pressure area. This is because the descending air which characterizes a high-pressure area _____
 - A. Cools and increases its capacity to hold water vapor.
 - B. Warms and increases its capacity to hold water vapor.
 - C. Warms and reduces its capacity to hold water vapor.
 - D. Cools and reduces its capacity to hold water vapor.
9. Which phenomenon is associated with a change in direction of the equatorial currents?
 - A. tsunami
 - C. unusually high tide
 - B. eutrophication
 - D. El Niño
10. What type of solar radiation is effectively absorbed by the ozone layer of the earth's atmosphere?
 - A. infrared
 - C. gamma
 - B. ultraviolet
 - D. x-ray
11. Which of the following devices best applies the concept that magnetism exerts a force on electric current?
 - A. magnet
 - C. electric motor
 - B. transformer
 - D. electric generator
12. In which layer of the atmosphere do all the weather changes happen?
 - A. mesosphere
 - C. thermosphere
 - B. stratosphere
 - D. troposphere

13. Ultrasound is often used by medical workers to obtain features of internal body parts. Infrasound on the other hand is commonly used in _____.
- A. monitoring conditions in pregnant women
 - B. detecting harmful living tissues inside the body
 - C. seismographic surveying of structures below the earth's surface
 - D. providing instant moving pictures of tidal waves and earthquakes
14. How is the conservation of mechanical energy described in a falling object?
- A. A falling object loses kinetic energy and gains potential energy.
 - B. A falling object loses kinetic energy and loses potential energy.
 - C. A falling object gains kinetic energy and gains potential energy.
 - D. A falling object gains kinetic energy and loses potential energy.
15. When we say that chemical reactions in the cell waste energy, we mean that:
- A. energy is being destroyed.
 - B. pieces of chemicals are being broken.
 - C. chemical energy is being converted to heat energy which is lost.
 - D. cells use only the chemicals they need and get rid of all excess chemicals.
16. Which law of force and motion explains this occurrence, when a rocket is propelled upward by the powerful downward discharge of exhaust gases?
- A. Universal Gravitation
 - B. Action and Reaction
 - C. Applied Force
 - D. Inertia
17. Which of the following forms of energy is demonstrated by a tightly coiled spring?
- A. Steam energy
 - B. Kinetic energy
 - C. Potential energy - *elastic potential*
 - D. Chemical energy
18. Which of the following process takes place when ice cubes form vapor without passing through the liquid state?
- A. Transpiration
 - B. Condensation
 - C. Sublimation
 - D. Evaporation

19. Which of the following processes is better associated with the technology than with Science?
- A. Constructing concepts and laws
 - B. Discovering forms of matter
 - ☒ C. Designing a workable system
 - D. Observing natural phenomena
20. What nuclear process occurs in the explosion of an atomic bomb?
- ☒ A. Fission
 - B. Fusion
 - C. Disintegration
 - D. Integration
21. Which of the following is true of all planets in the solar system?
- A. They have the same surface temperature
 - B. They can support human life
 - C. They are exactly of the same size
 - D. They revolve around the sun
22. In which of the following mediums will sound travel slowest?
- ☒ A. Air
 - B. Brick
 - C. Oil
 - D. Water
23. Which of the following factors does sound in air depend on?
- A. Frequency of sound
 - ☒ C. Air temperature
 - B. Wavelength of sound
 - D. Period of the wave
24. Which of the following disposal system can food scraps and food peelings be converted to humus?
- A. Open dump
 - B. Sanitary landfill
 - C. Recycling
 - ☒ D. Composting
25. Today scientists report about the formation of holes in the ozone layer of the atmosphere. This dangerous trend is being blamed on one of the following wrong practices:
- ☒ A. the excessive use of aerosols
 - B. the use of soil fertilizers
 - C. the use of ozone itself on the surface of the earth
 - D. removal of protective cover like green plants

PART III - ENHANCING TEST TAKING SKILLS

Questions 1 -2 refer to the data below:

Four groups of children were used in a dentist's experiment on whether "fluoride aide" helps fight tooth decay. All children in group A had their teeth painted with "fluoride aide". Group B children had their teeth painted with ordinary clear varnish. Groups C and D were not painted at all. All children from the four groups had their teeth inspected at 6 monthly intervals after painting.

1. Which group of children serves as the control group?
A. Groups A and B C. Groups C and D
B. Groups A, B and C D. Groups B, C and D
2. Which of the following hypothesis will best indicate on which groups of children would show the least and most numbers of decaying teeth?
A. Group A less than B less than C and D
B. Group A less than B greater than C and D
C. Groups A and B less than Groups C and D
D. Groups A and B greater than Groups C and D
3. Which of the following environmental conditions has been blamed for the usual occurrence of "fish kills"?
A. Acid rain C. Atmospheric pollution
B. Eutrophication D. Silting of lakes
4. What is the escape mechanism by which the mud fish and the catfish change from a darker color to a lighter one depending on the color of the water called?
A. protective mimicry C. habitat protection
B. adaptive coloration D. aggressive coloration

5. The diagrams below show the sun, a boat and an observer's eye. Which of the following diagrams best represent how you might see the boat?

6. Which law of motion explains what happens every time we walk? - reaction force
- Inertia
 - Acceleration
 - ☒ Interaction.
 - Universal gravitation
7. Which property of light accounts for the phenomenon of color?
- amplitude
 - frequency
 - velocity
 - ☒ wavelength. color
8. Ana formulated a hypothesis that cotton will grow larger bolls (pods) if magnesium is added to the soil. She has two experimental fields of cotton, one with magnesium and one without. Which data should be collected to support this hypothesis?
- color of the cotton bolls in both fields
 - height of the cotton plants in both fields
 - ☒ diameter of the cotton bolls in both fields
 - length of the growing season in both fields

9. Shown below is a simple food web in a grassy community. The arrow symbol $\longrightarrow$ means eaten by. What would happen if all snakes are killed?
- Grass population would increase.
 - Grasshopper population would increase.
 - Bird and frog populations would increase.
 - Grasshopper and bird populations would increase.

10. In an experiment, a vacuum is created when all air is removed from a tube. A coin and bits of confetti are released in the vacuum at the same time. They fall at the same rate and reach the bottom at the same time. Which of the following is proven in this experiment?
- In a vacuum, the rate of fall is the same for all objects regardless of weight
 - Outside a vacuum, air resistance is what makes different objects fall at different rates
 - Gravity has no effect at all on objects that fall in a vacuum.
- I and II
 - I and III
 - II and III
 - I, II and III
11. Large quantities of calcium carbonate are dumped into polluted lakes to fight the effect of acid rain. It is inferred from this action that calcium carbonate is a/an _____.
- acid
 - base
 - neutral substance
 - powdered substance
12. Today, a computerized machine could send regular electrical impulses to the heart muscles in order for it to beat rhythmically. What is this machine called?
- homeostatic machine
 - laser
 - pacemaker
 - pressure maker

13. Which of the following statements is definitely true about the nature science?
 - A. Science can always uncover the truth in the realm of nature.
 - B. Science will help make the world a better place to live in.
 - C. Theories in science can be disproved by testing; a well established theory can be demolished with a single observation.
 - D. Scientific work requires a dedication that excludes the lives of people in other fields of work.
14. A grasshopper was put inside a covered bottle. After sometime, the grasshopper died. The statement: "The grasshopper died because the oxygen in the bottle was exhausted is _____
 - A. a fact
 - B. a hypothesis
 - C. an inference
 - D. a conclusion
15. Chemical Heat Energy Mechanical Energy (with wasted heat)
The sequence of energy changes shown explains which event?
 - A. a flashlight is on
 - B. a candle burns
 - C. gasoline burns to power a car
 - D. electric current runs a refrigerator
16. Which of the following is the technological concept rather than science concept?
 - A. Tungsten has a high melting point.
 - B. Metals conduct electricity, some better than the others.
 - C. When electricity passes through metals, heat is generated.
 - D. Light bulbs are perfected through methods of manufacturing.
17. A paint technologist used different kinds of white paint onto concrete wall. He came back every two months and observed the painted areas with a hand lens. Which of the following questions could be a possible problem for this experiment?
 - A. Which paint color is best for concrete walls?
 - B. Do walls need to be painted with different colors?
 - C. Which kind of white paint faded fastest under the sun?
 - D. Which part of the concrete wall needs to be painted?

18. Consider the problem: "Which toothpaste brand is more effective in killing mouth bacteria?" Which of the following variables is manipulable?
- A. brands of toothpaste
 - B. brands of toothbrush
 - C. number of time to brush teeth
 - D. number of persons to brush teeth
19. The wise use of resources for the permanent good of all is referred to as:
- A. restoration
 - B. preservation
 - C. conservation
 - D. reforestation
20. The following statements given the underlying principles of technology except:
- A. All technological system could fail.
 - B. All technologies involve control
 - C. Technologies always have side effects.
 - D. Technology often provides tools for science without constraint.
21. The statements below refer to the interaction of forces in nature. Which of these are true?
- 1. A change in motion is always due to the effects of unbalanced forces.
 - 2. Every object in the universe exerts a gravitational force on every other object.
 - 3. Frictional forces can never be used to increase velocity
 - 4. Magnetic and electrical forces are unrelated to one another.
- A. 1, 2 & 3 C. 2, 3 & 4
B. 1, 3 & 4 D. 1, 2 & 4
22. Which of the following is the technological concept rather than science concept?
- A. Tungsten has a high melting point.
 - B. Metals conduct electricity, some better than the others.
 - C. When electricity passes through metals, heat is generated.
 - D. Light bulbs are perfected through methods of manufacturing.

23. Of the thousands of meteor that enter the Earth's atmosphere each year, only a few is actually observed to hit the earth. Why?
- A. Meteors fall only at night when most people are asleep.
 - B. The earth's atmosphere cause many small meteors to burn up.
 - C. The brightness of the sun's light make it impossible
 - D. People just don't recognize them because they look similar to the earth's rocks.
24. If the following radioactive emissions are arranged in the order of increasing penetrating power, with the least penetrating radiation first, the order is:
- A. alpha, beta, gamma
 - B. beta, gamma, alpha
 - C. gamma, alpha, beta
 - D. beta, alpha, gamma
25. The processes below are steps in scientific research that may lead to theory development or theory replacement. How will you arrange logically to bring about conceptual development or modification?
- 1. hypotheses
 - 2. evaluate results
 - 3. observe new phenomenon
 - 4. measure dependent variables
- A. 1,2,3,4 B. 3,1,4,2 C. 2,4,1,3 D. 4,3,2,1

Politics and Governance with the Philippine Constitution

Prepared by:

Dr. Benjamin M. Domingil, Jr.

Competencies:

1. Familiarize with the various forms of government from the barangay to the present system.
2. Explain the nature and provision of the present constitution to advantages and disadvantages over the other in the past in its function as fundamental law of the state.

PART I-A - CONTENT UPDATE**I. WHAT IS POLITICAL SCIENCE?**

Political Science is the study of the phenomena of the state and government; it is derived from two Greek words "polis" or "city" which today would mean a sovereign state and "scire" meaning "science"

Rodee (1980) defined political science "As a branch of social science, it deals with the theory, organization, government, and practice of the state."

Political Science also deals with those relations among men and groups, which are subject to control by state, with relations of state to other states.

Montesquieu (1689-1775) expounded the concept. He posited that all the functions of the government could be encompassed within the categories of legislation, execution, and the adjudication of law. He assumed that liberty could be best assured by the distribution of these functions, referring to legislation, execution adjudication, by their distribution among separate branches of the government namely the legislative, the executive department, and the judiciary of the courts of law.

Aristotle (324-332 B.C.) a Greek philosopher was credited with the observation that, "man is by nature a political animal." By this statement, Aristotle meant that the basic underlying substance of human existence is politics, that is, that man is predisposed to be involved in politics. He added that the only way to optimize the potentials and capabilities of an individual and to achieve the highest form of social existence was through interaction with others in a state (cited in Rodee, et al, 1983).

II. WHAT IS POLITICS?

Black's Law Dictionary (1990) defined politics as the science of government and the art on practice of administering public affairs.

Accordingly, politics is the process of making government policies. By nature, politics everywhere involves conflict—that is, some from struggle among people trying to achieve different goals and satisfy opposing interest. A conflict arises from the very nature of human life itself.

In its broadest sense, politics includes the decision enforcing processes in any group that makes and enforces rules on its members. Politics is unavoidable. Man is involved or will be involved in some kind of politics (Dahl, 1991). Every Filipino comes upon face to face with politics in almost every aspect of his life. He encounters politics in the governance of his country and the political unit he resides in—the barangay or municipality. A citizen encounters politics in school, in the church, in the business establishments he works, the employees' union in which he is a member, or in socio-civic organization he joins, and in a host of other organizations and a myriad of situations. He may choose to ignore politics, but definitely can never escape from its influence.

POLITICAL SCIENCE DEFINED

Political science is the systematic study of the State and Government. The word political is derived from the Greek word 'polis' meaning a city or what today is equivalent to a sovereign state; the word 'science' comes from the Latin word 'scire' meaning to know.

CORRELATES OF POLITICAL SCIENCE

Political Science shares common interest with other social disciplines namely:

1. **History** - It is a written record of the past including the present. It describes social events in time and place. It records the events chronologically. On the other hand, the function of political science is to analyze political institutions, to describe their workings and organization and to some extent to forecast their development; while that of history is to trace the origin and development of the state and its political institution.
2. **Economics** - is the scientific study of man's activity in providing for such human needs as hunger, shelter, clothing and education. It deals with man's attempt to earn a living, with man's activities in connection with the consumption, production, distribution and exchange processes of wealth including taxation. It is the science of wealth getting and wealth using activities of man.
3. **Sociology** - The study of sociology provides a way of understanding human behavior. It is the social science that deals with the study of man in his social interaction with other human beings in groups. It is also to obtain factual information about our society and different aspects of social life.
4. **Law** - It is defined as an ordinance of reason promulgated by a competent authority for the common good. It includes any edict, decree, prescript, order, ordinance, statute, resolution, rule, judicial, decision, usage, etc. which is made or recognized and enforced by the controlling authority. Political Science, on the other hand, is a study of the state with all institutions, of which law forms closely linked together.
5. **Psychology** - ~~This science deals mainly with the individual without any particular reference to his social life.~~ It studies its soul and faculties - ~~be~~ will and understanding and the individual conduct which is the outcome of ~~our~~ mental activity and human habits.
6. **Philosophy and Ethics** - while the relation of political science to philosophy is somewhat remote, the two studies touch up on each other in some parts, especially in the realm of political theory and political philosophy.
7. **Geography and Statistics** - the study of geography to a certain extent is related to that of political science. The distinctive functions of geography is to describe and explain the relations between man and his natural environment;

to examine and interpret the adjustments which groups of people have made to the combinations of natural environment conditions which exist in the regions where they live.

CONCEPT OF A STATE

A state is a community of persons more or less numerous, permanently occupying a definite portion of the territory, independent from outside or external control and possessing a government wherein a great body of inhabitants render habitual obedience. (CIR vs. Rueda, 42 SCRA 23).

ORIGIN OF THE STATE

1. **Divine Theory** – it holds that the state of divine creation and the ruler is obtained by GOD to govern the people. Reference has been made by advocates of this theory to the laws which Moses received at Mt. Sinai.
2. **Necessity or Force Theory** – it maintains that states must have been created through force by some great warriors who imposed their will upon the weak.
3. **Paternalistic Theory** – it attributes the origin of states to the enlargement of the family, which remained under the authority of the father or the mother. By natural stages, the family grew into a clan, then developed into a tribe which broadened into a nation that becomes a state.
4. **Social Contract Theory** – it asserts that the early states must have been formed by deliberate and voluntary compact among the people to form a society and organize government for their common good. This theory justifies the right of the people to revolt against a bad ruler.

FUNCTIONS OF THE STATE

1. **Constituent** – those which constitute the bond of society and are, therefore compulsory in nature.

2. **Ministrant** --those undertaken only by way of society and are, therefore, options of such as public works, publication, public charity, health and safety regulations and regulation of trade and commerce.

CONCEPT OF NATION

A nation is a group of persons occupying a portion of the territory sharing the same language, culture, tradition, and history.

STATE DISTINGUISHED FROM NATION

A state is more of a judicial or legal concept, while a nation is more of a racial or ethnic concept. A nation may or may not be independent of external control. A state may consist of one or more nations while a nation may consist of one or more states.

INHERENT POWERS OF THE STATE

1. **Police Power** -- it is the power of the state to regulate individual's rights and property for the general welfare.
2. **Eminent Domain or Power of Expropriation** -- it is the power of the state to take possession of private property for public purpose and after payment of just compensation.
3. **Power of Taxation** -- the power of the state to enforce proportionate contributions from the people for support of all government programs and services.

ELEMENTS OF THE STATE

The state has four essential elements, namely:

1. People
2. Territory
3. Government
4. Sovereignty

MODES OF ACQUIRING TERRITORY

1. **Discovery** - a discovery of a particular portion of the earth's surface coupled with occupation. A discovery without occupation will not make the discover the owner thereof.
2. **Prescription** - the continued and interrupted occupation of a territory for a long period of time by one state.
3. **Accretion** - it is the process where the land area of a state caused by the operation of either the forces of nature, or artificially through human labor, is increased.
4. **Cession** - is a bilateral agreement whereby one state transfers to another state a definite portion of its territory.
5. **Conquest** - the acquisition of territory by means of force.

FORMS OF GOVERNMENT

1. **Democracy** - comes from the Latin terms 'demos' and 'kratos'. It is a form of government wherein the power or sovereignty is exercised and or resides in the people. It may be classified as pure or representative democracy.
2. **Aristocracy** - a form of government wherein the power is exercised by a limited few or the so-called elite. It is always regarded as the privileged class.
3. **Monarchy** - a form of government wherein the power or sovereignty is exercised by one person only, usually a king or a queen. It could either be absolute or limited monarchy.
4. **Parliamentary** - a form of government wherein the President serves as nominal or titular head. It is the Prime Minister that runs the affairs of the State. He is directly accountable to the people. Under this system the ministry is legally responsible to legislature and consequently to the electorate.
5. **Presidential** - a form of government wherein the President is the chief executive of the state and independent of the legislature with respect to his tenure, acts, and policies.

6. **Federal** – a form of government where the power of the state is divided into two namely: national for national affairs and local for local affairs. Each organ is independent in its own sphere.
7. **Military** – a form of government established and controlled by military authorities over a beleaguered state.
8. **Revolutionary** – a form of government wherein the State is obtained by means of force.
9. **De Jure** – a form of government that is founded on existing legal or constitutional basis
10. **De Facto** – a form of government that is not founded on constitutional law. It exists in fact but not in law.
11. **Civil** – a form of government that is run by elected civilian officials

THE HISTORICAL DEVELOPMENT OF PHILIPPINE GOVERNMENT

The Philippines as nation has passed through several stages and has been under different colonial rule in the course of its history. Discussed hereunder is the evolution of the Philippines together with the different forms of government that had been implemented by the different colonizers.

THE PRE-SPANISH GOVERNMENT

Before the Spaniards came to Philippines, there were settlements composed of villages called Barangay consisting of 100 families. Every barangay was virtually a State for it possessed the four basic elements of the state. Each barangay was ruled by a Datu. He is the chief executives, law – giver, chief judge and military head. He was assisted by the Council of Elders called Maginoos which serve as advisers. In form, the government in a barangay is monarchical in nature with the datu as the monarch.

Social classes in the barangay are divided into four: the nobility or the maharika; the freeman or the timawa; the serfs or the aliping namamahay; and the slaves or the aliping sa guiguilid.

The early laws were both written and unwritten. The written were promulgated by the datus. The two known written laws are the Maragtas Code written by Datu Sumankwel in 1250 AD and the Code of Kalantiaw written by Datu Kalantiaw in 1433 AD both in Panay. The unwritten laws can be seen in the Filipino culture.

THE SPANISH GOVERNMENT

Spain's title Philippines was based on the discovery of the Philippines by Ferdinand Magellan in March 1521 and consummated by the conquest of Miguel Lopez de Legaspi forty – five years later. Spain kept the Philippines for almost four centuries until 1898 when the Philippines was ceded by Spain to the United States by virtue of the Treaty of Paris.

The Philippines was governed by the King of Spain through Mexico from 1565 to 1821. When Mexico gained independence, the Philippines were ruled directly by Spain through the Council of Indies from 1821 to 1837. In 1837, legislation for the Philippines was temporarily performed by the Council of Ministers. From 1863, the Ministry of Ultramar exercised general powers of supervision over Philippines affairs.

The Spanish government in the Philippines was centralized in structure and national in scope. The barangays were consolidated into pueblos (towns) and headed by a Gobernador who represents the Governor – general in the province. Cities governed under special Charters were created. Each of the cities had an Ayuntamiento or Cabildo (city council). Cebu was the first city to be established in 1565 in the Philippines. The second was Manila in 1571.

The powers of the government was exercised by the Government – General and ably assisted by the Board of Authorities and the Council of Administration. The first Spanish governor – general was Miguel Lopez de Legaspi and the last was Gen. Diego delos Rios.

To strengthen the judicial system, Spain established the Royal Audiencia in 1583 in Cebu and in Vigan, which exercised appellate jurisdiction over criminal cases coming from the surrounding areas. In 1886, the Courts of First Instance were established in each province and the Justice of the Peace Courts were established in the town level. Special courts were also organized.

THE REVOLUTIONARY GOVERNMENT

During the Spanish Period, several forms of de facto government were established.

Among them were:

The Katipunan – the Katipunan was a secret society that participated the Philippine revolution against the Spanish in August 26, 1896. The Katipunan was organized by Andres Bonifacio. The Central government of the Katipunan was vested in the Supreme Council (Kataas – taasang Sanggunian). A provincial Council was established in each province. A popular council was establishing in the town level. The judicial power was exercised by a Judicial Council or the Sangguniang Hukuman. When Bonifacio died, another government was established by Gen. Emilio F. Aguinaldo who acted as the first president of the Philippines of the Philippines republic by virtue of the election in the Tejeros Convention on March 22, 1897.

The Biak – na – bato Republic – on November 1, 1897, with a republic was established by Gen Emilio Aguinaldo in Biak – na – bato (now San Miguel de Mayumo, Bulacan). It had a Constitution which was to take for years only. The republic declared the separation of the Philippines from Spain. The republic lasted up to December 15, 1897, with the conclusion of the pact of Biak – na – Bato.

The Dictatorial Government – the following outbreak of the Spanish – American War on April 25, 1898, Gen. Aguinaldo established the Dictatorial Government on May 24, 1898. The most important achievements of the government were the

proclamation of the Philippines Independence at Kawit, Cavite on June 12, 1898 and the reorganization of the local governments.

The revolutionary Government – On June 23, 1898, Gen. Aguinaldo established the Revolutionary Government replacing the dictatorial government. The aim of the new government was to struggle for the independence of the Philippines, until all nations including Spain will expressly recognize it and to prepare the country for the establishment of a real republic.

The First Philippine Republic – On September 15, 1898, a revolutionary congress of Filipino representatives met in Malolos, Bulacan and Framed the so called Malolos Constitution. The Constitution established a free and independent Philippine Republic which was inaugurated on January 23, 1899 with Gen. Aguinaldo as President. The Republic was not recognized by the family of nations. It was nevertheless an organized government because it actually existed from January 23, 1901. In February, 1899 the United States annexed the Philippines as a result of the Spanish-American War and in April, 1901, Gen. Aguinaldo was captured.

THE AMERICAN GOVERNMENT

There were three-kinds of government implemented by the Americans during their period:

The Military Government- The American military rule in the Philippines started on April 14, 1898, the day after the capture of Manila. The existence of war gave the President of the United States the power to establish a Military government. His authority was delegated to the military governor who exercised, as long as the war lasted, all powers of government executive, legislative and judicial. The three American Military Governors were: Gen. Wesley Meritt, Gen. Elwell Otis and the last was Gen. Arthur McArthur.

The Civil Government- the Spooner Amendment ended the military regime in the Philippines. On July 4, 1901 a civil government was inaugurated headed by a Civil Governor. In February 6, 1905, the title was changed to Governor-General, who exercised legislative powers. He remained as President of the Philippine Commission, the sole lawmaking body of the government from 1901 to 1916, the Philippine Commission acted as the upper house of the legislative branch with the Philippine Assembly serving as a lower house. With the passage of the Jones Law in 1916, these two bodies gave way to the Philippine legislature. The Philippines was represented in the United States by two President Commissioners who were elected by the Philippine Legislature. These Commissioners had seats in the United States House of Representatives, receiving the same emoluments and other privileges as the American members of the body, but without the right to vote.

The first Civil Governor was Judge William H. Taft (1901-1903). He was succeeded by Luke F. Wright (1904-1906) who was the first American to enjoy the title of Governor-General of the Philippines. The last Governor-General was Frank Murphy (1933 - 1935) who was also the first High Commissioner of the Philippines upon the inauguration of the Commonwealth government of the Philippines.

The Commonwealth Government - the next stage in the political development of the Filipinos was the establishment of the Commonwealth government of the Philippines pursuant to an act of the United States Congress on March 24, 1934, commonly known as the Tydings - McDuffie law. The law provided for a transition period of ten years during the Philippine Commonwealth would operate until July 4, 1946, wherein the independence of the Philippines would be proclaimed and established. The new government of the Philippines was inaugurated on November 15, 1935, following the first national election under 1935 constitution held on September 12, 1935 with Manuel L. Quezon and Sergio Osmeña as President and Vice - President respectively. The commonwealth government of the Philippines was republican in form under the presidential type. The legislative power was vested in a unicameral Congress composed of the Senate and the House of the

Representatives. The Judicial power was vested in the Supreme Court and inferior courts provided by law. The government of the Commonwealth was autonomous in nature. The Filipinos had almost complete control over the domestic affairs, the United States retaining control only over matters involving foreign affairs.

During World War II, the Commonwealth government functioned in exile in Washington from May 13, 1942 to October 3, 1944. It was reestablished in Manila on February 27, 1945 when gen. Douglas MacArthur turned over to President Osmeña the full powers and responsibilities of the Commonwealth government under the 1935 Constitution.

THE JAPANESE GOVERNMENT

The Japanese Military Administrator was established in Manila on January 3, 1942, one day after its occupation. The Japanese High Command immediately terminated the sovereignty of the United States over the Philippines.

A civil government known as the Philippine Executive Commission was established with Jorge B. Vargas as its chairman. The Commission exercised both the executive and the legislative powers. However, laws enacted were subjected to the approval of the Commander – in – Chief of the Japanese forces. The Judiciary continued in the same manner as it was independence which it had traditionally enjoyed.

On October 14, 1943, the so – called Japanese sponsored Republic of the Philippines was inaugurated with Jose P. Laurel as President. Like the Commission, the Ultimate source of its authority was the Japanese military authority and government. On August 17, 1945, President Laurel dissolved the republic.

THE THIRD PHILIPPINE REPUBLIC

When the Philippines was finally liberated from the hands of the Japanese, the Third Philippine Republic was inaugurated on July 4, 1946 with Manuel A. Roxas as president and Elpidio Quirino as Vice President. Roxas died on April 1, 1948, paving the way for the Quirino presidency which lasted until 1953. Quirino was followed by Ramon Magsaysay, who was not able to finish his term when he died in a plane crash on March 17, 1957. Carlos Garcia succeeded Magsaysay. Garcia was followed by Diosdado Macapagal who served the country for only one term. Macapagal was defeated by Ferdinand Marcos in the presidential election of 1965.

The Marcos Years. Marcos took his oath of office on December 30, 1965. He was reelected in 1969, due to his outstanding performance as chief executive. However, before the end of his second term (1969-1973), Marcos made serious efforts to amend the 1935 Constitution which was in effect at that time. A Constitutional Convention was created which drafted the 1973 Constitution. But even before the framing of this charter was finished, Marcos issued Proclamation No. 1081 which placed the entire archipelago under Martial Law. By virtue of this declaration, the Congress was abolished, the opposition leaders and those who were critical of the Marcos administration were either imprisoned or they disappeared. Marcos assumed executive, legislative and even-judicial powers of the government. He virtually controlled all the aspects of Philippine politics through his Presidential Decrees and through the Batasang Pambansa.

The Aquino Presidency. On February 7, 1986, Marcos called for a snap presidential election, which marked by rampant cheating presumably on both the administration candidates led by Marcos for President and Arturo Tolentino for Vice President and the opposition candidates led by Corazon Aquino, (the wife of slain opposition leader Benigno Aquino Jr.) for President and Salvador Laurel for Vice President.

This event led to the so-called EDSA People Power Revolution from February 22-25, 1986, that paved the way for the downfall of the 20 years of Marcos Presidency.

The Aquino Administration. Corazon Aquino was inducted as the first lady President of the Philippines on February 25, 1986 in Club Filipino, San Juan, Metro Manila. Aquino issued Proclamation No. 3 on March 25, 1986 promulgating the Freedom Constitution. Thereafter, on June 2, 1986, she appointed a Constitutional Commission composed of fifty members which drafted the 1987 Constitution.

On February 2, 1987, the Filipino people voted to ratify the charter, thereby legalizing the restoration of democratic government and institutions in the country. This was followed by the election of the members of the bicameral legislative body in May 1987 and the election of local executives.

On May 11, 1992 the first Marcos presidential election was held and Fidel Ramos, the former Chief of Staff of the Armed Forces and the anointed successor of Corazon Aquino was elected president.

The Fidel Ramos Presidency. Ramos was the former military officer to become the president of the Philippines. He used his knowledge of the Philippine Military to reestablish a tradition of civilian control over the armed forces. He also built on the process of restoring democracy to the Philippines by addressing the nation's most difficult economic reform program based on privatization and deregulation, opening banking to foreign investment and transferring government assets to private ownership. He moved quickly to resolve the country's serious electric-power shortage, which had been a detriment to economic growth, by investing in the domestic power-generating infrastructure. His government improved tax-collection policies and practices and this combined with the growing economy to generate higher tax revenues for the government. In 1994-1995 the country had its first consecutive government budget surpluses. Despite of economic

reform program, however, unemployment remained a serious problem because population growth continued to outpace the creation of new jobs.

In the early 1990's, meanwhile, secessionist Muslim groups renewed their guerilla war in Mindanao. Negotiations between Ramos government and the MNLF formally began in 1993 and resulted in a lasting peace agreement, signed in September 1996. Other rebel groups, including the Moro Islamic Liberation Front (MILF) and Abu Sayyaf, continued guerilla activities.

The Joseph E. Estrada Presidency. In 1998 elections, Ramos and the ruling coalition lakas-NUCD, gave their support to Jose de Venecia. Joseph Estrada, vice president under Ramos and a populist politician, entered the race as a candidate of his own party, the Partido ng Masang Pilipino (Party of the Filipino Masses) which entered a coalition with two leading opposition parties. Estrada campaigned on promises to work toward improving the lives of poor Filipinos. He won the election with the widest margin ever in Philippine politics.

A major focus of the Estrada administration was "food security" which involved agricultural modernization and major infrastructure development projects. Despite its rhetoric, however, the government did not make much progress in implementing its "pro-poor" platform. The opposition became more outspoken in its criticism of Estrada, and his administration became embroiled in allegations of cronyism and corruption. The corruption allegations led to Estrada's impeachment by the House of Representatives November 2000. His trial in the Senate was suspended in mid-January 2001, however, after the prosecution team resigned to protest the suppression of evidence. Thousands of Filipinos then took to the streets of Manila to demand Estrada's resignation, however, Estrada retained strong support among the urban poor.

The Gloria M. Arroyo Presidency: Vice President Macapagal- Arroyo formed a strong opposition alliance, the United Opposition, within the government. The massive demonstrations, resignation of the most of the president's cabinet and loss of support among top military officials led to Estrada's ouster on January 20, after the Supreme Court declared the presidency vacant. Macapagal-Arroyo was immediately sworn as president.

Early in her presidency, Macapagal-Arroyo declared a suspension of offensive military operations against the MILF and pursued a policy of reconciliation with the group. In August 2001, the two sides signed a cease-fire agreement and peace negotiations continued with Malaysia acting as intermediary. The government meanwhile continued its military crackdown on the secessionist Abu Sayyaf, which was linked to terrorist activities such as bombings and Kidnapping. In 2001 legislative elections, Macapagal-Arroyo won a popular mandate to govern the country when candidates she had endorsed won control of the Senate. The previous Republic of the Philippines can be summarized as follows:

1. The First Republic-established on January 23, 1899 under the Malolos Constitution
2. The Second Republic- established on October 14, 1943 under the Japanese-Sponsored Constitution
3. The Third Republic- established on July 4, 1946 under the Constitution
4. The Fourth Republic- proclaimed on July 30, 1981, though the inaugural speech of the late Constitution, amended on April 7, 1981, through a plebiscite
5. The Fifth Republic- February 2, 1987 under the 1987 Constitution

BRIEF HISTORY OF PHILIPPINE CONSTITUTION

1. Malolos Constitution

On November 29, 1898, the Malolos Constitution was approved by the members of the Congress and then forwarded to President Aguinaldo for his approval. On January 3, 1899, President Aguinaldo's message was to the congress.

On January 21, 1899 President Aguinaldo finally proclaimed the Malolos Constitution as the fundamental law of the land.

2. 1935 Constitution

The drafting of the Constitution lasted six months from July 30, 1934 to February 8, 1935. Some delegates, however, had signed the document beginning February 9. Altogether, there were 200 signers.

The Tydings-Mcduffie Law required that the Constitution, after its approval by the President of the United States, be submitted to the Filipino people for their ratification or rejection. May 14, 1935, the Plebiscite on the Constitution was held

The electorate overwhelmingly ratified the Constitution. The ballots cast in favor of it totaled 1,213,046 and those against only 44,963.

3. 1973 Constitution

The 1973 Constitution shortly after the start of martial law, the delegates to the Constitutional Convention reassemble and resume work. They worked more quickly and finished the new constitution on November 29, 1972, signing it on the following day.

On December 1, 1972 copies of the signed Constitution were given to President Marcos, who in turn submitted it to the people for ratification. In the plebiscite of January 10-15, 1973, the hastily arranged citizen assemblies, composed of voters were reported to have ratified the constitution by a 95% positive majority, in an open and group voting by raising their hands. At noon of January 17, 1973, President Marcos signed the Constitution and put into immediate effect.

4. The 1987 Constitution

April 23, 1986 President Corazon C. Aquino issued Proclamation No. 9, the law governing the Constitutional Commission of 1986. The law provided for

the organization of a Constitutional Commission and detailed of its operation and established procedure of the submission of the proposed constitution and electorate in plebiscite.

October 12, 1986. The Constitutional Commission approved the proposed new constitution after 133 days of work with 44 voting in favor, while two voted against it.

On October 15, 1986. The Constitutional Commission held its final session to sign 109-page draft Constitution. On the same day, the draft in its original form in English and Filipino was presented to the President

February 2, 1987. The electorate in a plebiscite held for the purpose ratified the draft of constitution.

STATE DISTINGUISHED FROM GOVERNMENT

Many political science writers widely regard these two terms as identical. It is the considered view that the acts of the government (within the prescribed limits of the delegation of powers) are the acts of the state. Legally, however, under the contract of agency, the government is the agent through which the will of the state is carried out. The state cannot exist without the government but it is possible to have a government without a state.

CONCEPT OF CONSTITUTION

Meaning of Constitution

According to Judge Cooley, a constitution is a body of rules and maxims in accordance with which the power of sovereignty is habitually exercised.

PURPOSE OR FUNCTION OF CONSTITUTION

1. To prescribe the permanent framework of the system of government assigned to the different departments their respective powers and duties, and established certain fixed first principles on which the government is founded and
2. To promote public welfare, this involves the safety, prosperity, health, and happiness of the people.

KINDS OF CONSTITUTION

1. Written or rigid – is one, the provisions of which have been reduced to writing and embodied in one or more instruments at a particular time. Example: Philippine and U.S Constitutions
2. Unwritten or flexible – is one which has not been committed to writing at any specific time but is the collective product and accumulation of customary rules, judicial decisions, dicta of statements and legislative enactments of fundamental character written but scattered in various records without having any compact form in writing.

REQUISITES OF A GOOD WRITTEN CONSTITUTION

1. Broad – because it must outline an organization of the government for the whole State.
2. Brief – because its nature requires that only its great outlines should be marked. Its important objects designated and the ingredients which compose those objects be reduced.

TWO STEPS AMENDING OR REVISING A CONSTITUTION

1. Proposal – may be made by
 - a. Congress
 - b. Constitutional Convention
 - c. People's initiative
2. Ratification – This means the submission of the draft constitution to the electorate. A proposal made by the people's initiative requires at least 12% of the entire electorate and 3% must come from every legislative district.

PREAMBLE

Meaning

- The term preamble comes from the Latin word 'preambulare' which means 'to walk before'. Strictly speaking, preamble is not an integral part of the Constitution. Its true office is to expound on the scope and nature, the extent and application of the powers actually conferred by the constitution. (Watson, Const.Vol I p.92)

The Philippine Territorial Jurisdiction comprises:

1. Terrestrial – jurisdiction over bodies of land
2. Fluvial - jurisdiction over maritime and interior waters
3. Aerial – jurisdiction over atmosphere

The United Nations International Convention in Geneva defined the five kinds of water in relation to the territorial jurisdiction of an archipelago state:

1. Internal Water – the water around connecting and those that are in between the islands regardless of their breadth and dimensions.
2. Territorial Sea – is a belt of water outside of the archipelagic baselines and adjacent to the archipelagic waters. The archipelagic state has a right to establish the breadth of its territorial sea, not exceeding 12 nautical miles measured from the baselines. The archipelagic state has sovereignty over the territorial sea, the air space above it, and the bed and subsoil of such sea.

3. **Contiguous Zone** – beyond the territorial sea, may extend to not more than 24 nautical miles from the archipelagic baselines. The state may exercise, in the contiguous zone, the control necessary to prevent and punish infringements of its customs, fiscal, immigration or sanitary laws and regulations within the territory or territorial sea.
4. **Exclusive Economic Zone** – which beyond and adjacent to the territorial sea, may not extend more than 200 nautical miles from the archipelagic baselines. The archipelagic State has sovereign rights in the EEZ to explore, manage and exploit all the natural resources living and non-living in the waters, the sea bed and subsoil.
5. **Continental Shelf** – is the seabed and subsoil of the submarine areas that extend beyond its territorial sea throughout the natural prolongation of its territory to the outer.
 - Seabed – is the land holding the sea beyond the seashore.
 - Subsoil – is the soil below the surface soil including mineral and natural resources.
 - Insular shelves – are relatively shallow beds of sea bottom bordering the land Mass, the outer edges of which sink considerably until the great ocean Depths are reached.

THE NEW LAW ON THE SEA

The Convention on the Law of the Sea (under the sponsorship of the United Nations) signed in Jamaica on December 10, 1982 fixes a 12 mile territorial sea limit and establishes an economic zone from the baselines. It adopts and recognizes the archipelagic principle but set forth limitations thereon consisting of respect for right of the ships of other states to pass though the territorial sea as well as archipelagic waters and respect for rights of innocent passage and passage through archipelagic sea lanes subject to the promulgation by local authorities by pertinent rules and regulations.

ARTICLE II

Declaration of Principles and Policies

Section 1. The Philippines is a democratic and republican state. Sovereignty resides in the people and all government authority emanates from them.

A republican government is a democratic government by representatives chosen by the people at large. The essence therefore, of a republican state is indirect rule. The people have established the government to govern them. Its officers from the highest to the lowest servants of the people and not their masters. They can only exercise powers delegated to them by the people who remain as the ultimate source of political power and authority.

Section 2. The Philippines renounces war as the instrument of national policy, adopts the generally accepted principles of international law of the land and adheres to the policy of peace, equality, justice, freedom, cooperation, and amity with all nations.

Renunciation of war as an instrument of national policy is the first aspect of the declaration. Its accordance with the principle in the United Nations Charter binding all members to 'refrain in the international relations or use of force against territorial integrity or political independence of any state'. The declaration refers only to the declaration of the Philippines of aggressive war, not in defense of her national honor and integrity.

Section 3. Civil authority is, at all times, supreme over the military. The Armed Force of the Philippines is the protector of the people and the State. Its goal is to secure the sovereignty of the State and in the integrity of the national territory.

The idea of the supremacy of the civilian authority, the highest of such authority being the president, over the military has always been recognized in our jurisdiction by implication from express provision of the 1935 Constitution and by practice.

Section 6. The separation of the State shall be inviolable.

The principle of the separation of the Church and the State being inviolable is implied from the constitutional prohibitions that 'no law shall be made respecting an establishment of religion' and that 'no public money or property shall be appropriated, applied, paid or employed, directly or indirectly, for use, benefit, or support of any sect, church domination, sectarian institution or system of religion.'

ARTICLE II – BILL OF RIGHTS

Bill of Rights – defined as a declaration and enumeration of a person's rights and privileges, which the Constitution designed to protect against violations by the government or by an individual or group of individuals.

CLASSES OF RIGHTS

1. **Natural Right** – possessed by every citizen conferred upon him by God as a human being.
Example: right to life, right to live
2. **Constitutional Right** - rights conferred and protected by the Constitution part of the fundamental law cannot be modified or taken away by the law making body.
3. **Statutory Right** – it is provided by laws promulgated by the law making body. It can be abolished by the same body.

CLASSES OF CONSTITUTIONAL RIGHTS

1. **Civil Right** – right which the law enforces to private individual for the purposes of security, happiness and enjoyment
2. **Political Right** – right of the citizen to participate directly or indirectly in the establishment of administration of the government

3. Social and Economic Right – it is intended to insure the well being and economic security of the individual.

Right of the Accused – intended to protect persons accused of any crime. They of law nor shall any person be denied the equal protection of the law.

DUE PROCESS

Concept of due process of law which hears before it condemns and proceeds upon inquiry before rendering judgment. Under the constitution, a person may be deprived by the state of his life, liberty or property provided due process of law is observed.

KINDS OF DUE PROCESS OF LAW

1. Procedural due process of law
2. Substantive due processes of law are the (civil) rights intended for the protection of a person accused of any crime. Example: right against self-incrimination, right to have a legal counsel.
3. Section 1. No person shall be deprived of life, liberty or property without due process

Section 2. The right of the people to be secure in their persons, houses, papers and effects against unreasonable searches and seizures of whatever nature and for any purposes shall be issued except upon probable cause to be determined personally by the judge after examination under oath or affirmation of the complaint and the witness he may produced, and particularly describing the place to be searched and the persons or things to be seized.

Search Warrant – is an order in writing in the name of the people of the Philippines, signed by a judge, directed to the police officer, commanding him to search for personal property and to bring it before the court.

Warrant of Arrest – is an order in writing, issued in the name of the people of the Philippines, signed by a judge, directed to the police officer, commanding him to arrest a person, that he may be bound to answer for the offense committed.

REQUISITES FOR A VALID SEARCH WARRANT OF ARREST

1. Probable cause
2. To be determined personally by a judge
3. After examination under oath or affirmation of the complaint and his witness
4. Particularly describing the place to be searched and the persons or things to be seized

RULES IN THE COURT OF ARREST

1. When in the presence of an arresting officer, the person to be arrested has committed, is actually committing or is about to commit an offense.
2. When an offense has in fact just been committed and he has personal knowledge of facts including that the person to be arrested has committed it and
3. When the person to be arrested is a prisoner who has escaped from a penal establishment or place where he is serving final judgment or temporarily confined while his case is pending or has escaped while being transferred from one confinement to another.

Section 3

1. Right to privacy of the communication
2. Any evidence obtained in violation of this or the preceding section shall be inadmissible for any purpose in any proceeding.

Right to privacy is concisely defined as the right to be left alone. It has also been defined, as the right of a person to be free from unwarranted interference by the public in matters which the public is not necessarily concerned.

Section 9. Private property shall not be taken for public use without just compensation.

Eminent domain.— is power of the state to take private property for public purpose upon payment of just compensation to its owner.

Just compensation — is the fair marked value of the property at the time of the taking.

RIGHTS OF THE ACCUSED IN CRIMINAL CASES

1. The adequate legal assistance
2. To be informed of his right to remain silent
3. Right against the use of torture, violence or any other means which violates the free will.
4. To be heard himself and counsel
5. To bail and against the excessive bail
6. To be informed of the nature and cause of the accusation against him
7. To have speedy, impartial and public trial
8. To meet the witness face to face
9. Right against self-incrimination
10. Right against double jeopardy

Section 21. No *expost facto* law or bill of attainder shall be enacted.

An *expost facto* law is one which operating retrospectively makes an act done before the passage of the law and punish such act as aggravates a crime or makes it greater than it was committed, changes the punishment and inflicts greater punishment and alters the legal rules of evidence and receives less testimony than the law required at the time of commission of the offenses, in order to convict the offender.

A bill of attainder is a legislative act, which inflicts punishment without a judicial trial.

ARTICLE IV – CITIZENSHIP

Section 1. The following are the citizens of the Philippines

1. Those who are citizens of the Philippines at the time of the adoption of this Constitution.
2. Those whose fathers and mothers are citizens of the Philippines.
3. Those born before January 17, 1873 of Filipino mothers, who elect Philippine citizenship upon reaching the age of maturity, and
4. Those who are naturalized in accordance with the law.

Meaning of citizenship

1. Citizenship is a term denoting membership of a citizen in political society, which membership implies, reciprocally, a duty of allegiance on the part of the member and duty of protection on the part of the state.

General Ways of Acquiring Citizenship

1. Involuntary method – by birth because of blood relationship or place of birth, and
2. Voluntary method – by naturalization, except in case of collective naturalization of the inhabitants of a territory which takes place when it is ceded by one to another as a result of conquest or treaty.

Citizenship by Birth

There are two principles or rules that govern citizenship by birth, namely:

1. Jus Sanguinis – relationship by blood is the basis of the acquisition of citizenship under this rule. The child follows the citizenship of both of the parents or one of them. This is the predominating principle in the Philippines.
2. Jus Soli or Jus Loci – place of birth as the basis for acquiring citizenship under this rule.

Ways of Acquiring Citizenship through Naturalization

1. By the judgement of the Court – the foreigner who wants to become a Filipino citizen must first apply for naturalization with the proper Regional Trial Court. He must have all the qualifications as provided by law and must comply with all the procedures and conditions prescribed.
2. By direct act of Congress – in this case, our law making body simply enacts an act directly conferring citizenship on a foreigner.

ARTICLE V. SUFFRAGE

Section 1. Suffrage may be exercised by all citizens of the Philippines not otherwise disqualified by law who are at least eighteen years of age, and who shall have resided in the Philippines for at least one year and in the place wherein they proposed to vote for at least six months immediately preceeding the election. No literacy, property or other substantive requirement shall be imposed on the exercise of suffrage.

Meaning of Suffrage

Suffrage is the right and obligation to vote of qualified citizens in the election of certain national and local officers of the government and in the decision of public questions submitted to the people.

Nature of Suffrage

1. A mere privilege – suffrage is not a natural right of the citizens, but merely privilege given or withheld by the law making power subject to constitutional limitations.
2. A political right – in the sense of the right conferred by the constitution, suffrage is classified as a political right. enabling every citizen to participate in the process of government to assure that it derives its powers from the consent of the governed. The principle is that of one man, one vote (supra).

Scope of Suffrage

1. Election – it is a means by which the people choose their officials for definite and fixed periods and to whom they entrust, for the time as their representatives, the exercise of powers of government.
2. Plebiscite – it is the name given to a vote of the people expressing their choice for or against a proposed law or enactment submitted to them.
3. Referendum – it is the submission of a law or part thereof passed by the national or local legislative body to the voting citizens of a country for their ratification or rejection.
4. Initiative – it is the process whereby the people directly propose and enact laws.
5. Recall – it is the method by which a public officer may be removed from office during his tenure or before the expiration of his term by a vote of the people after registration of a petition signed by a required percentage of the qualified voters.

Qualifications of Voters

He must be

1. A citizen (male or female) of the Philippines
2. Not otherwise disqualified by law
3. At least eighteen(18) years of age; and
4. Have resided in the Philippines for at least six(6)months preceeding the election

Section – The Congress shall provide a system for securing the secretary and sanctity of the ballot as well as a system for absentee voting by qualified Filipinos abroad.

The Congress shall also design a procedure for the disabled and the illiterates to vote without the assistance of other persons. Until then, they shall be allowed to vote under the existing laws and such rules as the Commission on Elections may promulgate to protect the secrecy of the ballot.

ARTICLE V. - LEGISLATIVE DEPARTMENT

Legislative Power - the authority under the Constitution to make laws and to alter laws

Laws - refer to statutes, which are the written enactments of the legislative governing the relations of the people among themselves and between them and the government and its agencies.

Classification of Powers of Congress

1. **General Legislative Power** - power to enact laws intended as rules of conduct to govern the relations among individuals and the state.
2. **Specific Power** - power which the Constitution expressly directs or authorizes Congress to exercise like the power to choose who shall become the President in case two or more candidates have an equal and highest number of votes, to confirm certain appointments by the President to promote social justice, to declare the existence of a state of war, to impose taxes, to impeach, to act as constituent assembly.
3. **Implied Power** - that which is essential or necessary to the effective exercise of the powers expressly granted like the power to conduct inquiry and investigation in aid of legislation, to punish for contempt, to determine the rules of its proceedings.
4. **Inherent Power** - power which is possessed and can be exercised by every government because it exists as an attribute of sovereignty.

THE SENATE

Composition and Election - it is composed of 24 senators who are elected at large by qualified voters as may be provided by law.

Term of Office – six (6) years

Qualifications of a Senator

1. A natural born citizen of the Philippines
2. at least 35 years of age on the date of the election day
3. Able to read and write
4. A registered voter
5. A resident of the Philippines for not less than two (2) years immediately preceding the election day

Maximum terms - a senator is disqualified to serve for more than two consecutive terms but can still run for reelection after a break or interval

Registered Voter – one who has all the qualifications for a voter and none of the disqualifications provided by law and who has registered himself in the list of voters.

Residence – the place where one has his true permanent home and to which whenever absent, he has the intention of returning.

THE HOUSE OF REPRESENTATIVES

Composition and election/selection – composed of not more than 250 members popularly known as Congressmen elected from legislative or congressional districts and through party-list system

Term of Office – three (3) years

Qualifications of a Representative

1. A natural born citizen of the Philippines
2. At least 25 years of age on the election day
3. Able to read and write
4. Except for party-list representative, a registered voter
5. A resident thereof, for a period of not less than one (1) year preceding the election day

COMPOSITIONS/ELECTION/SELECTION AND CLASSIFICATION OF MEMBERS

1. The Constitution limits to 250 the maximum numbers the House of Representatives may have
2. The house of Representatives shall be elected from legislative districts and through party – list system of registered national and sectoral parties or organizations. The party – list representative shall constitute 20% of the number of representatives in the Lower House including those under the party list
3. The members of the House of Representatives may be classified into district, party-list and sectoral representatives

Kinds of Election for members of Congress

1. Regular Election
2. Special Election

Compensation – PhP160,000.00 to PhP180,000.00 annually. Any increase in their salary takes effect only after the expiration of full term of the members approving such increase

STEPS IN THE PASSAGE OF THE BILL

1. First reading
2. Referral to appropriate committee
3. Second reading
4. Debates
5. Printing and distribution
6. Third reading
7. Referral to the other House
8. Submission to join bicameral committee
9. Submission to the President

ARTICLE VII – EXECUTIVE DEPARTMENT

Section 1. The executive power shall be vested in the President of the Philippines
Executive Power – defined as the power to administer

Section 2. No person may be elected as President unless he is natural born citizen of the Philippines

Qualifications of the President and Vice President

1. Natural born citizen of the Philippines
2. Registered voter
3. Able to read and write
4. At least 40 years of age
5. Resident of the Philippines for at least 10 years

Section 3. There shall be Vice-president who shall have the same qualifications and term of office and be elected with and in the same manner as the President

Reasons for Prohibition against RE-election of President

1. A President seeking a second term is vulnerable to constant political pressure from those whose support he must preserve and has to devote his time and energy to consolidate this political support.
2. A President who seeks a second term is under terrific handicap in the performance of his function.
3. A President seeking re-election will even use public funds for the purpose even to the extent of making the government bankrupt.
4. The prohibition also widens the basic leadership.
5. The ban will put an end or at least hamper the establishment of political dynasties.
6. The six year term will give the President a reasonable time within which to implement his plans and programs of government.
7. A term, no matter how long, is short for a good President.

POWERS OF THE PRESIDENT

1. Appointing power
2. Power to revoke any appointments
3. Power of control over all executive departments, etc
4. Military power
5. Power to grant reprieve, commutations' and pardons
6. ~~Power to contract and guarantee foreign loan~~
7. ~~Power to enter into treaties or international agreement~~
8. Budgetary power
9. Power to address the Congress

ARTICLE VIII – JUDICIAL DEPARTMENT

Section 1. The judicial power shall be vested in one Supreme Court and in such lower courts as may be established by law.

Meaning of Judicial Power – is the power to apply the law to contests and disputes concerning legally recognized rights or duties between the state and private person or between individual litigants in case properly brought before the judicial tribunal.

Scope of Judicial Power

1. Adjudatory power – it includes the duties:
 - a. to settle actual controversies involving rights which are legally demandable and enforceable
 - b. to determine whether there has been a grave abuse of discretion amounting to lack or recess jurisdiction on the part of any branch or instrumentality of the government.
2. Power of Judicial Review
 - a. to pass upon the validity or constitutionality of the laws of the state and acts upon the other departments of the government
 - b. to interpret them

3. To render binding judgment
4. Incidental powers – it likewise includes the incidental powers necessary to the effective discharge of the judicial functions

Section 4. The SUPREME COURT shall be composed of the Chief Justice and 14 Associate Justices. It may sit en banc or, in its discretion, in divisions of three, five, seven members. Any vacancy shall be filled within 90 days from the occurrence thereof..

Qualifications for members of the Supreme Court and any lower collegiate court

1. He must be a natural born citizen of the Philippines, a naturalized citizen may not be appointed.
2. He must be at least forty (40) years of age
3. He must have, for fifteen (15) years or more, been a judge of a lower court or engaged in the practice of law in the Philippines
4. He must be a person of proven competence, integrity, probity, and independence

ARTICLE IX CONSTITUTIONAL COMMISSION

Independent Constitutional Bodies

The Three Constitutional Commissions are:

1. Commission on Civil Service
2. Commission on Audit
3. Commission on Election

Common Features:

1. They are multi – headed bodies.
2. They are categorized as independent by the constitution.
3. Their powers and functions are defined in the constitution.
4. The commissioners are required to be natural – born citizens of the Philippines.

5. Their term of office is staggered with two years interval.
6. The Commissioner appointed is intelligible for appointment for a period beyond the maximum tenure of seven (7) years.
7. Appointment of any vacancy is only for the unexpired portion of the term of the predecessor.
8. The commissioners cannot be appointed or designated in the temporary or acting predecessor.
9. The commissioners are removable only by impeachment.

THE CIVIL SERVICE COMMISSION

Composition of Civil Service Commission

It is composed of a Chairman and two (2) Commissioners. It is envisioned to enhance its independence on the theory that it will be more resistant to political pressure or influence than a body headed by a single individual. Their terms of office are for seven (7) years only without re appointment.

Qualifications of Members

1. They must be natural born citizens of the Philippines.
2. They must be at least thirty five (35) years of age at the time of appointment.
3. They must be persons with proven capacity for public administration.
4. They must not have been candidates for any elective position in the elections immediately preceding their appointment.

The term civil service means that professionalized body of men and women who have made of the government service of a lifetime career. The scope of this are every branch, agency, subdivisions and instrumentality of the government including every government -owned or controlled corporation with original charter

COMPOSITION OF COMMISSION ON ELECTIONS

It is composed of a Chairman and six (6) Commissioners. The 1973 Constitution increased in the membership from three in the 1973 Charter to nine on the theory that it would make it more difficult for the Commission to become the captive of any group or any person who might be interested in the commission deciding or taking action one way or another.

Qualification of the Members

1. They must be natural born citizens of the Philippines.
2. They must be at least thirty five (35) years of age at the time of their appointment.
3. They must be at least holders of college degree.
4. They must not have been candidates for any elective position immediately preceding elections.

THE COMMISSION ON AUDIT

Composition on Commission on Audit

It is composed of a Chairman and two (2) Commissioners. It is designed to make it more resistant to pressures from legislative and executive branches and other offices of the government.

Qualification of the Members

1. They must be natural born citizens of the Philippines.
2. They must be at least thirty five (35) years of age at the time of election.
3. They must be certified public accountants with not less than ten (10) years of experience.
4. They must not have been candidates for any elective position in the elections preceding their appointment.

ARTICLE X LOCAL GOVERNMENT

General Provisions

Section 1. The territorial and political subdivisions of the Republic of the Philippines are the provinces, cities, municipalities and barangays. There shall be autonomous regions in Mindanao and the Cordilleras as hereinafter provided.

LOCAL GOVERNMENT

Concept

Local government refers to a political subdivision of a nation or state, is constituted by law and has substantial control of local affairs which officials elected or otherwise locally selected.

LOCAL GOVERNMENT UNITS

The local government units are the following:

1. Province
2. City
3. Municipality
4. Barangay
5. Autonomous regions

These units are also called the political subdivisions of the country.

POWERS OF LOCAL GOVERNMENTS

The powers of the local government are:

1. To have continuous succession in its corporate name
2. To sue and be sued

3. To use a corporate seal
4. To acquire and convey real or personal properties
5. To enter into a contract, and
6. To exercise such other powers as granted to corporations subject to limitations provided by laws

ARTICLE XI ACCOUNTABILITY OF PUBLIC OFFICERS

Section 1. Public officer is a public trust.

Public office – is defined as the right, authority, and duty created and conferred by law in a given period either fixed by law or enduring at the pleasure of the supporting power.

Public officer – is the individual invested with some portion of the sovereign functions of the government for the benefit of the public.

Nature of Public Office

1. it is a public trust because it renders service to the public.
2. It is not a property for the holder of the office may not claim invested right.
3. it is not a contract because one has no right to sue the government for the recovery of damages.

The principle of the public accountability is emphasized in this section. All public officers and servants must consider their positions as sacred trusts and not as a means for achieving of power and wealth.

Section 2. Nature of Impeachment

Impeachment has been defined as a method of national inquest into the conduct of public men. It aims to protect from official delinquencies or malfeasance.

Officials Removable by Impeachment

1. The president and vice-president
2. Members of the Supreme Court
3. Members of the Constitutional Commissions
4. The Ombudsman

Grounds for Impeachment

1. Culpable violation of the constitution
2. Treason : example a Filipino imposes war in the Philippines
3. Bribery . either direct or indirect bribery
4. Graft and corruption
5. Betrayal of public trust – new ground for impeachment

Section 3. Initiating and Trial for Impeachment

The House of Representatives has the sole power to initiate all cases of impeachment.

The Senate has the sole power to try all cases of impeachment.

Procedure in Impeachment cases

1. Filing of verified complaint in the House of Representatives
2. Trial by the Senate
3. Requirement for conviction

The members are required to be under oath or affirmation.
To convict an officer, at least 2/3 of all members of the Senate agreeing are necessary.

The only penalty to impose in an officer is limited 'to removal from office and disqualification to hold any office under the Republic of the Philippines'. If a criminal offense has been committed, the party convicted is still liable to prosecution, trial, and punishment.

The power of the President to grant reprieves, commutations, and pardons does not extend to cases of impeachment.

Section 4. Anti-graft known as Sandiganbayan

The Sandiganbayan was a special court created by the Batasang Pambansa under the 1973 Constitution.

Section 5. Office of the Ombudsman to be known as Tanodbayan

Tanodbayan is a coined term in Filipino, which literally means 'guardians of the nations'. It is categorized like the three Constitutional Commissions as independent. It is known as the office of the Special Prosecutor

Section 8. Qualification of Ombudsman Deputies

They must be:

1. The natural born citizens of the Philippines
2. At least forty(40) years old at the time of the appointment
3. Persons with recognized probity and independence
4. Members of the Philippine Bar
5. Not have been a candidate for any elective office in the preceding election

ARTICLE XII NATIONAL ECONOMY AND PATRIMONY

Lands of the public domain are classified into agricultural, forest or timber, mineral lands, and national parks. Agricultural lands of the public domain may be further classified by law according to the use to which they may be devoted. Alienable lands of the public domain shall be limited to agricultural lands. Private corporations or associations may not hold such alienable lands of the public domain except by lease, for a period not exceeding twenty-five years, renewable for not more than twenty-five years, and not exceed one thousand hectares in area. Citizens of the Philippines may lease not more than five hundred hectares or acquire not more than twelve hectares thereof by purchase, homestead, or grant.

ARTICLE XIII SOCIAL JUSTICE AND HUMAN RIGHTS

The congress shall give highest priority to the enactment of measures that protect and enhance the right of all people to human dignity, reduce social, economic and political inequities and remove cultural inequalities by equitable diffusing wealth and political power for the common good.

To this end, the state shall regulate the acquisition, ownership, use, and disposition of property and its increments.

The promotion of social justice shall include the commitment to create economic opportunities based on freedom of initiative and self-reliance.

LABOR

The state shall afford full protection to labor, local and overseas, organized and unorganized, and promote full employment and equality of employment opportunities for all.

It shall guarantee the rights of all workers to self-organization, collective bargaining and negotiations, and peaceful concerted activities, including the right to strike in accordance with law. They shall be entitled to security of tenure, humane conditions of work, and a living wage. They shall also participate in policy and decision-making processes affecting their rights and benefits as may be provided by law.

HUMAN RIGHTS

There is hereby created an independent office called the Commission of Human Rights. The Commission shall be composed of chairman and four members who must be natural – born citizens of the Philippines and a majority of whom shall be Members of the Bar. The term of office and other qualifications and disabilities of

the Members of the Commission shall be provided by law. Until this Commission is constituted, the existing Presidential Committee on Human Rights shall continue to exercise its present functions and power.

ARTICLE XIV EDUCATION, SCIENCE AND TECHNOLOGY, ARTS, CULTURE AND SPORTS

All educational institutions shall include the study of the Constitution as part of the curricula. They shall inculcate patriotism and nationalism, foster love of humanity, respect for human rights, appreciation of the role of national heroes in the historical development of the country, teach the rights and duties of citizenship, strengthen ethical and spiritual values, develop moral character and personal discipline, encourage critical and creative thinking, broaden scientific and technological knowledge, and promote vocational efficiency.

ARTICLE XV THE FAMILY

The State recognizes the Filipino family as the foundation of the nation. Accordingly, it shall strengthen its solidarity and actively promote its total development.

Requisites of a Valid Marriage

- Legal capacity of the contracting parties
 - Age
 - Status
- Consent freely given
- Authority of the solemnizing officer
- Marriage License
- Public ceremony

Marriage, as an inviolable social institution, is the foundation of the family and shall be protected by the State.

PART II - ANALYZING TEST ITEMS

Directions: Read the questions properly. Indicate your answer by encircling the letter of your choice.

1. It is that definite or portion of the earth's surface which is the subject of sovereignty rights and interests. From the political standpoint, it is referred to as
- A. State
 - B. Government
 - C. Sovereignty
 - D. Territory

Answer: D

Analyze the statement. What is the focus of the basic information? It is concerned with one of the essential attributes of a state. Definitely, option A is not a specific description of a state because operationally defined, a state necessarily possesses all the attributes like persons, territory, sovereignty and government while the statement refers only to an element of a State. On the other hand, option B has for its object the institution or aggregate of institutions which rule a society. It is concerned with the operation and organization of government. Option C is synonymous to independence or the power to impose obedience upon the citizenry and therefore not acceptable as a choice to describe the statement. Option D provides the accurate definition as it relates to the portion of the earth's surface where sovereign rights and interests are recognized.

2. The city Mayor ordered the arrest and deportation of all the prostitutes to their respective provinces for promoting live shows and immoral sexual activities in the city. The order was assailed to be illegal because:
- A. The City Mayor has infringed on the constitutional rights of the prostitutes to travel and abode.
 - B. The City Mayor violated the due process of law since there was no notice and hearing before judgment was rendered.
 - C. The Mayor's order was arbitrary, and capricious.
 - D. Only the Courts are empowered to issue the order of arrest and deportation.

Answer: D

Option A is eliminated because there is nothing in the situation to show that the order was intended to violate the constitutional right to travel and abode. The same observation holds true to Option B and C although the situation does not explicitly mention about the arbitrariness of the order. Option D is the logical choice because the issuance of arrest, detention and even deportation orders is the exclusive prerogative of the Courts and does not rest within the competence of the City Mayor.

3. Despite strong protestations from Mang Jose, the government took away from his private property for public use upon payment to him or just compensation. What power of the State was involved in the particular case?
- A. Police Power
 - B. Power of Eminent Domain
 - C. Power of Taxation
 - D. Absolute Power of the State

Answer: B

The question is factual. You will recall that the state possesses inherent powers upon its domain. Option A is related to the question since it refers to the advancement of the general welfare of the people but the taking away of the private property is the main issue. Option C is a State inherent power also but has nothing to do with property rights. Option D is an inexistent power and is not in any way related to the question. Option B is the most logical choice since the power of Eminent Domain contemplates the exercise of a power to take away private property for public use upon payment of just compensation.

4. The United States is the only known country in the world that follows the "Jus Soli" doctrine which means Place of Birth, while the rest of the countries follow the "Jus-Sanguinie" principle which means blood relationship. What then is the citizenship of a child born to Filipino parents in the United States?
- A. Natural Born Citizen
 - B. Naturalized Citizen
 - C. Stateless Citizen
 - D. Dual Citizen

7. Its advantage is that it serves as the training ground for the national leaders
 - A. Bicameralism
 - B. Constitutionalism
 - C. Primary jurisdiction
 - D. Parents patriae
8. It is prerogative inherent in the state where it is called upon to protect those with less than full capacity to take adequate care of their own interests
 - A. Eminent Domain
 - B. Patents Patriae
 - C. Police
 - D. Taxation
9. The term of office of the senator
 - A. One year
 - B. Three years
 - C. Six years
 - D. Twelve years
10. The power to declare the existence of a state of war belongs to
 - A. Congress
 - B. President
 - C. Sandigang Bayan
 - D. Supreme Court
11. Amendment or revision of the Constitution may be proposed through any of the following except
 - A. Constitutional Convention
 - B. Constitutional Assembly
 - C. People's Initiative
 - D. People's Power
12. The regular election of the Members of Congress shall be held on the second Monday of
 - A. April
 - B. May
 - C. June
 - D. July
13. How many members does the Commission on Appointment have?
 - A. 24
 - B. 26
 - C. 25
 - D. 27
14. All appropriation, revenue or tariff bills etc. shall originate exclusively in the
 - A. House of Representatives
 - B. Sanggunian Panlalawigan
 - C. Senate
 - D. Supreme Court
15. An enrolled bill may become a law after a lapse of
 - A. 30 days
 - B. 60 days
 - C. 40 days
 - D. 90 days

16. The canvassing of the votes of the President shall be done by congress and presided by:
- A. Chief Justice
 - B. Secretary of National Defense
 - C. Ombudsman
 - D. Vice President
17. The Constitution empowers the President to declare Martial Law for
- A. 30 days
 - B. 60 days
 - C. 45 days
 - D. 90 days
18. It refers to the act of the President of staying the execution of a convict.
- A. Amnesty
 - B. Pardon
 - C. Commutation
 - D. Reprieve
19. It is the only constitutional court in the Philippines.
- A. Court of Appeals
 - B. Family Court
 - C. Shariah Court
 - D. Supreme Court
20. The change of venue or place of trial can be ordered for this reason
- A. Lack of jurisdiction
 - B. Humanitarian reason
 - C. Convenience
 - D. Avoid miscarriage of justice
21. It is designed to prevent any person or class from being singled out as special subject of hostile or discriminating legislation.
- A. Due process
 - B. Equal protection
 - C. Right Speech
 - D. Writ of Habeas Corpus
22. The 1987 Constitution was framed by
- A. People's initiative
 - B. Constitutional assembly
 - C. Constitutional commission
 - D. Constitutional convention

23. The government under President Aquino was .
- A. De facto
 - B. De jure
 - C. Both a and b
 - D. None of the above
24. Amendments in the 1987 Constitution can be made through a constitutional commission.
- A. Yes
 - B. No
 - C. Maybe
 - D. None of the above
25. The president declared martial law on the ground of rebellion. What, if any, is the effect of such act?
- A. The declaration of martial law will not automatically suspend the privilege of the writ of habeas corpus.
 - B. The operation of the constitution is not in any manner suspended.
 - C. A State of Martial Law does not supplant the functioning of the civil courts.
 - D. All of the above

PART III - ENHANCING TEST TAKING SKILLS

1. Which of the following sector cannot participate under the party-list system of representation
A. Elderly
B. Handicapped
C. Overseas workers
D. Religious
2. Which of the following positions does need the confirmation of the Commission on Appointments?
A. BIR Commissioner
B. Navy captains
C. Consul
D. Ambassador
3. The president cannot validly declare martial law in the following instance:
A. Eminent danger
B. Invasion
C. Rebellion
D. All of the above
4. The following are the members of the judicial and bar council except:
A. Professor of law
B. Ombudsman
C. Retired justice of the Supreme Court
D. Secretary of Justice
5. The budget of fiscal year 2012 was submitted to the President for action. He called a press conference saying that he will exercise his pocket veto on certain items of the said budget. Is the President clothed with the pocket veto power?
A. Yes
B. No
C. None of the above
D. Both of the above
6. The General Appropriation Act for the year 2012 allocated P 10 million each to the members of the House of the Representatives P150 million to the senators for countryside development notwithstanding that the President recommended its abolition. What remedy can the president employ to refuse release of the funds?
A. Abolish congress
B. Exercise his pocket veto
C. Exercise the power of impoundment
D. All of the above

7. A division of the Supreme Court failed to decide a given case. How shall the case be resolved?
- A. Raffle the case to another division
 - B. Decide the case en banc
 - C. Archive the case
 - D. Decide the case in absentia
8. Can the Supreme Court justice be removed by filing a criminal case against him?
- A. Yes
 - B. No
 - C. Both a and b
 - D. None of the above
9. Police officers arrested the accused based on the information supplied by the rape victim herself who pointed at him. Is the arrest without warrant valid?
- A. No
 - B. Yes
 - C. None of the above
 - D. All of the above
10. When may stoppage and search of vehicles without warrant be valid?
- A. There is a report supplied by undercover agent.
 - B. Where accused is carrying bulging bags and was suspiciously quiet and nervous when asked about its content.
 - C. Where the physical appearance of the accused fitted the description given in the confidential report.
 - D. All of the above
11. The following searches are valid even without a warrant of arrest except
- A. There is a waiver.
 - B. Made during the saturation drive
 - C. Open to eyes and hand
 - D. Stop and frisk principle
12. The ombudsman must be at least _____ years of age at the time of his appointment.
- A. 35
 - B. 40
 - C. 25
 - D. 21
13. Who has the sole power to try and decide an impeachment case?
- A. Supreme Court
 - B. People
 - C. Senate
 - D. House of Representatives

14. The following may be removed by impeachment except
A. Chairman of COMELEC C. Senator
B. Commissioner of BIR D. Chief Justice
15. Who has the power to decide on a person's right to vote?
A. Congress C. Court
B. Comelec D. President
16. All persons except those charged with offenses punishable with _____ when evidence of guilt is strong shall be bailable.
A. Arresto mayor C. Reclusion temporal
B. Reclusion perpetua D. Arresto mayor
17. The following are the requisites of trial in absentia except
A. Case is dismissed with the consent of the accused
B. Competent court
C. Valid arraignment
D. Valid plea
18. It is a law that punishes without judicial trial.
A. Certiorari C. Bill of attainder
B. Mandamus D. Ex post facto law
19. All institutions shall include the study of the _____ as part of the curriculum.
A. English C. Science
B. History D. Constitution
20. Upon what age must judges retire?
A. 70 B. 65 C. 56 D. 55
21. It is a mitigation of a penalty.
A. Pardon C. Commutation
B. Reprieve D. Amnesty
22. It is the power of the people to propose amendments to the Constitution.
A. Plebiscite C. Initiative
B. Referendum D. Recall

23. The party list system shall constitute _____ of the total number of the The House Representatives
A. 10% B. 20% C. 21% D. 40%
24. Members of the Congress shall in all offenses punishable by not more _____ years are privileged from arrest.
A. One B. Five C. Six D. Twelve
25. A bill can become a law even if not signed by the President after the lapse of
A. 20 days C. 40 days
B. 30 days D. 50 days

Philippine History

Prepared by:
Prof. Remedios C. Ong

Competencies:

1. Trace the history of the Philippines from pre-colonial to contemporary periods.
2. Draw the implications of the historical evolution of the Philippines to the present socio-political conditions.

PART I - CONTENT UPDATE**Introduction**

A Filipino is a mixture of different cultures. His contact with different Asian and Western countries had contributed much to what he is now. Physically he may be blending of Asian and western features or characteristics but his ideas are more in its outlook. Presently, the Filipinos is still searching for his identity.

I. Pre-Colonial**A. THEORIES ON THE EARLY PEOPLE**

Jocano Theorizes that the proof of early human existence in the Philippines dated as early as 21,000 to 22,000 years with the discovery in Tabon cave in 1962 of a skull cap and a portion of jaw, presumed to be those of human being. This discovery shows conclusively that human came earlier to the Philippines than the migrant people of the Malay Peninsula.

B. THEORY OF MIGRATION**➤ Pygmies**

Came from Borneo and other parts of South Asia and walked through land bridges. They have vertical body length that reaches only up to 1.5 meters hence they are referred to as pygmies. They appear to be dark-skinned,

kinky haired, have thick lips, have wide noses and have short limbs. They used tools made from sharp rocks and pieces of wood in hunting, fishing, and finding plants and crops sustainable for consumption.

➤ **Indonesians**

They used boats for travelling the sea in order to reach the Philippines. They knew how to plant crops, to hunt and to fish. Their tools were made up of rocks and metals that enabled them to build houses and to create tools that make their everyday activities less strenuous.

➤ **Malays**

They are brown-skinned, have average height, flat nose and straight, black hair. They have had the most sophisticated and highly developed civilization among the varieties of people that came to the Philippines. They are divided into three groups. The first group of Malay had traveled to the North of Luzon and became known for their practice of beheading people. The second group started to use alphabets and archeologist believed that they are ancestors of the Muslims in Mindanao.

Generally, the Malays started to put up government systems and created laws to promote harmony in their respective communities. The knowledge of the arts, music and literature also has become an indelible trademark of their way of life. This group of people is best known in their manufacture of pottery and clothing products.

C. CONTACT OF ASIAN COUNTRIES AND ITS IMPACT

➤ **Arabs**

It is widely believed that the Arabs had first set foot on the country in the 1st century A.D. The relationship was purely about trade and they bought products such as metals and cloths in exchange of pearls, gold, and shells

from the natives of the Visayas and Mindanao. The Arabs are believed to be the ones who bring the products of their country and other nearby countries in Europe and China, India and some Southeast Asian countries. The Philippines have had a purely trading relationships with the Arabs until when they started to preach the theories and principles of Islam in the 12th century A.D.

➤ **India**

The people that we know today are shrewd and very business-minded. Today, the most common business relationship the Filipinos have with them is borrowing money known as 5-6. Our contact with them started way back in 700 A.D., the time when the Majapahit Empire was at its peak. India, during that time, was under a powerful and sturdy domain. This made them capable of conquering countries nearby, the Southeast Asian region inclusive. They had first landed in Sulu and used it as their gateway to a rich and favorable Filipino trade. They brought tin products, gold and exquisite Hindu cloths, so famous for their high quality, grandeur and awe-striking features. The Philippines was not colonized by the Majapahit Empire although this rich commercial relationship flourished and continued for centuries and has influenced Filipino lifestyle in many ways.

➤ **China**

The early relationship between China and the Philippines started before the 10th century A.D. between the Tang Chao or Tang Dynasty (618-906 A.D.) and the Sung Dynasty (1127-1180 A.D.) as evidenced by artifacts and Chinese porcelains found in some parts of Luzon and Mindanao. Based on the Sung Shi, the book of the history of Sung, the people of Canton (Guang Dong) came to the Philippines regularly to trade their merchandise. This information was supported by an article written by Chau Ju Kua in his book Chu Fan Chi. He revealed that the Chinese, and the early Filipinos have had fruitful and prolific trading ties, both parties trusting each other.

➤ Japan

Prior to the Japanese occupation in the twentieth century, the Filipinos and the Japanese have had a good and beneficial relationship that continued on for centuries. This relationship started in the 13th century A.D. According to the ancient Japanese newspaper Nihongi, Filipinos had set foot on Kyushu to trade with the Japanese. They became interested in trading with the early Filipinos after having seen the gigantic pearls, cloths, tropical plant products and never before-seen jewelry and accessories. This fostered a peaceful, amiable and a friendly relationship not only to the two involved parties but also had an affirmative implication to the whole of Southeast Asia.

D. EARLY HISTORY AND CULTURE OF THE PHILIPPINES

➤ The Barangay, which was derived from the Malayan word balangay meaning a boat, was the ancient unit of government of the Philippines. Barangays are small states that have definite territories, population, government, and sovereignty. The barangay was the unit of government and consisted of forty to one hundred families. These barangays lived independently and was self-supporting under the leadership of a Datu.

➤ A Datu is the Chief executive, legislative, and judicial administrator of each tribe of barangay. He executes the law with the help of his own dependents and a number of people from the freeman class. He does his judicial and legislative duties with the help of the members of the Council of the Elders. As suggested by the term itself, the council is made up of the oldest and the most affluent members of the community.

➤ The position of being a datu is passed on from the father to his eldest son. In the absence of an eldest son, the eldest daughter assumed the post. If a Datu bears no child, a person is chosen from the tribe based on a certain criteria. The criteria include intelligence, wealth, strength and

bravery. These are very important traits that a datu must possess in order to carry out the duties of a tribal chief successfully.

➤ The social hierarchy is divided into three:

- Nobles or the elite —consisting of the chiefs and their families
- Freeman or the Maharlika
- Slaves or the dependents —acquired their low status in society by inheritance.

➤ Judicial process had trials which were held publicly and decisions were rendered promptly thereby avoiding what is known as justice delayed. "Trial by ordeal was adopted to determine the innocence or guilt of party". Among the ancient Filipinos the legitimate children automatically inherited the property of their parents even without a written will. In matter of succession, the first son of the barangay chieftain succeeded his father.

➤ Economic Life

The main industry and the main source of income of the early Filipinos is agriculture. The early Filipinos have started to practice kaingin in order to make a land suitable for farming out of bushy and grassy land area. Kaingin is the early practice of setting a fire to burn unwanted grass and plants that grow over a piece of land ideal for farming.

➤ Religious Beliefs and Education

The ancient Filipino people were mostly pagans and believed in their supreme creator, Bathala. Pagan is someone who does not believed in Christianity, Islam, or Hinduism. The early Filipinos believed not only in Bathala but also several other gods. These gods are of lesser degree since Bathala is considered the god of all gods.

Parents normally educate their children at home. The father is responsible for teaching his son. He starts his child's education at about 8 years old. The father teaches his son many activities such as hunting, fishing, gathering and chopping of woods, farming, etc. The son learns together with other children in the tribe who are of his same age.

E. HISPANIZATION OF THE PHILIPPINES

Magellan held an expedition for Spain to Moluccas by sailing west. Such expedition brought him to a group of islands, which they called Archipelago of St. Lazarus (later renamed Philippines after King Philip II of Spain). They anchored on Homonhon and later sailed to an islet south of Leyte where they celebrated the first mass on March 31, 1521. While Magellan was killed in a battle with the Mactan chief Lapu-Lapu, nevertheless his expedition paved way for the eventual colonization of the Philippines by Spain.

In 1565, Miguel Lopez de Legazpi arrived to establish a permanent settlement in the Philippine Islands. He concluded a blood compact with Sikatuna, a chieftain of Bohol, then signed a treaty of friendship with Rajah Tupas of Cebu where the first Spanish settlement San Miguel was established. It was later named Santissimo Nombre de Jesus. Further colonization was made in the Visayas and up north. De Goite fortified Manila, which was under Rajah Sulayman, a Muslim chieftain. In 1571, Legaspi established Manila as capital of the Philippines.

1. Economic Policies

They mostly characterized by monopoly that favored/ benefited the Spaniards.

- a. Taxation: started as a tribute of 8 reales (about one peso). This was abolished in 1884 and a personal cedula (graduated poll tax based on income) was instituted for residents 18 years of age and above. Taxes were excessive and most of which went into the pockets of officials.
- b. Forced Labor: males from 16 to 60 were required to render services to the government for 40 day supposedly with daily allowance and meager food ration. Falla is a fee paid by Filipinos to be exempted from forced labor.
- c. Encomienda: became the source of corruption of officials particularly in the sharing of produce between encomienda workers and landowners.
- d. Galleon trade or Manila Acapulco Trade: doctrine of mercantilism or (monopoly of goods from colonies) was imposed by Spain. The Philippines traded only with China and Mexico in the 16th century and goods were shipped by the Spanish galleons, for two centuries the chief source of official and individual income in the Philippines.
- e. Tobacco Monopoly for 100 years the government designated Nueva Ecija, Cagayan Valley, and Marinduque as tobacco planting districts. Later northern Luzon provinces were included.

2. Political Changes

- a. Government was centralized. For 250 years, the country was administered through the Council of Indies that transmitted to the Governor-General in the Philippines the royal decrees that served as guide in the administration of the colony. The governors' overwhelming authority is indicated by his unrestricted use of the complase power to suspend the implementation of any royal order if in his opinion, the condition in the colony did not warrant its implementation.
- b. ~~Provincial governments started with encomiendas, which were rewards given to Spaniards who helped in the pacification of the country. Encomienderos were empowered to collect taxes, protect and convert~~

native to Catholicism. Due to abuses perpetrated by encomienderos, encomiendas were abolished and replaced by the system of provincial governments: alcadia for pacified areas and corregimientos for unspecified areas. Baranggays were retained and assimilated into the bigger unit of government. Later pueblos (towns) were established.

3. Religious influence

Christian religion was introduced replacing the paganistic anito worship. Friar responsible for spreading the Christian religion: Augustinians (1565); Franciscans (1577); Jesuits (1581); Dominicans (1587); and the Recollects (1606). Early Missionaries learned the dialects of the people and introduced a highly church oriented literature. Pagan superstitions were utilized to hold natives to practice the new religion such that folk Catholicism resulted.

Education was controlled by friars. Religious orders founded the first schools and colleges. University of Sto. Tomas was the university founded in 1611. The chief feature of the curriculum was religion. Education was secularized by the civil government at about 1860.

4. Social Transformation

- a. Manner of dressing altered considerably in order to accumulate Spanish customs as well as the new morality resulting from conversion to Catholicism.
- b. The Filipinos accepted the practice of burial in public cemeteries and embraced the idea of marriages performed in the Catholic Church.
- c. 1849 Governor Narciso Claveria issued a decree which contained thousands of Spanish family names from which the natives could choose their own surnames.
- d. Adoption of Fiesta is a socio-religious event celebrating the feast day of the patron saint of a Catholic town.

GROWTH OF FILIPINO NATIONALISM

It was in the 19th century when national consciousness developed the sporadic uprisings started as early as 1574 by Lakandula and Sulayman followed by Magalat (1506), Tamlot, Bangkaw, Palaris, Dagohoy, Diego Silang and many others. It grew in intensity about 200 years later. Nationalism (devotion to or advocacy of national unity and independence) developed due to the following factors:

- a. Opening of Philippines to World Trade
- b. Rise of middle class
- c. Racial prejudice
- d. Secularization controversy
- e. European liberalism of Carlos-Marie dela Torre
- f. Cavite mutiny
- g. Execution of Gomez, Burgos and Zamora (GOMBURZA)

Campaigns for reforms started with the formation by the middle class of a Propaganda Movement calling for the assimilation of the Philippines to Spain, the transformation of the Philippines to a province of Spain, and making the Filipino fellow Spaniards. As Spanish Citizens the Filipinos would be represented in the Spanish Cortes and thereby their representative in that body could propose and participate in the approval of laws beneficial to the country. Foremost among them were Lopez Jaena, M.H. Del Pilar and Rizal. The movement failed to attain the reforms they demanded. However, their writings inspired and opened the minds of Filipinos. Andres Bonifacio founded the Katipunan (Kataastaasan, Kagalanggalan na Katipunan ng Bayan) in July 7, 1892 on a radical platform to secure Independence and Freedom of the Philippines by force. Katipunan's Objectives were:

- a. Political - separation of the Philippines from Spain.
- b. Moral - revolved around the teaching of good manners, hygiene, good morals, religious fanaticism and weakness of character.
- c. Civic - principle of self-help and the defense of the poor and the oppressed.

The society remained secret until Patinio exposed the society to Fr. Mariano Gil on August 19, 1895. By August 23, 1896 at Pugad Lawin, the Katipuneros tore up their cedula's shouting, "Long Live the Philippines".

Aguinaldo returned to the Philippines from Hongkong with a plan to form a Filipino government to show the capacity of the Filipinos for self-government. Aguinaldo established the Dictatorial Government in May and a month later, the revolutionary government upon the advice of Apolinario Mabini, the brain of the revolution. In June 12, 1898, Aguinaldo proclaimed the independence of the Philippines at Kawit, Cavite.

F. AMERICAN COLONIZATION

The Spanish American War erupted in Cuba, another Spanish colony. This event led to the coming of the Americans to the Philippines. The defeat of the Spaniards led to the negotiation, which was concluded by the Treaty of Paris on December 10, 1898. As provided for in the Treaty, the Philippines was ceded by Spain to the United States. Aguinaldo, the leader of the Philippine Revolution who was in exile in Hongkong learned about the American coming to the Philippines. He thought that the US came to liberate us, so on June 12, 1898, he declared the Philippine Independence and changed our form of government from dictatorial to revolutionary. After the promulgation of the Malolos Constitution in January 21, 1899 Aguinaldo inaugurated the Philippine Republic in January 23, 1899.

Due to the cession of the Philippines to US and the continued presence of Americans, hostilities erupted between the Filipinos and Americans. The unfortunate incident at San Juan Bridge where Filipinos were fired on February 4, 1899 led to the Filipinos-American War. It was only after the capture of

Aguinaldo on March 23, 1901 that the hostilities ended, although pocket resistance continued in some areas.

AMERICAN COLONIAL POLICY

General Wesley Merit established the military government and exercised the powers of government until July 4, 1901 when the President of the Philippine Commission became civil governor in area already pacified by American military.

Philippine-Bill of 1902 the first organized act of the Philippines and it provided for the administration of civil government in the Philippines.

William Howard Taft chairman of second the Philippine Commission recognized the independence of the Philippines.

Jacob Schurman became chairman of the First Philippine Commission.

U.S. Pres. William McKinley proclaimed the policy "Benevolent Assimilation". He emphasized that the Filipinos would be trained for self-government.

The Filipinization Policy expressed American intention of training Filipinos for self-government. As early as 1900, Filipinos were allowed to take over positions in municipal, provincial, and national government. By 1901, Cayetano Arellano was appointed Chief Justice of the Supreme Court. Partial free trade was established when the United States Congress approved in August 1909 the Payne-Aldrich Act. By this law, the American goods of all kinds and in unlimited quantities could enter the Philippines free of duty.

The promise of independence was contained in Jones Law of 1916. With the passage of the Hare-Hawes Cutting Law, a ten-year transition period was provided. This independence law was later amended by the Tydings-McDuffie law.

General Education

- a. Universal education was stressed.
- b. Public health and welfare was carried to the remote barrio.
- c. Commerce, industry and trade were requested.
- d. Basic individual freedom were respected.
- e. Transportation and communication were greatly improved.
- f. Political consciousness was developed through introduction of American political institution and practices.

Negative Results:

- a. The general economic dependence on the United States
- b. Partial loss of the racial heritage
- c. The continuance of colonial mentality
- d. Distorted sense of values

The inauguration of the Commonwealth government on November 15, 1935 marked the beginning of the ten-year transition period. Manuel L. Quezon, as a President launched the Social Justice to the common tao.

G. JAPANESE OCCUPATION

On December 7, 1941, Japan bombed Pearl Harbor, the US naval base in Hawaii. This marked the start of World War II in the Pacific. As early as September 1, 1939, war started in Europe when Germany invaded Poland.

Japan successfully occupied the Philippines after the fall of Bataan April 9 and fall of Corregidor May 6 from 1942 to 1944. The Filipino experienced the extreme brutality of the Japanese. Liberation of the Filipinos came with the return of Gen. Douglas MacArthur. Japan finally surrendered after Hiroshima (August 6, 1945) and Nagasaki (August 9, 1945) were destroyed by atomic bombs.

The return of the Commonwealth government was established with President Sergio Osmena who died in New York in 1944. In 1946, election for republican government was held and Manuel Roxas won as president.

Given these historical experiences of contact with the Asian neighbors and the western colonizers, the present Filipino has imbibed both cultures of the east and the west. Her oriental characteristics are very much manifested in her strong link to family and the respect accorded to them.

Despite her being liberal-minded because of American democratic influence, yet her Christian orientation instilled in her by the Spaniards and the influence of other religion enables her to confront the present social, political, and economic problems that comes her way. The Filipino emerges strong in times of crises for religion has taught her to have hope and to have concern for others who are in need.

H. POSTWAR ADMINISTRATION

1. Pres. Manuel Roxas – July 4, 1946 - April 15, 1948

Roxas declared amnesty for those arrested for collaborating with the Japanese during World War II. When the Philippines gained independence from the United States on July 4, 1946, he became first president of the New Republic. He worked for the reconstruction and rehabilitation on the war damaged country. His problem was compounded by the subversive activities of the Huk (formerly a guerilla government "HUKBALAHAP"). He died without finishing his term.

2. Pres. Elpidio Quirino – April 18, 1948 - December 30, 1953

Minimized the Huk problems with the help of Defense Secretary Ramon Magsaysay. Established Law Settlement and Development Corporation (LASEDECO) for landless farmers and Huk surrenderees.

3. Pres. Ramon Magsaysay – December 30, 1953 – March 17, 1957
"Man of the Masses". He promised to give the common tao justice. Established the NARRA (National Rehabilitation and Resettlement Administrations) to continue the resettlement program of previous administrations.
4. Pres. Carlos Garcia – December 30, 1957 – December 30, 1961
Famous for his "Filipino First" policy and Austerity program. This policy favored Filipino businessmen over foreign investors. He was also responsible for changes in retail trade which greatly affected the Chinese businessmen in the country. He also made a program focused on thriftiness.
5. Pres. Diosdado Macapagal – December 30, 1961 – December 30, 1965
The most radical Agrarian Reform Law, Agricultural Land Reform Code, was signed by him. This provided for the abolition of tenancy, Changed the date of celebration of Philippine independence from July 4 to June 12. His administration was also known for Harry Stonehill Scandal.
6. Pres. Ferdinand Marcos – December 30, 1965 – February 25, 1986
Promised to make his country "great again". Ruled for about 20 years during this time:
 - a. Worked for the changing of the 1934 Constitution and the result was the Constitution of 1973 providing for a parliamentary government.
 - b. Declared Martial Law 1972 because of deteriorating peace and order situation in our country.
 - c. Abolished Congress upon declaration of Martial Law. The later part of his regime was popularly known as dictatorial regime.
 - d. Benigno Aquino was assassinated in 1983 which generated protest and demonstration that culminated in the EDSA Revolution where People's-Power was manifested. This put to an end the 20 year rule of Marcos. Corazon Aquino, widow of Benigno Aquino assumed the presidency in February 25, 1986.
7. Pres. Corazon Aquino – February 25, 1986 – June 30, 1992
First woman president in the Philippines. Restored democracy:
 - a. Holding election for Congress and Local government.

- b. Framed and ratified the Constitution of 1987.
 - c. Restored freedom of press and speech.
 - d. Released political prisoners.
 - e. Worked for economic recovery.
8. Pres. Fidel V. Ramos – June 30, 1992 – June 30, 1998
Known for his "Philippines 2000", which is meant to make the Philippines an economically developed country and make it globally competitive.
Five Point Progress:
- a. Peace and stability
 - b. Economic growth and sustainable development
 - c. Energy and power generation
 - d. Environmental protection
 - e. Streamlined Bureaucracy
9. Pres. Joseph Estrada – June 30, 1998 – January 20, 2001
Known for his "Erap para sa Mahirap" program, which focuses on alleviating the socio-economic conditions of the poor. His flagship is "Jeep ni Erap". He was impeached on November but in January People Power II took place when the senators voted not to open an envelope containing the evidences against him.
10. Pres. Gloria Macapagal Arroyo – January 20, 2001
She was former Vice-President and concurrent Secretary of Social Welfare and Development. She assumed presidency by virtue of People Power II Revolution, or EDSA II. Her vision for the country as "building a strong republic throughout her tenure. Her agenda consists of building up a strong bureaucracy, lowering crime rates, increasing tax collection, improving economic growth and intensifying counter terrorism efforts. Her tenure is marked by charges of corruption scandals.
11. Pres. Benigno Simeon C. Aquino III – at Present
Son of the two Filipino icons of democracy. Vowed to fight corruption and establish transparency in governance. Won in the first ever automated election.

PART II - ANALYZING TEST ITEMS

1. During pre-colonial period the socio-political unit was the barangay, from the Malay term balangay, meaning a boat. During colonial period, several forms of government were established in the Philippines. Which among the following was not a form of government during colonial period?

A. Puppet C. Military
B. Democratic Republic D. Centralized colonial government

Answer: B

Option D. Rise of the Middle Class or the Filipinos who participated in agricultural production and commerce following the opening of the Philippines to world commerce acquired not only wealth and property but also improved their social status.

6. The ancient custom of arranging marriages of children by the parents came from the influence of
- A. Japanese G. Chinese
B. Borneans D. Indians
7. Different methods were used by the Filipinos to fight against the Japanese. One of these is the use of art to express their feeling against the Japanese government. The arts evolved while it is being used against the Japanese.
- A. The arts is part of culture that is developed by events in its environment
B. The Filipinos love the arts
C. The Filipinos fought for their freedom
D. The Filipinos are free to express their feelings

8. Examine/Evaluate the two sentences of every number.
- A. If the first sentence is wrong and the second sentence is wrong
 - B. If the first sentence is wrong and the second is right
 - C. If both sentences are correct
 - D. If both sentences are wrong
9. The religious schism which occurred in our country during the 1896- Revolution resulted in the formation a religious sect popularly known today as:
- A. Iglesia ni Kristo
 - B. Philippine Independent Church
 - C. Anglican Church
 - D. Evangelist Church
10. The president who ordered the immediate deportation of Harry Stonehill, an American arrested by National Bureau of Investigation.
- A. Carlos P. Garcia
 - C. Elpidio Quirino
 - B. Diosdado Macapagal
 - D. Manuel Roxas
11. The American promise of granting independence to the Filipinos after a transition period was contained in the following legislation except
- A. Jones law
 - C. Philippine Bill of 1902
 - B. Hare-Hawes Cutting Law
 - D. Tydings McDuffie Law
12. A law passed on May 1939 which punished Filipinos who allowed themselves to be used as fronts by alien businessmen and investors.
- A. Immigration law
 - C. Indigenous Protection Law
 - B. Economic Protection law
 - D. Anti-Dummy Law
13. Which law prohibited the display of all flags, banners, symbol and other paraphernalia used by the resistance against the US.
- A. Jones Law
 - C. Maura Law
 - B. Flag Law
 - D. Tydings McDuffie Law
14. The law providing greater protection for tenants by granting them freedom to choose the system of tenancy under which they would want to work.
- A. Land Tenancy Act
 - C. Agricultural Tenancy Act
 - B. Land Grant Act
 - D. Tenants Freedom Act

15. Agreement between the U.S. and the Philippines wherein the former would withdraw and surrender all rights and possessions, supervision, jurisdictions, control or sovereignty over the Philippines
- A. Treaty of General Relations C. Treaty of Withdrawal of Authority
B. Treaty of Sovereignty D. Treaty of Surrender
16. American Governor-General in whose administration saw the resignation of all Filipino cabinet members, thus precipitating the "cabinet crisis"
- A. Cameron Forbes C. Elwell Otis
B. Benjamin Harrison D. Leonard Wood
17. The Propaganda Movement was example of the Filipino's expression of Nationalism. However, most people of today doubt the nationalistic intention of the propaganda due to its non-advocacy of
- A. Assimilation
B. Reform in the administration
C. Generation of the Philippines from Spain
D. Annexation of the Philippines
18. Which of the following was the greatest naval battle in history during Japanese occupation of the Philippines?
- A. Battle for Leyte Gulf C. Battle of Samar
B. Battle of Surigao Gulf D. Battle of Cape Engaño
19. This law provided that American good of all kinds and in unlimited quantities could enter the Philippines free duty
- A. Payne- Aldrich Act C. Hare Hawes Cutting Act
B. Tydings McDuffie Law D. Jones Law
20. The conflict among the most powerful countries gave way to the start of Japanese period which caused damages to the Philippines. In your own opinion, how can you prevent conflicts with other people?
- A. Respect Individual differences
B. Believe that you are superior than others
C. Impose your principles in life to others
D. Avoid sensitive topics

21. Veneration of spirits was common among ancient Filipinos. Memories of dead relatives were kept alive through carved idols. This practice is called
- A. Cult of the dead
 - B. Mass of the dead
 - C. Nature of Worship
 - D. Divination
22. He promised to "make this country great again and ruled for about twenty years"
- A. Diosdado Macapagal
 - B. Ferdinand Marcos
 - C. Ramon Magsaysay
 - D. Carlos Garcia
23. In the "Death March" prisoners were forced to march from Bataan to this place
- A. Sta. Maria, Bulacan
 - B. Imus, Cavite
 - C. Lipa, Batangas
 - D. San Fernando, Pampanga
24. Who among the following became the chairman of the first Philippine Commission?
- A. William H. Taft
 - B. Dean Worcester
 - C. Jacob Shurman
 - D. Luke Wright
25. After the Filipino-American War, the Americans imposed restriction on Filipinos. The 10 year period was referred to as period of suppressed nationalism and one policy during this time was reconcentration. Which of the following refers to reconcentration?
- A. Formulation of Federal Party
 - B. Capture of rebel leaders
 - C. Restriction in membership in armed band
 - D. Settlement of Filipinos on one area

PART III - ENHANCING TEST TAKING SKILLS

1. The public announcer of the barangay who announces the promulgation of the new rules and regulations.
A. Trial by Ordeal C. Umalohokan
B. Judicial D. Succession
2. The practice of having surnames was started during Spanish regime through the order of
A. Governor Gen. Claveria C. Governor Gen. Dela Torre
B. Governor Gen. Polavieja D. Governor Gen. Juadrones
3. Which of the following sporadic uprising is considered as the longest revolt?
A. Bankaw C. Tamblot
B. Dagohoy D. Magalat
4. The form of government established by Aguinaldo was changed from dictatorial to
A. democratic C. republic
B. socialist D. revolutionary
5. The first Filipino who effectively repelled Spanish aggressor was
A. Humabon C. Lapu-Lapu
B. Sulayman D. Lakandula
6. Which of the following does not belong to the social transformation that took place as a result of Spanish colonization.
A. Adoption of fiesta to honor patron saints
B. Giving Spanish surname to Filipinos
C. Introduction of Gregorian Calendar
D. Introduction of crops and fruit trees- that came from Mexico
7. The Filipino is a product of a mixture of races and blending of Eastern and Western culture but he is basically a
A. Mestizo C. Indonesian
B. Chinese D. Malay

8. The oldest University in the Philippines founded by Dominicans in 1611 is
A. Ateneo de Manila C. San Ignacio
B. San Juan de Letran D. Santo Tomas
9. In 1565 Legaspi concluded a blood compact with the chief of Bohol named
A. Raja Tupas C. Sikatuna
B. Rajah Sulayman D. Lakandula
10. Sporadic uprisings started as early 1574 by Lakandula and Sulayman were followed by Magalat, Tamblot, Bankaw, Dagohoy and Diego Silang. These revolts were merely failure. In your own opinion how can you prevent sporadic revolts to become failure.
A. Initiative C. Respect for others
B. National Unity D. Hospitality
11. If a freemen married a dependent their only child would become
A. a freemen C. noble
B. dependent D. half free and half dependent
12. He is known for his "Philippine 2000" which is meant to make the Philippines as an economically developed country.
A. Ferdinand Marcos C. Diosdado Macapagal
B. Fidel Ramos D. Joseph Estrada
13. Which of the following example shows the heroism of the Filipinos during Japanese period in the Philippines.
A. Support for KALIBAPI C. Defending Bataan
B. Being a Makapili D. Cooperation with the kempetai
14. "The Man of the Masses", he promised to give the common tao justice
A. Manuel Roxas C. Ramon Magsaysay
B. Elpidio Quirino D. Cooperation with the kenpetais
15. For two centuries the chief source of official and individual income in the Philippine was the
A. Obias Pias C. Royal Company of the Philippines
B. Tobacco monopoly D. Galeon trade

General Education

16. First woman President who restored democracy in the Philippines as an economically developed country.
- A. Melchora Aquino C. Imelda Marcos
B. Corazon Aquino D. Gregoria de Jesus
17. The Spanish official who was empowered to remove, suspend or impose penalties upon erring officials
- A. ~~Visitador general~~ C. Gobernadorcillo
B. Governor-general D. Corregidor
18. In order to show that God always took the side of the innocent the early Filipinos resorted to trial
- A. by number of witness C. by verbal ability
B. by ordeal D. by jury
19. Who was instructed to prepare the groundwork for the gradual Filipinization of the government?
- A. Hare-Hawes C. Taft
B. Schurman D. Tydings McDuffie
20. The Cabinet member of the Quezon administration who was told by the President to stay and meet the Japanese while the latter would flee to Corregidor
- A. Benigno Aquino Sr. C. Jose P. Laurel
B. Jose Abad Santos D. Jorge Vargas
21. The meaning of "Kempetai"
- A. Military Police C. Japanese soldiers
B. Military Agent D. Guerillas
22. The American introduction of the democratic ideas made Filipinos aware of their rights as citizen of the Philippines. Which of the following rights shows abused of freedom?
- A. Right to vote during elections
B. Right to be elected to office
C. Right to express grievances through demonstrations even if traffic is disrupted
D. Right to own properties anywhere in the Philippines

23. What have been the negative effects of the Christian orientation of the Filipinos by the Spaniards in terms of their attitude towards life?
 - A. The Filipinos tend to be resigned to fate that befall them.
 - B. The Filipinos became spiritual.
 - C. The Filipinos became charitable.
 - D. The Filipinos became conscious of their moral responsibilities.
24. Barangay was the unit of government during pre-colonial period. Which of the following does not describe to the form of government in the colonial period?
 - A. Centralized government
 - B. Civil government
 - C. Puppet government
 - D. Democratic Republic government
25. The president famous for the "Filipino First Policy" and Austerity Program is
 - A. Ramon Magsaysay
 - B. Diosdado Macapagal
 - C. Carlos Garcia
 - D. Manuel Roxas

Basic Economics with Agrarian Reform

Prepared by:

Prof. Jerick C. Ferrer and Dr. Benjamin M. Domingil, Jr.

Competencies:

1. Familiarized the Philippine economic conditions with respect to taxation, land reform and cooperative as well as to the growth of gross national product.
2. Apply the fundamental economic principles to current economic conditions of the Philippines.

PART I - CONTENT UPDATE

I. ECONOMICS

- *Oikonomia*: Greek word meaning "management of the household"
- Is a Social Science concerned with how individuals and society choose to use its scarce resources to achieve maximum satisfaction of human material wants.
- Economics is the social science that studies the production, distribution, and consumption of goods and services

Why study economics?

1. To learn a new way of thinking : Cost and benefit thinking
 1. **Scarcity** is the natural limitation of resources that nature and previous generations have provided.
 2. **Opportunity cost** the cost or value of the next best alternative or choice
 - That which we forgo or give up, when we make a choice or a decision
 - "No such thing as free lunch"
 3. **Marginalism**: in weighting the cost and benefit of a decision, it is important to weigh only the cost and benefit that arises from the decision
2. To understand society
3. To understand global affairs
4. To become an informed voters

Tools in Economics: Theories and Models

Assumption: principle that economists use to simplify reality and make the world easier to understand One important assumption used in economics is

• "ceteris paribus" or "all other things being equal or constant" it helps us simplify reality in order to focus on the relationship that we are interested in.

Variable: a measure that can change from time to time and from observation to observation. e.g. price, income, inflation, GDP, GNP

Theory: a statement or set of related statements about cause and effect, action and reaction

Model: a formal statement of a theory. Usually a mathematical statement of a presumed relationship between two or more variables

DIVISION OF ECONOMICS

- **Microeconomics** - The branch of economics that examines the functioning of individual industries and the behavior of individual decision-making units, that is, business forms and households.
- **Macroeconomics** - The branch of economics that examines the economic behavior of aggregates – income, employment, output, and so on – in a national scale.

BASIC ECONOMIC QUESTIONS

- 1) **What to produce** – The economic system must decide what goods and services to produce with its land labor and capital.
- 2) **How to produce** - The economic system must decide how to produce each good or service – determining what mix of land, labor, and capital to use in production methods to employ.
- 3) **For whom to produce** – The economic system must decide which members of society will receive how much of the goods and services produced – the process of allocating income.

Economic Systems

1. **Market System:** This is also known as laissez-faire economy or free market economy. In this type of economy individuals and firms pursue their own self-interest without any central direction or regulation.
2. **Command Economy:** The basic economic questions are answered by a central government or planning agency. Through a combination of government ownership of enterprises and central planning the government dictates the directions of the economy.
3. **Mixed Economy:** A regulated market economy. The government plays a vital role in the economy while allowing the market mechanism to govern the economy.

Production; the process of making goods and services to satisfy human material wants and maximize profits

Factors of Production

1. Land includes all resources found on land, and in the sea.
2. Labor can be defined as any kind of work, either mental or manual in nature, which has the sole purpose of receiving rewards. According to Alfred Marshall, labor can be defined as any exertion that the mind or body undergoes, either partly or totally, with the view of earning some other good other than the pleasure derived from work itself.
3. Capital refers to the stock of goods made by the people to help them in the production of goods and services.
4. Entrepreneurship coordinates all the factors of production to produce goods and services.

How the Market Works

Market is a mechanism by which the buyers and sellers interact to determine both price and quantity of goods and services.

Demand and Supply and Price Determination

Demand is a market expression of the cumulative willingness and ability of household to buy different amount of product at different prices over a given period of time.

- Demand schedule is a table showing the different amount of a product that households will buy at all possible prices.

Price of Choc-nut	Quantities of Choc-nut Demanded
0	12
0.20	10
0.40	8
0.60	6
0.80	4
1.00	2

- Demand curve: a graphical representation of the demand schedule. It is a downward sloping curve.

- **Law of Demand:** Ceteris paribus, when price increases, quantity demanded increases, when price decreases, quantity demanded decreases. Relationship is inversely proportional or negative
- **Demand Function** is a mathematical expression of the law of demand.

$$Q_d = a - bP$$

Exemptions to the Law of Demand

- a. **Giffen goods:** a theoretical goods, when price increases demand also increases
- b. **Snob goods:** when a lot of people buy the good, its demand dies down.

Factors of Demand

1. Changes in income
2. Tastes and Preferences:
3. Price of substitute goods
4. Price of complimentary goods
5. Expectation of future income, wealth and prices
6. Population
7. Seasonality

Determinants of Demand

1. Price leads to a change in quantity demanded, causes a movement along the demand curve.
2. Non-price leads to a change in demand; causes a change in the whole demand schedule and demand curve.

Supply is a market expression of the cumulative willingness and ability of all firms to sell different amount of a product at different prices over a given period of time.

- **Supply schedule:** a table showing the different amount of a product that firm will sell at all possible prices over a given period of time.

Price of Choc-nut	Quantity Supplied of Choc-nut
0	0
0.20	2
0.40	4
0.60	6
0.80	8
1.00	10

- Supply curve is a graphical representation of the demand schedule. It is an upward sloping curve.

- Law of Supply: *ceteris paribus*, when price increases, quantity supply increases, when price decreases, quantity supply decreases.
- Supply function is mathematical expression of the law of supply. $Q_s = a + bP$

Factors of Supply

1. Cost of production
2. Price of related goods
3. No. of firms in the industry
4. Seasonality (weather condition)
5. Expectation of future price

Determinants of Supply

1. **Price** – leads to a change in quantity supplied, causes a movement along the supply curve.
2. **Non-price** – leads to a change in supply, causes a shift in the supply curve.

Market Equilibrium

- The objective of the market is to reach a state in which the quantity of goods that producers are willing and able to supply and the quantity of goods that buyers are willing and able to buy are equal at the same price.
- Equilibrium refers to a state in which at the one and only price quantity supplied is equal to quantity demanded.

Price of Choc-nut	Quantity Demanded	Quantity Supplied
0	12	0
0.20	10	2
0.40	8	4
0.60	6	6
0.80	4	8
1.00	2	10

Disequilibrium Condition

1. Excess Demand : $Q_d > Q_s$ = shortage

- When quantity demanded exceeds quantity supplied, price tends to rise. When price rises, quantity demanded increases and quantity supplied decreases until equilibrium is reached.

2. Excess Supply : $Q_d < Q_s$ = surplus / glut

- When quantity supplied exceeds quantity demanded price tends to fall. When price falls, quantity supplied will likely decrease and quantity demanded will likely increase until equilibrium is reached.

Price Elasticity

- Measures the responsiveness of demand and supply, whenever price changes.
- Price Elasticity of Demand: The ratio of the percentage change in quantity demanded to the percentage change in price.

$$E = \frac{\% \text{ change in } Q_d}{\% \text{ change in } P}$$

$$\% \text{ change in } Q_d = \frac{Q_{d2} - Q_{d1}}{\frac{Q_{d1} + Q_{d2}}{2}}$$

$$\% \text{ change in } P = \frac{P_2 - P_1}{\frac{P_1 + P_2}{2}}$$

Value of Elasticity Coefficient

Value	Type of Elasticity	Interpretation
1	Unitary	% change in Q_d = % change in P
> 1 (greater than 1)	Elastic	% change in Q_d > % change in P
< 1 (less than 1)	Inelastic	% change in Q_d < % change in P

Determinants of Price Elasticity of Demand

1. **nature of the good:** If the good is luxury, more elastic; if the good is necessity, inelastic or less elastic
2. **availability of substitutes:** More substitute, more elastic, less substitute, less elastic
3. **share in the consumer's income:** If the share is small, inelastic or less elastic; if the share is big, more elastic
4. **adjustment time available:** If the adjustment time is short, inelastic or less elastic; if the adjustment time is long, more elastic

Market Regulation: Price Control

A. Reasons for Price Control

1. The usual reason for the government to control the price of goods and services is "fairness".
2. Emergency situations.

B. Types of Price control

1. **Price Ceiling:** people think that the market determined price is very high and the sellers are greedily amassing huge profit at their expense, thus, price is always set below the market determined (equilibrium) price.
2. **Price Floor:** sellers think that the prevailing market determined price is too low for them to recover their production cost or earn a profit. Price is usually set at any price above the market price (equilibrium price).

Different Market Structures

1. **Perfect Competition:** there are many small sellers in the market, thus, nobody controls the price. Sellers are said to be price takers.
2. **Monopoly:** there is only one seller in the market; price is determined by the seller.
3. **Oligopoly** is a market where there are few big sellers colluding with each other.
4. **Monopolistic competition:** involves a few sellers supplying the market with different types of brands of the same product and capturing a specific group of buyers for a particular brand of product.
5. **Monopsony** is the reverse of a monopoly. There is only one buyer for a particular good or service.

Macroeconomic Studies

Circular Flow Diagram of Economic Activities: a visual model of how the economy works as a whole

Measuring Growth: National Income Account

- **Gross National Product (GNP)**
 - The total market value of all the goods and services produced by a nation in a given period
- **Gross Domestic Product (GDP)**
 - Measures the total market value of all the goods and services produced in the country

Approaches to Measuring GDP

1. **Expenditures approach** – adding up all the value of all the final goods and services spent during a given period.
 - Private consumption (C)
 - Government consumption (G)
 - Gross Private Investment (I)
 - Net Export (x-m)
 - $C+I+G+(x-m)$
2. **Income approach** – measures the total income earned by the factors of production.
3. **Production approach/ Value Added approach** – adding up the contribution of the 3 major sectors of the economy; agriculture, industry, service

Macroeconomic Concerns

- **Business Cycle:** The cycle of short-term ups and downs of in the economy
- **Recession:** a period during which aggregate output declines for two consecutive quarter
- **Depression:** a prolonged and deep recession
- **Inflation** is a sustained and general increase in prices in all or nearly all the markets in the economy
- **Deflation:** a sustained and general decrease in prices in all of nearly all the markets in the economy

Types of Inflation

1. Demand-pull inflation – state of excess aggregate demand
2. Cost push inflation – caused by a significant and continued increase in some cost of production (labor, raw materials, profit)

Effects of Inflation

1. Decrease in the value of money (Purchasing Power of the Peso)
2. Inflation loser
 - Fixed salary worker and retirees living on pension
 - Creditors and savers
3. Inflation gainers
 - Speculators
 - People with flexible income
 - Debtors

Government Role in Combating Inflation

- **Fiscal Policy** – is the manipulation of government spending and imposition of taxes.
- a. *Expansionary fiscal policy* – this is commonly known as “pump priming” the economy characterized by a decrease in tax rate and increase in government spending to spur growth and employment.
 - b. *Contractionary fiscal policy* causes an increase in taxes and decrease in government spending to combat inflationary pressures in the economy.
- **Monetary Policy** – manipulation of savings and investment of the financial sector to achieve the twin objectives of the macroeconomy
- a. *Easy money policy* – increase in the supply of money (MS) in the economy to spur growth and increase economic activity
 - b. *Tight money policy* - decrease in the supply of money (MS) in the economy to fight inflationary pressure

II. TAXATION

Meaning

- It is an inherent power of the state to impose and collect revenues to defray the necessary expenses of the government.
- It is compulsory contribution imposed by a public authority irrespective of the amount of services rendered to the payer in return.
- It is compulsory level on private individuals and organization by the government to raise revenue to finance expenditure on public goods and services.

PURPOSES OF TAXATION

- collect revenue for the government
- redistribute income
- correct an adverse balance of payments
- check consumptions of goods which are considered undesirable
- protect local/infant industries
- influence population trends of trade
- reallocate resources
- create a sense of identity

Sources and Origin of Taxation

- The Constitution
- Statutes or Presidential Decrees
- Bureau of Internal Revenue regulations
- Judicial Decisions
- Provincial, Municipal and Barrio Ordinances
- Observance of International Agreement
- Administrative Ruling and Opinions

Object of Taxation

- Persons: whether natural or juridical
- Property of any kind
- Transactions, interests and privileges

Classification of Tax System

- Progressive Income Tax – the Higher the income the higher the tax rate.
- Proportional Tax – The tax rate is constant and unaffected by the level of income.
- Regressive Tax – The higher the income the lower the tax rate.

Classification of Taxes

As to who bears the burden

- Direct Taxes
- Indirect Taxes

Types of Taxes

- Direct Taxes
- The burden cannot be shifted to the third party.
- Direct taxes are based on income and wealth.
- In most cases, direct taxes are progressive in nature.
- Direct taxes are compulsory in nature.
- Examples: income tax, residence tax, real state, immigration tax, estate/gift/inheritance tax.
- Indirect Taxes
- The tax burden can be shifted to the third party.
- Indirect taxes are based on expenditure and consumption.
- All indirect taxes are regressive in nature.
- Indirect taxes are optional in the sense that they can be avoided.
- Examples: sales tax, import tax, VAT/EVAT

Characteristics of a Sound Tax System

- **Efficiency** – must generate revenue greater than the amount of money the government must spend to collect taxes.
- **Equity** – individual and groups belonging to the same income bracket must be taxed equally while those belonging to different income groups must be taxed differently.
- **Convenience** measure to set up measures and procedures that will make it more convenient for taxpayers to pay.
- **Stability** – tax system must not be too often or it will encourage tax payers to withhold tax payment until a more preferred system is put in place.

III. AGRARIAN REFORM

Republic Act No. 6657 – The Comprehensive Agrarian Reform Law of 1988 which was signed into law by Pres. Corazon Aquino

AGRARIAN REFORM DEFINED

The redistribution of lands, regardless of crops or fruits produced to farmers and regular farm workers who are landless, irrespective of tenurial arrangement to include the totality of factors and support services designed to lift their economic status of the beneficiaries and all other arrangements alternative to physical redistribution of lands, such as production, profit sharing, labor administration and the distribution of shares of stocks, which will allow beneficiaries to receive a just share of the fruits of the land they work.

PRINCIPLES OF AGRARIAN REFORM

The policy of the state to pursue a comprehensive Agrarian Reform Program (CARP) to:

- To promote social justice
- To move the nation toward sound rural development and industrialization
- To establish owner-cultivatorship of economic sized farms as basis of Philippine agriculture

COVERAGE OF CARP

- All alienable and disposable lands of the public domain devoted to or suitable for agriculture
- All lands of the public domain in excess of the specific limits as determined by the Congress
- All other lands owned by the governments devoted to or suitable for agriculture
- All public lands devoted to or suitable for agriculture regardless of the agricultural products raised or can be raised

RETENTION LIMITS

- Five hectares for land owners
- Three hectares to be awarded to each child of the landowner subject to the following qualification:
 - At least 15 years old
 - Actually tilling the soil or directly managing the farm

BENEFICIARIES

- Agricultural lessees and share tenants
- Regular farm workers
- Seasonal farm workers
- Other farm workers
- Actual tillers or occupants of public lands
- Collectives or cooperatives
- Other directly working on the land

Republic Act 9700: CARP Extension with Reform Law or otherwise known as CARPER Law was signed on August 7, 2009 to extend the implementation of the CARP, which ended upon the expiration of R.A. 6657 or the CARL on 2008.

IV. COOPERATIVES

- A free association of persons voluntarily joined together
- With common bond of interest
- Legally constituted
- Purpose of conducting an economic enterprise
- Owned, controlled and administered democratically
- Making equitable contributions to the capital required
- Accepting a fair share of the risks and benefits
- Organized in accordance with generally accepted principles

NEW COOPERATIVE LAWS

- Cooperative Code of the Philippines (RA 6938)
- Cooperative Development Authority (RA 6939)
- Executive Order 95 and 96 issued by President Fidel Valdez Ramos.

UNIVERSAL PRINCIPLES OF COOPERATIVES

- Open and Voluntary Membership
- Democratic Control
- Limited Interest on Capital
- Education/Training Funds
- Continuing Membership
- Cooperation Among Cooperatives

Typologies of Cooperatives

According to Level of Cooperatives

- Primary – members of which are natural
- Secondary – members of which are primaries
- Tertiary – members of which are secondary upward to one or more apex organization

General Education

According to Services Rendered

- Credits
- Consumer
- Producers
- Marketing Cooperative
- Service
- Multipurpose

According to Scope of Membership

- Institutional – Members are employees of a specific institution or corporation.
- Associational – Members are those who have their own enterprise and belong to specific sector or organization.
- Community-Level – Members are based on a defined geographical area.

Dr. Ben

PART II - ANALYZING TEST ITEMS

1. What does the maxim "*There is no such thing as free lunch*." mean?
- A. You have to pay every time you have lunch.
 - B. All goods and services have a price.
 - C. Nobody can have a free lunch anywhere.
 - D. Every action and decision has a price that we need to pay.

Option A, B, C are very literal interpretations. Option D is the correct answer as in economics because of scarcity every decisions, choices and actions we make all entails either a price that we need to pay or giving something in return.

2. Suppose while walking you found a P100. If you choose to use the P100 to watch a movie, what is your opportunity cost for watching the movie?
- A. Nothing, you just found the money anyway.
 - B. P100, because you could have used the P100 to buy other things.
 - C. P100 plus the value of the time you spent watching the movie.
 - D. Nothing if you really like the movie that you watched.

Option A, B and D, assumes that the money is the only thing that has value which is a common thinking of many. Option C, is the correct answer as it recognizes a generally accepted principle in economics that the real cost of everything includes what we have given up to get it or its opportunity cost. The P100 is not the only thing that has value the time you spent in watching the movie could have been spent on another alternative productive activity.

3. What is the foremost effect of scarcity on how people live?
- A. It makes people very prudent in their spending.
 - B. Greed and selfishness are values that some people adhere to.
 - C. People face tradeoffs in everything they do and decide.
 - D. Environmental protection has become one of the leading issues today.

Option A, is very limited as it assumes money is the only thing that is scarce. Option B, the values that people adhere to is not only influenced by Economics but by other things like religion, culture, politics and so on. Option D, may be very timely but is only one aspect of the concept of scarcity. Option C, is the answer as scarcity created a condition in which people will have to face tradeoff- that is give up something in order to gain another- every time they decide or make choices in life. Environment issues, greed and selfishness are all merely aspects or dimensions of this economic fact.

4. Economics is a science because
 - A. It studies material objects only.
 - B. It's a discipline under the Social Sciences.
 - C. It applies and uses scientific methodology.
 - D. There is a Nobel Prize in Economics.
5. What does the assumption "ceteris paribus" mean?
 - A. All other variables are kept constant except the one being measured
 - B. Some variables are not included in the study.
 - C. We assume a perfectly competitive market.
 - D. All variables are kept constant.
6. What is a market?
 - A. a place where people buy and sell
 - B. a group of buyers and sellers of a particular good or service
 - C. a mechanism by which exchanges takes place
 - D. both b and c
7. What is demand?
 - A. It is a market expression of the cumulative willingness of all household to buy different amount of goods and service at different prices.
 - B. It is the market expression of the cumulative ability of all household to buy different amount of goods and services at different prices.
 - C. It is the market expression of the cumulative willingness and ability of all household to buy different amount of goods and services at different prices.
 - D. It is the market expression of the cumulative willingness and ability of all household to buy different amount goods and services at different prices on a given point in time.

8. Which of the following statements is TRUE?
- A. Price is variable while qty. demanded and qty. supplied are constant.
 - B. Price is constant while qty. demanded and qty. supplied are variables.
 - C. Price is a dependent variable and qty. demand and supply are independent variables.
 - D. Price is an independent variable and qty. demand and supply are dependent variables.
9. What best describes the demand curve?
- A. is downward sloping indicating a positive relationship between price and qty. demanded.
 - B. is downward sloping indicating a negative relationship between price and qty. demanded.
 - C. is upward sloping indicating a positive relationship between price and qty. demanded.
 - D. is upward sloping indicating a negative relationship between price and qty. demanded.
10. Which of the following are complementary goods?
- A. Coffee and tea
 - C. Pencil and ballpen
 - B. cellphone and sim card
 - D. jeepneys and buses
11. What is the relationship between price and quantity supplied?
- A. Proportional
 - C. Parallel
 - B. negative
 - D. Positive
12. A new tax on imported milk was imposed by the government which resulted in the decrease of the supply of this product. What factor of supply is described in this situation?
- A. cost of production
 - C. seasonality
 - B. expectation of future price
 - D. price of related product
13. If the government succumbs to the pressure of militant groups to lower the price of oil by setting a ceiling price what would likely happen?
- A. There will be a surplus of oil in the country.
 - B. There will be a shortage of oil in the country and people will have to fall in line to buy.

- C. The people will benefit more from the lowering of the price of oil.
D. There will be no effect at all in the market for oil as the supply of oil is price inelastic.
14. A change in quantity demanded implies that
A. There is a shift in the demand curve.
B. There is a change in the slope of the demand curve.
C. There is a movement along the existing demand curve.
D. There will be an upward sloping demand curve.
15. What would likely happen if the minimum wage is increased without any corresponding rise in the level of productivity?
A. It increase the welfare of the workers as they will have more money to take home to their family.
B. It will increase unemployment as many companies will resort to lay-offs or even shut down their operations.
C. The government will have to increase also the wage of government employees.
D. Many OFW will return to the country to work.
16. What is the likely effect of the government's policy on illegal drugs to jail the pusher and save the user?
A. The supply of drugs will decrease as the pushers (suppliers) are in jail.
B. The demand for drugs will decrease as the shortage of illegal drug will make it very expensive.
C. The policemen will have a hard time identifying whether someone is only a user or a pusher.
D. The demand for illegal drugs will remain the same as it is price inelastic and will likely increase drug related crime like robbery, theft, and others.
17. This happens when the government spends more than it earns from revenue generating activities.
A. There is a budget cut.
B. There is a budget deficit.
C. There is a budget surplus.
D. none of the above

18. What is the name of the global financial services firm that went bankrupt on September 15, 2008 and is considered the biggest bankruptcy in U.S. history?
 - A. Lehman Brothers
 - B. American Investment Group
 - C. J.P. Morgan and Chase
 - D. Bank of America
19. Which is NOT a function of money?
 - A. unit of account
 - B. store of value
 - C. ~~medium of exchange~~
 - D. tool against inflation
20. A period of general economic decline typically defined as a decline in GDP for two or more consecutive quarters is called
 - A. Depression
 - B. Recession
 - C. Inflation
 - D. Stagnation
21. A process or means by which the sovereign, through the law-making body, raise revenue to defray the necessary expenses of the government.
 - A. Tax
 - B. Penalty
 - C. Assessment
 - D. License
22. The term is used to describe duties payable on goods, whether imported or exported.
 - A. Subsidy
 - B. Revenue
 - C. Tariff
 - D. Assessment
23. The use by the taxpayer of illegal or fraudulent ~~mean to defeat or lessen the~~ payment of a tax.
 - A. Tax evasion
 - B. Tax deduction
 - C. Tax avoidance
 - D. Tax credit
24. The exploitation by the tax payer of legally permissible alternative tax or methods of assessing taxable property or income.
 - A. Tax evasion
 - B. Tax deduction
 - C. tax avoidance
 - D. tax credit
25. A kind of tax on the right of the deceased person to transmit his estate to his lawful heirs or beneficiaries.
 - A. Estate Tax
 - B. Inheritance Tax
 - C. Privilege Tax
 - D. Transfer Tax

PART III - ENHANCING TEST TAKING SKILLS

1. The policy of the state to pursue a Comprehensive Agrarian Reform Program is clearly stated in its policy to
- promote human rights.
 - establish owner-cultivatorship of economic size farms.
 - move the nation toward sound urban development and industrialization.
 - Free the tenant farmers from the bondage of the soil.

Option A forms part of the Universal Declaration of Human Rights embodied in the U.N. charter. Option C is a process related to industrialization of urban centers as a vehicle towards development and progress and completely a departure from agrarian reform which usually deals with rural development. Option D is an incomplete answer since it describes only land reform and not agrarian reform. Option B is the most logical choice as it embraces the state policy on agrarian reform.

2. What does this principle of equity in taxation provide?
- Taxpayers should be taxed according to their professions and status in life.
 - Taxpayers regardless of income should pay the same amount of tax.
 - Taxpayers that are similarly situated in life should be taxed similarly.
 - Taxpayers who do not have permanent jobs should pay less tax.

Option B, is not equitable as high income people will pay the same amount as those with low income. Options C and D, gives unclear and not definitive criteria for taxation situation in life and can mean many things which might not be applicable to taxation which clearly involves monetary aspects. The status of employment on the other hand does not reflect the level of income of the taxpayers; some non-permanent workers earn more than permanent ones. Option A is the clear answer as the kind of profession and status in life determines the level of income of the taxpayers that should be the subject of taxation.

3. Some Congressmen want to reduce cigarette smoking by increasing the so called "sin tax". It will probably take a large increase in the tax to make a difference because
- demand for cigarettes is inelastic.
 - demand for cigarettes is elastic.
 - supply of cigarettes is inelastic.
 - supply of cigarettes is elastic.

Sin taxes are tax levied on goods and services that are seen as vices like cigarettes and alcoholic beverages. Since most of products have an addicting effect it is generally accepted that even if the price of this product increases people who already started the habit of consuming this product will still consume almost the same amount of it. Thus, demand for this product is said to be less elastic or inelastic. Option C, is the correct answer. Options C and D pertain to supply and given the above situation it will not affect much the suppliers.

4. The retention limit to be awarded to each child of the landowner is
- three hectares
 - four hectares
 - five hectares
 - six hectares
5. The type of cooperative which promotes thrift among members and creates funds in order to grant loans for productive and provident purposes is called.
- Credit cooperative
 - Producer cooperative
 - Service cooperative
 - Consumers cooperative
6. Which of the following describes marketing cooperatives?
- They distribute products of members to both members and non-members.
 - They coordinate with other cooperatives in marketing the products of members.
 - They undertake joint production of goods whether agricultural or industrial.
 - They engage in the supply of production inputs to members and market their products.

General Education

7. The Comprehensive Agrarian Reform Law of 1988 stipulates that the retention limits of landowner is
- A. 5 hectares
 - B. 10 hectares
 - C. 8 hectares
 - D. 7 hectares
8. The Comprehensive Agrarian Reform Law of 1988 is also known as
- A. Republic Act No. 6662
 - B. Republic Act No. 6673
 - C. Republic Act No. 6657
 - D. Republic Act No. 6654
9. Taxable income is derived from
- A. Net income less additional exemption
 - B. Gross compensation income less withholding tax
 - C. Gross income less total exemptions
 - D. Gross income less personal exemptions
10. It is an economic union of nations that constitute a single market and uses a single currency called Euro;
- A. ASEAN
 - B. WTO
 - C. European Union
 - D. OPEC
11. These cooperatives provide vital service to the general public such as transportation, health, and housing service.
- A. consumers cooperatives
 - B. service cooperatives
 - C. credit cooperatives
 - D. Production cooperatives
12. Of the following, the factor that would cause an increase (shift to the right) in supply is
- A. Improved technology
 - B. Lower labor productivity
 - C. Increased price of substitutes
 - D. Increase demand
13. The main reason why OPEC has been unable to keep oil prices high is that
- A. Demand tends to become more elastic in the long run.
 - B. Supply tends to be more elastic in the long run.
 - C. Government regulations have prevented it.
 - D. Consumer boycott has driven the price down.

14. The "market basket" on which the consumer price index is based is composed of
- raw materials purchased by firms.
 - total current production.
 - products commonly purchased by typical consumers.
 - none of the above
15. What is the likely reason why the Philippine GNP is always bigger than its GDP?
- Foreigners are producing more in the Philippines, than Filipino OFWs are producing abroad.
 - Filipino OFW are producing more abroad than foreigners are producing in the Philippines.
 - Salaries of workers abroad are bigger than in the Philippines.
 - The government is not doing enough to achieve growth in the country.
16. Because of the "substitution effect" on demand, when the price of coffee increases
- People will use less cream and sugar.
 - People will be able to afford less coffee because their buying power has decreased.
 - People will drink tea instead.
 - People will use less costly coffee beans and other ingredients.
17. When price rises at an extraordinary high rate, it is called
- Inflation
 - Deflation
 - Hyperinflation
 - disinflation
18. Monopoly results because of
- Barriers to entry into the industry
 - Greed by the seller
 - Lack of interest by potential competitors
 - All of the above
19. What government agency is tasked to manage the monetary policy of the country?
- Department of Finance
 - Department of Budget and Management
 - National Economic and Development Authority
 - Bangko Sentral ng Pilipinas

20. Economics deals with the utilization of resources. How do we describe these resources?
- A. Abundant
 - B. Natural
 - C. Human
 - D. Scarce
21. The power of taxation is primarily and exclusively exercised by
- A. Congress
 - B. President
 - C. Bureau of Customs
 - D. Senate
22. It is a uniform tax imposed on sale of goods or service as they pass along the production and distribution chain.
- A. Exercise tax
 - B. Value-added tax
 - C. Inheritance tax
 - D. Tariff tax
23. A public market for the trading of company shares and other derivatives is called
- A. Money market
 - B. Portfolio market
 - C. Stock market
 - D. Foreign exchange market
24. Which law extended the implementation of the CARP for five more years?
- A. RA 6662
 - B. RA 6654
 - C. RA 9700
 - D. RA 9850
25. Which law created the Cooperative Development Authority?
- A. R.A. 6993
 - B. R.A. 6938
 - C. R.A. 6939
 - D. R.A. 6983

Society and Culture with Family Planning

Prepared by:

Prof. Minda I. Cabilao Valencia and Dr. Diony V. Varela

Competencies:

1. Comprehend the basic concepts, theories, and perspectives which relate to society, culture, and family planning.
2. Recognize cultural elements that are distinctly Filipino.

PART I - CONTENT UPDATE

I. Sociological Perspective and Methods

A. Definition of Sociology

anthropology

Sociology is the systematic study of human societies, particularly modern, industrialized systems (Macdonis, 2004). At the heart of sociology is a distinctive point of view known as the sociological perspective. The perspective incorporates the use of scientific principles and procedures in the study of patterns of social behavior and on how groups influence individuals and vice versa.

The sociological perspective also involves the use of what C. Wright Mills (1959) called the sociological imagination. For Mills, the sociological imagination is a "quality of mind – a perspective that enables us to see ourselves and the society around us from a distinct sociological point of view." By this Mills meant that the sociological imagination allows people to comprehend the relation between biography and history. It is an awareness of how events in personal life are often shaped by social forces.

Benefits of the sociological perspective

- It challenges familiarity and common sense beliefs.
- It broadens personal views and helps people appreciate their opportunities and limitations.
- It empowers people and encourages active participation in society.
- It recognizes social diversity.

Sociology's origin can be situated in the context of changes that created the modern world. The scientific, economic, and political transformations during the eighteenth and nineteenth centuries focused people's attention on how society and institution operate.

C. Early Sociologists

Auguste Comte (1798-1857)

- father of sociology; coined the term sociology: "socius" (partner), "logos (study); positivism

Karl Marx (1818-1883)

- class conflict/ struggle

Herbert Spencer (1820-1903)

- social darwinism/evolution

Emile Durkheim (1858-1917)

- group forces; social integration

Max Weber (1864-1920)

- bureaucracy

D. Theoretical Paradigms

1. Structural-functionalism – a macro-oriented paradigm that views society as a complex system whose parts work together to promote integration and social stability. It emphasizes the elements of cohesion, shared values, and equilibrium as bases of social order. The proponents of this paradigm are Auguste Comte, Herbert Spencer, Emile Durkheim, and Robert Merton.

2. **Social Conflict** – a macro-oriented paradigm that views society as an arena of inequality and conflict. The society is shaped by the interest of the powerful and dominant groups and the antagonism of opposing classes and groups struggling over the distribution of scarce resources. Its main precursors are W.E.B. du Bois and Karl Marx.
3. **Symbolic-Interactionism** – a micro-oriented paradigm that views society as the product of everyday social interactions. It emphasizes that human behavior is influenced by definition and meanings that are created and maintained through symbolic interaction to each other. This framework has roots in the works of Max Weber.

E. Sociological Investigation

A sociologist investigates society by asking distinct questions and attempting to find the answers by systematic research.

1. Types of Research

- a. **Basic research** - deals with the development of empirically-based theory.
- b. **Applied research** – deals with evaluation and action.

2. Methods of Research

- a. **Participant-observation or fieldwork** – researcher both observes and participates in the activities of the community or people being studied. The researcher also spends lengthy periods of time in the setting. While fieldwork generates more in-depth information than other methods, it can only be used to study relatively small groups or community.
- b. **Survey research** – researcher sends or gives questionnaires in interviews to a group of people or samples of a larger population. It allows the collection of data on large numbers of respondents.

The data may, however, be superficial.

- c. Documentary research – the method is applicable for acquiring historical data. The researcher is dependent, nonetheless, on the availability of sources.
- d. Experiments – researcher attempts to test a hypothesis under highly controlled conditions. While this method is easy to replicate, there are aspects of social life which cannot be studied in a laboratory.

II. Culture

A. Definition

The classic definition of culture is provided by Edward Tylor who described it as "that complex whole which includes knowledge, belief, art, morals, law, custom, and any other capabilities and habits acquired by man as a member of society" (Kottak, 2011). Enculturation is the process of learning a culture.

B. Components

- 1. Material Culture – refers to the material objects that people create and use.
- 2. Non-Material Culture – refers to the intangible world of ideas that people create.
 - a. Social Norms – rules and expectations that define what is acceptable in a social situation.
 - 1) Folkways are customary rules of conduct.
 - 2) Mores refer to special folkways which involve moral or ethical values.

- 3) Laws are formalized social norms enacted by people who are vested with political and legal authority.
- b. Values include a person's ideas about worth and desirability.
- c. Beliefs are a person's conception or ideas about the surrounding world.

C. Characteristics

1. Culture is learned.
2. Culture is shared.
3. Culture is dynamic.
4. Culture is adaptive.
5. Culture is integrated.

D. Issues in Understanding Culture

1. Language is a system of symbols that allows people to communicate with one another and ensures the continuity of culture.
2. Cultural Diversity (Macdonis, 2004)
 - a. High Culture – cultural patterns that distinguish a society's elite
 - b. Popular Culture - cultural patterns that are widespread among a society's population
 - c. Subculture – cultural patterns that set apart some segments of a society's population
 - d. Multiculturalism – a program which recognizes the cultural diversity and the equality of all cultural traditions
 - e. Counterculture – cultural patterns that strongly oppose those widely accepted within a society

3. Cultural Change

- a. Cultural Lag - time lag between a change or innovation and accomplishment of the social and cultural adjustments
- b. Culture changes by invention, innovation, and diffusion. An invention is the development of something totally new, while an innovation is an improvement on something that already exists. Diffusion is the spread of cultural traits from one to another.

4. Cultural Relativism, Ethnocentrism, and Xenocentrism (Kottak, 2011)

- a. Cultural Relativism - evaluates a culture by its own standards.
- b. Ethnocentrism - evaluates another culture by the standards of one's own culture.
- c. Xenocentrism - refers to preference for foreign things.

E. Filipino Society and Culture

1. Development of Filipino culture

- a. Asian
- b. Western

2. Basic Element of Filipino Society and Culture

Kinship group is a system of social relations based on blood, and marriage or affinity.

3. Filipino View of the World (Panopio and Rolda, 1992)

- Filipinos believe that the universe consists of the upper world (dwelling place of gods and angels) and lower world (dwelling place of humans and environmental spirits).

4. Other Characteristics of Filipino Culture

Smooth interpersonal relations (SIR), hiya (shame), utang na loob (reciprocity), bahala na, respect for elders, hospitality, personalistic-cyclic time orientation, close family ties, amor propio

III. Society and Social Structure

A. **Society** – refers to interacting individuals sharing a common culture.

Types of Society

- a. Non-industrial: hunting and gathering, horticultural, pastoral, and agricultural societies
- b. Industrial and post-industrial societies

B. **Social Structure** – refers to patterns of interaction and networks of relationship in a society. Its elements are as follows:

1. **Status** – social position of an individual:
 - Ascribed status – social position assigned to the individual
 - Achieved status – social position which an individual assumes and reflects personal ability and effort
 - Master status – shows a person's social identity and shapes a person's life
2. **Role** – behavior expected of someone who occupies a particular status
 - Role conflict – conflict between the roles associated with two or more statuses
 - Role strain – tension between roles associated with a single status
3. **Institution** – cluster of norms which perform certain social functions
4. **Group** is composed of two or more persons who share a common pattern of social interaction. Generally, a social group regardless of its nature has the following characteristics:
 - permanence beyond meetings
 - means for identifying and controlling members
 - mechanism for recruiting new members
 - goals or purposes
 - statuses and roles for members

- Types of group
 - 1) In-group vs Out-group
 - 2) Formal vs. Informal group
 - 3) Primary vs Secondary groups
 - 4) Gemeinschaft vs Gesellschaft

relation in society

IV. Socialization

Socialization is a process by which individuals develop their potential and acquire culture.

A. Understanding Socialization

1. Nature vs Nurture debate
2. Sigmund Freud's Model of Personality: id, ego and super ego

B. Socialization Agents

- Family
- School
- Peer groups
- Mass media

C. Socialization and the Life Course

1. Childhood
2. Adolescence
3. Adulthood
4. Old Age

D. Resocialization and Total Institution

Resocialization - refers to radically changing an individual's personality by controlling the environment. (Macdonis, 2004)

Total Institution - a setting in which people are isolated from the rest of society and manipulated by an administrative staff. (Ibid)

V. Deviance and Social Control

A. **Deviance** - norm violations which range from simple breaches of etiquette to serious violence

B. **Social Control** - attempts by society to regulate or direct people's attitudes and behavior

C. Explanation of Deviance

1. Cesare Lombroso's biological research

2. Structural functional paradigm

a. Emile Durkheim - deviance performs certain functions in the society.

b. Robert Merton's Anomie Theory - the extent and kind of deviance depend on whether a society provides the means to achieve cultural goals.

c. Richard Cloward's and Lloyd Ohlin's Deviant Subcultures - the greater motivation to violate norms will result in different patterns of deviance depending on the availability of illegitimate opportunities in the neighborhood.

3. Symbolic Interactionism

- a. Labeling Theory – deviance depends on people's reaction to a person's behavior, not in the behavior itself.
- b. Edwin Sutherland's Differential Association Theory - deviance depends on the individual's frequency and intensity of interaction with others.

4. Social conflict

Based on Karl Marx ideas, deviance reflects social inequality. Laws and social norms reflect the interests of powerful members of society. Social injury caused by the latter is less likely to be branded as criminals or deviants.

VI. Social Stratification

Social Stratification – hierarchical system that the society uses to divide people into levels based on wealth, power, and prestige. It exists in all societies and persists across generations although it may differ in form or system of operation.

1. Types of Stratification System

- a. Caste system is based on ascription or birth and allows little (or no) social mobility. Ex.: Indian system of castes is composed of four categories: Brahmin, Kshatriya, Vaishya, and Shudra. Below these castes are the Harijans or outcasts.
- b. Class system is based on the system of meritocracy and allows social mobility based on individual achievement. Ex.: industrial and post industrial societies

2. Factors that determine interaction in a stratification system

- A. Class consciousness

- B. Class conflict
- C. Social mobility
- D. Social distance

3. Theories of Social Stratification

- a. Davis-Moore thesis – social stratification is universal and important for the operation of a society.
- b. Karl Marx – social stratification causes social conflict.
- c. Max Weber – social stratification takes the form of a multidimensional hierarchy rather than distinct classes.

VII. Institutions

Institution – pattern of norms associated with major societal goal, value, or need

- 1. Family is considered the basic unit of society.
- 2. Economic institution is associated with the organization, distribution and utilization of resources in the society.
- 3. Political institution deals with allocating and rationalizing the use of power for the common good.
- 4. Religious institution involves beliefs and practices relative to sacred things.
- 5. Educational institution is tasked to provide members of society with important knowledge, including job skills and norms and values.

VIII. Contemporary Issues

A. Population

- 1. Demography – study of human population

2. Population growth is affected by three processes (Macionis, 2004)
 - Fertility – incidence of childbearing in a country's population.
 - Mortality – incidence of death in a country's population.
 - Migration – movement of people into and out of a specified territory.

B. Family Planning

1. Definition

Family planning is a national mandated priority public health program to attain the country's national health development. It is a health intervention program and an important tool for the improvement of the health and welfare of mothers, children, and other members of the family. The program also provides information and services for couples of reproductive age to plan their family according to their beliefs and circumstances through legally and medically acceptable family planning methods.

2. Basic Principles

- a. Responsible Parenthood: each family has the right and duty to determine the desired number of children they might have and when they might have them. Beyond responsible parenthood is responsible parenting which is the proper upbringing and education of children so that they grow up to be upright, productive, and civic-minded citizens.
- b. Respect for Life: the 1987 Constitution states that the government protects the sanctity of life. Abortion is not a family planning method.
- c. Birth Spacing: refers to interval between pregnancies, which is ideally three (3) years. It enables women to recover their health,

improve their potential to be more productive, and to realize their personal aspirations and allows more time to care for children and spouse/husband.

- d. Informed choice upholds and ensures the rights of couples to determine the number and spacing of their children according to their life's aspirations and reminds couples that planning the size of their families has a direct bearing on the quality of their children's and their own lives.

3. Intended Audience

Men and women of reproductive age (15-49) years old), including adolescents

4. Methods of Family Planning

a. **Natural Family Planning (NFP)** - refers to methods used to plan or prevent pregnancy, based on identifying the woman's fertile days. For all natural methods, avoiding unprotected intercourse during the fertile days is what prevents pregnancy. Natural methods are also known as fertility awareness-based methods.

- 1) **Two-day method** - relies on a simple algorithm to help women identify when they are fertile, based on the presence or absence of cervical secretions.
- 2) **Symptoms-based** - the three primary signs of a woman's fertility are her basal body temperature, her cervical mucus, and her cervical position. Computerized fertility monitors may track basal body temperatures, hormonal levels in urine, or changes in electrical resistance of a woman's saliva. From these symptoms, a woman can learn to assess her fertility.
- 3) **Calendar-based** - based on a record of the length of previous menstrual cycles.

Rhythm method – the act of abstaining from sexual intercourse on the days of the woman's menstrual cycle when she could become pregnant

Standard days method - to avoid pregnancy, a woman with cycles between 26 and 32 days long should not have unprotected intercourse on cycle days 9 through 20. A color-coded string of beads, called Cycle Beads™, are used to help women keep track of the days of their menstrual cycle and see which days they are likely to get pregnant.

- 4) Lactational amenorrhea method (LAM) - method of avoiding pregnancy based on the natural postpartum infertility that occurs when a woman is amenorrheic and fully breastfeeding. A strict version of LAM is known as ecological breastfeeding.
- 5) Withdrawal (Coitus Interruptus) - a contraceptive method that prevents fertilization by preventing the contact between the sperm and egg.

Advantages of Natural Family Planning Methods:

- Increased self-awareness and knowledge of their fertility. Consequently, a woman may track her reproductive health in general, and aid in the diagnosis of gynecological health and/or fertility problems.
- Increased reliance on their own resources rather than a family planning program or other sources of contraception
- Increased independence from costly or distant medical services
- Freedom from artificial substances and the side effects or potential medical risks of other methods
- Reduced re-supply costs associated with commodity-based methods

- Enhanced communication and intimacy with partner
- Ability to adhere to religious and cultural norms
- Can be free or very low-cost.

Disadvantages of Natural Family Planning Methods:

- The commitment, motivation, and cooperation of both partners is necessary.
- When used for pregnancy prevention, a couple may experience stress as a result of not being able to have unprotected intercourse for several days in a row during the fertile days.
- There are abstinence requirements.

b. Artificial methods

- 1) Oral contraceptives or the Pill - use of synthetic hormones (progesterone and/or estrogen) like those produced by the body to regulate the menstrual cycle
- 2) Male condom - made out of latex (rubber), but polyurethane and tactylon (both plastic) are also available
- 3) Female condom - a polyurethane (plastic) sheath with an inner ring that fits inside the vagina, around the cervix (like the diaphragm) and an outer ring that covers the outside labia
- 4) Intrauterine device (IUD) - a small plastic device which is placed in the uterus by a clinician. It is a reversible method of birth control given only by prescription.
- 5) Cervical cap - a soft rubber cup like device that fits snugly around the base of the cervix.
- 6) Vasectomy or male sterilization - a surgical procedure that prevents pregnancy by blocking the passage of sperm into the seminal fluid.

- 7) Diaphragm - a dome shaped rubber cup with flexible rim that covers the cervix and is inserted into the vagina before intercourse.

C. Republic Act 10354 - The Responsible Parenthood and Reproductive Health Act of 2012

1. Objective

A legislation that provides universal access to quality reproductive health care services, methods, devices, supplies, and relevant information and education.

2. Key Principles

- a. Freedom of choice: respect for protection, and fulfillment of reproductive health and rights.
- b. Right to non-fraudulent information on reproductive health, including family planning.
- c. Abortion is illegal, and is punishable by law.
- d. Partnerships are ideal for enhanced provision of necessary reproductive health services.
- e. A multi-faceted sustainable development process.

3. Relevant Sections of the Law

- a. Hiring of skilled health professionals for maternal health care and skilled birth attendance
- b. Provision of health care facilities
- c. Access to family planning
- d. Review of maternal, fetal and infant death
- e. Procurement and distribution of family planning supplies
- f. Introduction of responsible parenthood and family planning component in anti-poverty programs
- g. Provision of PhilHealth benefits for serious and life threatening reproductive health conditions

- h. Provision of mobile health care services
- i. Provision of age- and development-appropriate reproductive health education
- j. Mandatory presentation of certificate of compliance
- k. Capacity building of barangay health workers
- l. Provision of pro bono services for indigent women
- m. Provision of sexual and reproductive health programs for Persons with Disabilities (PWDs)

PART II - ANALYZING TEST ITEMS

1. It refers to everything which is socially learned and shared by members of the society.
- | | |
|---------------------|-------------|
| A. Nature | C. Culture |
| B. Material Culture | D. Folkways |

Answer: C

Option A or nature refers to all those things which were made by God or created without human intervention. Examples are rivers, mountains, sky, and trees. Option B or material culture is just one of the two main kinds of culture, the other being the non-material culture. Material culture refers to the creations of man that are tangible. Examples are buildings, jewelry, and cell phones. Option C or Culture provides the best answer. It satisfies the definition of culture as a complex whole that includes all habits and capabilities acquired by man as a member of society. Option D or Folkways is just one of the many components of culture. It refers to the customary ways people do things.

2. Which of the following statements about culture is NOT true?
- | |
|---|
| A. It is learned by groups of people. |
| B. It is different from place to place. |
| C. It is static. |
| D. It is transmitted across generations |

Answer: C

The statement directs us to identify among the options which is NOT a characteristic of culture. Option A is not the answer. One of the characteristics of culture is that it is learned. One must exert efforts in order to acquire the culture of the society. Culture is not instinct or something that is automatically acquired at birth. Neither is Option B the answer. Culture varies from one place to another, sometimes even from one generation to another. In the Philippines, for example, there exist hundreds of ethnic groups, each having a distinctive culture of its own. Option C is the correct answer. Culture is never static. It grows, develops and adapts to the changing times. For example, it is very evident that some of our customs such as courtship and parenting practices have changed. Option D cannot be the answer. While culture is dynamic it is transmitted from generation to generation.

3. Some people argue that individuals with fewer opportunities to achieve success goals will have greater motivation to violate norms and higher rates of deviance. This argument is best expressed by
- Conflict theory
 - Sub-culture theory
 - Differential association theory
 - Anomie theory

Answer: D

Option A is eliminated. Conflict theory emphasizes the repression of the weak by the powerful which leads to deviation. Option B or sub-culture theory asserts that the motivation to violate norms depends upon the availability of illegitimate opportunities within a certain subculture. Option C or differential association theory believes that a person may become deviant depending upon the frequency and interaction with other deviants. Option D or anomie theory is the correct answer. Anomie theory suggests that persons or groups with less opportunity in life are more likely to become deviants.

4. It is a social system in which most relationships are personal or traditional. It is found in the rural areas in the Philippines.
- Gesellschaft
 - Primary group
 - Gemeinschaft
 - Caste system

Answer: C

Option A or Gesellschaft refers to a social system where relationship among people is impersonal and formal. It is usually found in exclusive enclaves of the rich and the powerful. Option B or primary group is not a social system but a social group of people who know one another intimately as individual personalities. Option C or gemeinschaft is the correct answer. Gemeinschaft is a social system in which people are closely tied by kinship and tradition. Option D or Caste is a social system that is religiously sanctioned and hierarchically ranked groupings in which membership is fixed at birth and is permanent.

5. Which of the following statements is NOT true about the Filipino families today?
- A. Male authority has declined.
 - B. Division of labor has changed.
 - C. Separation has become more common.
 - D. It has ceased to be a socialization unit of society.

Answer: D

The instruction tells us to pinpoint a statement that does not tell the truth about Filipino families today. Option A is not the correct answer. Surveys have revealed a growing number of matriarchal families mainly due to women's call for equal authority in the family and in the society. Option B tells a truth about Filipino families today. Due to women's higher educational qualifications and more progressive attitudes, many wives now also work. It is not unusual now to see husbands tending the children and doing household chores. Option C is neither the correct answer. Due to a number of factors, church and government leaders have noticed an increasing number of couples who separate. Option D is the correct answer. The family, with all its issues, continues to serve as a socialization unit of society. It is the unit of society where an individual is first exposed to and has the most significant influence on the development of his/her personality.

6. A sociologist would be most interested in studying
- A. Artifacts
 - B. Group behavior
 - C. Psychological problems
 - D. Economic situations
7. Stability is a feature of this theory.
- A. Structural functionalism
 - B. Conflict theory
 - C. Symbolic interactionism
 - D. Disruptive functionalism
8. It analyzes society from the standpoint of the interacting individuals and the role of symbols in influencing human action.
- A. Structural functionalism
 - B. Conflict theory
 - C. Symbolic interactionism
 - D. Disruptive functionalism
9. These refer to the family, schools, peer group, and the media which influence an individual to develop their human potential and learn culture.
- A. Total institutions
 - B. Socializing agents
 - C. Counterculture
 - D. Subculture

10. Karl Marx sees stratification as
 - A. A system that guarantees the accomplishment of important work in society
 - B. Necessary for the operation of society
 - C. A multidimensional hierarchy
 - D. A system that safeguards the interests of the rich in society
11. The desire to succeed in life illustrates a Filipino
 - A. value
 - B. folkways
 - C. law
 - D. mores
12. A behavior pattern related to the general culture of a society and yet distinguishable from it is referred to as
 - A. Subculture
 - B. Culture shock
 - C. Norm
 - D. Mores
13. The process of casting aside social practices unsuited to new circumstances and replacing them with more appropriate social practices is called
 - A. Socialization
 - B. Resocialization
 - C. Enculturation
 - D. Ethnocentrism
14. According to Edward Tylor, it is the complex whole which includes knowledge, beliefs, arts, morals, laws, customs and other capabilities and habits acquired by man as a member of the society. To what does Tylor refer?
 - A. Norm
 - B. Folkways
 - C. Culture
 - D. Mores
15. An individual considers his/her culture as the best and all other cultures are inferior or barbaric. This is referred to as
 - A. Ethnocentrism
 - B. Cultural relativism
 - C. Assimilation
 - D. Acculturation
16. The main transmitter of culture from generation to generation is
 - A. Diffusion
 - B. Invention
 - C. Language
 - D. Education

17. Social scientists have developed ways to analyze culture and society called
- A. Theoretical perspectives
 - B. Hypothesis
 - C. Research methods
 - D. Techniques
18. Which process makes a member learn the norms of the group and acquire a personality?
- A. Accommodation
 - B. Aggregation
 - C. Compartmentalization
 - D. Socialization
19. What role or status is assigned to an individual is based on hereditary traits?
- A. Achieved
 - B. Ascribed
 - C. Master
 - D. Applied
20. Concentration camps, prisons and military schools are examples of
- A. Total institutions
 - B. Socializing agents
 - C. Counterculture
 - D. Subculture
21. If sociologists were analyzing dormitory life, which of the following aspects of that topic would they be most likely to study?
- A. The rules of conduct that guide how much freedom students have to go into another's work area
 - B. How much time an individual student spends in going out with friends versus studying
 - C. How an individual student copes with homesickness after moving in
 - D. Which aspects of a student's personality are most related to academic excellence
22. When a division chief evaluates the unsatisfactory performance of her staff members who are also her friends and relatives. She may experience
- A. Role play
 - B. Role conflict
 - C. Role strain
 - D. Role ambiguity
23. Social control is imposed on deviants or non conformists to maintain
- A. social stigma
 - B. social strata
 - C. social order
 - D. social mobility

24. Which of the following is not true of deviance?
- A. It helps to maintain group unity.
 - B. It helps to reinforce appropriate behaviour.
 - C. It is common in developed economies.
 - D. The deviant behaviour of one generation may become the norm of the next generation.
25. Sociologists use the term "cultural relativism" to mean that
- A. Other components of culture are more relevant than others.
 - B. Each culture must be judged within its own context.
 - C. Other societies have more cultures than others.
 - D. Culture is important in dealing with other people.

6. In most instances of participant observation, the researchers:
 - A. hide their true identity.
 - B. do not hide their true identity.
 - C. pay their informants for information.
 - D. act as therapists to the subject.
7. The symbolic interactionist theory
 - A. is often criticized as seeing all interactions as conflicts.
 - B. is important for the analysis of macro-level issues.
 - C. is criticized for neglecting the importance of symbols.
 - D. is concerned on how individuals understand and interpret their actions.
8. Which represents the person's basic drives in Freud's model of personality?
 - A. Id
 - B. Ego
 - C. Superego
 - D. Self
9. A theorist who argues that a society's institutions are shaped by its economic system.
 - A. Comte
 - B. Durkheim
 - C. Marx
 - D. Weber
10. Which research technique allows the investigator to ask a list of questions, but is free to change them during the course of the interview?
 - A. Participant observation
 - B. A semi structured (open-ended) interview
 - C. A structured interview
 - D. A data discussion
11. Material culture would not include
 - A. Houses
 - B. Folkways
 - C. Jewelry
 - D. Mobile phones
12. All societies have means to ensure that their members conform with social norms. The general term for these means is
 - A. Social control
 - B. Fines and imprisonment
 - C. Values
 - D. Taboos

13. It refers to the movement of people into and out of a specified territory.
- A. Fertility
 - B. Mortality
 - C. Demography
 - D. Migration
14. The statement "The educational system perpetuates values which protect the rich and powerful" illustrates the
- A. Functionalist theory
 - B. Interactionist theory
 - C. Conflict theory
 - D. Evolutionist theory
15. Research that investigates a population at several intervals over a relatively long period of time is called
- A. Cross-sectional study
 - B. Residual study
 - C. Secondary analysis
 - D. Longitudinal research
16. Survey is used when:
- A. Other measures do not produce statistical significance
 - B. The study must be repeatable
 - C. It is necessary to discover the distribution and interrelations of certain variables among large numbers of people.
 - D. It is important to use procedures having cross-cultural applications.
17. The intended audience of the family planning program include
- A. Men of reproductive age only
 - B. Women of reproductive age only
 - C. Men and women of reproductive age
 - D. Men and women of reproductive age, including adolescents
18. Which of the following is not a group?
- A. Board of directors
 - B. Family
 - C. University sorority
 - D. All football fans
19. What is central to the conflict perspective of deviance?
- A. Labelling of deviants
 - B. Anomic behavior
 - C. Dominance and power
 - D. Deviant subcultures

20. The process which entails a son's erotic attachment to his mother and his hostility to his father is called by Freud as
- A. Electra complex
 - B. Oedipus complex
 - C. Inferiority complex
 - D. Xenophobia
21. Questionnaires in surveys may include _____
- A. Standardized questions
 - B. Open-ended questions
 - C. Checklist
 - D. All of the above
22. The Nazi Holocaust or the extermination of the Jews during world War II is an example of
- A. Xenocentrism
 - B. Culture shock
 - C. Ethnocentrism
 - D. Cultural tolerance
23. Contemporary Filipino culture is influenced by
- A. Asian culture
 - B. Western culture
 - C. Religion
 - D. Asian and western culture
24. Which of the following statements about a caste system is not true?
- A. It is common in developed economies.
 - B. There is no social mobility.
 - C. It shapes a person's life.
 - D. It is based on ascription.
25. Which of the following statements about culture is not true?
- A. Each group needs a culture in order to function.
 - B. An individual participates in a number of cultures.
 - C. Social conflict is due to meeting the expectations of different cultures.
 - D. Students do not have their own culture but instead practice the culture of the larger society.

Rizal's Life and Works and other Heroes and Heroines

Prepared by:
Dr. Evangeline L. Martin

Competencies:

1. Familiarize Rizal and his work.
2. Evaluate the contribution of other Philippine heroes and heroines

PART I - CONTENT UPDATE

The course is designed to expose students to a wide range of biographical models of selected Filipino national heroes with particular focus on the life and works of Dr. Jose Rizal to help them choose life philosophies, values, virtues, and life goals they will embrace both as a private person and as a citizen. The course will examine the socio-economic-political and historical contexts that scaffold the life and works of Rizal and other selected heroes and identify the lessons that can be drawn from their lives that are applicable in contemporary times.

A. The Rise of Filipino Nationalism

The early Filipino uprisings against the Spanish colonizers were unsuccessful due to the Filipino's failure to act as a nation. The Spaniards used the *divide et impera* (divide and rule) strategy to continue their rule in the Philippines. They devised ways for Filipinos to fight each other rather than to fight together against the real enemy.

However, *divide et impera* failed. The Filipinos never stopped fighting for their rights and independence. Through the leadership of well-known heroes, the freedom-loving Filipinos learned to unite and staged a revolution that eventually toppled the Spanish government in the Philippines.

In the nineteenth century, nationalism was instilled in the Filipinos as they began to think of themselves as belonging to one nation with a common origin, set of customs and traditions, and history. With the growth of nationalism came the struggle for democracy, human rights, and freedom. From the various abuses that the Filipinos suffered from the oppressive Spanish colonial government,

they learned to fight together against their colonizers.

B. Dr. Jose P. Rizal and La Liga Filipina

The most popular among the members of the Propaganda movement was the Philippine national hero, Dr. Jose P. Rizal. According to Prof. Friedrich Ratzel, a German historian and Rizal's close friend, Rizal was not only the most outstanding Filipino but also one of the most outstanding representatives of the Malay race. Rizal's intellectual legacy includes his two famous novels, *Noli Me Tangere* and *El Filibusterismo*. The two novels described the political, economic, educational, religious, and cultural situations in the Philippines during the Spanish period.

While in Hong Kong, Rizal laid down the basis of La Liga Filipina, or the Philippine League, which he planned to establish in the Philippines upon his return. He, then, drafted the constitution of the league with the assistance of Jose Mariano Basa. Basa was a businessman who was among those exiled to the Mariana Islands as punishment for their participation in the Cavite Mutiny of 1872. The motto of the league was *Unus Instar Omnium*, or One Like All.

On the night of July 3, 1892, Rizal founded La Liga Filipina in a house at Ilaya Street in Tondo, Manila.

Rizal's direct participation in nationalistic campaigns alarmed the Spanish authorities, because of this, Governor General Eulogio Despujol issued a decree on July 7, 1892, sending Rizal into exile to Dapitan, Zamboaga del Norte. Rizal was detained first at Fort Santiago in Manila from July 7 to 17, 1892. He was then transferred to Dapitan on July 17, 1892, where he stayed until July 31, 1896. During his four-year exile in Dapitan, Rizal did all he could for the people of the community.

On November 3, 1896, Rizal was then imprisoned for the second time in Fort Santiago for his supposed involvement with the Katipunan. Gov-Gen Camilo de Polavieja sentenced Rizal to death by firing squad. Rizal was shot at seven o'clock in the morning of December 30, 1896, at Bagumbayan. His execution embittered the Filipinos and triggered them to fight with determination.

D. Rizal: The Person

1. The Great Thinker

He was the great thinker as he used reasons and understanding that led him to empower the use of pen and paper. In such, the great books *Noli Me Tangere* and *El Filibusterismo* has aroused the feelings of his countrymen and awakened them from the deep-sleep of more than centuries of friar-misrule and colonial maladministration.

His novels were not the only key of his success but all his other writings, letters, diary entries and other works that served as his love for the country as a profound and effective Great Thinker.

2. The Great Doer

Rizal was known as an intellectual and was highly competitive in various fields. He believed that the intellect should be practiced through performance. He excelled in different fields which made him competent, creative, and respectable to his fellow researchers, scholars, and scientists not only in Spain but in England, France, Germany, and Austria. It was most especially evident in the deep friendship and mutual admiration between himself and Ferdinand Blumentritt.

3. The Great Lover

He was the Great Filipino Lover in his time. He had four great loves. First was an almighty sacred love for God. The almighty flame of love was

burning in his heart and soul whether as a Roman Catholic or as a mason. Second was his sacred love for his family and friends. Third was his love for the country which is his most beloved "*patria adorada*." Lastly, Rizal's love for Josephine Bracken, the one true love of Rizal.

He had shown his fervent love he had shared with all by giving his own life to enlighten the mind of his countrymen.

4. The Great Servant Leader

Rizal had no position in the government, neither he had control of vast financial or material resources and the means to broadcast his reformist vision. Yet, he had been very effective as a leader to transform the Filipino people and inspired them to enable them advance their cause. His leadership was one of being a servant leader.

His ability to love without limits, without ever counting the cost is a real greatness that became the inspiration of this servant-leadership. This can be seen in his masterpiece "*Mi Ultimo Adios*" which was written shortly before his execution.

Conceivably the greatest power of our national hero must have come from the power to love with all pure and all-mighty love in which this powerful love lived on and triumphed over his death.

E. Quotations from Rizal's Writings

- "The education of the Filipino from birth until the grave is a brutalizing, depressing, and anti-human. For five or ten years the youth comes into contact with books, chosen by the very sane priests who boldly declare that it is an evil for the Filipinos to know Castilian, that the Filipino should not be

separated from his carabao, that he should not have any further ambition, etc. During these five or ten years the majority of students have grasped nothing more than no one understands what the books say, not even perhaps their own professors. During these five or ten years the students have to contend with the daily preaching that lowers human dignity, gradually or brutally killing their self-respect – that eternal, tenacious, persistent effort to humiliate the native, to make him accept the yoke, to reduce him to the level of a beast."

- "I am assiduously studying that happenings in our country. I believe that nothing can redeem us except our brains."
- "A nation wins respect not by covering up abuses, but by punishing them and condemning them."
- "People and government are correlated and complementary a stupid government is an anomaly among righteous people, just as a corrupt people cannot exist under just rulers and wise laws. Like people like government, we will say, paraphrasing a popular adage."
- "We must confess that these (Philippines) indolence actually and positively exist; but instead of regarding it as the cause of the backwardness and disorder, we should regard it as the effect of disorder and backwardness, which fosters the growth of a disastrous predisposition."

F. Rizal's Works: The following are some of the writings of Rizal

1. To My Fellow Children (Sa Aking Kabata)

He wrote this poem as appeal to his countrymen to love their national language. Rizal said: "Ang hindi magmahal sa sariling wika, ay higit pa sa hayop at malansang isda, kaya ang marapat pagyamaning kusa na tulad sa isang tunay na nagpala."

2. To The Filipino Youth (A La Juventud Filipina)

"A La Juventud Filipina" is a literary masterpiece that expresses Rizal's immortal message of love of country, energy, and faith particularly in the youth, the "Hope of the Fatherland." ("Ang Kabataan ang Pag-asa ng Bayan.")

3. Letter to the Young Women of Malolos

Famous literary work where Rizal voiced out the conviction that women should think for themselves, should be educated, and should be more active in public office.

4. The Intricate Alliance between Religion and Good Education

Rizal showed the importance of religion in education. Education without God is not true education.

5. My Last Farewell

This masterpiece was written by Rizal in Fort Santiago probably a day or two before his execution on December 30, 1896 in Bagumbayan. The poem is full of the author's love of country when he uttered this, "It is sweet to die for you so that you may live. It is sweet to die and sleep under your sky."

6. The Council of Gods

The winning of this allegorical drama in a literary contest was controversial and exceptional because the winning author was an Indio. The prize was a gold ring on which the bust of Cervantes was engraved.

7. Noli Me Tangere and El Filibusterismo

Noli Me Tangere and El Filibusterismo differ on the ideas and aspirations implied to the reader. Noli Me Tangere is a romantic novel, it is a work of the heart, a book of feeling; it has freshness, color, humor, lightness and wit. The diagnosis that came out was that Juli was an attempt to expose

the real conditions during Rizal's time. *El Filibusterismo* is a political novel; it is a work of the head, a book of thoughts; containing bitterness, hatred, pain violence and sorrow. And the Fili was a study of the prescription of the diagnosis (prognosis). From this point of view, Rizal analyzed the prescription, which was the resolution.

G. Taft Commission and Rizal Law

The Taft Commission chose Rizal out of several great Filipinos as the number one hero of his people.

Republic Act No. 1425 (Batas Rizal) mandated the offering of the course Buhay at Katha ni Rizal to all college students; to provide the models that will challenge the spirit of nationalism. More recently, the Commission on Higher Education (CHED) saw the need to strengthen the idealism of college students by providing the youth with opportunities to examine the different perspectives that other Filipino heroes and heroines took in building our nation.

H. Other Heroes and Heroines

According to American Historian LOUIS L. SYNDER, *nationalism* is a mental condition, feeling, or sentiment of a group of people living in a well-defined geographical area, speaking a common language, possessing a literature in which the aspirations of the nation are expressed, attached to a common tradition, and, in some cases, having a common religion.

There are two kinds of nationalism – active and passive. *Active nationalism* is more aggressive. It involves making threats against strong forces by forming organizations, using violent means, and resorting to rebellion. *Passive*

nationalism, on the other hand, is expressing the sentiments and needs of people through peaceful means, such as literature. Both kinds of nationalism were displayed by Filipino heroes and heroines.

- **Andres Bonifacio**

Bonifacio was born in Tondo on November 30, 1863. The early death of his parents forced him to quit school to support his brothers and sisters. He founded the Katipunan on a radical platform – winning the independence and freedom of the country by force of arms. History recognizes him as the “Father of Katipunan” because he was its founder and leader.

- **Emilio Jacinto**

Another leading personality in the Katipunan as he was Bonifacio's right-hand man. He was known as the “Brains of the Katipunan.” Together with Bonifacio and Dr. Pio Valenzuela, he wrote many of the documents of the Katipunan which included the famous Kartilla. He edited the Kalayaan, which was the official newspaper of the Katipunan.

- **General Emilio Aguinaldo**

He was a Filipino general, politician, and independence leader. He played an instrumental role in the Philippine independence during the Philippine Revolution against Spain and the Philippine-American War that resisted American occupation. He eventually pledged his allegiance to the US government. In the Philippines, Aguinaldo is considered to be the country's first and the youngest Philippine President, though his government failed to obtain any foreign recognition.

- **Jose Apolonio Burgos**

He was a Spanish mestizo born to a Spanish army lieutenant in Vigan, Ilocos Sur. Father Burgos vigorously defended the native priests from attacks by the Spaniards who believed in the superiority of the white race.

Being an advocate for the preservation of rights of the Filipino priests, Father Burgos antagonized many friars who later on plotted his death. Part of the GOMBURZA trio who were falsely accused of mutiny by the Spanish colonial authorities in the Philippines in the 19th century. He was placed in a mock trial and abruptly executed in Manila along with other clergymen.

- **Apolinario Mabini**

He was a Filipino political philosopher and revolutionary who wrote the constitution for the first Philippine Republic of 1899-1901, and served as its first prime minister in 1899. In Philippine history texts, he is often referred to as "*the Sublime Paralytic*", and as "*the Brains of the Revolution*". To his envious enemies, he is referred to as the "Dark Chamber of the President".

- **Marcelo Hilario del Pilar**

He was a Filipino revolutionary leader of the Philippine Revolution and one of the leading ilustrado propagandists of the Philippine War of Independence. Del Pilar was one of the co-publishers and founders of La Solidaridad newspaper. In 1882, Del Pilar founded the newspaper "Diariong Tagalog" to promote reforms among the farmers and peasants. He also supported José Rizal's polemical writings.

- **Graciano López y Jaena**

He was a Filipino writer and journalist in the Philippine Revolution. López Jaena was born in Jaro, Iloilo to Placido López and María Jacoba Jaena. His parents were poor, as his mother was a seamstress and his father a general repairman. At the age of six, López Jaena was placed under the care of Friar Francisco Jayme who raised him. He is remembered for his literary contributions to the propaganda movement. López Jaena founded the fortnightly newspaper, La Solidaridad. When the publication office moved from Barcelona to Madrid, the editorship was succeeded to Marcelo Del Pilar. López Jaena died of tuberculosis on January 20, 1896.

- **Lapu-Lapu**

The king of Mactan Island, he's regarded as the first great hero of the Philippine Islands and he's credited for the death of Magellan(claimed as the re-discoverer of the Philippine Islands).

- **Gabriela Silang**

She was the first Filipino woman to lead a revolt during the Spanish colonization of the Philippines. An active member of the insurgent force of Diego Silang, her husband, she led the group for four months after his death before she was captured and executed. Her ferocity and death became a symbol for Filipino women, their pre-colonial importance in Filipino society and their struggle for liberation during colonization. Because of her bravery, Gabriela Silang was often called the "Joan of Arc of Ilocandia."

- **Melchora Aquino**

She is now hailed the "Mother of the Katipunan and Philippine Revolution" for having supported the revolution consistently by curing the Katipuneros who were hurt during the revolution.

- **Hilaria Aguinaldo**

The wife of President Aguinaldo, she established the Hijas de la Revolucion (Daughters of the Revolution) that became the Asociacion dela Cruz (Red Cross Association), now known as the Philippine Red Cross, to help wounded soldiers during the war.

- **Trinidad Tecson**

Together with the young Gen. Gregorio del Pilar, she fought and liberated Bulacan particularly Calumpit. She also fought at Subic in Zambales and brought the sick and wounded to Biak-na-Bato, even if it meant having

to cross the Zambales mountains. Aside from being dubbed the "Mother of Biak-na-Bato" for her contribution during the Philippine Revolution of 1896, she was also later called "Mother of the Philippine Red Cross."

- **Geronima Tomelder-Pecson**

In 1947, Geronima Tomelder-Pecson changed political history when she was elected the first female senator of the Philippines. A well-known educator, she authored and sponsored various laws and bills that focused on education during her tenure as a senator. Pecson also held the distinction of being the first woman in the world to become member of the executive board of the United Nations Educational, Scientific and Cultural Organization (UNESCO) in 1950.

PART II - ANALYZING TEST ITEMS

Items on Knowledge and Understanding on the Life and Works of Rizal, Other Heroes and Heroines.

1. Four days after the founding of the La Liga Filipina, Rizal was arrested and imprisoned at Fort Santiago without due process of law. Who was then the Governor-General of the country who ordered the arrest and banishment of Rizal in Dapitan?
- | | |
|---------------------|---------------------|
| A. Ramon Blanco | C. Camilo Polavieja |
| B. Eulogio Despujol | D. Emilio Terrero |

Answer: B

The statement is about the different Spanish Governor-Generals who played a significant role on Rizal's life. Option A is not the right choice because it was Ramon Blanco who gave Rizal, after the four-year exile in Dapitan, the permission to go to Cuba as a revolutionary doctor. Option B is the appropriate answer for the reason that on July 7, 1892 Despujol published a decree banishing Rizal in Dapitan. Rizal was detained in Fort Santiago from July 7 to 14, 1892. On July 15, he left for Dapitan and led a fruitful life there for four years from July 17, 1892 to July 30, 1896. On the other hand, Option C is not the correct answer because Polavieja approved the death sentence and ordered that Rizal be executed at 7:00 o'clock in the morning of December 30, 1896, at Bagumbayan Field, now Luneta. The same is true with the Option D, because when Rizal returned in 1887, Terrero was the Spanish Governor-General who advised Rizal to return to Europe because his life was in danger caused by the publication of his novel Noli Me Tangere.

2. Friends and fellow nationalists defended Noli Me Tangere. A brilliant defense came from Rev. Vicente Garcia who claimed that Rizal did not attack the Church and Spain.
- | |
|---|
| A. Rizal's Noli Me Tangere was simply a fiction, no harm to anyone. |
| B. Rizal focused on the ignorance of Filipinos. |

4. The character in the novel Noli was described by Rizal as a laundry woman before her marriage to the officer of the Guardia Civil. She was known as the "Muse of the Guardia Civil." She pretended to have forgotten Tagalog already but her use of Spanish was awful. Who was the woman?
- A. Dona Consolacion
 - B. Dona Victorina de los Reyes de Espadaña
 - C. Sisa
 - D. Paulita Gomez

Answer: A

The question is about the different characters in Noli Me Tangere. Option A is an explicit description of Dona Consolacion, who shows the mentality of the civil guard for being the mistress of the atrevez. She was vulgar, imprudent, quarrelsome and cruel. Option B is eliminated because although Dona Victorina de los Reyes de Espadana was the paragon of colonial mentality but she was the wife of Don Tiburcio de Espadaña, the fake doctor in the Noli. She despises what was Filipino and imitates what was Spanish. Option C is not related to the question, Sisa, the mother of Crispin and Basilio, illustrated the lack of concern of society in trying to help her solve the problems, the maltreatment of her two sons and the indignities she suffered which finally drove her insane. Option D is not responsive who yields to the habit of ethno-political selection in marriage.

5. Sometime in 1807, Rizal's close friend Ferdinand Blumentritt asked him to define the term for he could not find the word in European Spanish or Spanish American sources. Rizal replied that in Filipino, the word meant: "a dangerous patriot who someday will be hanged." What was the word requested Rizal to define?
- A. Filibuster
 - B. Revolutionist
 - C. Militarist
 - D. Patriot

Answer: A

Analyze the statement: Blumentritt wrote a letter to Rizal, sometime in 1867, asking him to define the word he could not understand. Option A is the appropriate choice because it was the period (1872) when the Spaniards used the word filibuster to describe those whom they suspect of revolutionary activities. At present, the word meant: as obstruction

of legislative action, by delaying tactics, e.g. by making long speeches to consume time. Options B, C, and D are synonymous to a nationalistic, my-country-right or wrong chauvinistic, exaggerated and aggressive patriotism, so these options must be eliminated. The same observation holds true to Options B, C, and D, that while Rizal at one time or the other entertained the idea of revolution, he was not for armed-revolution per se.

6. The EDSA revolution started with:
 - A. The holding of snap election
 - B. The assassination of Ninoy Aquino
 - C. The founding of RAM
 - D. The protest of Enrile and Ramos
7. Which of these statements does not show nationalism
 - A. Filipinos joining the Katipunan
 - B. Respect for the flag
 - C. Filipino-American connivance for Aguinaldo's capture
 - D. Filipino revolts against Spain
8. Rizal met a kind Protestant German pastor in Germany who befriended him. He stayed at his vicarage and learned German language. This is where he finished his first novel. Where was "Noi Village" located in honor of the novel Noi Me Tangere?

A. Wilhelmsfeld	C. Heidelberg
B. Berlin	D. Leipzig
9. The following is a passage from the diary of General del Pilar that he wrote the night before his tragic encounter with the American forces. What important characteristic of General del Pilar not shown on the passage?

"The General (Aguinaldo) has given me the pick of all the men that can be spared and ordered me to defend the pass. I realize what a terrible task he has given me. And yet I feel that this is the most glorious moment of my life. What I do is done for my beloved country. No sacrifice can be too great."

A. Bravery	C. Arrogant
B. Heroism	D. Loyal

10. Rizal had a best friend whom he would always confide with through letters. His best friend is a principal of a secondary school in Leitmeritz, Austria. Who is he?
- A. Ferdinand Blumentritt C. Pedro Paterno
B. Maximo Viola D. Jose M. Cecilio
11. Rizal founded La Liga Filipina because of his desire to:
- A. Unite his fellowmen and get freedom from Spain
B. Expose the abuses of the Spaniards to the whole world
C. Make his fellowmen more nationalistic
D. All of those mentioned above
12. El Filibusterismo is the sequel of Noli Me Tangere and, like the first book, it was written in Spanish. To whom did he dedicate this second novel?
- A. To his beloved parents
B. To the suffering Filipino people.
C. To the executed Filipino priests Gomburza.
D. To his love, Leonor Rivera
13. A character in Noli who became a drug addict and frequently visited Calle Fumadero in Tondo-the place where the Chinese addicts were allowed to smoke opium.
- A. Kabesang Tales C. Capitan Tiago
B. Placido Penitente D. Tiburcio de Espadaña
14. Magellan tried his best so that local chieftains would accept and submit to Spain's power. However, one brave Filipino ruler, a chieftain of Mactan, defied Magellan
- A. Raja Humabon C. Raja Lapulapu
B. Raja Zula D. Raja Kolambu
15. Jose Rizal integrated in an article for the La Solidaridad the vision of this legend to expose two contemporary issues of forced labor and land grabbing during the Spanish regime
- A. Biag-ni-LamAng C. Maria Sinukuan
B. Maria Makiling D. The Monkey and the Tortoise

16. "There are no tyrants where there are no slaves" means
- A. Nationalism is a high degree of emotion.
 - B. People are conquered and abused only if they allow themselves to be so.
 - C. Leaving without the desired freedom is frustrating.
 - D. A condition which when criticized will bring intense results.
17. The battle of Mactan proved that
- A. Filipinos disliked the Spaniards.
 - B. Magellan was no match for Lapulapu's men.
 - C. Filipinos were more courageous than the Spaniards.
 - D. Filipinos are freedom-loving people.
18. One of the youngest Filipino generals, who led General Aguinaldo's rear guards, was shot and killed while he was defending Tirad Pass in Ilocos Sur.
- A. General Vicente Lukban
 - B. General Gregorio del Pilar
 - C. General Macario Sakay
 - D. General Miguel Malvar
19. Rizal is a noted kite-maker in his hometown in Laguna. His favorite design is of Malay origin. What is the name of the said design?
- A. guryon
 - B. boka-boka
 - C. chapi-chapi
 - D. de baso
20. Rizal envisioned of putting up a Filipino colony in Sandakan, North Borneo. His dream did not materialize because the Governor-General of the Philippines did not allow him. Who was the said Governor-General?
- A. Emilio Terrero
 - B. Eulogio Despujol
 - C. Camilo Polavieja
 - D. Ramon Blanco
21. The guerilla women played a strategic and vital role in the movement. One of these guerilla women known as "Dayang-Dayang" of Kalipunang Pambansa ng mga Magsasaka sa Pilipinas (KPMP) organized an army and armed the guerilla with weapons from the landlords.
- A. Felipe Culala
 - B. Carmen Planas
 - C. Remedios Gomez
 - D. Elisa Ochoa

22. The greatest Filipino strategist of the Filipino-American war is
- A. Emilio Aguinaldo
 - B. Gregorio del Pilar
 - C. Antonio Luna
 - D. Miguel Malvar
23. On June 11, 1901, the Second Philippine Commission approved Act No. 137, which organized "the politico-military district of Morong into the " Province of Rizal." This was done due to which of the following reasons?
- A. Creating a province that will lead the people of Morong to be united after the freedom from Spain.
 - B. Creating a province that will lead to the proclamation of Jose Rizal to be the National Hero.
 - C. Creating a province to provide equal rights to people living near Morong and Manila.
 - D. Creating a province to be named after Jose Rizal in honor of his martyrdom.
24. Born in Sta. Cruz, Manila on August 2, 1799; he was the parish priest of Bacoar, Cavite at the time he was involved in the Cavite Mutiny of 1872.
- A. Andres-Urdanete
 - B. Jacinto Zamora
 - C. Vicente Garcia
 - D. Mariano Gomez
25. Governor General Emilio Terrero had ordered the commission coming from University of Santo Tomas to review the content of Noli Me Tangere as suggested by Archbishop Pedro Payo. What was the suggestion of this commission regarding the novel?
- A. Strictly advised the friars to analyze the content of the novel for further discussions on the Sunday mass.
 - B. Create another commission review the contents of the novel.
 - C. Called a conference with the Governor-General and let the author explain the contents of the novel.
 - D. Strictly prohibit the production, circulation and as well as reading of the novel.

PART III - ENHANCING TEST TAKING SKILLS

1. As an answer to Fr. Rodriguez' pamphlet, Marcelo H. del Pilar, under the pen name of Dolores Manapat, has written a pamphlet similar to the physical make up that enabled it to enter the churches and be read by church goers. What was the title of Del Pilar's work which literally means "Be as slippery as an Eel."
 - A. Caligat Cayo
 - B. Caiingat Cayo
 - C. Dasalan at Tocsohan
 - D. La Espana Moderna
2. Which of the following statements is Rizal's annotations on *Los Sucesos del Las Islas Filipinas*?
 - i. Villalobos and not Legaspi was the one who named the island as "Philippines."
 - ii. Manila was established on 1571 and not on 1572.
 - iii. It was not only the Spaniards who joined Magellan on his trip but also Portuguese, Malays, Negritoes and other nationalities.
 - iv. The Philippines is composed of 7,107 islands and not 7,100 only
 - A. i and ii
 - B. ii and iv
 - C. i, ii and iii
 - D. all of the above
3. On Rizal's exile in Dapitan, he was guarded by a Spanish military commandant, Captain Ricardo Canicero. How did this military commandant treat the exiled?
 - A. He would allow Rizal to talk to his visitors only upon his consent.
 - B. He supported Rizal's activities and reported it to the Governor-General to ask for funding.
 - C. He gave Rizal the freedom to go anywhere requiring him only to report once a week to his office.
 - D. He strictly guarded Rizal and would not allow him to do any activities that are suspicious in his eyes.

General Education

4. The Katipunan was a secret society founded by Andres Bonifacio and other patriotic Filipinos on July 7, 1892, aimed at attaining Philippine Independence through the use of force. In what district of Manila was the Katipunan founded?
A. Intramuros
B. Binondo
C. Tondo
D. Sampaloc
5. She joined the women chapter of the Katipunan in 1895 at the age of 47 and was popularly known as the Mother of Biak-na-Bato. Who was this Katipunera?
A. Agueda Kahabagan
B. Trinidad Tecson
C. Teresa Magbanua
D. Marina Dizon
6. The first official flag of the Katipunan was made by Benita Rodriguez upon the request of the Supremo. She was assisted by a woman very close to the heart of Andres Bonifacio. Who was this woman who assisted Benita Rodriguez in making the first official flag of the Katipunan?
A. Marina Dizon
B. Gregoria de Jesus
C. Catalina de Castro
D. Espiridiona Bonifacio
7. Who was this Filipino hero who wrote in his last will: "Should I be killed, enshrine me in a Filipino flag with the same clothes in which I died and bury me in the ground."
A. Juan Luna
B. Antonio Luna
C. Apolinario Mabini
D. Andres Bonifacio
8. What was Dr. Jose Rizal's educational philosophy?
A. To create in the youth an innate desire to alleviate his intelligence that will lead him to eternal life.
B. To see improvements in the school and in the methods of teaching.
C. To form the nucleus of an unfavorable opinion of imperialistic administration of his country and people.
D. To be able to contain if not eliminate, social evils like inferiority complex, camaraderie, timidity, and false pride.

9. What could be Dr. Jose Rizal's guiding political philosophy for the country?
- A. To censure the friars for abusing the advantage of their position.
 - B. To counsel the Filipinos not to resent a defeat attributed to them.
 - C. To elevate the country to the highest seat of glory.
 - D. For the country not to be taken advantage but rather be developed, civilized, educated, and trained in the science of self-government.
10. The Kartilla of the Katipunan consisted of 13 teachings which the members of the society were expected to follow. Who prepared the Kartilla of the Katipunan?
- A. Andres Bonifacio
 - B. Emilio Jacinto
 - C. Emilio Aguinaldo
 - D. Apolinario Mabini
11. Who was this Filipino hero who wrote the following statements: "I am now surrounded by the enemy which shall overpower me, and my brave men, I shall die happy with the thought that it is sweet to die defending my motherland."
- A. Antonio Luna
 - B. Andres Bonifacio
 - C. Gregorio del Pilar
 - D. Apolinario Mabini
12. What was the reason of Rizal when he decided to write his two novels in Spanish?
- A. He wants to show off his talent in Spanish.
 - B. He wants to hide it to those who doesn't know Spanish.
 - C. He has the idea that it was the intellegentia that should lead and guide the people in the revolution
 - D. He loves the language and were comfortable with it.
13. What crime Rizal was tried by the Spanish military court?
- A. graft and corruption
 - B. rebellion and organizing illegal societies.
 - C. libel and assault.
 - D. falsification of documents
14. After the execution, Rizal's corpse was buried with the greatest secrecy at the Paco Cemetery. Who was the one who patiently searched all the cemeteries in Manila to find his body in vain?
- A. his brother, Paciano
 - B. his mother, Teodora
 - C. his sister, Narcissa
 - D. his friend, Maximo Viola

15. When Rizal was in trial, who was the defense counsel assigned to him?
- A. Luis Taviel de Andrade C. Camilo de Polavieja
B. Nicolas dela Pena D. Martin Constantino
16. Who gladly agreed to finance the printing cost of the book *Noli Me Tangere* when Rizal was having problems with the expenses?
- A. Ferdinand Blumentritt C. Antonio de Morga
B. Hans Meyer D. Maximo Viola
17. Rizal was able to finish his studies and performed excellently in all subjects in Ateneo. He was later coined as the "pride of the Jesuits" but he pointed out that if it weren't for this education, he wouldn't have achieved those goals. Who was this educator?
- A. Father Sanchez C. Don Saez
B. Maestro Aquino D. Don de Jesus
18. Below are four statements about the Philippines during Rizal's time. Which statement is false?
- A. The system of government was called *frailocracy*.
B. The Philippines was represented in the Spanish Cortes.
C. The big plantations were owned by religious organizations.
D. The justice system served the interests of the Spanish colonial government.
19. Who ordered Jose Rizal to be shot in Bagumbayan on the morning of December 30, 1896?
- A. Governor-General Ramon Blanco
B. Governor-General Eulogio Despujol
C. Governor-General Camilo Polavieja
D. Governor-General Rafael de Izquierdo
20. Jose Rizal and other mestizos and pensionados in Madrid formed the Propagandists Movement to appeal to reformers in the Spanish administration in the Philippines through periodicals and pamphlets. Which of the following was not a product of the Propagandists Movement?
- A. Sol C. Kalayaan
B. Fray Botod D. Dasalan at Tocsohan

21. If Gregorio del Pilar was the hero in the Battle of Tirad Pass, then who was the leader in the Battle of La Loma?
- A. Antonio Luna C. Emilio Jacinto
B. Mariano Sakay D. Miguel Málvar
22. Who led the longest revolt in Philippine history?
- A. Andres Malong C. Francisco Dagohoy
B. Diego Silang D. Hermano Pule
23. In 1872 the martyrdom of Gomburza truly inspired Rizal to fight the evils of Spanish tyranny and redeem his oppressed people. The governor-general who ordered the execution of Gomburza was
- A. Governor-General Rafael de Izquierdo
B. Governor-General Fernando Primo de Rivera
C. Governor-General Ramon Blanco
D. Governor-General Camilo de Polavieja
24. How did Rizal describe his novel, *El Filibusterismo* in terms of treatment, style, and content?
- A. *El Fili* is a romantic novel; it is a work of the heart, a book of feeling; it has freshness, color, humor, lightness, and wit.
B. *El Fili* is a political novel; it is work of the head, a book of thoughts; containing bitterness, hatred, pain, violence, and sorrow.
C. *El Fili* is a novel about Filipino ethics, a book of Filipino habits and customs; it has humor, wit, bitterness, and pain
D. None of the above
25. At the start, there were two rival factions of the Katipunan in Cavite: one was the Magdalo faction led by Baldomero Aguinaldo with headquarters at Cavite Viejo (now Kawit) and the faction led by Mariano Alvarez, uncle-in-law of Bonifacio. Where was the headquarters of the Magdiwang faction in Cavite?
- A. Imus C. Binakayan
B. Naic D. Noveleta

Philosophy

Prepared by:
Prof. Michael M. Nael

Competencies:

1. Form a critical and analytical attitude towards various philosophical thoughts
2. Comprehend the various implications of various philosophical thoughts to educational theories and practices
3. Manifest knowledge of the nature of philosophy and its processes as applied in education

PART I - CONTENT UPDATE**1. NATURE OF PHILOSOPHY**

- a. Philosophy (from the Greek words, "Philia" and "Sophia," meaning "love of wisdom") - is defined technically as the science of beings in their ultimate reasons, causes and principles, acquired by human reason alone. In brief, it is the field of reason.
- b. Philosophy is the Science and Art of all things naturally knowable to man's unaided powers in so far as these things are studied in their deepest causes and reasons. It is humanity's attempt to think speculatively, reflectively, and systematically about the universe and the human beings' relationship to the universe. It is humanity's communal search for the ultimate explanation of the realities of life.

2. BRANCHES OF PHILOSOPHY

1. The major branches of Philosophy serve as the foundation of education and the teaching- learning process
2. Education must teach Mental and Physical Realities (Metaphysics), the Truth and knowledge as contained in the curriculum (Epistemology), the good and morality (Ethics) and the reasonable as to content and processes (Logic).
3. Philosophy guides the educative processes as it determines the aims, mission, vision, goals and objectives of education. It likewise determines the approaches, methodologies, strategies of teaching, the content of the curriculum, the role of teachers and all the decisions and actions in the educative process.

2.1 METAPHYSICS- What is reality? (Teachers must teach the realities of life, especially the essential and the relevant realities.)

Metaphysics. It is the theory of reality. It covers such sub-branches as cosmology (origin and development of the cosmos); nature of man, problem of freedom as in determinism (cosmos is governed by forces or laws beyond the control of man), and free will; conceptions about God (theism, atheism; monotheism, polytheism, pantheism, deism, etc.); teleology (meaning or purpose of life); constancy or lack of it in reality as in absolutism (constancy) and relativism (lack of constancy); quality or reality as in monism (one reality), dualism (two), and pluralism (many realities); ontology (study of being/existence); relation of body and mind; and others.

2.1.1 Metaphysical Axiom

An axiom is an irreducible primary. It doesn't rest upon anything in order to be valid, and it cannot be proven by any "more basic" premises. A true axiom cannot be refuted because the act of trying to refute it requires that very axiom as a premise.

1. **Existence exists** is an axiom which states that there is something, as opposed to nothing.
 2. **The Law of Identity.** To have an identity means to have a single identity; an object cannot have two identities.
 3. **Consciousness-** consciousness is axiomatic because you cannot logically deny your minds existence at the same time as using your mind to do the denying.
-

2.1.2. Implications of these Axioms

1. **Reality is Absolute: The Primacy of Existence** -This means that reality is not subject to wishes, whims, prayers, or miracles. If you want to change the world, you must act according to reality.

2. Causality -Causality is the Law of Identity applied over time. It is the identity of actions. Action is a change in the identity of an entity.
3. Every effect must have a cause. That cause, however, is an effect of a previous cause. Causality is the law that states that each cause has a specific effect, and that this effect is dependent on the identities of the agents involved.
4. Nothing. Nothing, or non-existence, is that which doesn't exist. It is not a metaphysical entity. It doesn't exist. It has no identity.
5. Contradiction-Contradictions don't exist in reality because reality simply is as it is and does not contradict itself.
6. An Entity is the Sum of its Parts -Assuming there are basic building blocks of the universe, it is conceivable that these entities have a fixed identity, except location. They do not change. They act, and interact, but do not ever actually change their identity.

2.1.2. Metaphysical Theories

1. IDEALISM

- a. believed that the physical world around us is not real; it is constantly changing and thus you can never say what it really is.
- b. There is a world of ideas which is a world of unchanging and absolute truth. This is reality for Plato.
- c. Whenever we grasp an idea, or see something with our mind's eye, we are using our mind to conceive of something in the Ideal world.
- d. Since concept could not come from the physical world, it must come from an ideal world.

2. DUALISM

- a. Dualism is the philosophy that there are two kinds of reality: material and immaterial.
- b. There is a physical world as well as a non-physical or spiritual world.
- c. Ideas in the mind come from the physical world as experienced by the senses.
- d. Truth can be verified through its existence in the natural world.

3. MATERIALISM

- a. On this view only the world of matter is real.
- b. Thoughts, ideas, and other non-physical things are merely movements of physical matter or chemical reactions.
- c. There is no reality beyond the physical.

2.2. EPISTEMOLOGY- What is truth? (Teachers must teach the truth, its criterion and grounds and the ability to learn to know)

Epistemology. It is the theory of knowledge. Its major concerns are the nature of knowledge itself and the grounds for its validity.

2.2.1. Positions in relation to knowledge

- a. Agnosticism - coined by Thomas Huxley which means "not being able to know" or belief in the impossibility of knowledge.
- b. Skepticism is the doubting or questioning attitude towards knowledge (also known as the scientific attitude).
- c. Affirmation of knowledge. It is the possibility of knowledge.

2.2.2. Types of knowledge in relation to observation

- a. A priori - knowledge not requiring observation; literally means "before" or "prior to"
- b. A posteriori - knowledge based on observation; literally means "after" or "posterior to"
- c. Experimental - knowledge resulting from tested observation.

2.2.3. Types of knowledge according to means / instruments

- a. Empirical - knowledge acquired through sense perception (equivalent to scientific knowledge). The school of thought is known as empiricism.
- b. Rational - knowledge acquired primarily through reason and belief is called rationalism.

- c. **Intuitive** - knowledge acquired primarily through intuition (sudden flash of insight) and the belief is known as intuitionism.
- d. **Authoritative** - knowledge acquired through an authority (expertise) and the belief is known as authoritarianism
- e. **Revealed**. Knowledge acquired through revelation (what God discloses to man). And the belief is revelationism. It is also called religious knowledge.

2.2.4 Criterion of Truth

1. **Naïve realism** – argues that reality is precisely what as it appears to be. So it adheres to the belief that "seeing is believing" Truth therefore is what is seen and experienced. The disadvantage of this criterion is the overdependence on appearance.
2. **Feelings** - the belief that what one feels is the truth and that the best criterion of truth is a hunch. The disadvantage of this is that feelings are subjective and are not sometimes true.
3. **Customs and traditions** - this is used by many as a criterion of truth particularly in matters pertaining to morals, politics, dress, etc.
4. **Time** - is regarded as an excellent test if not the final test of truth. The disadvantage is that we have to wait until the end of time to be really certain of the truth.
5. **Intuition** - "truth that comes from one knows not where". It is not a test of truth but a source of truth.
6. **Revelation** - "Truth which comes from God" This is also a source of truth and not a test of it.
7. **Instinct** - What is instinctive must by virtue of that fact be true since nature deemed it so. But most knowledge is beyond the bounds of instinct. It is not therefore a test of truth.
8. **Majority, Plurality, Consensus Gentium** - The number of people who believes in the truth determines its truthfulness. However, truth is not necessarily dependent on how many believes it has to be true.

9. Authority- certain individuals who have mastered a field of study may be a criterion of truth but authority gives only opinion which could be true or which could be false.
10. Correspondence - a belief that when an idea agrees with its object, it is proof of its truth. However, it is a definition of truth not a criterion.
11. Pragmatism - If an idea works then it is true, but not all truths work. It cannot be the ultimate criterion of truth.
12. Consistency - means the absence of contradiction. But there is a possibility to be consistently false sometimes.
13. Coherence - a systematic consistent explanation of all the facts of experience. Its technical name is reason. This is believed to be the ultimate criterion of truth. It makes use of all the other criteria to come up with a reasonable view of reality. This is humanity's criterion of truth.

2.2.5 Epistemological Theories

1. Empiricism

- a. Empiricists claim knowledge is a product of human experience.
- b. Statements of observations take pride of place in empiricist theory.
- c. Naïve empiricism holds simply that our ideas and theories need to be tested against reality and accepted or rejected on the basis of how well they correspond to observed facts.
- d. For any knowledge to be properly inferred or deduced, it is to be gained ultimately from one's sense-based experience.

2. Idealism

- a. A theory of reality and of knowledge that attributes to consciousness, or the immaterial mind, a primary role in the constitution of the world.
- b. All physical objects are mind-dependent and can have no existence apart from a mind that is conscious of them.

- c. What we refer to and perceive as the external world is in some way an artifice of the mind.
- d. Analytic statements (for example, mathematical truths), are held to be true without reference to the external world, and these are taken to be exemplary knowledge statements.

3. Naïve realism

- a. There exists a world of material objects.
- b. Statements about these objects can be known to be true through sense-experience.
- c. These objects exist not only when they are being perceived but also when they are not perceived.
- d. These objects are also able to retain properties of the types we perceive them as having, even when they are not being perceived. Their properties are perception-independent.
- e. By means of our senses, we perceive the world directly, and pretty much as it is. In the main, our claims to have knowledge of it are justified.

4. Phenomenalism

- a. Phenomenalism is a development from George Berkeley's claim that to be is to be perceived.
- b. When you see a tree, you see a certain perception of a brown shape, when you touch it, you get a perception of pressure against your palm.
- c. One shouldn't think of objects as distinct substances, which interact with our senses so that we may perceive them; rather we should conclude that all that really exists is the perception itself.

5. Pragmatism

- a. It holds that what is important about knowledge is that it solves certain problems that are constrained both by the world and by human purposes.

- b. The place of knowledge in human activity is to resolve the problems that arise in conflicts between belief and action.
- c. Pragmatism is committed to the use of the experimental method in all forms of inquiry; a non-skeptical fallibilism about our current store of knowledge, and the importance of knowledge proving itself through future testing.

6. Rationalism

- a. Rationalists believe that there are a priori or innate ideas that are not derived from sense experience.
- b. These ideas, however, may be justified by experience.
- c. These ideas may in some way derive from the structure of the human mind, or they may exist independently of the mind.
- d. If they exist independently, they may be understood by a human mind once it reaches a necessary degree of sophistication.

7. Representationalism

- a. Representationalism or Representative realism, unlike Naïve Realism, proposes that we cannot see the external world directly, but only through our perceptual representations of it.
- b. The objects and the world that you see around you are not the world itself, but merely an internal virtual-reality replica of that world.
- c. The veil of perception removes the real world from our direct inspection.

8. Relativism

- a. Protagoras maintains that all things are true and in a constant state of flux, revealing certain aspects of truth at one time while concealing them at another.
- b. Relativism claims that there is no objective truth, it also holds that anything which a man can perceive is true, but not necessarily true to the next person.

9. Skepticism

- a. Philosophical skepticism is the position which critically examines whether the knowledge and perceptions people have is true.
- b. Adherents of this position hold that one can never obtain true knowledge, since justification is never certain.
- c. Scientific skepticism is the practical stance that one should not accept the veracity of claims until solid evidence is produced.

2.3. ETHICS - What is the good life? (Teacher must teach the good, to value the good and moral life and to actually live the good life. Learning to be, to do and to live together.)

2.3.1. NATURE OF ETHICS

- a. Ethics is the philosophical study of the morality of human acts.
- b. Only human acts are subjects of morality and moral responsibility.
- c. Human acts are acts done with knowledge, freedom and voluntariness.
- d. Acts with no knowledge, and/or freedom, and/ or voluntariness are called acts of man and are not subject to morality.
- e. The determinants of morality are the act itself, the circumstances, and the end of the doer.

2.3.2. CLASSICAL ETHICAL THEORY

1. Platonism

- a. If a man knows what the good life is, he will not act immorally. Thus evil is due to lack of knowledge.
- b. Absolutism-there is fundamentally one and only one good life for all men to lead- the objectivity of Moral Principle.

2. Aristotle- Nicomachean Ethics

- a. The doctrine of the mean- in order to achieve happiness, men must act moderately, they must act so as to be striving for the mean between two extreme.
- b. The good life is a life of happiness.
- c. Happiness is an activity not a goal.
- d. Men ought to behave so as to achieve happiness.

3. Epicurus-Hedonism

- a. Pleasure is the sole good - to live pleasantly without suffering from any of the undesirable effects of such living
- b. ~~Dynamic pleasure-pleasure accompanied by pain~~
- c. Passive pleasure- pleasure not accompanied by pain
 - 1. Psychological Hedonism- a doctrine that states that men pursue pleasure and only pleasure in their lives.
 - 2. Ethical Hedonism- the view that men not only seek pleasure but that they ought to do so since it is the only good.

4. Cynicism-Diogenes

- a. Holds that all fruits of civilization are worthless.
- b. If salvation is to be found, it is in the rejection of society and a return to simple life, to a life of ascetic living.
- c. The world was fundamentally evil; in order to live properly a man must withdraw from participation in it.
- d. Man must find it with-in itself. This is what virtue consists of.

5. Stoicism- Zeno

- a. Learn to be indifferent to external influences
- b. Epictetus- good or evil depends upon oneself.
- c. Virtue resides in the will, that only the will is good or bad.

- d. Man who is indifferent is a free man- he becomes independent of the world.
- e. Predestination- all happenings in the world are fixed by God according to some preconceived plan.
- f. Virtue consists of a will which is in agreement with the happenings of nature.

6. Christian Ethics

- a. The view that there is a divine being who has laid down certain rules for moral behavior and that correct conduct consist in acting in accordance with these rules and incorrect conduct consists in violating them.
- b. Authoritarianism- the church regards the moral code as an objective and infallible guide to correct behavior.

7. Baruch Spinoza "the Ethics"

- a. All things come to pass, according to the eternal order and fixed laws of nature- stoics' point of view.
- b. Nothing is good or bad in itself but it is only in relation to someone- relativist.
- c. One should look at events as part of a larger system.

8. Utilitarianism: Jeremy Bentham and J.S. Mill

- a. An action is right in so far as it tends to produce the greatest happiness for the greatest number.
- b. The consequence of a given action determines the rightness or the wrongness of an act not the motive for which it was done.
- c. The main tenet is to separate rightness or wrongness of an act from the goodness or badness of an agent who performs the action.

9. Emmanuel Kant

- a. Kant divided actions into two:
 - acts done from inclination-non-moral
 - acts done from a sense of duty-moral
- b. Morality is closely bound up with one's duties and obligation:
 - acts in accord with duty-non-moral
 - acts from duty-moral
- c. Categorical imperatives
 - a. Act only on the maxim that you can will that it should become the universal law
 - b. Act as to treat humanity as an end never as a means

2.3.3 MODERN ETHICAL THEORIES

1. Subjectivism and Objectivism

- a. Objectivism-any theory that holds that ethical judgments are true or false.
- b. Subjectivism:
 - Ethical judgments are neither true nor false.
 - If the theory holds that ethical judgments are true or false but they are always about the psychology of the person who utters them and only that person then it is subjectivist.

2. Naturalism, Non-naturalism, Emotivism

- a. Naturalistic- holds that moral judgment are true or false and also that such judgments are reducible entirely to the concept of some natural science usually psychology.
- b. Non-naturalistic-holds that those moral judgments are true or false but they are not reducible to any natural science.

- c. Emotivism-holds that moral judgments are neither true nor false but are mere expressions of the feelings of those who utter them and evocative of the feelings of those who hear them.
-
- 3. Motivism , Deontological and Consequence Theories
 - a. Motivist- the rightness or wrongness of an action depends upon the motive from which the act was done. Ex. Kant's ethics
 - b. Consequence theory-the rightness or wrongness of an action depends entirely upon the effects which the action has. Ex. Utilitarian
 - c. Deontological-the rightness or wrongness of an act depends neither upon the motive nor the consequence but solely upon what kind of act it was.

2.3.4 ETHICAL PRINCIPLES

- a. Principle of Indirect voluntariness
 - 1. The doer must be able to foresee the evil effect at least in a general way.
 - 2. The doer must be free to refrain from doing that which is the cause of the evil effect.
 - 3. The doer be morally bound not to do that which is the cause of the evil effect.
- b. Principle of Double effect
 - 1. The evil effect must not precede the good effect.
 - 2. There must be a reason sufficiently grave calling for the act in its good effect.
 - 3. The intention of the doer must be honest.

c. The end of the agent as a determinant of morality

1. A good act done for a good end takes on an added or a new goodness from the end, and from each good end that influences the act.
2. A bad act done for an evil end takes on an added or a new malice from the end, and from each evil end that influences the act.
3. A good act done for an evil end is wholly evil if the end is the complete motive for the act or if the end, while only a partial motive, is gravely evil. A good act done for an end slightly evil and not the whole motive of the act, is only partially vitiated.
4. An evil act can never become good by reason of a good end.
5. An indifferent act is good if done for a good end, evil for an evil end.

d. Influence of circumstance upon morality of human acts

1. An indifferent act becomes good or evil by reason of its circumstances.
2. A good act may become evil by reason of circumstances.
3. An act may become better or worse, or may take on a new goodness or evil by reason of circumstances.
4. An evil act can never be made good by circumstances.
5. A gravely evil circumstance entirely vitiates a good act.
6. A slightly evil circumstance does not entirely vitiate a good act.

e. On duty

1. Common necessity never exempts from duty.
2. No necessity exempts from a negative natural duty.
3. Extreme or grave necessity exempts from affirmative natural duty, provided there is no involved violation of negative natural law.
4. Extreme or grave necessity exempts from the prescription of positive law, provided there is no involved violation of negative natural law.

f. On contract: The matter apt; the person fit; consent and a formal note of it

- g. On prescription of ownership: Fit goods; good faith; a title, too; due time: the thing belongs to you.
- h. On strike: conditions requisite for a just strike
 1. That it be the only available means of reaching a just settlement of the difficulties between employer and employees
 2. That the matter at stake be of an importance sufficient to warrant the hardship and damage that must be borne by the workers, the employers, the families of both, and the community at large
 3. That there be a reasonable hope of success in obtaining the good for which the strike

2.4. LOGIC - What is correct thinking? Teachers must develop the mental faculty of students, to reason out critically, creatively and strategically.

- a. Logic is the science and art of correct thinking and right reasoning.
- b. Logic is the study of univocal terms and precise ideas that constitute propositional judgment in order to determine the validity and soundness of syllogisms and arguments.
- c. Logic is a tool of knowing and understanding and thus a tool of Philosophy, Science and Education. The wisdom that philosophy discovers through correct reasoning is taught and transmitted through logical educative processes. The collective wisdom of the human race is verified by science which employs logical processes and methodologies and made applicable and relevant through technology.

2.4.1. Types of Logic

- a. Inductive. It is reasoning from particular/specific to general/universal. It is popular in the sciences because it leads to the discovery of principles, laws, etc.

- b. Deductive. It is reasoning from the general/universal to the particulars/specifics. Its main justification is to show proofs of the known principle. It is often used in Mathematics.
Syllogism is the verbal form of deductive reasoning.
- c. Dialectic. It is reasoning in which the conflict or contrast of ideas is used as a means of detecting the truth. In Hegel's dialectic, there are three stages: thesis (affirmation of the idea); antithesis (negation of the idea); and synthesis (reaffirmation of the idea or truth itself).
- d. Experimental or problem solving. It is the testing of hypothesis and makes use of both induction and deduction.

2.4.2 IMMEDIATE INFERENCE

- a. Inference is a process by which a conclusion is drawn from a valid sequence and relationship of premises.
- b. Syllogisms are verbal expressions of arguments that are products of reasoning or inferential thinking

c. Kinds of Syllogisms

1. Categorical Syllogism is a syllogism that is made up of categorical propositions.

Example: *All books are tools for learning;*

But the dictionary is a book;

Therefore, the dictionary is a tool for learning.

2. Hypothetical Syllogism is a syllogism wherein at least one proposition is a hypothetical proposition.

Example: *If all books are tools for learning then they must be valued.*

But all books are tools for learning;

Therefore, they must be valued.

d. Immediate Inferences

1. Immediate Inference is a kind of inference by which the mind directly draws the implication of one proposition to arrive at a new proposition without the use of a medium or a third idea.

2. Types of Immediate Inference

- 2.1. Oppositional inference is a type of immediate inference that proceeds from the relationship between propositions with the same subject and predicate but different quantities and/or qualities. Oppositional inference is the process of determining the truth or falsity of an opposite statement from the truth or falsity of a given statement.

2.2. Types of Categorical Propositions

Categorical Propositions are statements of direct claim of relationship or non-relationship. They are either true or false. They are classified into four types, namely A, E, I, O propositions:

1. A propositions- propositions that are Universal/Singular in quantity and affirmative in quality

Ex. All men are rational; Cathy is a student; Every citizen is free to own properties

2. E Propositions- Those that are Universal/ Singular in quantity and negative in quality

Ex. No man is an island; All students are not teachers; Every dog is not a cat.

3. I Propositions-Those that are particular in quantity and affirmative in quality

Ex. Some politicians are liars; Many countries are for peace; Filipinos are Christians.

4. O Propositions-Those that are particular in quantity and negative in quality.

Ex. Some civilians are not responsible people; Many are not in favor of war; Not all Filipinos are not rich.

2.3 These four types of categorical propositions are actually opposed to each other either as contradictories, contraries, sub-contraries, or sub-alternates.

- a. Contradictory Opposition exists between two statements of different qualities and quantities. Contradictory propositions cannot be both true and cannot be both false. If one is true then the other is false and if one is false the other is true. A & O Propositions and E & I Propositions are contradictories.
- b. Contrary Opposition exists between two statements of both universal quantities but of different qualities, that is, one is affirmative and the other is negative. Contrary propositions may be both false but only one can be false. So if one is true the other is false but if one is false the other is doubtful. A and E propositions are contraries.
- c. Sub-Contrary Opposition exists between two statements that are both Particular in quantities but of different qualities. Sub-Contrary propositions may be both true but only one can be false. So if one is true the other is doubtful but if one is false the other is true. I and O Propositions are sub-contraries.
- d. Sub-Alternate Opposition exists between two propositions that are of the same quality but different in quantities, that is, one is universal and the other is particular. Sub-alternates may be both true and maybe both false. If the Universal proposition is true the particular proposition is true and if the particular proposition is false the universal proposition is false but if the particular proposition is true the universal proposition is doubtful and if the universal proposition is false the particular proposition is doubtful. A & I propositions and E and O Propositions are sub-alternates.

2.4 Square of Opposition

2.5 Summary of the Rules in Oppositional Inference

- A. Contradictory Opposition: *A and O, E and I* propositions
1. *If one proposition is true then the other is false.*
 2. *If one proposition is false then the other is true.*
- B. Contrary Opposition: *A and E* propositions
1. *If one is true then the other is false.*
 2. *If one is false then the other is doubtful.*

- C. Sub-Contrary Opposition: I and O Propositions
 - 1. If one is true then the other is doubtful.
 - 2. If one is false then the other is true.
- D. Sub-Alternate Opposition: A and I; E and O propositions
 - 1. ~~If the universal is true then the particular is true.~~
 - 2. ~~If the universal is false then the particular is doubtful.~~
 - 3. ~~If the particular is true then the universal is doubtful.~~
 - 4. ~~If the particular is false then the universal is false.~~

If one is to apply these rules in analyzing the relationships that exist between and among the four types of categorical propositions, then one can immediately infer that:

- if A is true, then E is false, I is true, and O is false.
- if A is false, then E is doubtful, I is doubtful and O is true.
- If E is true then A is false, I is false and O is true.
- If E is false then A is doubtful, I is true and O is doubtful.
- If I is true then A is doubtful, E is false and O is doubtful.
- If I is false then A is false, E is true and O is true.
- If O is true then A is false, E is doubtful and I is doubtful.
- If O is false then A is true, E is false, and I is true.

To have a visual illustration of these inferences, please remember the square of opposition. Recall that on the upper left hand corner is found the A proposition while on the upper right hand corner is found the E proposition. Recall further that on the lower left hand corner is found the I proposition while on the lower right hand corner is found the O proposition. If we now apply the rules of opposition, we will have the table below

2.6 Truth-Value Table of Opposing Propositions

I. F	E ?	F I	? E
T F	? T	F T	T ?
? F	F T	F ?	T F
I ?	E T	? I	T E

Legend: T= True, F = False, ? = doubtful

3. Education or Logical Equivalence is the process of restating the same meaning of proposition using different forms. The result of the inference is a new proposition but it has the same meaning and truth-value as the given.

3.1 Types of Education or Logical Equivalence

1. Conversion is the process of interchanging the position of the subject and predicate terms without extending any term and without changing the quality of the proposition. The original proposition is reformulated by interchanging the subject and the predicate while maintaining the quantities of the terms. The original proposition is called the convertend while the resulting proposition is called the converse.

Ex. All computers are expensive. = Some expensive things are computers. A to I. Partial Conversion

Man is a rational Animal. = A rational animal is a man. A to A full conversion

No terrorist is a peace lover. = No peace lover is a terrorist. E to E conversion

Shortcut:

Subject copula Predicate = Predicate copula Subject

To illustrate: I proposition converted to another I Proposition

Some governments are socialist = Some socialists are governments

Note: An O proposition cannot be validly converted because it will extend a term from a particular to a universal extension or quantity

- Obversion is the process of expressing an affirmative proposition in a negative manner or a negative proposition in the affirmative manner. It involves the changing of the copula and contradicting the original predicate. It is the process in which a new proposition is formulated by changing the quality of the original proposition and contradicting the original predicate.

Ex.: All trees are useful. = All trees are not non-useful. A to E obversion

Some actions are not good, = Some actions are bad. O to I obversion

To illustrate: A- proposition contraposed to another A- proposition

All health workers are professionals = All non-professionals are non-health workers.

(Note: An I proposition cannot be contraposed validly.)

4. Inversion is the process of changing the quantity of a proposition and contradicting the original subject and predicate terms. It proceeds by obverting and converting the contraposit of a universal proposition. It is the process of changing the quantity of the original proposition and contradicting both subject and predicate and retaining the quality of the original proposition.

Invertend No X are Y

All X are Y

Step 1: Obvert = E Propositions start with step 2 = All X are not non-Y.

Step 2: Convert = No Y is X or All Y are not X. = All non-Y are not X.

Step 3: Obvert = All Y are non-X. = All non-Y are non-X.

Step 4: Convert = Some non-X are Y. = Partial = Some non-X are non-Y. = Full inverse

Step 5: Obvert = Some non-X are not non-Y. = Full = Some non-X are not Y. = Partial inverse

Sample Inversion

All knights are brave. = Some non-knights are non-brave. A-to-I inversion

Shortcut:

Subject
Universal
Affirmative

Copula

Predicate
affirmative

Subject
Particular
Negative

Copula

Predicate
Negative

To illustrate: A-Proposition, inverted to I-Proposition

All nurses are health workers. Some non-nurses are non-health workers.

Note: I and O Propositions cannot be inverted

2.4.3 MEDIATE INFERENCES

A. Categorical Syllogism

A Categorical Syllogism is a mediate inference that is made up of categorical propositions. The two propositions, called premises, are related through a middle term. These result into a third proposition, called conclusion, which flows necessarily from such relationship.

A.1. Basic Components of a Categorical Proposition

1. The Three Categorical Propositions

1. Major Premise-the proposition of greater extension that is made up of the major term and the middle term. It is usually written as the first premise.
2. Minor Premise- The proposition of lesser extension that is made up of the minor term and the middle term. It is usually written as the second premise.
3. Conclusion- The proposition that flowed from the relationship of the two premises. This contains the inferred truth, which is a necessary implication of the two premises. It is made up of the minor and the major term and is usually written last.

Example:

Major Premise: All rational animals are mortal;

Minor Premise: But all men are rational animals;

Conclusion: Therefore, all men are mortal.

A.2. The Three Terms

1. *The Major Term*- is one of the terms found in the major premise and the predicate of the conclusion.
2. *The Minor Term*- is one of the terms found in the minor premise and the subject of the conclusion.
3. *The Middle Term*- is found in both major and minor premises but not in the conclusion. It is the term that mediates and connects the two premises. The common idea that allows the truth to flow from the premises to the conclusion.

Example:

All *health workers* are professionals;
But, some *public servants* are health workers;
Therefore, some *public servants* are *professionals*.

Major Term: *professionals*
Minor Term: *public servant*
Middle Term: *health workers*

A.2. Rules on the Validity of Categorical Syllogism

1. There must be three terms only; the major term, the minor term, and the middle term. The violation of this rule is known as *fallacy of excessive terms or lack of terms*.
2. Each of the terms must be used twice univocally. The violation of this rule is known as *fallacy of analogous or equivocal terms*.
3. The middle term must be used in both premises and not in the conclusion. The violation of this rule is called the *fallacy of misplaced middle term*.
4. The middle term must be universal at least once. The violation of this rule is called the *fallacy of undistributed middle term*.

5. The Major and the minor terms may only be universal in the conclusion if they are universal in the premises. The violation of this rule is known as the *fallacy of extension of the major or the minor term*.
6. Two affirmative proposition results into an affirmative conclusion. The violation of this rule is called the *fallacy of negative conclusion*.
7. Two negative premises cannot have a valid conclusion. The violation of this rule is known as the *fallacy of negative premises*.
8. One affirmative and one negative premises result into a negative conclusion. Violation of this rule is called the *fallacy of affirmative conclusion*.
9. The premises must be universal at least once. The violation of this rule is known as the *fallacy of undistributed premises*.
10. One universal and one particular premise results into a particular conclusion. The violation of this rule is known as the *fallacy of universal/ or extended conclusion*.
11. Two particular premises cannot have a valid conclusion. The violation of this rule is called the *fallacy of undistributed premises*.
12. Never claim something in the conclusion something that was not claimed and proven in the premises. This is the General rule in any syllogism. The violation of this rule is called the *fallacy of lack of sequence*.

A.3. Valid Moods of Categorical Syllogisms

Figure 1: Barbara, Celarent, Darii, Ferio or AAA, EAE, AII, EIO.

Figure 2: Cesare, Camestres, Festino, Baroco or EAE, AEE, EIO, AOO

Figure 3: Darapti, Disamis, Datisi, Felapton, Bocardo, Ferison or AAI, IAI, AII, EAO, OAO, EIO

Figure 4: Bramantip, Camenes, Dimaris, Fesapo, Fresison or AAI, AEE, IAI, EAO, EIO

(Note: The 1st vowel refers to the major premise, the 2nd to the minor premise and the 3rd to the conclusion)

A.4. Determining the validity and soundness (reasonability) of Syllogism

1. Rewrite the argument in the logical form that is major premise, minor premise and conclusion
2. Check the syllogism if it contains a fallacy or if it is in accordance with the rules of validity
3. If it contains a fallacy or a rule was violated then it is invalid and therefore should not be accepted as reasonable
4. A shorter way is to identify the middle term, the term common to both major and minor premises, and then determine the figure and the mood then compare it to the valid mood on that figure(see samples below) if it is one of the moods identified then it is valid. If not then it is invalid.
5. To check for soundness, check if both premises of the valid syllogism are true. If they are then the syllogism is sound. If one or both of the premises is false then it is unsound.

A.5 Examples of the valid moods

Figure 1: Subject: Predicate Middle Terms

1. BARBARA:

- | | |
|---------------------------|--|
| A- All X are Y; | A- All spiritual are immortal; |
| A- But all W are X; | A- but all human souls are spiritual; |
| A- therefore, all W are Y | A- thus, all human souls are immortal. |

2. CELARENT

- | | |
|---------------------|--|
| E- All X are not Y; | E- All spiritual are not immortal; |
| A- but all W are X; | A- but all human souls are spiritual; |
| E- All W are not Y | E- Thus, all human souls are not immortal. |

3. DARII

- | | |
|------------------------|---|
| A- All X are Y; | A- All spiritual are immortal; |
| I- but some W are X; | I- but some human souls are spiritual; |
| I- thus, some W are Y. | I- thus, some human souls are immortal. |

4. FERIO

E- No X is Y;

I- but some W is X;

O- thus, some W are Y.

E- No spiritual being is immortal;

I- but some human souls are spiritual;

O- thus, some human souls are immortal.

Figure II: Predicate: Predicate Middle Terms

1. CESARE

E- All Y are not X;

A- but all W are X;

E- thus, All W are not Y.

E- Every Manual is not a newspaper;

A- but all Bulletin Today are newspapers;

E- Thus, all Bulletin today are not manuals.

2. CAMESTRES

A- All Y are X;

E- but no W is an X;

E- thus, no W is an Y.

A- All manuals are newspapers;

E- but no Bulletin Today is a newspaper;

E- therefore, no Bulletin Today is a manual.

3. FESTINO

E- All Y are not X

I- but some W are X

O- thus, some W are Y

E- All manuals are not newspapers;

I- but some Bulletin Today are newspapers;

O- thus, some Bulletin Today are not manuals.

4. BAROCO

A- All Y are X;

O- but some W are not X;

O- thus some W are not Y.

A- All manuals are newspapers;

O- but some Bulletin Today are not newspapers;

O- thus, some Bulletin Today are not manuals.

Figure III: Subject: Subject Middle Terms

1. DARAPTI

A- All X are Y;

A- but all X are W;

I- thus, some W are Y.

A- All transparencies are plastic;

A- but all transparencies are instructional materials;

I- thus, some instructional materials are plastic.

2. DISAMIS

I- Some X are Y;
A- but all X are W;
I- thus, some W are Y

I- Some transparencies are plastic;
A- but all transparencies are instructional materials;
I- thus, some instructional materials are plastic.

3. DATSI

A- All X are Y;
I- but some X are W;
I- thus, some W are X.

A- All transparencies are plastic
I- but some transparencies are instructional materials
I- thus, some instructional materials are plastic.

4. FELAPTON

E- No X is Y;
A- but all X are W;
O- thus, some W are not Y.

E- No transparencies are plastic;
A- but all transparencies are instructional materials;
O- thus, some instructional materials are not plastic.

5. BOCARDO

O- Some X are not Y;
A- but all X are W;
O- thus, some W are not Y.

O- Some transparencies are not plastic;
A- but all transparencies are instructional materials;
O- thus, some instructional materials are not plastic.

6. FERISON

E- All X are not Y
I- but some X are W
O- thus, some W are not Y.

E- All transparencies are not plastic;
I- but some transparencies are instructional materials;
O- thus, some instructional materials are not plastic.

Figure IV: Predicate: Subject Middle Term

1. BRAMANTIP

A- All Y are X;
A- but all X are W;
I- thus, some W are Y.

A- Education is an investment of human capital;
A- but all investments of human capital are precious;
I- thus some precious things are education.

2. CAMENES

A- All Y are X;
 E- but no X is W;
 E- thus, no W is Y.

A- Education is an investment of human capital;
 E- but no investment of human capital is precious;
 E- thus, no precious thing is education.

3. DIMARIS

I- Some Y are X;
 A- but all X are W
 I- thus some W are Y

I- Some Education are investment of human capital;
 A- but all investments of human capital are precious;
 I- thus, some precious things are education.

4. FESAPO

E- No Y is X
 A- but all X are W
 O- thus, some W are not Y

E- No education is an investment of human capital;
 A- but all investments of human capital are precious;
 O- thus, some precious things are not education.

5. FRESISON

E- No Y is X
 I- but some X are W
 O- thus, some W are not Y

E- No education is an investment of human capital;
 I- but some investments of human capital are precious;
 O- thus, some precious things are not education.

B. Hypothetical Syllogism

B.1 Rules for the Validity of Conditional Syllogism (Cause and effect Relation introduced by "If... Then...")

1. There must be sequence. The consequent must necessarily flow from the antecedent.
2. Posit or assert the truth of the antecedent in the minor, posit or assert the truth of the consequent in the conclusion.
3. Sublate or deny the truth of the consequent in the minor premise, sublate or deny the truth of the antecedent in the conclusion.

4. Posit or sublate completely, never partially.
5. It is invalid to sublate the antecedent in the minor premise:
6. It is invalid to posit the consequent in the minor premise

Examples: *If it rains then the ground will be wet:*

But it rained;

Therefore, the ground was wet.

If it rains the ground will be wet;

But the ground is not wet;

Therefore, it did not rain.

(Note: *Mutually exclusive alternatives or sequential correlatives are exempted from rule 5 and 6*)

B.2 Rules for the Validity of Disjunctive Syllogism (choices introduced by "Either....Or...")

1. If the disjunction is a strict disjunction or contradictory disjunction: (two choices only)
 - a. Posit one alternative in the minor premise then sublate the other in the conclusion.
 - b. Sublate one alternative in the minor premise then posit the other in the conclusion.
2. If the disjunctive is contrary or a third alternative is implied:
 - a. Posit one alternative in the minor premise then sublate the other or the rest in the conclusion.
 - b. It is invalid to sublate one alternative in the minor premise then posit another in the conclusion.
3. If the disjunction is sub-contrary or both alternatives could be true:
 - a. Sublate one alternative in the minor premise then posit the other in the conclusion.

- b. It is invalid to posit one alternative in the minor premise then sublate the other in the conclusion.

Examples: *Either the answer is correct or it is wrong;
But the answer is not correct;
Therefore, the answer is wrong.*

*Either you are rich or poor;
but you are not rich;
therefore, you are either poor or middle class.*

B.3 Rules for the Validity of Conjunctive Syllogism (introduced by "One cannot be... and be... at the same respect")

1. Posit one alternative in the minor premise then sublate the other in the conclusion.
2. It is invalid to sublate one alternative in the minor premise then posit the other in the conclusion.

Examples: *You cannot be in Baguio and in PNU at the same time;
But you are in Baguio;
Thus, you are not in PNU.*

2.3.4 Fallacies

A. Nature of Fallacy

Fallacy refers to errors in the reasoning process or an argument that has insufficient evidence or warrant for its conclusion.

A.1 Kinds of Informal or Material Fallacy

1. The Fallacy of Relevance- an erroneous reasoning process that presents unrelated or irrelevant facts or psychological manipulations, which in turn befog the mind and deviate the mind from analyzing the real issue.

Example: *The bishop is innocent from the charges of sexual harassment because many people attended the prayer rally for him. He is also known to be kind and he helped a lot of people.*

2. The fallacy of Ambiguity-An erroneous reasoning process, which is a result of the lack of preciseness in the meaning of the languages that were used.
Example: *He did not violate the law since he parked his car only on one side. what was prohibited was parking on both sides.*

A.2 The Types of Fallacy of Relevance

1. Argumentum ad Baculum or the Appeal to force- this uses moral, psychological, cultural, or physical pressure instead of reason in its argument. Appealing to force is wrong because it attacks the freedom of man.

Example: *Since I am the boss, you must vote for my candidate or else I will fire you from your job.*

2. Argumentum ad misericordiam or the appeal to pity- when compassion or pity is being used to obscure the issue.

Example: *We should not fail poor students for they may not acquire the education that will help them overcome their poverty.*

3. Argumentum ad autoritatem or the appeal to misplaced authority- when the truth of the argument is solely based on an authority not relevant to the issue.

Example: *According to Time Magazine, Filipinos should only have one child thus our congress must legislate such law.*

4. Argumentum ad hominem-when the personality of the opponent is attacked when it has nothing to do with the issue.

Example: *Don't believe what Martha said on education, she was not even a graduate of PNU.*

5. Argumentum ad ignorantiam or the appeal to ignorance- when the truth or falsity of an issue is asserted because no one can offer proof of its contradictory.

Example: *He was not guilty since no one saw him commit the crime.*

6. Argumentum ad populum or the appeal to people-when the popular sentiments of the majority or those that counts are made the basis of the conclusion. This makes use of the bandwagon argument.

Example: *Since milk from China causes health problems then we must avoid buying any product coming from China,*

7. Petitio Principii or Begging the question/ Circulus in probando or arguing in circles -when one makes use of an unproven assumption to prove yet another assumption or the use of an unproven assumption to prove another assumption that proves the first assumption.

Example: *Order is indispensable to justice because justice can be achieved only by means of social and legal order.*

8. Ignoratio elenchi or ignoring the issue- when the issue is set aside and an unrelated fact is presented or an irrelevant conclusion is made.

Example: *Question: Do you love me? Answer: Let us eat, you must be hungry.*

9. Fallacy of false cause-when an effect is attributed to an unrelated cause simply because the perceived effect took place after the perceived cause.

Example: *We are poor because the government is not concerned with providing us the basic services.*

10. Hasty Generalization-When the argument concludes even if there is insufficient data to establish a valid sequence when what is true to a few is made true to all.

Example: *Since I saw them together then they must be lovers.*

11. Special pleading-when the argument uses only favorable truths and disregards other truth that will not serve the purpose of the one arguing. When partial truths are presented as the whole truth.

Example: *If you love your friend then you must be willing to give everything to him for love is giving everything without expecting anything.*

12. Black or white or the fallacy of broad disjunction- when a contrary relation is presented as contradictory.

Example: *Since you are not ugly, then you must be beautiful.*

13. Fallacy of accident- when an accidental quality of a thing is assumed to be-essential. When physical properties are mistaken to be the true nature of a being.

Example: *Since ice is not liquid it therefore is not water.*

14. A fortiori Fallacy- when other properties/possibilities are not considered in arriving at a conclusion. The argument is based solely on one aspect of reality ignoring other aspects that greatly affect that reality.

A.3 Fallacy of Ambiguity

1. Fallacy of Equivocation- when the meaning of a term is interpreted into two distinct meanings. When one of the terms in the syllogism is equivocal or analogous.

Example: *Time heals all wounds. Time is money. Therefore, money heals all wounds.*

2. Fallacy of Amphiboly- When a phrase or a proposition is used in two or more interpretations.

Example: *We must bear many children since we were commanded to go and multiply.*

3. Fallacy of Accent or prosody- when the context of a statement is falsely interpreted. When a statement is entirely taken out of context and the suppositions are wrong.

Example: *Since Ateneo is located in Quezon City it must be called Ateneo de Quezon City and not Ateneo de Manila.*

4. Fallacy of Composition-When what should be understood to be the properties of an individual is taken collectively. When an individual characteristic is applied to all the members of the group.

Example: *Fatima must be an excellent school since one of its graduates top the Medical Exam.*

5. Fallacy of division-When the collective property is applied to an individual. When what is true to a whole as a whole is made true to an individual part.
Example: *Since teachers are responsible for their students, the teacher of a criminal must also be responsible for the criminal's act.*
6. Fallacy of false analogy-when similarity of meanings is inferred from the similarity of patterns.
Example: *Since both of us sir have the same attendance then we must have the same grade.*

3. Philosophical Theories and Educational Movements (Philosophy as related to educational processes)

3.1. Naturalism.

1. Is a doctrine denying anything in reality that has supernatural significance
2. Truth can be discovered only through nature: MAN is a product of NATURE
3. Nature is the be-all and end-all of reality. Its antithesis is supernaturalism. Nature is the aggregate of things around us.
4. Its educational theme is harmony with nature and the hedonistic principle of pleasure in the educative process.
5. Its chief educational spokesman is Herbert Spencer who believes that the goal of education is complete living.
6. The child (pupil) is viewed as a child of nature and so is inherently good.
7. There is only one reality, and that reality is nature.- Leucippus, Democritus, Epicurus, Lucretius and Spencer
8. Reality is composed of bodies moving in space.- Democritus, Epicurus, Lucretius and Hobbes
9. Force or energy is the ultimate reality.- Spencer

10. Keeping close to the dominant and peaceful ways of nature is the most acceptable way of adhering to the demands of day-to-day life.-
Leucippus, Democritus, Epicurus and Rousseau
11. Cosmic reason is the governing principle of all things.- Epictetus

Educational Aims of Naturalism: To develop the individual in accordance with laws of nature, human development

Curricular Emphasis: Physical Education, Natural Sciences

Agencies: Family, Tutors

Contents Studied:

- History was taught as biography.
- Astronomy and geography were learned through observation.
- Counting and weighing things, measuring distances, drawing and singing
- Women were taught only singing, dancing, embroidery and home chores to please their men.

Outstanding Contributions to Education:

- Three Modern Principles of Teaching:
 - Principle of growth
 - Principle of pupil activity
 - Principle of individualization
- The Order of Nature:
 - need
 - activity
 - experience
 - knowledge

Implications to Education

1. Education is, first of all, for the benefit of the child, not for the sake of any conception, however hallowed, of the function of the teacher, or the curriculum, or the school.- Rousseau
2. Education should be a practical preparation for life.- Rousseau
3. All knowledge should be evaluated in terms of evolutionary naturalistic

- principles of education which must conform to them.- Spencer
- 4. The method of instruction should be based upon the psychological principles governing the development of the child.- Rousseau
- 5. Education teaches the moral primacy of the will.- Epictetus
- 6. Education must provide first-hand contact with the child's physical environment.- Rousseau
- 7. The knowledge that the individual acquires through experience and verifies and uses to solve his life problems, is utterly superior to that knowledge supplied by traditional sources.- Spencer

3.2. Idealism. It opposes the philosophy of naturalism.

- 1. Its origin is traced to Plato who advocated a doctrine of ideas (also the doctrine of the universals).
- 2. Since an idea is nonmaterial, idealism stresses moral and spiritual reality.
- 3. Rene Descartes, an idealist, advocated a perfect being- God and humans are imperfect beings (the belief of the one and the many)
- 4. Its educational philosophy is ideal-centered. God is the absolute/ perfect ideal. Sometimes, it is regarded as perfectionalism.
- 5. Plato's Republic is believed to be the first educational classic/treatise ever written. It envisioned a society ruled by a philosopher- king.
- 6. Idealism is a philosophy that proclaims the spiritual nature of men and the universe. Its basic viewpoint stresses the human spirit, soul, or mind as the most important element in life.
- 7. It holds that the good, true and beautiful are permanently part of the structure of the related coherent, orderly, and unchanging universe.
- 8. All of reality is reducible to one fundamental substance- Spirit. Matter is not real, only the mind is real.

Aim of Idealist Education: to contribute to the development of mind and self. The school should emphasize intellectual abilities, moral judgments, aesthetics, self-realization, individual freedom, individual responsibility, and self-control.

Curriculum of Idealist Education-

- intellectual subject-matter, which is ideational and conceptual on subjects, which are essential for the realization of mental and moral development.
- Subject matter should be made constant for all. Mathematics, History, and Literature rank high in relevance since they are not only cognitive but value-laden.

Methodology of Idealist Education

- Idealists encourage accumulation of knowledge and thinking and must apply criteria for moral evaluation. Suggested methods are questioning and discussion, lecture and the project, whether done singly or in group.
- Although learning is a product of the learner's own activity, the learning process is made more efficient by the stimulation, which comes from the teacher and school environment.
- The learner is immature and is seeking the perspective into his own personality.

Role of an idealist Teacher

- The idealist teacher should be conversant with a variety of methods and should use the particular method that is most effective in securing the desired results.
- Teachers are revered persons central to the educational process. They must be excellent mentally and morally in personal conduct and convictions.
- They must exercise creative skills in providing opportunities for the pupil's mind to analyze, discover, synthesize, and create.
- They should see his role in assisting the learner to realize the fullness of his own personality.

Implication of Idealism to Education

- Idealism is often considered a conservative philosophy of education because much of its thrust is to preserve cultural traditions.

- This is because of the concern for perennial and ultimate truths and the notion that education is largely a matter of passing on to the young the nation's cultural heritage.
- There is great concern for morality and character development.
- Idealistic education emphasizes the cognitive side, intellectualism or elitist, to the detriment of the physical and affective side of development.
- Character development in idealistic philosophy was pictured as:
 - The first rule to be learned by all students is order.
 - Students must conform to rules and regulations and repress everything that interferes with the function of the school.
 - Pupils must have their lessons ready on time, rise and sit at a given signal, learn habits of silence and cleanliness.

3.3. Realism. It is attributed to Aristotle, a pupil of Plato.

1. Realism may be defined as any philosophical position that asserts the objective existence of the world and beings in it and relations between these beings independent of human knowledge and desires.
2. The knowability of these objects as they are in themselves and the need for conformity to the objective reality in man's conduct.
3. Realism holds that reality, knowledge, and value exist independent of the human mind. For the realist, matter is real.
4. The most important part of realism is the thesis of independence. Sticks, stones, trees exist whether or not there is a human mind to perceive them.
5. Realists refer to those universal elements of man that are unchanging regardless of time, place, and circumstance.
6. Realists generally maintain a materialistic concept of human nature biased toward social control and social order.
7. They tend to see the universe in terms of an independent reality with its internal and systematic order; therefore, human beings must adopt and adjust to this reality, and dreams and desires have to be subsumed under its demand.

8. Realism believes that things exist independent of the mind. Its origin is traced to Aristotle's doctrine of particulars.
9. It has greatly influenced the socialistic (communitistic) educational philosophy.
10. John Amos Comenius, a great realist, believes that education is formation and that the school is the true forging place of man.
11. It believes in determinism (man is not free because he is governed by laws or forces of nature beyond his control). One of the primary goals of education is habit formation.
12. The teacher is the key figure, a master teacher; one who transmits knowledge to his pupils (an authority).

Aim of Realist Education

- The aim of a realist education is to provide the students with the essential knowledge that he will need to survive in the natural world.

Realist Curriculum

- The curriculum is called the subject-matter approach, which is composed of two basic components, the body of knowledge, and the appropriate pedagogy to fit the readiness of the learner. The liberal arts curriculum and the math science disciplines consist of a number of related concepts that constitute the structure of the discipline.

Methodology of Realist Education

- The teacher is expected to be skilled in both the subject matter that he teaches and the method of teaching it to students.
- Formal schooling means transmission of knowledge from experts to the young and immature.
- The school's task is primarily an intellectual one.
- The administrator's role is to see to it that the teachers are not distracted by recreational and social functions from performing their intellectual task of cultivating and stimulating the learning of students.

- In the elementary level, emphasis is on the development of skills for reading, writing, arithmetic, and study habits.
- In the secondary and collegiate level, the body of knowledge regarded as containing the wisdom of the human race will have to be transmitted in an authoritarian manner.
- Students will be required to recall, explain, compare, interpret, and make inferences. Evaluation is essential, making use of objective measures.
- Motivation will be in the form of rewards to reinforce what has been learned.

Role of Realist Teachers

- The teacher is a person who possesses a body of knowledge and who is capable of transmitting it to students.
- Teaching should not be indoctrinating. Learning should be interactive.
- The teacher utilizes pupil interest by relating subject matter to student experiences.
- The teacher maintains discipline by reward and controls the pupil by activity.

Implication of Realist to Education

- The universal elements in man make up the elements in the education of man. Education implies teaching, teaching implies knowledge, knowledge is truth, and truth is the same everywhere. Thus education should be the same everywhere.
- Realists are concerned with the necessity of student measuring up to the standard curriculum or external criteria of excellence.
- They believe that the "superior" students should be given the arts and sciences while the "slower" students should be given a narrow technical-vocational training.
- Realism favors a fact-based approach to knowledge. This had led to the tradition and problem of "testing" including the IQ as passport to a college education, the teachers' board as a minimum requirement for entry into the profession. The realist believed that hard work and discipline are

considered "good" and the students' heads should be filled with "factual truth" so that they do not come to a "bad end."

3.4 PERENNIALISM - Robert Hutchins, Mortimer Adler

1. Despite differing environments, human nature remains the same everywhere; hence, education should be the same for everyone.
2. Since ~~rationality is man's highest attribute~~, he must use it to direct his instinctual nature in accordance with deliberately chosen ends.
3. It is education's task to impart knowledge of eternal truth.
4. The student should be taught certain basic subjects that will acquaint him with the world's permanencies.
5. Students should study the great works of literature, philosophy, history, and science in which men through the ages have revealed their greatest aspirations and achievements.
6. Perennialism is an educational theory that is greatly influenced by the principles of realism. It has a conservative/ traditional view of human nature and education.
7. Perennialists contend that truth is universal and unchanging, and, therefore, a good education is also universal and constant.

Aim of Perennialist Education

- The perennialists have for their aim the education of the rational person. The central aim of education should be to develop the power of thought.
- They view the universal aim of education as the search for and dissemination of truth. They look up to the school as an institution designed to develop human intelligence.

Perennialist Curriculum

- The perennialist view education as a recurring process based on eternal truths; thus, the school's curriculum should emphasize the recurrent themes of human life.

- It should contain cognitive subjects that cultivate rationality and the study of moral, aesthetics, and religious principles to develop the attitudinal dimension.
- The perennialist prefers a subject matter curriculum, which includes history, language, mathematics, logic, literature, the humanities, and science.

Perennialist's Methodology

- As for the methods of teaching, the curriculum of a perennialist education would be subject-centered, drawing heavily upon the disciplines of literature, mathematics, language, history, and the humanities.
- The perennialists suggest that the best means to attaining this enduring knowledge is through the study of great books of Western Civilization.
- The method of study would be the reading and discussion of these great works which, in turn, discipline the mind.

Role of Perennialist Teachers

- The teacher, accordingly, must be one who has mastered discipline, who is a master teacher in terms of guiding truth, and whose character is beyond reproach.
- The teacher is to be viewed as authority and his expertise not to be questioned.
- The role of the school becomes one of training an intellectual elite who will one day take charge of passing this on to a new generation of learners.

Implication of Perennialism to Education

- Perennialism represents a conservative theoretical view centered in the authority of tradition and the classics.
- Among its major educational principles are:
- Truth is universal and does not depend on the circumstances of place, time, or person;
- A good education involves a search for and an understanding of the truth;
- Truth can be found in the great work of civilization; and
- Education is the liberal exercise that develops the intellect.

3.5 ESSENTIALISM - William- Bagley, Herman Horne

1. Learning, of its very nature, involves hard work and often unwilling application.
2. The initiative in education should lie with the teacher rather than with the pupil.
3. The heart of the educational process is the assimilation of prescribed subject matter.
4. The school should retain traditional methods of mental discipline.
5. Essentialism, a conservative educational theory rooted in idealism and realism
6. It arose in response to progressive education. The essentialists were concerned with a revival of efforts in the direction of teaching the fundamental tools of learning as the most indispensable type of education.

Aims of Essentialism

- The essentialist have as their ultimate aim " to fit the man to perform justly, skillfully and magnanimously all the offices, both private and public, of peace and war".
- The indispensable cultural objectives of humanity, the essentials, are goals that must be achieved –sometimes incidentally- but more often by direct instruction. Informal learning helps, but this should only be supplementary and secondary.
- The essentialist believed that the essential skills, knowledge, and attitude needed by the individual in making has adjustment to the realities of life should be systematically planned so that these essentials will be recognized.

Essentialist Curriculum

- The essentialist emphasizes the need for a curriculum that transmits significant race experiences and the need to present this racial experiences through organized subject matter courses.

- Thus, reading, writing, arithmetic, grammar, history, geography, hygiene, elementary science, drawing, language, art, manual training, domestic arts- all traditional subjects of the elementary school- are given a new justification and emphasis as basic essential in the training of children.
- Among the common themes found in the essentialist point of view are:
- The elementary school curriculum should aim to cultivate basic tool skills that contribute to literacy and mastery of arithmetical computation.
- The secondary curriculum should cultivate competencies in History, Mathematics, Science, English, and foreign languages. Mastering all these subjects and skills prepare the student to function as a member of a civilized society.
- Schooling requires discipline and a respect for legitimate authority; and
- Learning requires hard work and disciplined attention.

Essentialist Methodology

- The essentialist method emphasizes habituation more than experience, guidance more than incidentalism, discipline more than freedom, effort more than interest, and self-examination more than expression.
- Essentialists do not believe in building up generalization by the slow method of induction, but rather in properly guiding pupils in a few hours or days in the acquisition of general laws and principles then using them in the solution of immediate and pressing problems.
- The essentialists are concerned with the most effective method of forming habits and developing skills; thus, drill has a definite place in the classroom.
- The essentialists emphasize the necessity of teaching pupils how to think systematically and effectively.

Role of Essentialist Teachers

- It is the duty of the teacher to help the learner grow into these higher interests rather than limit all school activities to those ephemeral things that appeal only to natural and childish interest.

- During the immature years of childhood and youth there is a need for competent, sympathetic and firm teachers to help them see the truth and to help them adjust themselves to inexorable facts.
- In this view, teachers should be restored to instructional authority.
- They must be well prepared and held accountable for the children's failure to learn. Instruction should be geared to organized learning.
- The method of instruction should center on regular assignments, homework, recitation, and frequent testing and evaluation.
- They believe that effective thinking cannot take place by looking at the world en masse, or by picking up knowledge piecemeal.
- Methods of systematic analysis and systematic synthesis must be used; the essential elements of knowledge must be separated from the worthless chaff, and these essentials must be organized into meaningful wholes, with close attention to the interrelationships of each of these entities.
- The essentialists recognize that interest is a strong motivating force of learning. Learning however, that is not immediately appealing and interesting to the child should not be totally eliminated from the child's education.
- The more valuable and more permanent interests may grow out of efforts that are at first disagreeable and monotonous.

Implication of Essentialism to Education

- Essentialists are particularly concerned with the fundamentals of education, the skill and knowledge without which person cannot be either individually or socially efficient.
- They emphasize the authority of the teacher and the value of a subject matter curriculum
- The essentialist prescribed the following rubrics for their educational program:
 - A fixed curriculum;
 - Certain minimum "essentials" literature, mathematics, history, etc;

- Preconceived educational values ; and
- Education as individual adoption to an absolute knowledge which exists independently of individual.
- The essentialists believe that the intellectual disciplines are the necessary foundation of modern life.
- The school has the responsibility to channel the accumulated experiences of humankind into organized coherent and differentiated disciplines.
- Mastering these basic disciplines will enable the students to use them in solving personal, social, and civic problems.

3.6 Sociological Movements

Sociological movements focused on the contribution of education to the preservation and progress of society; this is called the social function of education. Social educationists were concerned with the individual's development and his relationship to the social structure.

3.6.1. Social traditionalism

- The high schools had to give experience in science and math, language and history but emphasis should be on health, moral conduct, home and leisure, and the vocations.
- In college, work, travel, and study replaced the traditional academic subjects.
- The results of social education brought about extra-curricular activities in the school program. Extra-curricular activities, when properly controlled and directed, were of value in providing experience in various phases in life.
- Athletics, dramatics, public speaking activities, musical activities, and assemblies were all sources of training for the various aspects of social life.

Methodology

- Social communication, social cooperation, and social science were the methods used in teaching the child to adjust to life.

- The teacher worked with the social interests of the child in mind to develop social consciousness.
- Student's participations in school activities and school government were effective methods of teaching leadership and responsibility.
- Students were taught cooperation rather than competition; to face the class rather than the teacher; and to deal with small groups for cooperative effort.

3.6.2. Social Experimentalism

Aim

- The social experimentalists believe that the school prepares for a progressive structuring of the social order since social tradition was not concerned with social change.
- The school should direct the pupil in learning to meet the needs of a changing society, not only for immediate needs, but also for future needs under changing social conditions.
- The experimentalists emphasized the training for intelligence in all phases of human activity. Students should learn sources of facts and realities of social conditions and problems and learn to verify, weigh alternatives, and take sides on controversial issues. Students' emotions had to be trained for beneficial social results.

3.6.3. RECONSTRUCTIONISM -George Counts, Theodore Brameld

1. Education must commit itself here and now to the creation of a new social order that will fulfill the basic values of our culture and at the same time harmonize with the underlying social and economic forces of the modern world.
2. The new society must be a genuine democracy, whose major institutions and resources are controlled by the people themselves.
3. The child, the school, and education itself are conditioned inexorably by social and cultural forces.

4. The teacher must convince his pupils of the validity and urgency of the reconstructionist solution, but he must do so with scrupulous regard for democratic procedures.
5. The means and ends of education must be completely re-fashioned to meet the demands of the present cultural crisis and to accord with the findings of the behavioral sciences.
6. Society has to reconstruct its values, and education has a major role to play in bridging the gap between the values of culture and technology.
7. It is the task of the school to encourage the critical examination of the cultural heritage and find the elements that are to be discarded and those that have to be modified.
8. The Curriculum should include learning to live in a global milieu. Reconstructionism proposes educational policies related to national and international problems as a means of reducing world conflict. The school becomes the center of discussions of controversies.

3.7 PROGRESSIVISM -John Dewey, William H. Kilpatrick, John Childs

1. Education should be life itself, not a preparation for living.
2. Learning should be directly related to the interests of the child.
3. Learning through problem solving should take precedence over the inculcating of subject matter.
4. The teacher's role is not to direct but to advise.
5. The school should encourage cooperation rather than competition.
6. Only democracy permits - indeed encourages - the free interplay of ideas and personalities that is a necessary condition of true growth.
7. Progressive education is based on a philosophy based on experience, the interaction of the person with his environment.
8. The end product of education was growth- an on-going experience which led to the direction and control of subsequent experience.
9. Progressive education must use the past experiences to direct future experiences.

Content

- Progressive education was not interested in a prepared, prescribed curriculum to transmit knowledge to students.
- Curriculum must come from the child so that learning would be active, exciting, and varied.
- The contents of the subject are done by the teacher and the students as a group project or a cooperative effort. The teacher served as facilitator.

Progressive education is characterized by the following contributions to education:

1. Emphasis on the child as the learner, rather than the subject matter
2. Stress on activities and experiences, rather than on textbook reliance and memorization
3. Cooperative learning, rather than competitive lesson learning
4. Absence of fear and punishment for disciplinary purposes

3.8. PRAGMATISM. It is the most recent among the four classical philosophies.

1. Pragmatism is the belief that the meaning of an idea is determined by the consequences when it is put into test or practice in the world of reality.
2. Although Greek in origin, it later became an American philosophy. The foremost American philosophers are William James (practicalism), Charles Peirce (experimentalism), and John Dewey (instrumentalism).
3. It believes that change is the essence of reality. "Everything flows; nothing remains the same."
4. Its chief method is the experimental method that yields experimental knowledge.
5. It believes that education is life; a continuous process of reconstruction. Education is never complete.

3.9. Existentialism. It is principally a contemporary or modern philosophy.

1. It grew out from the works of European philosophers particularly Soren Kierkegaard (Danish).
2. Its chief principle is "existence precedes essence."
3. It has two types: atheistic and theistic. The chief atheistic philosopher is Jean Paul Sartre (French).
4. It clamors for individuality and freedom in education.
5. It stresses individual decision-making; the teacher offers knowledge and the pupil can either accept or reject it.
6. Man has no fixed nature and he shapes his being as he lives.
7. The philosophy that places emphasis on individual existence, freedom, and choice.
8. Sees the world as a personal subjectivity, where goodness, truth, and reality are individually defined.
9. Reality is a world of things, truth subjectivity chosen, and goodness comes from group decisions.
10. Existentialism is about being saint without God; being your own hero, without all the sanction and support of religion or society.
11. Existentialism, broadly defined, is a set of philosophical systems concerned with a free will, choice, and personal responsibility.
12. There are no "universal" guidelines for most decisions.
13. Existentialism takes into consideration the underlying concepts:
 - Human free will
 - Human nature is chosen through life choices.
 - A person is best when struggling against their individual nature, fighting for life.
 - Decisions are not without stress and consequences.
 - There are things that are not rational.
 - Personal responsibility and discipline is crucial.
 - Society is unnatural and its traditional religious and secular rules arbitrary.
 - Worldly desire is futile.

NATURE

- Focuses on the experiences of the individuals.
- Offers individuals a way of thinking about the meaning of life.

EXISTENTIAL THEMES

1. Existence precedes essence
2. Anxiety and anguish
3. Absurdity
4. Nothingness
5. Death

EDUCATIONAL AIM

- To train individual for significant and meaningful existence.
- Synthesis and Implications to Education:
 - The classroom is a free market of ideas and as such it must guarantee complete freedom of thought for the individual.
 - The student is encouraged to make independent decisions to guarantee authentic existence.

CURRICULAR EMPHASIS

- Subject-centered
- Literature
- History
- Arts for aesthetic expression
- Humanities for ethical values

TEACHING METHODS

- Inquiry Approach
- Question-Answer Method
- Experimentation
- Self-expressive activities

ROLE OF TEACHERS

- Good provider of experiences
- Effective questioner
- Mental disciplinarian

ROLE OF THE STUDENT

- Determines own rule

ROLE OF SCHOOL

- Create an atmosphere for active interaction.
- Plan better solutions to their everyday problems
- Discuss the different situations based by an individual

3.10 BEHAVIORISM**A. B. F. Skinner.**

1. Learning is manifested by a change in behavior.
2. The environment shapes behavior.
3. The principles of contiguity (how close in time two events must be for a bond to be formed)
4. Reinforcement (any means of increasing the likelihood that an event will be repeated) are central to explaining the learning process.
5. Learning is the acquisition of new behavior through conditioning.

3.11. LANGUAGE ANALYSIS. It is the most recent contemporary philosophy and one of the schools of thought under philosophical analysis.

1. It regards philosophy as an activity of clarifying thoughts through the careful use of language and logical methods.
2. It advocates the principle of verifiability - what is true can be verified or confirmed.
3. The proper use of language is to avoid ambiguity or vagueness; for precision or accuracy.

4. In education and in anything, "the more general a statement, the less accurate it becomes."
5. Its principal exponent is Ludwig Wittgenstein. Others are Bertrand Russell and A.J. Moore.
6. Words can have different meanings under different contexts.

3.12 Oriental Education

Aims: to impress traditional ideas and cultures in order to maintain and perpetuate the long established social order

China: to preserve and perpetuate ancestral tradition

India: to preserve the caste system

Egypt: to preserve religious tradition

Persia: to strengthen military traditions

Types: Moral Training- training in customs, duties, and polite behavior

Theoretical training- language and literature

HINDUISM

1. Brahman, the eternal trimutri, or the three in one GOD: Brahma, the creator; Vishnu, the preserver; and Shiva, the Destroyer
2. The Caste System, determined by the laws of Manu
3. Submission to Fate, since man is not outside, but part of Brahman
4. The law of Karma that from good must come good and from evil must come evil
5. Reincarnation as a chain of rebirths in which each soul through virtuous living, can rise to a higher state
6. Nirvana, the final stage reached upon the emancipation of the soul from the chain of rebirths
7. Yogas, the disciplines which enable the individual to control the body and the emotions
8. Dharma, the law of moral order, which each individual must find and follow to reach nirvana

BUDDHISM

1. From good must come good, and from evil must come evil. This is the First Law of Life
2. Prayers and sacrifices to the gods are useless only understanding the eightfold path, and practicing the Buddhist ten commandments and perfections lead to perfect wisdom
3. The Vedas are not sacred books since they teach that people should pray and offer sacrifices.
4. The world always was and always will be.
5. Brahma did not create people into castes out of Manu. There are only two kinds of people: those who are good and those who are bad.
6. The aim of life is not pleasure or happiness but the end of individual existence through the practice of the ten perfection.
7. He who attains perfect wisdom enters Nirvana and for him the chain of reincarnation is broken.

The Four Noble Truths

1. There is suffering.
2. There is cause for suffering.
3. There is cessation of suffering.
4. The eight fold path is the way to end suffering.

The Eight Fold Path

- | | |
|-------------------|------------------------|
| 1. right belief | 5. right occupation |
| 2. right resolve | 6. right effort |
| 3. right speech | 7. right contemplation |
| 4. right behavior | 8. right concentration |

The Ten Perfections

- | | |
|-----------------|--------------------|
| 1. giving | 6. patience |
| 2. duty | 7. truth |
| 3. renunciation | 8. resolution |
| 4. insight | 9. loving kindness |
| 5. courage | 10. serenity |

The Buddhist 10 Commandments

1. Do not destroy life.
2. Do not take what is not given.
3. Do not commit adultery.
4. Tell no lies and deceive no one.
5. Do not become intoxicated.
6. Eat temperately and not at all in the afternoon.
7. Do not watch dancing, nor listen to singing or plays.
8. Wear no garlands, perfumes or any adornments.
9. Sleep not in luxurious bed.
10. Accept no gold or silver.

CONFUCIANISM

1. Human nature is good and evil is essentially unnatural.
2. Man is free to conduct himself as he wills and he is the master of his choice.
3. Virtue is its own reward.
4. The rule of individual behavior is what you do not want others to do to you, do not do to them.
5. A man has five duties: to his father, to his wife, to his elder brother, to his friend
6. Man should strive to become a superior man.

Five constant Virtue

1. benevolence
2. righteousness
3. propriety
4. wisdom
5. sincerity

PART II - ANALYZING TEST ITEMS

Practice test no 1. Which Chinese word is the basis of the Golden Rule?

- A. Ren B. Yi C. Ch'i D. Li

This type of question tests your memory and association skills. You have already learned that Confucianism teaches us to develop virtues, to become a sage within and a king without and to be a man of human heartedness. Human-heartedness- REN or GEN involves the value of Yi, Li and Chi. The Golden Rule encourages us to become a noble man-a man with compassion, a man who is benevolent, a man with a heart. Ren- letter A, therefore, is the correct answer.

Practice test no. 2. Which type of knowledge is acquired by means of sense perception?

- A. Rational C. Empirical
B. Authoritative D. Intuitive

The key term in this question is sense perception. A simple analysis of the different choices will reveal the correct answer. Eliminate immediately letter D for intuition is internal and does not need the senses. Letter B can be eliminated next for authority simply uses expertise and credibility. Lastly, letter A cannot be the correct answer because it involves inherent ideas that may not pass through the senses. Letter C-Empirical is, therefore, the correct answer.

Practice test no 3. What valid conclusion can be derived from the premises below?

"Whoever is an industrious person is energetic";

"but all athletes are energetic";

- A. Thus, all energetic persons are industrious
B. Thus, all athletes are industrious
C. Thus, some industrious persons are athletes
D. None of the above

This question asks us to know the rules of valid categorical syllogism. Letter A wrongly restates the major premise through an invalid conversion. It also uses erroneously the middle term in the conclusion. Letter B is the most logical conclusion; it is however an invalid conclusion. Letter C is simply the converse of letter B which is invalid and since it is a logical equivalent of letter B, C is also invalid. The correct answer is letter D. This syllogism violates the rule that the middle term must be Universal at least once. Energetic - the middle term are both particular. The syllogism, therefore, cannot have a valid conclusion.

Practice test no 4. Which philosophy believes that the individual is unique, free, and in the process of realizing his/her essence?

- | | |
|---------------|-------------------|
| A. Pragmatism | C. Realism |
| B. Idealism | D. Existentialism |

This question asks us to have knowledge of the major tenets of the different philosophical positions. Pragmatism believes in the utility, workability and functionality of an individual. Idealism contends that truth is the mind. It is more concerned with the mental/moral development of an individual. Realism is concerned with the body/soul aspects of the individual. Existentialism- letter D is the correct answer. According to this philosophy, individuals create their own essence through their own individuality and subjectivity.

Practice test no. 5: What fallacy is committed by this argument?

"Sir, I am a scholar and I want to continue my studies; please give me a high grade so that my scholarship will continue."

- | | |
|---------------------|---------------|
| A. Ad Baculum | C. Ad Hominem |
| B. Ad Misericordiam | D. Ad Populum |

Ad Baculum is the use of force, violence, or threat. Ad hominem is attack against the person and Ad populum makes use of the popular sentiments in arguments. These were not resorted to in the argument above. A, C, or D, therefore, cannot be the correct answer. Letter B, on the other hand, makes use of pity which is irrational in this case for the basis of grading is academic performance and not charity. It also violates the requirement of love/charity which is justice, for before one can take pity, one should first be just. Ad Misericordiam-letter B is the correct answer.

PART II - ANALYZING TEST ITEMS

1. In epistemology, on the question of knowledge, which knowledge requires the testing of observation?
 - A. A posteriori
 - B. A priori
 - C. Experimental
 - D. Revealed
2. What philosophical belief asserts that knowledge is impossible?
 - A. Agnosticism
 - B. Skepticism
 - C. Altruism
 - D. Empiricism
3. Critical thinking skill requires a teacher to support his/her claim with a ground that warrants the reasonability of the conclusion. What major premise is needed to validly complete this argument?

"but many moments in life are romantic events
Therefore, many romantic events are memorable."

 - A. All moments in life are memorable.
 - B. Romantic events are memorable moments in life.
 - C. Some in life are memorable.
 - D. None of the above
4. The nature of knowledge in the curriculum, its certainty and its objectivity is founded on what branch of Philosophy?
 - A. metaphysics
 - B. Epistemology
 - C. Axiology
 - D. logic

5. In Ethics, Immanuel Kant divided actions into two: acts done from inclination-non-moral and acts done from a sense of duty-moral. For him morality is closely bound up with one's duties and obligation. He also proposed the Categorical Imperatives: a. act only on the maxim that you can will that it should become the universal law and b. act as to treat humanity as an end never as a means. Which one below applies Kant's moral philosophy?
- A. One must search for knowledge for immorality is caused by ignorance.
 - B. One must resolve before acting if one wants others to do the very action that one is about to do.
 - C. One must see to it that one's action serves a particular purpose.
 - D. One must make sure that his action results into pleasure and avoidance of pain.
6. How do philosophers explain the existence of change and permanency? How is it that in spite of the changes there is something that remains to be permanent? This is due to the principle of
- A. Act and potency
 - B. Essence and existence
 - C. Cause and effect
 - D. Hylemorphism
7. Which view about truth is common to all pragmatists?
- A. Truth is what all investigators will ultimately agree to.
 - B. Truth is relative to place, time, and purpose.
 - C. Truth is what works for the individual.
 - D. Truth is unchanging.
8. This is the systematic consistent explanation of all the facts of experience. Its technical term is reason. It is considered as the best criterion of truth
- A. Pragmatism
 - B. Consistency
 - C. Correspondence
 - D. Coherence

9. "Every non-man is immortal since every mortal beings is man." Suppose the premise is true, the conclusion of this immediate inference will be
- A. True
 - B. False
 - C. Doubtful
 - D. invalid
10. To develop creative thinking skill the teacher asks "What if..." questions. To what metaphysical principle is this grounded?
- A. primacy of existence
 - B. consciousness
 - C. identity
 - D. causality
11. What is the specific role of a teacher's philosophy of education in the teaching-learning process?
- A. It determines the aims, mission, and vision of the educative process.
 - B. It influences the professional development that the teacher undertake.
 - C. It qualifies the objective, the content, the methodology and the context of the teaching process.
 - D. It identifies what kind of learners the teacher is going to teach.
12. This Philosophy posits the knowability of the world and everything in it as they are in themselves and their existence is independent of the human mind.
- A. Existentialism
 - B. Idealism
 - C. Materialism
 - D. Realism
13. What type of error in reasoning is found in this argument?
- "This medicine works with rats; thus, it must surely work with human beings."
- A. Fallacy of Accident
 - B. A Fortiori
 - C. Ad Ignorantiam
 - D. False Cause

14. Why is it that a teacher should address the uniqueness of each pupil, cater to individual interest, and adapt the lesson to the experience of the learner?
- A. Because of the axiom of causality
 - B. Because of the axiom of consciousness
 - C. Because of the axiom of identity
 - D. Because of the axiom of supremacy of existence
15. In the argument, "We cannot punish this man because he is the only one that supports his family", what is wrongly appealed to?
- A. People
 - B. Ignorance
 - C. Advantage
 - D. Pity
16. Aristotle contended that the good life is a life of happiness. Happiness is an activity not a goal and men ought to behave so as to achieve happiness. Thus men must act moderately and they must act so as to be striving for the mean between two extremes. As a teacher how are you going to interpret this?
- A. You will provide your students moral dilemmas.
 - B. You will develop a sense of duty in your students.
 - C. You will develop the cognitive ability of your students.
 - D. You will provide your students opportunities to develop virtues.
17. If the statement "Some philosophies are irrational" is true, what statement below will be false?
- A. Some rational things are not philosophies.
 - B. Some irrational things are philosophies.
 - C. No irrational thing is not philosophies.
 - D. No irrational thing is a philosophy.
18. "Some scientists are religious" is false then it follows that
- A. All scientists are religious is true.
 - B. No scientist is religious is false.
 - C. Some scientists are not religious true.
 - D. Some non-religious people are non-scientists is true.

19. What kind of opposition exists between the propositions "No man is above the law" and "Some men are not above the law"?
- A. Contraries
 - B. Sub-alternates
 - C. Contradictories
 - D. Sub-contraries
20. What logical equivalence exists between the statements "All books are reading materials" and "Some non-books are non-reading materials"?
- A. Converse
 - B. obverse
 - C. contraposit
 - D. inverse
21. John Locke contended that the mind is a "white paper" or "tabula rasa" void of any characters and without any ideas and all things anybody knows comes from experience. What would be the logical implication of this tenet?
- A. There is no inherent idea.
 - B. We can only know our perception of reality and not reality itself.
 - C. Reality is in the mind.
 - D. Reality is what it appears to be.
22. What is the contraposit of the contradictory of the statement "Life is precious" and what is its truth value?
- A. Some precious things are life. false
 - B. Some non-precious things are not death. false
 - C. Some non-life is not precious. true.
 - D. Some life is not precious. true
23. In the argument, "Some people are angry is true thus Some angry beings are not people is false." What kind of immediate inference exists here?
- A. Valid conversion
 - B. Invalid conversion
 - C. Valid conversion of the sub-contrary
 - D. Invalid conversion of the sub-contrary

24. "My grades should be high for I got high grades in the first exam" What fallacies are present in this argument?

- I. Division
- II. Composition
- III. False Cause
- IV. A fortiori
- V. Hasty Generalization

A. I, III, III

C. III, IV, V

B. II, IV, V

D. IV, V, I

25. What major premise is needed to validly complete this argument? "but every idiot is a mentally retarded person; therefore, no idiot is a scientist"

- A. No mentally retarded person is a scientist.
- B. All scientists are not idiots.
- C. All mentally retarded persons are idiots.
- D. Mentally retarded persons are not to be scientists.

PART III - ENHANCING TEST TAKING SKILLS

1. What metaphysical principle enables humans to know reality as it is?
 - A. Identity
 - B. Causality
 - C. Primacy of existence
 - D. Excluded middle
2. If the statement, "All teachers are not materialistic" is true, what other statements below are true?
 - I. Some teachers are not materialistic.
 - II. No materialistic being is a teacher.
 - III. Some non-teachers are non-materialistic.
 - IV. Some non-materialistic beings are teachers.
 - V. All materialistic beings are non-teachers.
 - VI. Materialistic teachers are unhappy.

A. I, III, V, VI	C. II, III, IV, VI
B. I, II, IV, V	D. III, IV, V, VI
3. Which kind of logic is described as reasoning using Hume's thesis-antithesis-synthesis process?
 - ☒ A. Dialectics
 - B. Experimental
 - C. Inductive
 - D. Deductive
4. In ethics, what is the meaning of the Golden Mean according to Aristotle?
 - ☒ A. In order to achieve happiness, men must act moderately.
 - B. Men should aim for extreme virtue such as rashness and timidity.
 - C. Character virtues tend to be supported by excess.
 - D. A temperate man doesn't enjoy abstinence itself.

5. When is an act a moral or a good act?
- With Knowledge
 - Good circumstances and intentions
 - Instinctive
 - With Voluntariness
 - In accord with Eternal law
 - With Freedom
- A. I, II, III, IV, V C. III, IV, V, VI, I
B. II, III, IV, V, VI D. I, II, IV, V, VI
6. "No person is not a subject of human rights and Some persons are not subjects of human rights" What judgment is acceptable here?
- The second statement is valid and true.
 - The first statement is false.
 - The second statement is invalid and false.
 - The first statement is supported by the 2nd statement.
7. Teacher Ana believes in Deontological Ethics. How will she judge the rightness or wrongness of her pupil's actions? She will base on
- The motive/s of the action
 - The Consequence/s of the action
 - The nature of the act itself
 - Her religious beliefs
8. Plato's posited that if a man knows what the good life is, he will not act immorally. Thus, evil is due to lack of knowledge. The logical consequence of this viewpoint will be
- Self-determination morality
 - Emotivism
 - Authoritative and objective morality
 - Hedonism

9. "They are often seen together, they must be lovers." This is an example of what fallacy?
- A. Hasty Generalization
 - B. Composition
 - C. False Cause
 - D. A Fortiori
10. "To be repaired: a VHS of an old man with a broken head." What fallacy was committed?
- A. Equivocation
 - B. Composition
 - C. Amphiboly
 - D. False Analogy
11. "My teacher said that I should marry Richard, therefore, I will." The fallacy committed in this argument is?
- A. Ad Authoritatem
 - B. Ad Populum
 - C. Ad Vericundiam
 - D. Ad Ignorantiam
12. "Why will I trust him, he didn't even have a master's degree." This argument is
- A. Valid
 - B. Ad Populum
 - C. Ad Hominem
 - D. Ad Baculum
13. A paper when burned becomes ash. Why is it that a four year old child when taught Algebra may not learn it?
- A. Because learning should concentrate on the basic knowledge.
 - B. Because learning must be useful and relevant.
 - C. Because learning is the actualization of the child's potentials.
 - D. Because learning must be based on actual experience.

14. "I'll pay for your tuition provided that you'll be my mistress." Why is this argument wrong?
- A. Appeal to Advantage
 - B. It's practical though immoral
 - C. Equivocation
 - D. a fortiori
15. What situation/s show/s why naïve realism cannot be the sole criterion of truth?
- A. What looks like an apple, taste like apple, smells like apple feels like apple is an apple.
 - B. What looks like a girl, acts like a girl, feels like a girl is a girl.
 - C. What the majority thinks and feels to be the truth must be true.
 - D. What is learned by doing is better than what is learned from books.
16. "If teacher Abi uses the showing methodology, then she is a traditional teacher; but she is a traditional teacher; therefore, he uses the showing methodology." What type of inferential thinking is this?
- A. Valid Conditional
 - B. Valid Disjunctive
 - C. Invalid Conditional
 - D. Invalid Disjunctive
17. The Ethical theory that holds that pleasure is the sole good and that to live pleasantly without suffering from any of the undesirable effects of such living is the sole purpose of life according to
- A. Utilitarianism
 - B. Hedonism
 - C. Platonism
 - D. Cynicism

18. The view that an action is right in so far as it tends to produce the greatest happiness for the greatest number and that the consequence of a given action determines the rightness or the wrongness of an act not the motive for which it was done comes from
- Utilitarianism
 - Hedonism
 - Platonism
 - Cynicism
19. As a teacher, you believe that good preparation leads to efficient and relevant learning. From what metaphysical axiom is this based?
- The whole is the summation of all its parts
 - The law of Identity
 - The law of causality
 - The law of potency and act
20. In this conditional syllogism, "If the dentist is not skillful, he will cause his patient much pain", what minor premise is needed to have a valid conclusion?
- But the dentist is skillful.
 - But the dentist did not cause his patient much pain.
 - None. Every possible premise is invalid.
 - But the dentist caused his patient much pain.
21. "The order in the world owes its origin either to mere chance or to an intelligent designer: but the order in the world is not due to mere chance; therefore, it must be due to an intelligent designer."
- This syllogism is
- Valid Conditional
 - Valid Disjunctive
 - Invalid Conditional
 - Invalid Disjunctive
 - An argument for God's existence
 - A self defeating argument

- A. I and V C. III and VI
B. II and V D. IV and VI

22. "He either violated the law, or else he was arrested unjustly; but he did violate the law; therefore, he was not arrested unjustly." This is an example of what argument?

- A. Invalid disjunctive
B. Invalid Categorical
C. Valid Conjunctive
D. Valid Conditional

23. "If you have acute high blood pressure then you are very sick;
But you do not have acute high blood pressure;
Therefore, you are not very sick."

- I. Valid
II. Invalid
III. Conditional
IV. Categorical
V. Hypothetical

Which best describes the syllogism above?

- A. I, III and V C. II, III and V
B. II, III and IV D. I, IV and V

24. "Every vegetable is nutritious; but _____; therefore, No microorganism is nutritious." What minor premise is needed to make this a valid syllogism?

- A. No nutritious thing is a micro-organism.
B. Some micro-organisms are not vegetable.
C. No micro-organism is a vegetable.
D. Every micro-organisms are vegetables.

25. What would be the logical conclusion if we follow George Berkeley's tenet, "To be is to be perceived" or "Esse est percipi"?
- A. Realism
 - B. Empiricism
 - C. Idealism
 - D. Skepticism

Introduction to Humanities: Appreciation of the Arts

Prepared by:
Dr. Anita M. Navarro

Competencies:

1. Define art and understand its functions.
2. Determine the composition of the different forms of art
3. Distinguish the different elements, principles and mediums of the various arts

PART I - CONTENT UPDATE

I. Introduction

The Humanities are the sum of the best that was thought and said and artistically rendered.

--Paul Obler

The Humanities include literature, philosophy, religion, the arts, and all of man's varied efforts to understand and improve his own experience.

--James Bugental

What is art?

- May refer to any skill or mastery
- May also refer to a process or a product of a creative skill.
- As a process – it is the arrangement of aesthetic elements in an appealing and interesting manner.
- As a product –it includes human creation, different activities and forms of expression such as Painting, sculpture, architecture, music, literature, dance and theater.
- Art is imitation-a representation of reality
- Art is-expression- expresses the feelings and ideas shared by all individuals regardless of culture. It also expresses the way of life of the creators of the product
- Because art expresses the sentiments and temper of the artist as well as the times, it also communicates.

The Functions of Art

- **Personal Functions** – satisfying individual needs for personal expression
- **Social Functions** – social needs for display, celebration and communication
- **Physical Function** – our physical needs for utilitarian objects and structures

The Personal Functions of Art

1. For personal expression of the artists ideas and feelings
 2. To educate our senses and sharpen our perception of colors, forms, textures, designs, etc. in our environment
 3. For fresh insights into nature and human nature for greater understanding of ourselves and the world around us
-

The Social Functions of Art

1. It seeks to influence the collective behavior of a people
2. It is created to be seen or used primarily in public situations
3. It expresses or describes social or collective aspects of existence as opposed to individual and personal kinds of experiences

The Physical Functions of Art

1. The need for beauty in functional objects for everyday use (Form and function: the function of an object generally determines the basic form that it takes)
 2. The need for aesthetic design of a building is determined primarily by its operational function
 3. Planning of communities according to environmental and operational efficiency
-

Composition of Art

Subject: What is it about?

Content: What is expressed/what is being communicated?

Medium: What is it made of

Form: In what shape is the meaning projected?

Technique: How is it done?

Elements and Organization of Visual Arts

Visual Arts

- Refers to the artworks perceived by seeing which are shown in 2 – 3 dimensional forms reflecting the cultural, social and religious temper of the era.
- Designs are influenced by the demands from nature, man and the medium of materials available

A. Painting

- The Art of putting together the elements of Art on canvas, wood, plastic, metal paper and glass.

A.1 Other Related Visual Arts

- Tapestry is a large fabrics in which a design is woven by hand
- Mosaic – made of small pieces of colored stone or glass called tesserae glued on a surface
- Print is a graphic image resulting from a duplicating process

Print making techniques

- Relief – cutting away from a block of wood. Portions of the design that the artist does not want to show.
- Intaglio – the design is scratched, engraved or etched into a metal plate.
- Planographic process – service printing is done from an almost soft surface that has been treated chemically or mechanically so that some will print and others not.

- Stencil printing – done by cutting of special designs out of special paper, cardboard or metal sheet so that when ink is rubbed, design is reproduced on the surface beneath.
- Serigraphy or silk-screen printing – fundamentally multi – color stencil process done through a screen consisting of very fine silk nylon mesh stretched tightly over wooden frame. Parts of the mesh are part out of the stencil and the areas which are to print are left over.

B. Sculpture

- The art of adding or subtracting to any materials to form a new design, object, project or concept.

C. Architecture

- The art of designing and constructing buildings and structure to answer functional demands of man.

III. The Elements of Visual Arts

A. Lines

- The most ancient and universal means of creating Visual Arts.
- It is a prolongation of a point that feature the shape and form of any piece of Arts.

Kinds of Line maybe:

- Broad
- Thin
- Fine
- Jagged

Lines evoke feelings and ideas

~~Straight – the ideas of steadiness and force~~

- ~~Vertical – denotes poise, solemnity, strength and dignity~~
- Horizontal – quietude, width, contemplation and infinity
- Diagonal – suggests action and movement
- Broken or Jagged – connotes violence, war, disturbance

Curve – associated with flexibility, grace, joyous life and energy

- Concave
- Convex
- Spiral
- Scroll

B. Value

- Relative degree of lightness and darkness of colors that gives impression of solidity, distance and depth illusion.
- Tints are values above normal while shades are values below normal.
- Kinds of Values maybe:
- Light
- Medium
- Dark

C. Light and shadow (chiaroscuro)

- An Italian word which is used in modeling a figure in depth to articulate the forms in 3 – dimensional arts where shadow occurs naturally.
- It is used in Sculpture and Architecture

D. Form and shapes

- The external appearance of a clearly defined area.
- Regular or Static as circle or round, triangle, square etc. (Geometric)
- Natural size and/or shape of things around the environment. (Biomorphic)

E. Color

- The most important element of Visual Arts which is the easiest to notice.
- Primary Colors:
 - Red
 - Yellow
 - Blue
- Secondary Colors:
 - Orange
 - Violet
 - Green
- Tertiary colors:
 - Red Violet
 - Blue Violet
 - Red Orange
 - Yellow Orange
 - Blue Green
 - Yellow Green

Color Harmonies

Related

- Monochromatic
 - One color tint with shades or values.
- Analogous
 - 3-4 neighboring colors — possesses one color in all mixtures
- Contrasting — found to be opposite they contrast each other strongly
- Complimentary — any 2 opposite colors
- Split — any 3 colors with Y guide
- Double — any 4 opposite colors
- Double Split — any 6 colors with 2 Y guide

- Triad – 3 colors forming equilateral triangle in the color chart
 - Intensity – dullness and brightness of color- gives color strength
 - full intensity
 - 2/3 intensity
 - 2/3 neutral
 - Neutral
- Neutral colors: the art of balancing colors – white, black, silver, brown cream and bronze, gold, copper and peach

Properties of Colors

- Hue – identify or the names of colors
 - Cool – dominance of blue
 - Warm – dominance of red and yellow
- Value – lightness or darkness of color
- Tints are values above normal white
- Shades are values below normal

F. Texture

- Deals more directly with the sense of touch
- Best appreciated when felt by hands.
- The surface characteristics of an object – smooth, glossy, shiny or dull, fine or coarse, plain or irregular, dirty or dusty, rough etc.

G. Volume

- The solidity of an object which enable us to know its thickness, length and height.

H. Perspective

- The position of an object in space.
- This refers to the location and distance upon the appearance of an object by which the eye judges spatial relationships.

- Foreshortening – linear perspective applied to human figure.
- Linear perspective or One point perspective – a representation of distance by means of converging lines – point of origin maybe at the middle, left or right, top or bottom.
- Two – point perspective – there are two points in line with each other in horizontal position. The points come from left to right. They come from any point maybe near or far or vice – versa.

-I. Space

- Represented in a two – dimensional surface.

IV. Organizations as the principle of designs

1. Harmony

- A sense of belonging together of the various parts of the design that gives unity, which is essential to beauty

2. Balance

- A feeling of ability and equilibrium of parts distributed around a central point.

3. Rhythm

- The continuous use of colors, patterns, objects that carry our attention from one part to another.

4. Proportion

- Gives the eye the right and proper relationship of one object to the other.

5. Emphasis

- The focal point that rests on the subordinate part or space and easily attracts the attention of the on - looker and enhance the beauty of the object.

V. Elements in Different Arts

A. Painting

- Subject: what it is about
 - Landscapes, seascapes and cityscapes
 - Still lifes
 - Animals
 - Portraits
 - Figures
 - Everyday Life
 - History and Legend
 - Religion and Mythology
 - Dreams and Fantasies
- Medium:
 - Fresco
 - Watercolor
 - Oil
 - Tempéra
 - Encaustic
 - Pastel
 - Crayons
 - Acrylic
 - Pencil
 - Charcoal
 - Pen and Ink
- Styles in Painting:
 - Realism and Naturalism – real objects, scenery, activities seen and experienced
 - Impressionism – goes beyond what is real. May use distortion of form and color to interpret inner sensation and emotion

- Modernism – Modern-art work with "Gusto"—can discern and interpret whatever he feels. It can be anchored to abstract form
- Cubism – applied with form of abstraction-overlapping of forms
- Surrealism – expressed in symbolic forms using superiority of unconsciousness dreams and imagination in an artistic reaction
- Expressionism – totally abstract and very free in form. Art in any means-dripping colors, throwing colors to fill a space, rolling over a canvass with colored bodies
- Pop art / Post – Modernism – arts drawn from advertisement, movie, billboards, comic strips

B. Sculpture

Types

- Free – standing
- Relief
 1. High Relief
 2. Low Relief
- Kinetic
- Processes or Techniques
- Additives
 1. Assemblage and Construction
 2. Casting (Negative and Positive)
 3. Welding / Fabrication
 4. Mobile
 5. Body forms
 6. Modeling
- Subtractive
 1. Carving
- Material of Sculpture
 - Stone
 - Wood

- Metal
- Bone and Ivory
- Jade and other Crystals
- Clay
- Wax
- Cement
- Shell
- Glass
- Plaster
- Plastics
- Fiberglass and Resin
- Electronic Lighting Devices

C. Architecture

- Styles and designs depends on climate, geographical location, aspects of life as social, economic, spiritual, political, technological and ideological.
- Types of construction
- Materials:
 1. Mortar construction
 - cement
 - gravel
 - rocks
 - sand
 2. Highbred
 - adobe
 - bricks
 - tiles
 - marbles
 3. Organic
 - wood

4. Metal
5. Reinforced Bars
6. High Tech Steel for Skeleton and Cantilever
7. Synthetic
 - plastic
 - glass

VI. Music

It is an artistic form of auditory communication incorporating instrumental or vocal tones; any pleasing and harmonious sound produced by singers or musical instruments

MEDIUM: Sound/Tones

Elements of Music

1. **Rhythm**-the movement characterized by the regular recurrence of pulses that can be a contrast of strong and weak pulses.
 - Beat - the regular, recurrent pulsation that divides music into equal units of time.
 - Meter - the regular occurrence of accented and unaccented beats

Related concepts:

Simple meter, Compound Meter, Polymeter ///

Time Signatures /// Rhythmic Pattern ///

Syncopation /// Accent

2. **Melody** – that part of music which we can sing. It is a series of notes arranged in a particular rhythmic pattern and divided into smaller units called phrases. It is the horizontal structure of music.

Related concepts:

Pitch-the highness or lowness of a sound

Key Signatures- consists of sharps and flats

Scale—a group of musical notes collected in ascending or descending order

3. **Tempo** – the rate of speed in music

Tempo Markings”

Adagio	-	very slow
Andante	-	moderately slow
Allegro	-	fast
Moderato	-	moderate
Accelerando	-	gradually becoming faster
Ritardando	-	gradually becoming slower
Presto	-	very fast
Vivace	-	lively

4. **Dynamics** - the volume or loudness of a tone

Kinds:

Fortissimo (ff)-very loud

Pianissimo (pp)- very soft

Mezzo Piano (mp)- half soft

Mezzo Forte (mf) – half loud

Crescendo – gradually becoming louder

Decrescendo –gradually becoming softer

5. **Form** - The overall plan or structure of a musical piece that helps a musician put together a credible performance or a listener to enjoy the music even more.

- **Tone**- the smallest unit of a composition
- **Figure**- the smallest characteristic group of a tone
- **Motive**- a tone group identified with a particular composition
- **Phrase**- a succession of tones arranged to give a musical thought
- **Period**- complete musical thought made of two phrases in question and answer format
- **Section**- is a combination of periods

6. **Timbre** - is musical color or the peculiar quality of a tone. Each instrument has its own color and produces its own mood or emotion. Various combinations of instruments produce different textures and distinctive colors.

Classification of Instruments

- Strings
- Woodwinds
- Brass
- Percussion

Classification of Voice

- Soprano
- Alto
- Tenor
- Bass

7. **Texture**- the relationship between melodies and harmonic elements in music.

Monophonic- a single unaccompanied melodic line

Polyphonic- having two or more melodic lines

Homophonic- having one main melody accompanied by chords

8. **Harmony**- the simultaneous sounding of a group of tones and the vertical relationship between a melody and its accompanying chords.

Chord- a musical sonority with three or more tones sounded simultaneously.

VII. Dance

it is a succession or arrangement of steps and rhythmic movements to musical or rhythmic accompaniment. It may be performed for such purposes as entertainment, part of rituals or the expression of inner thoughts and emotions.

Medium: The human body

The Elements of Dance

- Theme
 - Design
 - Movement
 - Space, Time, Duration & Force
 - Technique
 - Music
 - Spectacle (costume, props & scenery)
 - Choreography
-

Kinds of Dance

- **Communal Dance** – In early cultures, dance was a way of life, magic methodology for survival. Confronted by an environment that could be neither rationally controlled nor evaded, members of the tribe consciously invented dance as a strategy for transcending the consciousness of self by achieving an ecstatic state.
 - **Ritual Dance** – is a conscious dance organized volitionally in its design, purpose and meaning. It celebrates mythology rather magic.
 - **Folk Dance** – developed from the racial or regional memories of older dance motifs in communal dance but reflecting social and recreational, an expression of the peasantry in feudal society.
 - **Social Dance** – this dance form is exemplified by the coupled dance which emerged in 15th century Europe in a variety of vigorous styles which were innovative adaptations and refinements of folk dances developed by dancing masters of the time.
 - **Performance/Art/Dance** – this is also called theater dance. It is exemplified by the ballet and later, the modern dance.
-

VIII. Theater Arts and Cinema

The theater combines all the other art forms. It makes use of dramatic literature for script; architecture, sculpture, painting, and its related arts for set design; costumes & make-up/mask/face painting; and music for setting the mood of the audience or for heightening the emotional impact of a particular scene.

The Elements of Drama

- Plot
- Characters
- Theme
- Dialogue
- Spectacle
- Music

The Elements of Theater

- The script or scenario
- The performance and the performers
- Spectators

Cinema or Film

The projection of an object on the retina for a split second longer than its is actually there, causing the images to blur into the illusion of motion.

Elements of Cinema

- Image - the series of still photographs rapidly projected on screen.
- Time - has two types: 1) the actual duration of the films; 2) the diegetic time or the time that is the result of the story or narrative.
- Motion - the illusion of movement of the many still frames through a projector.

- **Sound** - refers to the aural element which could include the dialogue of the characters, sound effects, music scores, narrations, and voice over.
- **Lighting** - the manipulation of light and dark which helps achieve the effects being created.
- **Sequence** - the continuity of events, using the visual language of film. It is the interesting ordering and arranging of shots to tell a story.
- **Composition** - pertains to the use of visual elements and principles to create a frame that is artistically interesting, engaging, and inconsistent with the overall picture the film is creating.

The Major Stages of Film-Production

- **Preproduction**- it involves developing an idea or getting a script, arranging the financial concerns of the production, and discussing the script with key people responsible for designs, photography, music and sounds for conceptualization or any modification needed.
- **Production** - This involves the director's job of conducting, blocking and lighting rehearsals.
- **Postproduction**- It involves three phases: editing, preparing the final print, and bringing the film to the public.

Categories of Film Genres

The three main types are often used to categorize film genres; setting, mood and format. The film's location is defined as the **setting**. The emotional charge carried throughout the film is known as its **mood**. The film may also have been shot using particular equipment or be presented in a specific manner, or **format**.

The following are some examples of well-established genres in film. They are often further defined to form subgenres, and can also be combined to form hybrid genres.

According to Setting

- **Crime** – places its character within realm of criminal activity, or within organizations attempting to prevent said activity (or sometimes both).
- **Fantasy** – speculative fiction outside reality (i.e. myth, legend)
- **Film noir** – portrays its principal characters in a nihilistic and existentialist realm or manner.
- **History** – taking place in the past amidst notable historical circumstances.
- **Music** – about musicians, music and their instruments, not to be confused with musicals.
- **Prison** – story is about life in prison, the guilty and the innocent
- **Sci-Fi** – defined by the effects of speculative (not yet existing) technology (i.e. future space travel, cyberpunk, time travel).
- **Sports** – sporting events and locations pertaining to a given sport.
- **War** – battlefields and locations pertaining to a given sport.
- **Western** – wilderness on the verge of civilization, usually in the American West.

According to Mood

- **Action** - generally involves a moral interplay between "good" and "bad".
- **Adventure** – involving danger, risk, and/or chance, often with a degree of fantasy.
- **Comedy** – intended to provoke laughter
- **Drama** – depends mostly on in-depth character development, interaction and highly emotional themes.
- **Horror** – intended to provoke fear and/or revulsion in the audience
- **Mystery** – not understanding in full the plot of the movie until the end.
- **Romance** – dwelling on the elements of romantic love.
- **Thriller** – intended to provoke excitement and/or nervous tension into audience.

According to Format

- **Live Action** – the most common format of films
- **Animation** – the rapid display of a sequence of 2-D artwork or model positions in order to create an illusion of movement.
- **Biography** – also known as “biopic”, a format that tells the story of an historic figure or an inspirational story about real people. This genre is arguably the most controversial, because the majority of biopics show fictionalized events.
- **Documentary** – a genre that portrays reality
- **Musical** – songs are sung by the characters and interwoven into the narrative.

According to Target Audience

- **Children's Film** – films for young children; as opposed to a family, no special effort is made to make the film attractive for other audiences.
- **Family Film** – intended to be attractive to people of all ages and suitable for viewing by a young audience. Examples of this are Disney films.
- **Adult Film** – intended to be viewed only by an adult audience, content may include violence, disturb themes, obscene language, or explicit sexual behavior. Adult may also be used as a synonym for pornographic film.

“The Humanities find their subject matter in those significant achievements of the human race which illuminate and illustrate the distinctive characteristics of man as a rational and spiritual being.”

--Clyde Holbrook

PART II - ANALYZING TEST ITEMS

1. From the different techniques in sculpturing, carving is considered the most painstaking and time-consuming process. What made it so?
- ☒ Various tools are used and the artist slowly cut little by little until a design is perfectly arrived at.
 - ☐ It keeps on adding at or building up to form easily shape in a rapid execution.
 - ☐ The addition of collage where a scrap is pasted to make an additional texture as a finishing touch.
 - ☐ The process is composed of two stages, the positive and negative.

The correct answer is A – since the use of different materials in cutting took little by little, a careful and slow cutting is done to perfectly arrive at a desired masterpiece.

Option B – is a process of additive specifically assemblage or construction

Option C – a step used in painting as a finishing touch

Option D – is a process used in casting

2. Which technique in printing does not belong to a similar process?
- ☐ etching
 - ☐ intaglio
 - ☒ woodcut
 - ☐ engraving

The correct answer is C – because the woodcut prints the protruding part while the others print the depressed parts.

Option A – etching is the creation of indentation on a metal surface and the ink fills the spaces

Option B – intaglio involves scratching a metal plate and inking the scratched area

Option D – also involves scratching the surface and inking the depressed the depressed parts.

3. When the pigment or color is applied on a surface, the resulting art work is a
 - a. photography
 - b. mosaic
 - c. tapestry
 - d. painting
4. Curve lines can be flexible, graceful and joyous which curve line best suits the mentioned qualities?
 - a. concave
 - b. convex
 - c. spiral
 - d. scroll
5. Colors can be cool or warm. What color dominates the cool colors?
 - a. yellow
 - b. green
 - c. blue
 - d. red
6. The element of art that signifies the solidity of an object and enables us to know its thickness, length and height is _____.
 - a. form
 - b. value
 - c. space
 - d. volume
7. This principle of design that gives the parts a sense of belonging together is known as
 - a. rhythm
 - b. harmony
 - c. balance
 - d. proportion
8. We like to see things having the right and proper relationship with each other. This principle referred to is _____.
 - a. rhythm
 - b. proportion
 - c. balance
 - d. harmony
9. A type of construction which consists of a beam supported on only one end is called
 - a. post and bites
 - b. truss
 - c. cantilever
 - d. arch
10. This construction enabled the development of tall skyscraper.
 - a. truss
 - b. cantilever
 - c. steel cage
 - d. arch

11. This medium in painting is a mixture of pigments applied to wet plaster.
a. fusco *frisco* c. pastel
b. tempera d. encaustic
12. This is a subtractive process which chips away a formed material to bring out the desired form.
a. molding c. modeling
b. carving d. installation
13. An architectural is designed and constructed in consideration of the following aspects of life:
a. social and economic c. technological and geographical
b. political and ideological d. all of the above
14. Colors can be combined without limits. If we combine all colors in an art work, what will come out?
a. gray c. white
b. black d. brown
15. The use of one color with different tints or shade is a type of related harmonics. What is the term given to the use of one color with different shades?
a. light and shadow c. analogous
b. monochromatic d. complementary
16. This element of visual art refers to the surface characteristics of an object and is best appreciated when touched.
a. value c. form
b. texture d. color
17. Sculpture that is dynamic and literary moves or seems to be moving.
a. assemblage c. kinetic
b. free standing d. installation
18. The regular recurrent pulse of music.
a. meter c. accent
b. beat d. syncopation

19. This is the part of music which we can sing
☒ a. melody c. rhythm
b. beat d. dynamics
20. This refers to the expressive loudness or softness of music or song
a. beat c. tempo
b. accent ☒ d. dynamics
21. It is the simultaneous sounding of a group of tones, the vertical relationship between a melody and its accompanying chords
a. timbre c. syncopation
☒ b. harmony d. accent
22. This art form is the most personal of all art forms because of the nature of its main medium
a. music c. drama
☒ b. dance d. cinema
23. This dance form emerged in the 15th century in Europe and started the trend of dancing in couples, nowadays; it is also called ballroom dancing.
a. folk dance c. ballet
☒ b. social dance d. communal dance
24. This art form combines dramatic literature for scripts, architecture, sculpture, painting and its related arts for set design, costumes and make-up, music and live performance for heightening the emotional impact of a particular scene. What art form is this?
☒ a. theatre arts c. dramatic art
b. dance drama d. musicale
25. The series of still photograph rapidly projected on a screen
a. video bites c. sequence
b. cinema technique. ☒ d. image

PART III - ENHANCING TEST TAKING SKILLS

1. This is the property that gives the color its name.
 - a. intensity
 - b. value
 - c. tint
 - d. hue
2. Art is usually a representation of reality. Hence it is often referred to as:
 - a. communicative
 - b. affective
 - c. imitative
 - d. expressive
3. Perspective is an element of visual arts that gives the position of an object in space. What kind of perspective represents a distance by means of converging lines
 - a. foreshortening
 - b. aerial perspective
 - c. one point perspective
 - d. two point perspective
4. Perspective has many functions in art, particularly in the use of space. This is a type of perspective applied when a figure is illustrated on a surface.
 - a. one point
 - b. two point
 - c. foreshortening
 - d. aerial
5. A line when used by an artist suggests meaning. What meaning is associated with a vertical line?
 - a. motion and mobility
 - b. continuity and grace
 - c. honor and dignity
 - d. depression and chaos
6. When an architect designs and constitute a structure he wants to respond to
 - a. the needs of humans
 - b. the satisfaction of humans
 - c. the demands of humans
 - d. all are considered

7. Which of these process in sculpture does not belong to the category
- a. costing
 - ☒ b. carving
 - c. welding
 - d. modeling
8. Art is an expression of the way of life of its creators
- a. because it depicts important events in the life of a people
 - b. because it uses materials that were abundant at the time of creation
 - c. because it represents significant human experience and personalities
 - ☒ d. because of all of the above
9. A graphic image that is a result of a duplicating process is called
- a. photography
 - b. image
 - ☒ c. print
 - d. copy
10. When we refer to a color value that is darker than the hue, we call that its
- ☒ a. shade
 - b. tint
 - c. saturation
 - d. intensity
11. Orange are called _____ colors
- a. monochromatic
 - ☒ b. analogous
 - c. split
 - d. triad
12. When we demand that the things we use in our daily lives must be beautiful, we fulfill the _____ function of art.
- a. social
 - ☒ b. physical
 - c. personal
 - d. religious
13. An extreme long camera shot of a movie is often used as a
- a. panorama shot
 - ☒ b. establishing shot
 - c. dialogue shot
 - d. character shot
14. When we refer to the material out of which the art is made of we mean its
- ☒ a. subject
 - b. medium
 - c. content
 - d. style

15. When we refer to the manner in which an art work is organized, we refer to its
- a. subject
 - ☒ b. style
 - c. medium
 - d. content
16. The relative lightness and darkness that gives impression of solidity and illusion of depth.
- a. hue
 - b. chiaroscuro
 - c. intensity
 - ☒ d. value
17. This type of dance developed from social or regional memories of older dance motifs but are social and recreational in purpose
- a. ritual dance
 - b. art dance
 - c. social dance
 - ☒ d. folk dance
18. The visuals that we witness in a theatrical performance is called
- ☒ a. plot
 - b. spectacle
 - c. property
 - d. set
19. Which among the following film genres does not belong to the group?
- a. action
 - b. adventure
 - c. mystery
 - ☒ d. Western
20. This film belongs to a game that portrays reality. It is called a
- ☒ a. documentary
 - b. biography
 - c. history
 - d. sports

Psychology

Prepared by:

Dr. Teresita Tabbada-Rungduin and Dr. Priscila B. Dizon

Competencies:

1. Describe the behavior of the individual in relation to his physical and social environment.
2. Explain the basic concepts and theories in understanding human behavior.

PART I - CONTENT UPDATE

Psychology – scientific study of the behavior of individuals and their mental processes.

scientific – empirical and uses the principles of the scientific method

behavior – overt and can be verified

mental processes – workings of the human mind — thinking, planning, reasoning, creating and dreaming

Goals of Psychology

The goals of psychology are to describe, explain, predict, and control behavior and mental processes

The History of Psychology: Important People and Dates

4th and 5th Century BC	Psychology has its roots in many disciplines, dating back to the views of Aristotle, Socrates and Plato who studied the nature of the mind, the soul, the body, and human experience
17th Century	Rene Descartes supported the nativist view that some ideas are innate
	John Locke advocated the empiricist view that knowledge is acquired through experiences and interactions with the world
1869	Sir Francis Galton studied individual differences leading to the development of intelligence tests

1879	Wilhelm Wundt founded the first psychological laboratory at the University of Leipzig in Germany devoted to experimental psychology. Published <i>Principles of Physiological Psychology</i> , and is known as the <i>father of Psychology</i>
1883	G. Stanley Hall established the first Psychological Laboratory in North America at John Hopkins Hospital
1888	James McKeen Catell became the first professor in Psychology in the US
1890	Williams James wrote a two-volume work. <i>The Principles of Psychology</i> – most important Psychology text ever written

History of Psychology in the Philippines: Important People and Dates

Historical accounts of psychology in the country indicate that the subject was probably taught as early as the 17th century in two Philippine Universities, namely, University of Santo Tomas and the University of San Carlos in Cebu

1. Sinforoso Padilla	Established the first psychological clinic in the country at the University of the Philippines in 1932
2. Jesus Perpinan	Had set up the Far Eastern University Psychological Clinic
3. Estefania Aldaba-Lim	

Perspectives in Psychology

The conceptual approaches define points of view and sets of assumptions that influence both what psychologists will study and how to study it. Although each perspective represents a different approach, psychologists borrow and blend concepts from more than one of these perspectives.

Biological Perspective – the approach to identifying causes of behavior that focuses on the functioning of the genes, the brain, the nervous system, and the endocrine glands.

Psychodynamic Perspective – a psychological model in which behavior is explained in terms of past experiences and motivational forces; actions are viewed as stemming from inherited instincts, biological drives and attempts to resolve conflicts between personal needs and social requirements. Freud himself emphasized early childhood as the stage in which personality is formed.

Behaviorist Perspective – it was concerned with observable behavior that can be objectively recorded. Its emphasis on the need for rigorous experimentation and carefully defined variables has influenced most areas of psychology.

Humanistic Perspective – according to the humanistic perspective, the main task for humans is to strive for growth and development of their potential. They deal with the whole person – integrating knowledge of the individuals' mind, body and behavior with an awareness of social and cultural forces.

Cognitive Perspective – this perspective stresses human thought as both results and causes of human behavior. They study higher mental processes such as perception, memory, language use, problem-solving, and decision making at a variety of levels.

Evolutionary Perspective – it suggests that mental abilities evolved millions of years to serve particular adaptive purposes just as physical abilities.

Cultural Perspective – this focuses on the cross-cultural differences in the cause and consequence of behavior.

The Relevance of Research to Psychology

The research process in psychology can be divided into two major categories that usually occur in sequence; forming an idea (discovery) and then testing it (justification). In the initial phase, observations, beliefs, information, and general knowledge lead to a new ideas and theories. A theory is an organized set of concepts that explains a phenomenon or set of phenomena. Hypothesis will be derived from the theory and then will proceed to the second phase which rely on the scientific method.

The Biological Bases of Behavior

Heredity and Behavior

Researches in human behavior explore the link between the genes people inherit and their behavior.

Biology and Behavior

The hormones of the endocrine system and the neurotransmitters of neurons perform similar function. They both carry messages between cells. Neurotransmitters carry messages between adjacent neurons.

The Nervous System in Action

The human brain is composed of three functional divisions: the central core, the limbic system, and the cerebrum. The central core mediates basic autonomic functions; the limbic system is involved in emotion, motivation and memory; and the cerebrum is responsible for planning and decision making.

Sensation and Perception

Sensation is the process by which stimulation of sensory receptors produces neural impulses that represent experiences inside or outside the body. It is the study of the relationship between physical stimuli, and the behavior or mental experience the stimuli evoke is the task of Psychophysics.

The most significant figure here is German physicist Gustav Fechner (1801 – 1887). He coined the term psychophysics and provided a set of procedures to relate the intensity of a physical stimulus – measured in physical units – to the magnitude of the sensory experience – measured in psychological units.

The Different Sense Modalities			
Senses	Stimuli	Specific Receptors	Brain Area
Visual (Sense of Sight)	Light rays	Rods and Cones	Optic nerve to Occipital lobe
Auditory (Sense of Hearing)	Sound waves	Cochlea (Organ of Corti)	Temporal lobes
Olfactory (Sense of Smell)	Chemical substances in a gaseous state	Olfactory cells	Temporal lobe (perception of odor)

Gustatory (Sense of Taste)	Chemical substances in liquid form	Taste buds	Gustatory center in the cerebral cortex
Cutaneous (Touch, Pressure, Pain, Cold and Warm Sensations)	Mechanical energy applied to the skin	Light touch – Meissner's corpuscles Pressure – Pacinian corpuscles Cold sensation – Krause's corpuscle Warm sensations – Ruffinian endings	Somatosensory area of the cerebral cortex

Perception – the processes that organizes information to make sense of sensation.

Major Functions of the Visual Perceptual System

1. **Localization:** determining where objects are
 - a. **Figure-ground organization:** natural tendency to organize stimulus into regions corresponding to figure and ground
 - b. **Perceptual grouping:** elements are perceived together, rather than isolated units
 - 1) Proximity
 - 2) Similarity
 - 3) Good Continuation
 - 4) Closure
 - 5) Common fate

- c. Depth perception: determining how far the object is from us
 - 1) Relative size
 - 2) Superimposition
 - 3) Relative height
 - 4) Linear perspective
 - 5) Motion parralax
- 2. Recognition: discerning what objects
- 3. Constancy: keeping the appearance of the objects the same even if their image in the eye are changing

Identification and Recognition

Identification and recognition involve both Bottom-Up and Top Down Processes, which work together to provide a coherent understanding of the world.

Bottom-up processing: Taking sensory data in from the environment and sending it to the brain for extraction and analysis of relevant information

Top down processing: involves your past experiences, knowledge, and cultural background in perceiving the world. Higher mental functioning influences how you understand objects and events.

Consciousness

Consciousness: is a state of awareness of the outside world, of our own thought and feelings. Each day we go through a variety of conscious states, sometimes unintentionally or intentionally.

William James: one of the earliest psychologists who dealt with consciousness.

Normal Waking Consciousness

Consciousness can be defined as the sum total of all the external stimuli and internal mental events of which we are aware at any given time; simply defined as a state of awareness.

Consciousness and Attention

Selective attention: The cognitive mental process that limits the amount of information allowed into consciousness is known as selective attention. The process of selective attention is illustrated in our everyday experiences in the classroom.

Sleeping and Dreaming

Sleep is a part of the daily cycles in behavioral or physiological activity known as circadian rhythms. We sleep to restore and revitalize our bodies and minds for the next waking day. Lack of sleep affects our physical and mental activity.

Sleep is not a single, continuous state. It's a complex combination of states. Actually, several states of conscious awareness are a part of the sleep process. We pass through the stages of the sleep cycle. The different levels of sleep are defined on the basis of electroencephalogram (EEG). It is a machine that measures electrical brain activity. Each of the stages has specific characteristics. Sleep is made up of two distinct stages: the Non-Rapid Eye Movement (NREM) which contains four stages, ranging from light to deep sleep, and the Rapid Eye Movement (REM) sleep which occurs periodically through the night.

Dream Theories

Dreams as wish fulfillment

Dreams are one of the most fascinating aspects of human consciousness. What do dreams tell us?

Sigmund Freud was the first modern theorist to consider seriously the psychology of dreaming. To the followers of Freud, dreams are the royal road to the unconscious. They believe that dreams are derived from the unconscious drives or wishes. These wishes or drives are usually repressed during the day; but during sleep, the repression is relaxed and unconscious wishes are more likely to emerge into consciousness, thus manifest in our dreams.

Dreams as brain activity

Two sleep researchers, J.A. Hobson and R. McCarley (in Lahey, 1989), proposed a biopsychological theory of dreaming, the activation synthesis hypothesis. They argue that dream state of REM sleep is generated within the area of the brain stem known as pons. The theory regards dreams as mere by-products of periodic brain activation rather than a result of unconscious wishes.

Sleeping and dreaming seem important to health, and extended periods of sleep deprivation have been shown from researches to cause fatigue, inefficiency, and irritability.

Sleep Disorders

Normal patterns of sleep and waking can be disturbed for many reasons. The most common sleep disorder is insomnia. Other sleep disorders include sleep walking, sleep talking, narcolepsy, and sleep apnea.

Insomnia

Insomnia is the long-term inability to obtain adequate sleep due to lengthy time to sleep onset, frequent waking during the night, and /or very early morning waking. People with insomnia are usually mildly depressed or anxious. During the day, they tend to internalize their worries, concerns, and feelings rather than expressing them outwardly. At night, as external distraction wane and attention is directed inward, these concerns enter consciousness. This mental alertness

blocks sleep, causes muscular tension and physiological arousal that leads to an escalating pattern of fearing to go to bed because of expected insomnia.

Sleep walking

Sleep walking occurs primarily during the deepest parts of non-REM sleep. Sleepwalkers rise from bed and carry on complicated activities, such as walking from one room to another, even though they are sound asleep. This is common in children before the age of puberty, but is not particularly unusual in adults. Sleepwalking is not an abnormal behavior. It usually reappears in adults only during periods of stress.

Learning Memory

Learning is a process that results in a relatively consistent change in behavior or behavior potential. How do humans learn?

The Behavioral Learning Theories

1. Pavlov's Classical Conditioning. Learning takes place as a result of the association between the stimulus and response.
2. Thorndike's Connectionism. Learning is a result of the bonds or connectionism established between the stimulus and response through the laws of exercise, readiness, and effect.
3. BF Skinner's Operant Conditioning. Learning is enhanced by the consequence associated with the response or behavior. The effects of reinforcement and punishment shape the desired behavior.
4. Bandura's Social Learning. Learning is possible by observing the consequences of another person's behavior. He gave emphasis to the impact of modeling and the individuals cognition of himself and the target behavior.

Cognitive Learning

Gestalt Psychology

Wolfgang Kohler, Max Wertheimer, Kurt Koffka studied on how organisms perceive relationships among ideas and the effect those relationships have on memory and learning.

Kurt Lewin developed the Field Theory or his concept of life space – psychological environment that influence a person's learning.

Ausubels Meaningful Learning

Meaningful Learning will occur when the materials to be learned are related to what students already know. It will also be helpful if there is an advance organizer that will give an overview of the new information before actual learning is expected.

Bruner's Discovery Learning

Learners will be more interested if they are confronted with problems that they will need to investigate / experiment / gather data about and discuss among their peers or with the teacher.

Information Processing

The human brain is compared to the computer-- the ways in which sensory input is processed in the working memory and later retrieved for new interpretation and application.

The use of mnemonics needs to be demonstrated so that learners will be helped to encode in their long - term memory the knowledge that will help them apply and create knowledge.

Motivation

Motivation refers to an internal state or condition that activates behavior and gives it direction.

Motive and Its Components

Motive has two components, need and drive. *Needs* are based on some deficit within the person. The deficit may be physiological or psychological. *Drives*, on the other hand, are based on needs and have the added feature of an observable change in behavior. Drives imply motion of some sort.

Functions of Motives

Motives have three important functions in behavior. First, they *energize* the person. The motivated person is active and his activity is maintained at relatively high levels until relevant goals or rewards are attained. Goal refers to a substance, or object capable of satisfying a need. Aroused motives will make the individual more alert in general.

Motives have a *directing* function. They determine from many possible behaviors or responses which are likely to be the most appropriate. This directs a person to organize his ideas around whatever goal is important to him at the moment. Lastly, motives have a *selecting* function. Reinforcement, consequences, and feedback determine which of a number of responses will be selected. A number of responses and ideas are available in every situation and at each choice.

Origin of Motives

Motives originated from a biological or physiological source or from an environmental influence. A motive may arise from a biological need such as the need for food or water which drives an individual to seek food when hungry or drink when thirsty. The tissues of the human body need these food and water to function continuously.

Motives may also be caused by environmental factors. We react strongly to social acceptance.

Theories of Motivation

Instinct Theory

People act the way they do because of their instincts. An instinct is an innate or generally predetermined disposition to behave in a particular way when confronted with certain stimuli.

Instinctual behavior follows an inborn plan that allows for substantial flexibility in the course of development. For example, infants have the tendency to form a strong emotional bond with their biological mother, but an infant can form a bond with a substitute mother. Instinctual behavior, then, is viewed as innate or pre-programmed but is subject to modification in the face of environmental demands.

Drive Theory

Clark Hull (1943) believed that organisms are motivated to eliminate or reduce bodily tension. Drive is the term used to define the state of tension that occurs when a need is not met. Hull believed that drives motivate organisms to reduce tension. Organisms with high state of arousal are motivated to engage in the process of drive reduction, a set of behaviors designed to reduce or eliminate bodily tension.

Drive theory states that the potential level of any response is a joint function of the response habit, strength, and the person's level of drive. High drive facilitates performance on simple or over-learned tasks but hampers performance on complex or novel ones.

Arousal Theory

Arousal theory, which arose partly as an alternative to drive theory, stipulates that a moderate level of stimulation is reinforcing. An increase in the level of tensions or excitement is referred to as arousal.

The theory proposes that moderate level of stimulation is the most pleasant and that both higher and lower levels are relatively aversive.

Some contemporary examples of activities that suggest a need to increase arousal are roller rides, sky diving, and horror movies.

Solomon's Opponent Process Theory of Acquired Motives

Richard Solomon provides intriguing answer to some questions with his opponent process theory of motivation. He explains that a state of positive feeling is followed by a contrasting negative feeling, and vice versa; and any feeling, either positive or negative, that is experienced in succession loses some of its intensity.

Incentive Theory

External goals motivate organisms to perform certain actions. The external stimuli in the environment that "pull" the organisms in certain directions are called incentives.

The basic assumption of incentive theory is that if a desirable goal can be anticipated following the completion of a particular action, the organism is motivated to perform that action.

Classification of Motives

Primary Motives: Biological Needs

Many human motives stem from the need for things to keep an organism alive and are necessary for survival. We consider these as primary motives, also known as physiological motives. Primary motives are those directly related to the normal body functions such as need for air, food, water, excretion of waste,

rest and sleep, protection from heat and cold, avoidance of pain and so on. Sexual motive is also considered to be a primary motive because the species would not be able reproduce if the sexual motive is not satisfied.

Psychological Motives

Psychological motives are needs in the sense that individual's happiness and well-being depend on these motives. Though psychological needs are as powerful as physiological needs, often they are less easily identified such as needs for approval, affection, affiliation, achievement, power, prestige, and so on.

Maslow's Hierarchy of Motives

According to Maslow, our motives are organized in a hierarchy arranged from the most basic to the personal and advanced. If lower needs in the hierarchy are not met for the most part, then higher motives will not operate. Higher needs lie dormant until the individual has the chance to immediately satisfy pressing lower needs like hunger, thirst, and safety. When the lower needs are met, other motives like developing relationships with others, achieving a positive self-esteem, and producing crafts or art or realizing one's full potential become important to the individual.

The Maslow needs of hierarchy is as follows:

1. *Physiological or Biological needs*: food, drink, sex and so on
2. *Safety/Security needs*: order, protection, shelter and family stability
3. *Love and Belongingness*: affection, group affiliation, and personal acceptance
4. *Esteem needs*: self-respect, reputation, and social status
5. *Intellectual needs*: knowledge, truth, education
6. *Aesthetic needs*: arts, harmony, appreciation and value of nature
7. *Self-Actualization*: self-fulfillment, achievement of personal goals
8. Transcending beyond oneself

Emotions

Plutchik (1984) identified eight basic emotions: fear, anger, joy, sadness, acceptance, disgust, anticipation, and surprise. These emotions are associated or connected with each other. For example, the emotion of fear is connected with the behavior pattern of protection. Likewise, anger is related to the behavior pattern of destruction.

Motivation and emotion are closely related concepts for three reasons:

1. The arousal of emotions activates behavior as motives do.
2. Motives are accompanied by emotions.
3. Emotions typically have motivational properties of their own.

Theories of Emotions

James-Lange Theory

William James believed that the emotional stimulus is routed (by the sensory relay center known as the thalamus) directly to the hypothalamus, which produces the bodily reaction (fear or other emotion). The sensations from this bodily reaction are then sent back to the cortex which produces what we feel is the conscious experience of emotion. According to James, we cry because we feel sorry, strike because we are angry, tremble because we are afraid.

Cannon-Bard Theory

Walter Cannon did not just criticize the James-Lange theory. He proposed an alternative theory of his own. The theory states that conscious emotional experiences and physiological reaction and behavior are relatively independent events. The theory was later revised by Philip Bard and is known as the Cannon-Bard theory of emotion.

Cognitive Theory

The more contemporary theory of emotion views the cognitive interpretation of emotional stimuli or events in the outside world and stimuli within the body as the key elements in emotion. According to this theory, there are two steps in the process of cognitive interpretation in emotions: (1) the interpretation of stimuli from the environment and (2) the interpretation of stimuli from the body resulting from autonomic arousal.

Principles of Emotion

1. Emotional needs express themselves one way or another.
2. Anger is an expression of need.
3. Our feelings and needs are not wrong or bad.
4. Emotions are the gateway to vitality and feeling alive.
5. We can address emotional issues and still save our true face.
6. Immediate reactions to problem often disguise deeper feelings.
 - a. *Running away.* A frequent response to intense feelings is to remove ourselves from the situation by avoiding others, not talking to them, acting like they are not there, and pretending the event never occurred.
 - b. *Getting angry.* Anger, although it appears direct, is one of the strongest avoidance function we have because it keeps us away from our deeper emotions. Anger frequently masks feelings of being haunted.
 - c. *Denying importance.* When we are hurt, we may attempt to diminish our strong feelings by rationalizing.
 - d. *Addressing the situation.* Identifying real feelings and then addressing the situation is the best, but possibly the most difficult way to respond. Solutions based on surface reactions never satisfy us because they do not respond to the heart of our concern. True satisfaction comes when we identify, accept, and respond to our deeper needs.
7. We must clarify individual needs before solving problem with others.
8. We need to express positive feelings and communicate negative ones.

Mental Processes

What are the mental processes?

Mental processes refer to thinking which can be any of the following:

- Use of symbolic processes by the brain
- Ideation, the sequence of producing ideas concerned with the solving of specific problems or incongruities in models of reality (Stratton and Hays, 1991).
- The deliberate exploration of experience for a purpose. That purpose may be understanding, decision-making, planning, problem-solving, judgment, action, and so on (De Bono, 1991).
- Purposeful manipulation of words and images. Forming concepts, solving problems, making decisions, and being creative (Sdorow, 1990).
- "Thinking is a process by which a new mental representation is formed through transformation of information by complex interaction of the mental attributes of judging, abstracting, reasoning, imaging and problem-solving" (Solso, 1988).

From the above definitions, we can deduce that mental processes can be categorized into forming concepts, solving problems, and making judgments or plans or what they call metacognition.

Mental Processes		
Major Decisions Of Thinking	Thinking Processes Involved in each Dimension	Thinking Skills
I. Concept Formation	critical thinking/analysis logical reasoning	1. seeing relationship 2. a. induction b. deduction

II. Problem Solving	problem solving strategies decision making creative problem solving	learning and remembering analysis, synthesis, making a choice, communication
II. Problem Solving	self-management self-concept awareness of oneself self-efficacy self-esteem	setting goals monitoring effort evaluating outcomes

Critical Thinking

Critical thinking has been defined as "principled thinking" (Siegel, 1980). It involves the correct assessing of statements using analysis and logic. It serves as the foundation for evaluation and decision-making. It is therefore a necessary skill to develop. Ennis (1962) suggested the following twelve aspects of critical thinking:

1. Grasping the meaning of a statement
2. Judging whether there is ambiguity in a line of reasoning
3. Judging whether certain statements contradict each other
4. Judging whether a conclusion follows necessarily
5. Judging whether a statement is specific enough
6. Judging whether a statement is actually the application of a certain principle
7. Judging whether an observation statement is reliable
8. Judging whether an inductive conclusion is warranted
9. Judging whether something is an assumption
10. Judging whether a definition is adequate
11. Judging whether a statement by an alleged authority is acceptable

Analysis

Analysis is defined as a breakdown of the material into its constituent parts and the detection of the relationships of its parts – of the way they are organized (Bloom, 1956). Two or more items are compared and contrasted. Then a relationship is established between or among the concepts. The relationships are varied and can be any of the following:

1. Semantic relationships involve similarities or differences in meaning.
2. Symbolic relationships are those that are comparable purely in terms of the symbols (e.g. letters or numbers) that make up their components, with no respect to their meanings.
3. Phonetic relationships are pairs of words that sound alike like homonyms, rhymes.
4. Class relationship involves pairs that belong to the same classification.
5. Functional relationship can be seen if one item changes into the other, acts or performs on the other, or is used for the other.
6. Quantitative relationships are expressed as similarities or differences as to quantity, degree or number.
7. Pattern relationships are those that possess similar figural attributes (size, shape, pattern, color)

Strategies for Solving Analytical Problems

When attempting to solve analogy problems, it is helpful to adhere to a specific, deliberate set of steps. The following sequence is based on Sternberg's (1981) model:

1. Read the entire analogy item.
2. Take note of the parts of speech used. No more than two different parts of speech may be used for a parallel analogy.
3. Examine the primary relationships first, i.e. determine in what way are the first two words related to each other, then apply the same relationship to the same pair. If the primary is not immediately obvious, consider the various types of analogies that can be used and try to narrow to more than two or three possibilities.

Logic and Logical Reasoning

Two thousand years ago, Aristotle introduced a system of reasoning – a process of validating arguments called syllogism. Syllogism has three parts – a major premise, a minor premise, and a conclusion in that order.

A conclusion reached by means of syllogistic reasoning is considered valid if the premises are true and the form correct. This type of reasoning is deductive logic. From a general statement, we proceed to a specific situation and determine the application of a rule or principle to that particular case.

One would observe that knowledge stored in the long-term memory has influence on the quality of information perceived, encoded, stored, and transformed. The more information a person has, the more accurate his transformation will be.

Problem – Solving

Problem-solving is the cognitive process through which information/concepts are used to reach a goal that is sometimes blocked by some kind of obstacle (Sdorow, 1980). It is synonymous to synthesis (Bloom, 1956), which is putting together the elements and parts so as to form a new whole. Guilford refers to it as productive thinking. It is the production of new information from a given information. Edward de Bono (1979) calls it generative thinking.

Problem solving consists of cognitive operations that follow a pattern. It is required that the elements be combined in a new way. When a scientist uses the findings of others as background information and then builds on these findings, adding personal interpretation to produce new information, he is forming a synthesis.

The following are the steps in solving everyday problem:

1. Analyze the problem, its manifestations and its causes;
2. Decide what information and tools are needed;

3. Design solution and alternatives;
4. Evaluate advantages and disadvantages of each possible solution;
5. Act on the chosen solution;
6. Monitor and evaluate every step and its effect; and
7. Be creative and patient until the problem is solved.

Creative Thinking

Problem-solving challenges one's creative thinking. The quality of the solution to a problem is an outcome of one's creative thinking.

Torrance (1974), an authority on creativity, defines creativity as "a process of becoming sensitive to problems, deficiencies, gaps in knowledge, missing elements, disharmonies, searching for solutions, making guesses, or formulating a hypothesis about deficiencies, testing and retesting this hypothesis – possibly modifying and retesting them – and finally communicating the result."

1. Saturation
2. Deliberation
3. Incubation
4. Illumination

Creative problem solving can be enhanced by following some of these strategies.

1. Use brainstorming to stimulate ideas.
2. Use the Delphi technique to make the best use of the experiences of the people involved and to avoid the gut feel of one person overriding the gut feel of all the others.
3. Try lateral thinking (de Bono, 1979).
4. Challenging anything that blocks the solution.
5. Persist and review the objectives while in the process.
6. Be imaginative and take risk in what is not ordinary.
7. Ask help where you may.
8. Break the problem to make it easier to cope with.
9. Be open-minded, be flexible. Consider the devil's advocate ideas.

10. Grow in knowledge by reading, listening to others, and involving yourself in different learning experiences.

Metacognition

Another mental process that needs attention is thinking about one's thinking. People usually spend so much time thinking about others, about their work, and about the events in the environment. Taking time to think about one's thinking will make a difference in the expressions and outcomes of one's action. Thinking about one's thoughts that affect one's feelings and action may make the person realize the impact of his emotions on his behavior. This kind of thinking is called metacognition. It is a form of thinking in which an individual develops an awareness of his characteristics, attitudes, beliefs, and actions

Intelligence

Nickersen, Perkins, and Smith (1985) in Solso, 1988 have compiled a list of abilities with they believe represent human intelligence that would be required of a computer to act "Humanly" intelligent:

The ability to classify patterns. All humans with normal intelligence seem able to assign non-identical stimuli to classes.

The ability to modify behavior adaptively. To learn adapting to one's environment is amore important mark of human intelligence.

The ability to reason deductively. Making logical inferences from stated premises lessens mistakes and failures

The ability to reason inductively and generalize. To discover rules and principles from specific circumstances makes an intelligent person go beyond the information given.

The ability to develop and use conceptual models. Much of what we "know" we infer from our past experiences with other similar things and events.

The ability to understand. The ability to see relationships in problems and to appreciate the meaning of these relationships in solving a problem is a validation of one's understanding.

Theories of Intelligence

Francis Galton's Theory of General Intelligence

The term intelligence was popularized in the 1980's by writings of Sir Francis Galton. He is a cousin of Charles Darwin, who is credited for developing the theory of evolution based on natural selection of inherited characteristics. In Galton's view, intelligence is a single general characteristics that provides the basis for more specific ability that each of us possesses. He believed that intellectual ability is inherited and if one is generally intelligent, he will likely develop strong mechanical, artistic, musical, and other kinds of ability.

Alfred Binet's Theory of General Intelligence

Alfred Binet also viewed intelligence as the general ability to reason and solve problems in a variety of situations. He based this view in his observation that good students tend to do well on all of the tasks included in the Binet-Simon scale, while poor students tend to do poorly on all tasks.

David Wechsler

David Wechsler (1958, cited in Sdorow, 1990) believed that intelligence is the capacity to understand the world and the resourcefulness to cope with the challenges. He further suggested that it may include the capacity to act purposefully, to think rationally, and to deal effectively with the environment (Wechsler, 1975). He constructed an intelligence test with subscales measuring those abilities. He developed versions of his test for use with

different age groups. The Wechsler Intelligence Scale for Children (WISC) for ages 6-17, and the Wechsler Adult Intelligence Scale (WAIS) for adults. Both has undergone revisions, 1974 and 1981, respectively. Each of Wechsler's Intelligence scale contains subtests measuring different aspects of verbal and nonverbal IQ, a performance or nonverbal IQ, and an overall IQ.

Horn and Cattell's Two-Factor Theory of Intelligence

John Horn and Raymond Cattell (1966) identified two fundamental types of intelligence. Fluid intelligence which reflects thinking ability, memory capacity, and speed of information processing, is largely inherited and independent of education. In contrast, crystallized intelligence is a combination of knowledge and developed skills brought about by schooling and everyday experiences.

Spearman's Theory of General Intelligence

Charles Spearman found that scores on certain tasks correlate highly with one another. Performances on vocabulary test, reading, and writing test which correlate highly might reflect the influence of a verbal ability factor. When a group of people were given a variety of cognitive tasks, their scores on task tended to show high or moderate or low on all tests. This led Spearman to conclude that performance on all the tasks depend on the operation of a single underlying factor which he called "g" - a general intelligence factor. However, the correlations between the tasks correlated were less than a perfect 1.00; Spearman thought there must also be a specific factor which he called "S" factor.

Thurstone's Theory of Primary Mental Abilities

Based on the individual's performance on a battery of tests, Louis Thurstone identifies seven factors which he called Primary Mental Abilities namely, reasoning, word fluency, perceptual speed, verbal comprehension, spatial visualization, numerical calculation, and associative memory.

Though scores or tests measuring these abilities had moderately high correlation with one another, they did not correlate high enough for Thurstone to assume the existence of a general underlying factor which would reflect the influence of a specific intelligence related to the particular ability assessed by the test.

Guilford's Structure of the Intellect

J.P. Guilford suggested that some 120 different abilities make up what we call intelligence. Each of these represents the interaction among dimensions that Guilford called cognitive operations (thought processes), contents (information the person is thinking about), and products (result of thinking about the information).

The Triarchic Theory of Intelligence

Robert Sternberg (1984) developed the Triarchic Theory of Intelligence assuming the intelligence is composed of three general types of abilities. He distinguished between componential intelligence which reflects verbal reasoning ability, experiential intelligence which is the ability to combine different experiences in insightful ways to solve specific problem, and contextual intelligence which is the ability to function in everyday social situation (Sdorow, 1990).

The Triarchic theory recognizes the individual's ability to function in setting other than school. It also recognizes that fact that one may excel in one kind of intelligence without excelling in the other two. However, Sternberg (1986) believes that each of the three kinds of intelligence can be improved by special training.

The Theory of Multiple Intelligence

Howard Gardner (1983) believed that the brain has evolved separate systems for different adoptive abilities that he calls 'intelligences.' Each of these seven types of intelligences is developed in different degrees in every person.

Some of them are assessed by traditional intelligence tests like linguistic intelligence, logical mathematical intelligence, and spatial intelligence. Others are not assessed by traditional intelligence test like bodily-kinesthetic intelligence, intrapersonal intelligence, interpersonal intelligence, and musical intelligence.

As observed in everyday life, a person may excel in one or more of Gardner's intelligence, while being average or below average in others. In extreme cases, there are children who are autistic but have musical intelligence, one who excels in painting but may be "average" in other areas, the athlete who excels in sports but is too shy in an interview, or one who is mathematics genius but could hardly carry out a verbal exchange, confidently.

According to Gardner, the extent to which a person will succeed in life depends on the extent to which he develops the kind of intelligence that are needed in one's culture. For example, for most people especially in the urban areas, success depends more on linguistic intelligence than in any other. One has to learn to process information in print, or otherwise organize and use them to act communicate effectively. One who live in another culture, like in a fishing or farming village, will have to depend on their spatial and bodily-kinesthetic intelligence to live productively. Somewhere in the readings of the author, she encountered an additional intelligence which is the naturalistic intelligence. People who are very keen observers of the elements of nature so that they can predict what is to happen from their observations are examples of this type. Another book cited moral intelligence an ability to decide on which is more appropriate behavior as another kind of intelligence. Perhaps as long as there are psychologists trying to understand human behavior, there will be additional human capabilities that will be studied and harnessed to improve human society.

Emotional Intelligence

Recently, Goleman (1994) revived the notion of emotional intelligence. It refers to the ability to use one's emotions, as conceptualized by Salovey, in order to succeed. Actually, it can be synonymous to Thorndike's earlier formulation of social intelligence. It involves being aware of one's feelings and mood, managing one's mood, motivating oneself, and being able to maintain interpersonal relationships. Researches are being conducted to harness emotional intelligence for one's success.

Human Relations

Interaction with others add meaning to one's life. Living is worthwhile as long as we learn to live life for what it is. What is life for? It depends on one's experiences and thoughts. But to live life meaningfully is to be able to say that one has done something for himself and for others. In Erickson's psychosocial stages of life, one who is in his retirement age should be able to look back and claim he contributed to the betterment of another's life.

Inside every individual is an interaction. His personal characteristics are manifested in his behavior which others in the group experience as he relates with them. These personal characteristics are products of his hereditary endowments, his interaction with his environment and the realization that comes with maturity.

Theories of Social Interactions

Symbolic Interactionism (George Herbert Mead)

The Self emerges from social interaction through the understanding of symbols. She learns to understand the symbols in her society as she sees them. At first she imitates them, but they don't have meaning. Later, she learns to produce the symbols. She likewise learns to imitate what others

are doing to express herself to/ with others. As she matures, she is able to understand many symbols and adjust behavior according to her perception of symbols in the situations. If she has acquired the symbols of the people around, then there will be more harmonious interpersonal relations.

Social Learning Theory

A person's self-concept is an aspect of his personality that will affect his interpersonal relations. The sum total of a person's thought or idea about his appearance, his family, his experiences and the recognition he gets from the people around him all contribute to his self-concept.

During childhood an individual develops his self-concepts as he interacts with the members of his family. When he feels he is loved, he sees himself positively. When he goes to school, he begins to compare himself with others. If he sees himself comparable with others, he continues to feel good about himself. If he habitually fails or is generally disliked by others he develops a negative self-concept.

You can observe how these two kinds of personal orientations differ as to attitudes towards others and their work. While one who has high self-concept usually volunteers to do something, the one with low self-concept will shun responsibility because of lack of a sense that he can do it. It is self-efficacy in the language of Social Learning Theory. Thus, one who has low self-concept is usually shy and withdrawn while the other is open to experience and is outgoing.

The feedback one gets from peers, significant others or even new acquaintances continue to form the self-concept of an adolescent. The comments she receives define her identity which influences her reactions to other events. It (feedback) is also the basis for future plans and goals in life.

However, as one matures, she develops a self-awareness that may influence her self-concept better than that provided by information from others. Through careful observation of her feelings, thought and behavior, she develops a better self-concept. She knows her strengths and weaknesses. If she is able to do things successfully, she develops a sense of worthiness or self-esteem. Sometimes she may not feel successful but knowing that she tried her best, that she did something, gives the individual high assurance of self-worth because she may realize that not everything is under her control.

As an individual matures, the self becomes the source of self-esteem. It is the individual himself who knows his feelings, thoughts and capacities. He evaluates what he has done. If he thinks he has done it well according to his own thoughts, feelings, and capacities, he develops high self-esteem.

Attribution Theory

Another belief that affects one's interpersonal behavior is attribution. It refers to the perception of the cause of a person's behavior. If a person attributes the outcomes of his action to his personal efforts, characteristics or attitudes, he has internal orientation. How do you think will this affect his attitude? How about when one sees that others, luck or circumstances beyond his control, are responsible for his outcomes? How will he behave in future projects? Having external orientation usually draws little or no effort in doing something better. People who have internal attribution are perceived to be more self-reliant, more persistent, and more persevering. They are more likely to succeed specially in academic situations. Perhaps it can also improve our interpersonal relations. When we risk something in somebody whom we like to be our friend, a friendship might develop. Taking responsibility for the direction and quality of the relationship will result in a more active and responsive interpersonal relations. Heider suggests: "The greater the personal force contributing to the production of an outcome, the greater the actors' responsibility for the occurrence of that effect."

In an interpersonal context, a person's attribution of a behavior can affect his behavior to the situations.

We judge situations and other people on the basis of our own perceptions, expectations, experience, motives, and feelings. We fail to consider the other person's concerns and motives. It will help if we find out first the other person's thoughts and feelings. We will achieve better relationship if we check our perception and our communication. Take care not to be biased or too emotional. Being considerate of the other person's thoughts and feeling can make a difference in our expressions.

Carl Roger's Theory of Interpersonal Relations

Congruence is the term used to indicate an accurate matching of experiences, awareness, and communication of an individual. Actual psychological experience is being accurately represented in his awareness and his communication.

Each one of us recognizes the need to be in congruence with persons we deal with. In your interaction with others, perhaps, you may have met and observed persons who really mean what they say and try to reciprocate or match the feelings and expressions of others. With them, we exactly know where we stand. However, there are also others, who, with certainty always put up a front, a façade and we wonder what they really feel.

Empathic Understanding: A Tool for Interpersonal Relationship

Being empathic (empathetic with some authors) is a very special way of being with another person. It is one of the most delicate and powerful ways of using ourselves (Rogers, 1995). It is also the most potent factor in bringing about changing and learning. Listening to feelings and reflecting them are important aspects of empathic understanding, "It is an experiencing of the consciousness behind another's outward communication, but continuous

awareness that this consciousness is originating and proceeding in the other. Empathy is the ability to understand how the other person feels and thinks about a particular situation."

What are the effects of empathy? Empathy is related to positive outcome so proven by social researches.

Empathy dissolves alienation. The person feels he is no longer an isolate because someone is able to understand him.

The recipient feels valued, cared for, and accepted as the person he is which later facilitates to listening more to himself and understanding himself better. By letting the other person know "where you are" emotionally, being able to communicate clearly or what we term congruence is the basis for building a relationship. The three of them—congruence, empathy, positive regard—provide illumination and healing, our precious gifts to the other person.

The Filipino Interpersonal Values

Filipinos are admired for their capacity for smooth interpersonal relations. They value the "kapwa-tao." They will exert effort to please the other person. They hold the "kapwa" in high esteem that they give him the best of themselves and their resources.

Pagbibigay-galang, mabuting pagtanggap, pakikipagpalagayang loob, hiya, utang na loob, bayanihan, and pakikisama are Filipino vocabularies that give color to the Filipino interpersonal relations.

The Role of Self-esteem in Interpersonal Relations

Have you taken the initiatives or risk in doing something you thought you cannot do?

How do you feel after each situation? How does it feel to try and give your best to what you are doing?

How does it feel to help others do a task or just lift their hopes or spirits?

How does it feel when someone says I was motivated by your concern for me?

There are many things that we do for ourselves and for self-respect. We change our lives and others' lives too, because we believe we can or we have to. The sense of confidence in our capacity to do something is self-efficacy. Self-respect is the feeling we develop from trying to give our best to what we think we can and ought to do. These two components make up self-esteem.

Self-efficacy + self-respect = self-esteem

A sense of esteem or worthiness gives a person the confidence to take risk and so she is able to help other persons. Her effort gives her additional experience and insight about herself and her capacity. She develops a sense of well-being or respect for herself. The acceptance and respect she gives herself is felt for others. If she is able to accept herself for what she is and respect herself for what she can do, she will also be able to give the same to others. She experience of success or approximation of what is expected develops trust. Hence, there is improvement in every undertaking. These feelings of acceptance, respect, and trust of oneself is experienced also for others. Thus, a person with healthy self-esteem can establish a harmonious or facilitative relationship with others.

What is Communication?

Communication is process in which one person or group (the sender) transmits some types of information to another person or group (the receiver) who interprets the message and sends feedback in return.

The message is transmitted to the receiver. A sender's ability to encode ideas, thoughts and feelings will affect how it is going to be decoded or interpreted by the receiver. After decoding, the receiver may send a reply or feedback. The process may be very simple but there are factors that may affect the whole process. Personal factors will have some influence on the performance of the sender and the receiver. The situation of the environment, like atmosphere, will also have an impact on how the message is transmitted and received.

Types of Communication

Nonverbal Communication

While we do transmit a great deal of information to others through words, we also communicate with them non-verbally through an unspoken languages of gazes, expressions, and body movements. The distance we kept from the other person or the way we use physical space gives non-verbal cues. The manner and style of personal grooming are also channels for non-verbal communication.

Reading Facial Expressions

The six different emotions universally understood/conveyed by facial expressions are happiness, sadness, surprises, fear, anger and disgust. We have to watch the facial expression to find out the other's feelings. If however the other person doesn't want us know his feelings, he may conceal them. Some professionals must learn to conceal their true feeling like the doctor who worries about his patient, the consumer who wants to get a bargain.

or the caregivers who would not want their client to feel embarrassed. One who would want to read a person through his facial expression can detect concealment by the timing of:

Gazes and Stares: the Language of the Eyes

The eyes are the windows of the soul. They transmit eloquently a great deal of our thoughts and feelings. Have you seen a smile that seems to be lacking in genuineness because the look in the eyes of the person seems to say he is not really happy?

Can you tell the difference between the casual look and the look full of love? Have you been alarmed by the stare of another person?

Body Language: Gestures, Movement, and Postures

Another interesting mode of communication is the use of body language. Gestures, movements, and postures convey as many messages as there are symbols one can think of and can be understood in return. What does a thumbs up sign mean? When one cannot sit still or when he paces a room back and forth, how does he feel? How do you sit when you are alert and want to participate in a discussion? What does a person who looks at his watch want to say or unconsciously feel? What would you think of people who are well mannered, polite, and respectful?

Physical Appearance

My father used to narrate his experience about grooming. He was bidding for the construction of four-door apartment building. He came on a friend's invitation. There were three of them who met the owner. He won the bidding not on the basis of the lowest bid but on the basis his good grooming. He learned he was trusted the project because the owner thought he must be responsible because he cared for his appearance. He showed concern not only for himself but for other who he was going to interact with.

As you might imagine, people really care about appearance. There are many good things about being properly groomed.

The Use of Space and Architecture

Are you aware of the distance you maintain with others? The more familiar with the person, the closer you approach them, unlike when meeting mere acquaintances or strangers. There are other messages conveyed by physical space. The bigger the space occupied, the higher the position of the person in the company. Notice the office table of the trainees and the manager, including the location and materials used in each. The architectural design of homes, school and offices convey status, interest and life/work style of its occupant.

We are aware of the importance of heeding the non-verbal cues when there is incongruence. Actions speak louder

Understanding Human Personality

Personality can be defined as the distinctive patterns of thought, emotion, and behavior that make up an individual's personal style of interacting with the physical and social world.

There are five general approaches to explaining personality. These are the psychoanalytic approach, the trait approach, the humanistic approach, the behavioral approach and the cognitive approach.

The psychoanalytic approach – people's unconscious experiences are responsible for their behavior styles.

The trait approach – inherited predispositions explain individual difference in personality. The most popular of these approaches is the Big Five Personality

Factors namely Openness to experience, Conscientiousness, Extraversion, Agreeableness, and Neurotism. (OCEAN)

The humanistic approach – identifies self-responsibility and feelings of acceptance, respect, and trust as the key causes of differences in personality. A person who is growing toward self-actualization can be said to be psychologically healthy.

Behavioral approach – behavioral theorists see behavior as a result of conditions in the environment that shape human behavior. Social learning theory emphasizes the role of models to develop the desired personality.

Cognitive approach – describes how people process information. People differ in the way they mentally represent information. How individuals interpret themselves and their environment determine how they will respond to the world.

Each of five approaches is of some value when explaining behavior patterns. It is possible that one theory is appropriate for explaining one aspect of personality and some others will be more acceptable for explaining other dimensions of personality. It seems that when studying a person's personality one needs to consider the different approaches to really understand a person.

Psychological Disorders

People with Good Mental Health

A normal person possesses to a greater degree the following traits:

1. appropriate perception of reality
2. ability to exercise voluntary control over behavior

3. self-esteem and acceptance
4. ability to form affectionate relationships

Maladaptive behaviors may be categorized into:

1. Anxiety disorders
 - a. panic
 - b. phobias
 - c. obsessive compulsive disorders
2. Mood disorders
 - a. depression
 - b. Bipolar disorder
3. Schizophrenia
4. Personality disorders

There are many ways we can influence our psychological well being. By trying to analyze our actions and feelings we can enhance our capacity to remain psychologically healthy.

PART II - ANALYZING TEST ITEMS

1. The Constitution of the Philippines is to a lawyer while the Professional Code of Ethics for Teacher is to a teacher.

A. semantic relationship	C. phonetic relationship
B. symbolic relationship	D. functional relationship

The correct answer is D because the Constitution of the Philippines is used by the lawyer and the Professional Code of Ethics is a guide to the teacher.

2. A person's assessment of his current circumstances determines his response. What will you do in case you were in a not so pleasant situation?

A. Express your thoughts and feelings to whomever.
 B. Analyze the situation in different perspective.
 C. Listen to your friend's opinion.
 D. Respond the way you think you are happier.

The correct answer is B. All the answers are possible but it is more scientific that a person analyze, or assesses the different perspectives of the situation before responding.

3. Karmi was able to achieve her goal of a college degree despite her family's financial difficulties. She supported herself by taking student - friendly work schedules. Her determination to change her future succeeded. Which statement describes her personality development?

A. Personality is a product of heredity.
 B. Personality is shaped by one's environment.
 C. Personality is shaped by the person's decision.
 D. Personality is a product of the reactions of people in one's environment.

The correct answer is C. The rest of the answers are half true. Karmi is mature enough to be productive and to make decisions and her decisions shape her personality.

4. What is defined as the distinctive pattern of thought, emotion, and behavior that makes up an individuals' personal style of interacting with physical and social environment?
- A. Psychology
 - ☒ B. Personality
 - C. Intelligence
 - D. Heredity
5. It is considered the most comprehensive and influential theory of personality. Sigmund Freud, its proponent, claimed that much of what we think and do is driven by unconscious experience.
- A. Evolutionary Psychology
 - B. Humanistic
 - ☒ C. Psychoanalytic
 - D. Social Learning
6. Sigmund Freud instructed his patients to say everything that comes to mind during their treatment session. This is the method of _____.
- ☒ A. Free Association
 - B. Hypnosis
 - C. Meditation
 - D. Transference
7. Roderick won the Web Page Design Competition in his school. His work showed he has superior capacity for abstract thinking and creative expression. What stage does he manifest?
- A. Sensory motor
 - B. Pre-operational
 - C. Concrete
 - ☒ D. Formal
8. What defense mechanism is used when a person gives reasons for failure to perform a behavior?
- A. Displacement
 - B. Projection
 - ☒ C. Rationalization
 - D. Reaction Formation

9. This perspective holds that individuals have an innate tendency to move toward growth, maturity, and positive change.
- A. Behavioral
 - B. Cognitive
 - ☒ C. Humanistic
 - D. Psychoanalytic
10. An interrelated set of propositions about a particular phenomenon and supposed to be the most important source for scientific hypothesis – is referred to as
- A. Conclusion
 - B. Experiment
 - C. Problem
 - ☒ D. Theory
11. He is the author of the first psychology textbook published in 1890.
- A. Burrhus Skinner
 - ☒ B. William James
 - C. Ivan Pavlov
 - D. James B. Watson
12. Psychology not only seeks to scientifically study behavior and mental processes, but also attempts to
- A. Understand why people do the things they do.
 - B. Provide continuity between scientific disciplines.
 - C. Combine sociological and psychiatric constructs.
 - ☒ D. Apply that knowledge to the service of human welfare.
13. Although psychologists study many different topics and use many kinds of methods, there is unity within the field since most psychologists
- A. Work in more than one subfield.
 - ☒ B. Emphasize empirical research.
 - C. Publish articles on their research.
 - D. Engage in speculative research.

14. These psychologists believed that perception depends on the patterns formed by the stimuli and on the organization of experience.
- ☐ A. Behavioral
 - ☒ B. Gestalt
 - ☐ C. Humanistic
 - ☐ D. Psychoanalytic
15. He established the first psychological laboratory in Germany in 1879. His interests were on the senses, especially vision.
- ☐ A. Charles Darwin
 - ☐ B. Ivan Pavlov
 - ☐ C. Kurt Koffka
 - ☒ D. Wilhelm Wundt
16. Which would be a logical sequence for solving a problem?
- 1. Making Conclusion
 - 2. Defining the problem
 - 3. Gathering relevant information
 - 4. Generating Hypothesis
 - 5. Testing the Hypothesis
- ☐ A. 1 2 3 4 5
 - ☐ B. 2 3 4 1 5
 - ☒ C. 1 2 3 5 4
 - ☐ D. 2 3 4 5 1
17. This perspective understands behavior in terms of unconscious processes.
- ☐ A. Behavioral
 - ☐ B. Cognitive
 - ☒ C. Psychoanalytic
 - ☐ D. Subjective
18. All behavior is a result of conditioning and the environment shapes behavior by reinforcing specific habits according to:
- ☐ A. Structuralism
 - ☐ B. Functionalism
 - ☒ C. Behaviorism
 - ☐ D. Humanism

19. This is the subfield of psychology which conducts research in teaching and learning to influence development of more effective ways in facilitating learning.
- A. Experimental Psychology
 - B. Developmental Psychology
 - ☒ C. Educational Psychology
 - D. Organizational Psychology
20. Which process is involved in integration and meaningful interpretation of information received by the stimuli?
- ☒ A. Perception
 - B. Sensation
 - C. Elaboration
 - D. Generalization
21. The most common sleep disorder characterized by long term inability to obtain adequate sleep due to late onset of sleep or frequent waking is
- ☒ A. Insomnia
 - B. Sleep Apnea
 - C. Sleep Walking
 - D. Nightmare
22. This is a kind of talking to oneself which helps the individual to know what to do, what tools to use, what consequence will be acceptable. What kind of thinking is this?
- ☒ A. Metacognitive
 - B. Analytical Thinking
 - C. Logical reasoning
 - D. Creative Thinking
23. What kind of thinking do we engage in when we categorize or organize into categories, or analyze materials by establishing relationships or patterns in them?
- ☒ A. Critical Thinking
 - B. Creative Thinking
 - C. Generative Thinking
 - D. Reflective Thinking

24. Reactions to a particular situation may vary because of individual differences. Which is not a factor in the development of schema?
- A. Culture
 - B. Prior Knowledge
 - C. Language/ Vocabulary
 - D. Physical Attributes
25. This refers to a group of disorders characterized by loss of contact with reality, marked disturbance of thought and perception. Delusions and hallucinations almost always occur.
- A. Anxiety Disorder
 - B. Mood Disorder
 - C. Personality Disorder
 - D. Schizophrenia

PART III - ENHANCING TEST TAKING SKILLS

1. Who was the psychologist who proposed that dreams are expressions of unconscious drives or wishes and to benefit from it, they should be studied and explained?
☒ A. S. Freud
☐ B. B.F Skinner
☐ C. Kurt Lewin
☐ D. James Watson
2. Piaget argued that if the new experience does not fit the existing schema, the child will modify a schema to fit new information or engage in
☒ A. accommodation
☐ B. assimilation
☐ C. characterization
☐ D. critical thinking
3. Which learning recognizes that organisms have the ability to represent aspects of the world mentally and then operate these mental representations rather than on the world itself?
☐ A. behavioral
☐ B. social learning
☒ C. cognitive
☐ D. humanistic
4. By adolescence one must develop a sense of self-worth in major areas of life. Which of the following is not self-enhancing?
☐ A. Engaging and exploring experiences
☒ B. Being over dependent on significant adults
☐ C. Joining peer group activities
☐ D. Cooperating and striving with schoolwork

5. Pia noticed that her new friends are fond of computer games and spend most of their time in the computer shop. They have little time for school assignments and are sometimes reprimanded. What should Pia do?
- ☐ A. Engage in computer games to be with her new friends
 - ☒ B. Encourage friends to balance studies and leisure
 - ☐ C. Stop playing computer games
 - ☐ D. Stay away from her new friends
6. Which of the following areas of identity development needs to be resolved first?
- ☒ A. gender
 - ☐ B. career direction
 - ☐ C. social affiliation
 - ☐ D. ideological view
7. Which is a good way to interact with person we have conflict with?
- ☐ A. Avoid encounters with them
 - ☐ B. Ignore or deny their presence
 - ☒ C. Negotiate your ideas and feelings with them
 - ☐ D. Talk negatively about them
8. Filipinos are admired for their capacity for smooth interpersonal relations. Which Filipino value should be controlled so it will be positive for the individual and for others?
- ☐ A. pagbibigay-galang
 - ☐ B. mabuting pagtanggap
 - ☒ C. bayanihan
 - ☐ D. pakikisama
9. A person with a healthy sense of self-esteem, self confidence, and self respect is not likely to
- ☐ A. Establish healthy social relationship.
 - ☒ B. Stay away from others.
 - ☐ C. Work well with others.
 - ☐ D. Share little to others.

10. A group of students were watching the cheering competition, during the conversation after the demonstration each of the group of friends pointed out a different aspect of what they saw. What explains this?
- A. active perception
 - ☒ B. selective attention
 - C. divided consciousness
 - D. subconscious process
11. Chemicals produced in the brain that make communication between nerve cells possible are called
- ☒ A. neurotransmitters
 - B. hormones
 - C. neurobiology
 - D. electro chemicals
12. It is the brain's stress center, responsible for activating the inner core of the adrenal glands to release the hormones which help the body to adjust to emergency situations.
- A. cortex
 - ☒ B. hypothalamus
 - C. cerebrum
 - D. medulla
13. What is the label for all the strategies used to organize information in order to remember and retrieve them easily?
- ☒ A. mnemonics
 - B. memory peg
 - C. keyword
 - D. loci
14. Sternberg believes that individuals can be more successful if they are given training in improving their capacities for componential, experiential, and contextual intelligence. How is this theory known?

- ☒ A. Triarchic theory of intelligence
 - ☐ B. Zone of proximal development
 - ☐ C. Sociocultural theory
 - ☐ D. Multiple intelligence theory
15. The self interacts with itself – a kind of talking to oneself which helps the individual to know what was done, how to do it again, and what consequences will be more accepting. What kind of thinking is it?
- ☐ A. creative thinking
 - ☐ B. critical thinking
 - ☒ C. reflective thinking
 - ☐ D. lateral thinking
16. The more information a person has the more accurate his hypothesis will be, the better problem solving he will perform. What is your opinion?
- ☐ A. Agree
 - ☐ B. Disagree
 - ☒ C. Strongly agree
 - ☐ D. No opinion
17. Which is very helpful for learning complex materials / text?
- ☒ A. PQRSST strategy
 - ☐ B. Experiential strategy
 - ☐ C. Rehearsal strategy
 - ☐ D. Association startegy
18. Where is this happening?
- Noting similarities and differences among the forms in a row and then coming up with a conclusion that you make use of to solve a problem.
- ☐ A. sensory register
 - ☒ B. working memory
 - ☐ C. long term memory
 - ☐ D. storage memory

19. Aside from setting goals, planning action, and acting on your goal, what else will ensure achievements of goals? These are so easy to say but will require a lot of _____ to achieve.
- A. planning
 - ☒ B. goal setting
 - C. acting
 - D. discipline
20. What needs are satisfied when a person feels he belongs to a group, trusted he can contribute, and that his effort are recognized?
- A. physiological
 - ☒ B. psychological
 - C. self actualization
 - D. self regulation
21. What would be possible if an acquaintance tells you that you look like someone who had a significant role in her past?
- A. Be happy of the association
 - ☒ B. Be wary of transference
 - C. Be confident of your appearance
 - D. Be anxious to please
22. This is characterized by long standing patterns of maladaptive behavior that constitute immature and inappropriate ways of coping with others and solving problems.
- A. anxiety disorder
 - ☒ B. mind disorder
 - C. personality disorder
 - D. Schizophrenia
23. Which is the least helpful way of coping with negative emotions?
- A. Engage in physical exercise
 - ☒ B. Push the emotion out of conscious awareness
 - C. Seek emotional support from others
 - D. Talk about / Analyze Negative emotions.

24. What is it that inhibits persons to be active in social situations? It may be chronic and dispositional; it has the potential to make people lonely and isolated. It tends to minimize social pleasure and maximize social discomfort and isolation. It can be modified but it will have to be done with determination.

A. aggressiveness

B. extraversion

☒ C. anxiousness

D. shyness

25. Which of the following strategies is best to do in this challenging time?

☒ A. Provide individuals with coping skills so they can be more resilient

B. Have programs that allow for early assessment and prompt treatment

C. Know the cause of a disorder and eliminate it

D. Focus on isolating at risk people

Introduction to Computers

Prepared by:

Dr. Alice D. Dioquino

Competencies:

1. Manifest mastery of fundamental concepts, principles and operations of information and communication technology (ICT).
2. Identify varied and appropriate use of technology.
3. Analyze the effect / impact of ICT on the environment.

PART I – CONTENT UPDATE

- A computer is an electronic machine which can take instructions, and perform computations based on those instructions. It can be programmed and performs high-speed mathematical or logical operations or that assembles, stores and retrieves data and processes data.
- Data Processing is a process that involves transformation of data into information through classifying, sorting, merging, recording, retrieving, transmitting, or reporting. Data processing can be manual or computer based.

HISTORY OF COMPUTING

"Who invented the computer?" is not a question with a simple answer. The real answer is that many inventors contributed to the history of computers and that a computer is a complex piece of machinery made up of many parts, each of which can be considered a separate invention.

Historical records show that man has invented three age group of devices to assist him in calculating and processing data. These devices are classified as: 1) manual-mechanical device 2) electromechanical and 3) electronic

- **Manual Mechanical** – is a tool or a device with simple mechanism powered by the hand. Devices of this type required some sort of physical effort from the user when used. The earliest data processing devices were all manual mechanical devices due to the absence of electricity and adequate industrial technology. Some examples of these devices were the:

- **Abacus** – A counting device for making calculations consisting of a frame mounted with rods along which beads or balls are moved. It is the first *manual mechanical data processing device which was developed in China in 3000 B.C.*
- **Napier's Bones** - Napier's bones, also called Napier's rods, are numbered rods which can be used to perform multiplication of any number by a number 2-9. By placing "bones" corresponding to the multiplier on the left side and the bones corresponding to the digits of the multiplicand next to it to the right, and product can be read off simply by adding pairs of numbers (with appropriate carries as needed) in the row determined by the multiplier. This process was published by Napier in 1617 in a book titled *Rabdologia*, so the process is also called *rabdology*.
- **Oughtred's Slide Rule** - A device consisting of two logarithmically scaled rules mounted to slide along each other so that multiplication, division, and other more complex computations are reduced to the mechanical equivalent of addition or subtraction. The first slide rule was a joint effort of two Englishmen Edmund Gunter and William Oughtred. This was based on Napier's logarithms and has become the first analog computer (of the modern ages).
- **Pascaline** – invented by the famous French mathematician, Blaise Pascal in 1642. Although limited to addition and subtraction, the toothed counting wheel is still used in adding machines. Several wheels with teeth numbered from 0 to 9 are arranged in a row representing ones, tens, hundreds, thousands, and so on.
- **Leibniz's Calculator** – was invented by Baron Gottfried Wilhelm Von Leibniz in 1674. It utilizes the same techniques for addition and subtraction as the Pascaline but could also perform multiplication; division and square roots.
- **Babbage's Analytical Engine** – was invented by Charles Babbage in 1822. He is known as the "Father of Modern Computers" as a result of his contributions to the basic design of the computer.

➤ **Electromechanical** – An electromechanical device is usually powered by an electric motor and uses switches and relays. Household electrical appliances, desk calculations and punched – card data processing equipment all fall under this category. Some examples of these devices were the:

- **Hollerith's Punched Card Machine** – It was invented by Herman Hollerith in 1880. He used punched cards, read electronically to keep and transfer data. The cards were transported between brass rods, and when there were holes in the cards, the rods made contact and an electric current could flow. This was a machine to tabulate census data in 1890 more efficiently than the manual method.
- **Jacquard's Loom** – used punched cards to create patterns on fabric woven on a loom. It was the forerunner of the keypunch machine. It was invented by Joseph Marie Jacquard in 1804.
- **Mark I** – was a 51 x 8 x 2 feet machine. It could perform the four basic arithmetic operations and could locate information stored in tabular form. It was invented by Howard Aiken in 1943 but was put into use in 1944 up to 1959 at Harvard. It was fully automatic and could complete long computations without human intervention. Its official name was Automatic Sequence Controlled Calculator.

➤ **Electronic Devices** – are devices which use electrical switches and circuitry.

- **Atanasoff-Berry Computer** – invented by John Atanasoff in 1942 and was the first digital computer that used binary logic circuitry and had regenerative memory.
- **Electronic Numerical Integrator and Calculator (ENIAC)** – was invented by Presper Eckert and John Mauchly in 1943 to 1946. It was the first large-scale general purpose digital electronic computer. It consisted of over 18,000 vacuum tubes and required the manual setting of switches to achieve desired results. It could perform 300 multiplication problems per second.

- **Electronic Discrete Variable Automatic Computer (EDVAC)** – was invented by John Von Neumann in 1945. This was designed as a stored-program computer.

GENERATIONS OF COMPUTERS

The history of computer development is often referred to in reference to the different generations of computing devices. Each generation of computer is characterized by a major technological development that fundamentally changed the way computers operate, resulting in increasingly smaller, cheaper, and more powerful and more efficient and reliable devices.

- **First Generation - 1940-1956: Vacuum Tubes**

The first computers used vacuum tubes for circuitry and magnetic drums for memory, and were often enormous, taking up entire rooms. They were very expensive to operate and in addition to using a great deal of electricity, generated a lot of heat, which was often the cause of malfunctions.

First generation computers relied on machine language, the lowest-level programming language understood by computers, to perform operations, and they could only solve one problem at a time. Input was based on punched cards and paper tape, and output was displayed on printouts.

The UNIVAC and ENIAC computers are examples of first-generation computing devices. The UNIVAC was the first commercial computer delivered to a business client, the U.S. Census Bureau in 1951.

- **Second Generation - 1956-1963: Transistors**

Transistors replaced vacuum tubes and ushered in the second generation of computers. The transistor was far superior to the vacuum tube, allowing

computers to become smaller, faster, cheaper, more energy-efficient and more reliable than their first-generation predecessors. Though the transistor still generated a great deal of heat that subjected the computer to damage, it was a vast improvement over the vacuum tube. Second-generation computers still relied on punched cards for input and printouts for output.

Second-generation computers moved from cryptic binary machine language to symbolic, or assembly, languages, which allowed programmers to specify instructions in words. High-level programming languages were also being developed at this time, such as early versions of COBOL and FORTRAN. These were also the first computers that stored their instructions in their memory, which moved from a magnetic drum to magnetic core technology.

The first computers of this generation were developed for the atomic energy industry.

• Third Generation - 1964-1971: Integrated Circuits

The development of the integrated circuit was the hallmark of the third generation of computers. Transistors were miniaturized and placed on silicon chips, called semiconductors, which drastically increased the speed and efficiency of computers.

Instead of punched cards and printouts, users interacted with third generation computers through keyboards and monitors and interfaced with an operating system, which allowed the device to run many different applications at one time with a central program that monitored the memory. Computers for the first time became accessible to a mass audience because they were smaller and cheaper than their predecessors.

Fourth Generation - 1971-Present: Microprocessors

The microprocessor brought the fourth generation of computers, as thousands of

integrated circuits were built onto a single silicon chip. What in the first generation filled an entire room could now fit in the palm of the hand. The Intel 4004 chip, developed in 1971, located all the components of the computer - from the central processing unit and memory to input/output controls - on a single chip.

In 1981 IBM introduced its first computer for the home user, and in 1984 Apple introduced the Macintosh. Microprocessors also moved out of the realm of desktop computers and into many areas of life as more and more everyday products began to use microprocessors.

As these small computers became more powerful, they could be linked together to form networks, which eventually led to the development of the Internet. Fourth generation computers also saw the development of GUIs, the mouse and handheld devices.

- **Fifth Generation - Present and Beyond: Artificial Intelligence**

Fifth generation computing devices, based on artificial intelligence, are still in development, though there are some applications, such as voice recognition, that are being used today. The use of parallel processing and superconductors is helping to make artificial intelligence a reality. Quantum computation and molecular and nanotechnology will radically change the face of computers in years to come. The goal of fifth-generation computing is to develop devices that respond to natural language input and are capable of learning and self-organization.

CLASSIFICATIONS OF COMPUTERS

- Computers are available in different shapes, sizes and weights, due to these different shapes and sizes they perform different sorts of jobs from one another.

- They can also be classified in different ways. All the computers are designed by the qualified computer architectures that design these machines as their requirements.
- A computer that is used in a home differs in size and shape from the computer being used in a hospital. Computers act as a server in large buildings, while the computer also differs in size and shape performing its job as a weather forecaster.

The Super Computer

- The biggest in size, the most expensive in price than any other is classified and known as super computer. It can process trillions of instructions in seconds. This computer is not used as a PC in a home neither by a student in a college.
- Governments specially use this type of computer for their different calculations and heavy jobs. Different industries also use this huge computer for designing their products.
- In most of the Hollywood's movies it is used for animation purposes. This kind of computer is also helpful for forecasting weather reports worldwide.

Mainframes

- Another giant in computers after the super computer is the Mainframe, which can also process millions of instruction per second and capable of accessing billions of data.
- This computer is commonly used in big hospitals, air line reservations companies, and many other huge companies prefer mainframe because of its capability of retrieving data on a huge basis.
- This is normally too expensive and out of reach from a salary-based person who wants a computer for his home.

Minicomputer

- This computer is next in the line but offers less than mainframe in work and performance. These are the computers, which are mostly preferred by the small type of business personals, colleges, etc.

Personal computers

- Almost all the computer users are familiar with the personal computers. They normally know what the personal computer is and what are its functions.
- This is the computer mostly preferred by the home users. These computers are lesser in cost than the computers given above and also, small in size; they are also called PCs in short for Personal computers.
- This computer is small in size and you can easily arrange it to fit in your single bedroom with its all accommodation.

Laptops/Notebooks/Netbooks

- Having a small size and low weight the notebook/netbook is easy to carry to anywhere. A student can take it with him/her to his/her school in his/her bag with his/her book.
- This is easy to carry around and preferred by students and business people to meet their assignments and other necessary tasks.
- The approach of this computer is also the same as the Personal computer. It can store the same amount of data and having a memory of the same size as that of a personal computer. One can say that it is the replacement of personal desktop computer.

The Tablet PCs

At some point, most people end up in front of their desktop or laptop computers to search for something in the Internet, file a document or create a presentation for work. But not anymore, technology has evolved to be more accessible even

when you are on the go. Mobility has been a key standard set by the emerging wireless computing devices in the recent years, and these devices and gadgets have progressed from the biggest down to the smallest, from the thickest to the thinnest, and from the heaviest to the lighter ones.

One of these more popular wireless and handheld devices are the tablet PCs which dominated the market in 2011. Tablets of different brands, kinds and sizes were launched following the first series of the iPad sold in the market early in 2011. Tablet PCs are known as wireless, portable personal computers with a touchscreen interface. The tablet form factor is typically smaller than a notebook computer but larger than a smartphone. This form of device was initially developed to replace the bulky and heavy laptops and immobile desktop computers. Tablets offered mobility and faster connectivity in a single touch of a finger.

Mobile Phones

On the other hand, mobile phones which have considerably larger screens that also functions as a personal computer gained popularity in the recent years. A number of mobile phone brands developed their own smartphones that are said to be at par or a better choice over a tablet PC. Smartphones have functions and features similar to a tablet PC, only integrated in a mobile phone.

THE COMPUTER SYSTEM

The computer is a system which consists of the hardware, software and the peopleware. Without each one the computer cannot function at all. The term, "computer hardware" refers to all the parts of the computer that you can touch. "Computer software" generally refers to those computer related things that you can't touch.

HARDWARE COMPONENTS

The hardware components are further categorized as input and output devices. An input device is any peripheral (piece of computer hardware equipment) used to provide data and control signals to an information processing system (such as a computer). Input and output devices make up the hardware interface between a computer as a scanner or 6DOF controller.

Many input devices can be classified according to:

- the modality of input (e.g. mechanical motion, audio, visual, etc.)
- whether the input is discrete (e.g. keypresses) or continuous (e.g. a mouse's position, though digitized into a discrete quantity, is fast enough to be considered continuous)
- the number of degrees of freedom involved (e.g. two-dimensional traditional mice, or three-dimensional navigators designed for CAD applications)

Pointing devices, which are input devices used to specify a position in space, can further be classified according to:

- Whether the input is direct or indirect. With direct input, the input space coincides with the display space, i.e. pointing is done in the space where visual feedback or the cursor appears. Touchscreens and light pens involve direct input. Examples involving indirect input include the mouse and trackball.
- Whether the positional information is absolute (e.g. on a touch screen) or relative (e.g. with a mouse that can be lifted and repositioned)

A keyboard is a human interface device which is represented as a layout of buttons. Each button, or key, can be used to either input a linguistic character to a computer, or to call upon a particular function of the computer. Traditional keyboards use spring-based buttons, though newer variations employ virtual keys, or even projected keyboards.

A pointing device is any human interface device that allows a user to input spatial data to a computer. In the case of mice and touch screens, this is usually achieved by detecting movement across a physical surface. Analog devices, such as 3D mice, joysticks, or pointing sticks, function by reporting their angle of deflection. Movements of the pointing device are echoed on the screen by movements of the cursor, creating a simple, intuitive way to navigate a computer's GUI. Other pointing devices are:

- Trackball operates with a rotating metal ball inset in a small boxlike device and does not require a desktop
- Touchpad a pressure sensitive pad that is smaller, more accurate, thinner and is less expensive to build than a trackball
- Trackpad a small, touch-sensitive pad, usually a couple of inches square which acts as an alternative to a mouse on some notebook/palmtop computers. It works by sensing fingertip pressure
- Joystick a manual control consisting of a vertical handle that can move freely in two directions; used as an input device to computers or to devices controlled by computers.
- Touch Screen a type of display screen that has a touch-sensitive transparent panel covering the screen. Instead of using a pointing device, you can use your finger to point directly to objects on the screen. This is used nowadays in tablet pcs, television sets and even cell phones.
- Light Pen utilizes a light-sensitive detector to select objects on a display screen
- Stylus a pointing device shaped like a pen. You use this with a digitizing tablet or touch screen.

Imaging and Video input devices

Video input devices are used to digitize images or video from the outside world into the computer. The information can be stored in a multitude of formats depending on the user's requirement.

- Webcam
- Image scanner
- Fingerprint scanner
- Barcode reader
- Digitizing Tablet
- 3D scanner
- Laser rangefinder
- Optical Character Recognition
- Optical Mark Reader
- Voice-Recognition System

Audio input devices

Audio devices are used to either capture or create sound. In some cases, an audio output device can be used as an input device, in order to capture produced sound.

- Microphone
- MIDI keyboard or other digital musical instrument

Output Devices

An output device displays information on a screen, creates printed copies or generates sound. A monitor, printer and speakers are examples of output devices.

Monitors and Displays

- Shows the processed information on a screen
 - A monitor uses a picture tube like a television with the image displayed on the front of the tube, which is called the screen
 - Displays are flat and use plasma, LCD, LED, active-matrix, or some other technology

- Monitors used to be called Cathode Ray Tubes (CRTs) because of the picture tube which was a large vacuum tube.
- A monitor or display produces a soft copy. When the device is turned off the information disappears.
- Monitors are rapidly being replaced by flat panel or LCD monitors.

Printers – produce a hard copy (also called as printout). The information is printed on paper and can be used when the device is off.

- Dot-matrix printers use metal pins to strike an inked ribbon to make dots on a piece of paper.
- Ink jet printers (non-impact printer) – use drops of magnetic ink to produce dots on a page to produce text or images
- Laser printers (non-impact printer) – a laser or LEDS make dots on a light sensitive drum. A toner (very tiny particles of plastic) sticks to the drum where the dots are made. The paper is pressed against the drum and the toner is placed on the paper. The paper is then heated and the toner melts into the paper.

Plotter a device that draws pictures on paper based on commands from a computer. Plotters differ from printers in that they draw lines using a pen. As a result they can produce continuous lines

Input/Output Devices

These are pieces of hardware that is used for both providing information and receiving information.

- Disk Drive reads and writes information on it
- Hard Disk Drive a rigid magnetic disk mounted permanently in a drive unit
- Optical Disk a direct - access disk which has recorded information on it with a laser beam that burns pits into its surface.
- Modem modulates the computer output to an acceptable signal for transmission and then demodulates the signal back for computer input

Speakers

- Used to output sound.

Parts of the System Unit

Motherboard – is the main circuit board of a microprocessor. It is also known as the main board or system board.

Central Processing Unit (CPU) – is the central electronic chip that determines the processing power of the computer. Its speed is measured in hertz (one cycle per second). it has three basic parts:

- **The Arithmetic Logic Unit (ALU)** – does all the arithmetical and logical operations of the computer
- **The Control Unit** – directs the flow of information into the CPU and or memory or storage and controls the instructions the CPU will do next.
- **Registers** – used to store data and instructions inside the processor.

Memory - consists of silicon chips, usually uses either VLS or VLSI technology to create the chips. There are two forms of memory:

- **Read Only Memory (ROM)** – stores information which is used by the CPU.
 - It can also hold programs that are directly accessed by the CPU.
 - The instructions cannot be erased nor altered.
 - These instructions are built into the electronic circuits of the chips and are called firmware.
 - The instructions in the ROM are nonvolatile. They stay there even when the computer is turned off.
 - Access to information is either random or sequential access:
 - Random-access means that any piece of information in the ROM can be accessed at any given time without accessing other information first.

- The other kind of access is sequential access.
- Random Access Memory (RAM)
 - The instructions here are constantly changing, depending on the needs of the CPU:
 - Instructions are volatile. When the computer is turned off, the information in the RAM disappears.
 - Hence, the information in the RAM needs to be saved to a secondary storage device before the computer is turned off.
 - Access to information is random access.
- Computer data storage, often called storage or memory, refers to computer components, devices, and recording media that retain digital data used for computing for some interval of time. Computer data storage provides one of the core functions of the modern computer, that of information retention.
- Other forms of fast but temporary storage today more commonly refers to mass storage - optical discs, forms of magnetic storage like hard disks, and other types slower than RAM, but of a more permanent nature. Historically, memory and storage were respectively called primary storage and secondary storage.
- The computer stores information as a string of zeros (0) and ones (1)
 - The standard string length is eight 0's or 1's in a row called a byte
 - A byte equals one character (a letter, number or symbol)
 - There are 256 standard characters used by almost all computers

Megabytes, Gigabytes, Terabytes... What Are They?

These terms are usually used in the world of computing to describe disk space, or data storage space, and system memory.

- 1 Kilobyte (KB) = 1024 bytes
- 1 megabyte (MB) = 1000 KB
- 1 gigabyte (GB) = 1000 MB
- 1 terabyte = 1000 GB

- Hard Drive is the primary device that a computer uses to store information. It stores programs, data files, saves and organizes files. It is usually located inside the computer case, although there are now USB drives which are connected externally. The hard drive magnetically stores data on stacks of rotating disks called platters.
- Floppy drive – stores and retrieves information on a floppy disk
- CD/DVD ROM drive – a device that reads information stored on a disc
- USB (Universal Serial Bus) flash drive - also known as Pen Drive is the next revolution in secondary portable storage device. Initially emerged with couple of MB storage capacity, it quickly gained attraction due to its solid state rugged construction, being very handy and can now accommodate large capacity of files and its capability of being used on any computer equipped with USB port.
- Zip drive – a removable disk that holds a large amount of information. It can be used to archive and protect large amount of data.

Communication Devices

For communication to take place between two people from widely different countries or cultures, an electronic or human translator is required to act as an interface between them. Similarly for a computer to communicate with another completely different system, this will also require an interface of some kind.

An interface is usually provided by a card which contains ports for input and output devices, plus processing and memory microchips. In effect it translates one form of communication from an external input device into that which can be understood by the computer and then, if necessary, into another that can be sent to any special output device, or another computer. An interface card may be inserted in one of the slots provided inside the computer or it may be external with its own power supply and plugged into the computer's serial communication port.

Here are some common examples:

MODEM (MODulator-DEModulator) - needed for Internet, email, fax and video-conferencing communications using telephone cables. It converts outgoing digital signals from the computer into analogue audio tones which can travel along the telephone wires, and the reverse for incoming signals.

Sound Card - for music or speech from programs, CD-ROMs, and microphone. It usually includes a MIDI interface for input from musical instruments.

MIDI (Musical Instrument Digital Interface) - needed to connect musical instruments to a computer so that the music played can be stored as a file, displayed on screen, edited, printed or played back.

Network Card - enables the computer to communicate with other computers linked together by cable through the interface. Used for shared storage of programs and work files, and for sharing printers.

Peripheral devices - any piece of hardware attached to a computer. A few examples of peripheral devices are scanners, printers, and digital cameras.

Computer software

Computer software or just software is a general term used to describe a collection of computer programs, procedures and documentation that perform some tasks on a computer system. This provides instructions that tell the computer how to operate. Software also includes video games and the logic systems of modern consumer devices such as automobiles, televisions, toasters, etc.

Types of Software

System software

System software helps run the computer hardware and computer system. It includes:

- device drivers
- operating systems
- servers
- utilities
- windowing systems,

The purpose of systems software is to unburden the applications programmer from the details of the particular computer complex being used, including such accessory devices as communications, printers, readers, displays, keyboards, etc. And also to partition the computer's resources such as memory and processor time in a safe and stable manner.

Programming software

Programming software usually provides tools to assist a programmer in writing computer programs, and software using different programming languages in a more convenient way. The tools include:

- compilers
- debuggers
- interpreters
- linkers
- text editors

An Integrated development environment (IDE) is a single application that attempts to manage all these functions.

Application software

Application software allows end users to accomplish one or more specific (not directly computer development related) tasks. Typical applications include:

- industrial automation
- business software
- computer games
- telecommunications, (ie the internet and everything that flows on it)
- databases
- educational software
- medical software

Ways of acquiring software:

public domain software are programs that are uncopyrighted because their authors intended to share them with everyone else are in the public domain. Programs in the public domain can be used without restriction as components of other programs. When reusing such code, it is good to understand its history so that you can be sure it really is in the public domain

Shareware is software that is distributed free on a trial basis with the understanding that the user may need or want to pay for it later. Some software developers offer a shareware version of their program with a built-in expiration date (after 30 days, the user can no longer get access to the program). Other shareware (sometimes called liteware) is offered with certain capabilities disabled as an enticement to buy the complete version of the program. Programming that is offered at no cost is called freeware. However, it is copyrighted so that you can't incorporate its programming into anything you may be developing. Free to use and make copies of. Cannot be changed or used in another program without the copyright holder's permission.

Commercial software requires payment before it can be used, but includes all the program's features, with no restrictions or time limits. Commercial software programs typically come in a physical box, which is what you see displayed in retail stores. While it's true that the software boxes are not as big as they used to be, they still contain the software CD or DVD and usually a "getting started" manual along with a registration key used for registering the product. Most commercial software programs ask that the user to register the program so the company can keep track of its authorized users. Some commercial software programs, such as newer versions of Microsoft and Adobe programs, require the user to register the programs in order to continue using them after 30 days. While most commercial software programs are sold in the physical box, many software titles are now available as downloads. These downloads are typically made available from the company's website. The user pays for the program directly on the website and instead of receiving the software in the mail, the user downloads it to his computer. Another popular way of purchasing commercial software online is simply paying for a registration key, which unlocks the features of a shareware program. This upgrades the shareware program to the commercial version, which removes any feature limitations from the shareware version.

Computer Security Ethics and Privacy

Today, many people rely on computers to do homework, work, and create or store useful information. Therefore, it is important for the information on the computer to be stored and kept properly. It is also extremely important for people on computers to protect their computer from data loss, misuse, and abuse. For example, it is crucial for businesses to keep information they have secure so that hackers cannot access the information. Home users also need to take means to make sure that their credit card numbers are secure when they are participating in online transactions.

- A computer security risk is any action that could cause loss of information, software, data, processing incompatibilities, or cause damage to computer hardware, a lot of these are planned to do damage. An intentional breach in computer security is known as a computer crime which is slightly different from a cybercrime. A cybercrime is known as illegal acts based on the internet. There are several distinct categories for people that cause cybercrimes, and they are referred as hacker, cracker, cyberterrorist, cyberbully, cyberextortionist, unethical employee, script kiddie and corporate spy.

The term hacker was actually known as a good word but now it has a very negative view. A hacker is defined as someone who accesses a computer or computer network unlawfully. They often claim that they do this to find leaks in the security of a network. The term cracker has never been associated with something positive this refers to someone who intentionally accesses a computer or computer network for evil reasons. They access with the intent of destroying, or stealing information. Both crackers and hackers are very advanced with network skills.

A cyberterrorist is someone who uses a computer network or the internet to destroy computers for political reasons. A cyberextortionist is someone who uses emails as an offensive force. They would usually send a company a very threatening email stating that they will release some confidential information, exploit a security leak, or launch an attack that will harm a company's network.

An unethical employee is an employee that illegally accesses their company's network for numerous reasons. One could be the money they can get from selling top secret information, or some may be bitter and want revenge. A script kiddie is someone who is like a cracker because they may have the intentions of doing harm, but they usually lack the technical skills. They are usually silly teenagers that use prewritten hacking and cracking programs. A corporate spy

has extremely high computer and network skills and is hired to break into a specific computer or computer network to steal or delete data and information. Shady companies hire these type of people in a practice known as corporate espionage. They do this to gain an advantage over their competition an illegal practice. Business and home users must do their best to protect or safeguard their computers from security risks.

The typical network attacks that puts computers at risk includes viruses, worms, spoofing, Trojan horses, and denial of service attacks. Every unprotected computer is vulnerable to a computer virus which is a potentially harming computer program that infects a computer negatively and altering the way the computer operates without the user's consent. Once the virus is in the computer it can spread throughout infecting other files and potentially damaging the operating system itself. It's similar to a bacteria virus that infects humans because it gets into the body through small openings and can spread to other parts of the body and can cause some damage. The similarity is, the best way to avoid is preparation.

A computer worm is a program that repeatedly copies itself and is very similar to a computer virus. However the difference is that a virus needs to attach itself to an executable file and become a part of it. A computer worm doesn't need to do that. It sends copies to itself and to other networks and eats up a lot of bandwidth. A Trojan Horse named after the famous Greek myth and is used to describe a program that secretly hides and actually looks like a legitimate program but is a fake. A certain action usually triggers the Trojan horse, and unlike viruses and worms they don't replicate itself. Computer viruses, worms, and Trojan horses are all classified as malicious-logic programs which are just programs that deliberately harm a computer. You know when a computer is infected by a virus, worm, or Trojan horse if one or more of these acts happen:

- Screen shots of weird messages or pictures appear.
- You have less available memory than you expected
- Music or sounds play randomly.
- Files get corrupted
- Programs or files don't work properly
- Unknown files or programs randomly appear
- System properties fluctuate

Computer viruses, worms, and Trojan horses deliver their payload or instructions through common ways.

- when an individual runs an infected program so if you download a lot of things you should always scan the files before executing, especially executable files.
- when an individual runs an infected program.
- when an individual boots a computer with an infected drive
- when it connects an unprotected computer to a network.
- when one opens an unsecured email attachment.

Intellectual Property

- Intellectual property refers to creations of the mind: inventions, literary and artistic works, and symbols, names, images, and designs used in commerce.
- Intellectual property is divided into two categories: Industrial property, which includes inventions (patents), trademarks, industrial designs, and geographic indications of source; and Copyright, which includes literary and artistic works such as novels, poems and plays, films, musical works, artistic works such as drawings, paintings, photographs and sculptures, and architectural designs. Rights related to copyright include those of performing artists in their performances, producers of phonograms in their recordings, and those of broadcasters in their radio and television programs.

Computer Ethics

Ethics is a set of moral principles that govern the behavior of a group or individual. Therefore, computer ethics is set of moral principles that regulate the use of computers. Some common issues of computer ethics include intellectual property rights (such as copyrighted electronic content), privacy concerns, and how computers affect society. ~~The legal aspects of computing are complex and multilayered.~~ Teachers can help society by practicing ethical computer use, avoiding software piracy, and providing direct instruction on ethical computing practices.

INTERNET

The Internet, sometimes called simply "the Net," is a worldwide system of computer networks - a network of networks in which users at any one computer can, if they have permission, get information from any other computer (and sometimes talk directly to users at other computers).

Why do users access the Internet?

1. Communications
2. information
3. Shopping
4. banking
5. Online classes
6. entertainment

What is the Web?

- Billions of documents, called Web pages, available to anyone connected to the Internet

- A Web site is a collection of related Web pages
- A Web page contains text, graphics, sound, video, and links to other Web pages
- You can share information by creating Web pages or posting photos on a photo sharing community

A Web browser is a software application used to locate and display Web pages. The two most popular browsers are Microsoft Internet Explorer and Firefox. Both of these are a graphical browser, which means that they can display graphics as well as text. In addition, most modern browsers can present multimedia information, including sound and video, though they require plug-ins for some formats.

Search engine - A program that searches documents for specified keywords and returns a list of the documents where the keywords were found. Although search engine is really a general class of programs, the term is often used to specifically describe systems like Google, Alta Vista and Excite that enable users to search for documents on the World Wide Web and USENET newsgroups.

Directories – like yahoo, uses human editors to place the site into a hierarchy or outline of topics so that users can find it by selecting the appropriate category.

URL (Uniform Resource Locator) – is the global address of documents and other resources on the World Wide Web.

The first part of the address is called a protocol identifier and it indicates what protocol to use and the second part is called a resource name and it specifies the IP address or the domain name where the resource is located. The protocol identifier and the resource name are separated by a colon and two forward slashes.

Servers

Laptops

Desktops

Cloud Computing

Cloud Computing

Cloud computing is the use of computing resources (hardware and software) that are delivered as a service over a network (typically the Internet). The name comes from the use of a cloud-shaped symbol as an abstraction for the complex infrastructure it contains in system diagrams. Cloud computing entrusts remote services with a user's data, software and computation.

Google Apps is a cloud-based productivity suite that helps you and your team connect and get work done from anywhere on any device. It's simple to setup, use and manage, allowing you to work smarter and focus on what really matters.

Cloud computing is the use of computing resources (hardware and software) that are delivered as a service over a network (typically the Internet). The name comes from the use of a cloud-shaped symbol as an abstraction for the complex infrastructure it contains in system diagrams. Cloud computing entrusts remote services with a user's data, software and computation.

World Wide Web (www) – refers to all the publicly accessible web sites in the world, in addition to other information sources that web browsers can access. These other sources include FTP sites, USENET newsgroups and a few surviving Gopher sites.

Email - Short for electronic mail, the transmission of messages over communications networks. The messages can be notes entered from the keyboard or electronic files stored on disk.

What is a network?

A social networking service is an online service, platform, or site that focuses on facilitating the building of social networks or social relations among people who, for example, share interests, activities, backgrounds, or real-life connections. A social network service consists of a representation of each user (often a profile), his/her social links, and a variety of additional services. Most social network services are web-based and provide means for users to interact over the Internet, such as e-mail and instant messaging. Online community services are sometimes considered as a social network service, though in a broader sense, social network service usually means an individual-centered service whereas online community services are group-centered. Social networking sites allow users to share ideas, activities, events, and interests within their individual networks.

Advantages of Using Computers

- Speed
- Reliability
- Consistency
- Storage and
- Communication

Disadvantages:

- Violation of Privacy
- Impact on the Labor Force
- Health Risks
- Impact on the Environment

What are some examples of computer applications in society?

- Education
- Finance
- Government
- Healthcare
- Science
- Publishing
- Travel
- Industry

Computer Applications in Education

Management - Computers are used in a variety of ways in the educational field. Computers can be used in school management such as budget, inventory, student records, communications, library circulation, and library public access catalog.

Learning and Instruction - Computer applications can be used in education for learning and for instruction. Instruction and learning can be divided into two major areas, teacher-centered instruction and student-centered learning.

- Teacher-centered instruction examined the computer as the object of instruction as well as a tool of instruction and the management of instruction. It is subdivided into the categories of computer literacy, CAI, CMI, and design of teaching materials.
- Student-centered learning views the computer as a tool for the student to use to create, access, retrieve, manipulate, and transmit information in order to solve a problem. Understanding the concept of the computer as an information tool relies on accepting the fact that the computer is a productivity tool for the student and the teacher alike.

Educational Research - Computers are used widely in educational research. Educational research includes functions relating to information gathering and processing. The teacher/researcher may examine student performance data in new and revealing ways. Bibliographic citations of studies performed by educators around the world can be acquired and perused from the desktop computer.

PART II - ANALYZING TEST ITEMS

Direction: Read each item carefully then choose the letter of the best of the answer.

1. What two things did George Boole invent?
 - A. a punch card machine
 - B. C programming code
 - C. Logic and Boolean Algebra
 - D. the search engines
2. What do punch cards do?
 - A. give someone a horse
 - B. Store data as small holes on a piece of paper
 - C. Quench your thirst
 - D. Provide written code for the Altair
3. What did Steve Jacobs introduce in the computer world?
 - A. laptop
 - B. netbook
 - C. ipad
 - D. tablet PC
4. Who is the high-tech mogul who appeared on a 1995 cover of Time magazine headlined as "Master of the Universe"?
 - A. Bill Gates
 - B. Steve Jobs
 - C. Paul Allen
 - D. Douglas Engelbart

5. What movie did Apple use to hype its new Quick Time4 format, sparking a net-clogging 25 million downloads of the trailer?
- A. Star Wars Episode II: The Phantom Menace
 - B. Superman
 - C. Extra Terrestrial
 - D. Twilight Saga
6. What was the first fast-food restaurant to offer patrons free 20 minutes of Internet time?
- A. Burger King
 - B. Jollibee
 - C. McDonald's
 - D. Starbucks
7. What do you call the board that forms the foundation of your computer?
- A. motherboard
 - B. ROM
 - C. main memory
 - D. RAM
8. How is RAM speed measured?
- A. bytes
 - B. megabytes
 - C. hertz
 - D. gigabytes
9. The word processor is an example of what types of software?
- A. application software
 - B. operating systems software
 - C. systems software
 - D. utilities

10. Which of the following hardware devices acts as the intermediary between a computer and the phone system?
 - A. modem
 - B. speaker
 - C. keyboard
 - D. hard disk
11. Which is the standard input device that accepts letters, numbers and commands from the user?
 - A. keyboard
 - B. digital camera
 - C. scanner
 - D. mouse
12. Which of the following refers to the transmission of messages over communications networks?
 - A. email
 - B. WAN
 - C. LAN
 - D. networks
13. Fourth generation computing devices, are based on what?
 - A. IC
 - B. vacuum tubes
 - C. LSI
 - D. transistors
14. Which of the following enables the computer to communicate with other computers linked together by cable through the interface?
 - A. network card
 - B. internet
 - C. LAN.
 - D. intranet

15. This is the biggest in size, the most expensive in price than any other computers. Different industries also use this huge computer for designing their products. Which classification of computer is referred to?
- A. mini computers
 - B. super computers
 - C. personal computers
 - D. mainframe computers
16. Which of the following is equivalent to one character?
- A. kilobyte
 - B. byte
 - C. megabyte
 - D. gigabyte
17. What software helps run the computer hardware and computer system?
- A. operating system
 - B. utilities
 - C. application software
 - D. system software
18. What do you call someone who accesses a computer or computer network unlawfully?
- A. hacker
 - B. unethical employee
 - C. cyber extortionist
 - D. script kiddie
19. What is the latest portable storage device which can have as much as 8 gigabytes memory?
- A. thumb drive
 - B. CD
 - C. floppy drive
 - D. DVD

20. Which program repeatedly copies itself and is very similar to a computer virus?
- A. trojan horse
 - B. virus
 - C. computer worm
 - D. freeware
21. Which electronic machine can take instructions, and perform computations based on those instructions?
- A. PDA
 - B. computer
 - C. cell phone
 - D. ipad
22. What do you call the set of moral principles that regulate the use of computers?
- A. ethics
 - B. professional ethics
 - C. code of ethics
 - D. computer ethics
23. Which printer uses metal pins to strike an inked ribbon to make dots on a piece of paper?
- A. ink jet printer
 - B. dot matrix printer
 - C. laser printer
 - D. matrix printer
24. Which of the following instances would NOT spread a computer virus?
- A. When an individual runs an infected program.
 - B. When someone sneezes in front of the computer.
 - C. When someone opens an unsecured email attachment.
 - D. When an individual boots a computer with an infected drive.

- A. Uniform Reading Locator
B. Unidentified Reading Location
C. Uniform Resource Locator
D. Unidentified Resource Locator

PART III - ENHANCING TEST TAKING SKILLS

1. Who invented the disk drive?
 - A. Ted Hoff
 - B. John Bardeen
 - C. Reynold Johnson
 - D. John Reynolds
2. In what mode do computers calculate numbers?
 - A. octal
 - B. decimal
 - C. binary
 - D. hexadecimal
3. Which operating system was developed by a college student named Linus Torvalds?
 - A. Linux
 - B. Windows
 - C. Android
 - D. Mac OS X
4. What does www stand for?
 - A. World Wide Wrestling
 - B. World Wide Web
 - C. World War Won
 - D. Whole Wide World
5. It is the process of translating sound card signals from a microphone into codes the computer can use.
 - A. inputting
 - B. digitizing
 - C. encoding
 - D. scanning

6. It is the geometric arrangement of a computer system.
 - A. Bus
 - B. Network
 - C. Star
 - D. Topology
7. A local area network is used to share
 - A. peripherals
 - B. data
 - C. both A and B
 - D. printer
8. Which one of the following is a search engine?
 - A. Java
 - B. Google
 - C. Firefox
 - D. Internet Explorer
9. Which of the following is a browser?
 - A. Internet Explorer
 - B. Email
 - C. Launcher
 - D. World Wide Web
10. Which programs are uncopyrighted because their authors intended to share them with everyone else?
 - A. public domain software
 - B. shareware
 - C. freeware
 - D. beta version
11. Which of the following best describes RAM?
 - A. It is nonvolatile.
 - B. It cannot be changed by the user.
 - C. It is used in both primary and secondary memory devices.
 - D. All of the above

12. Which of the following refers to the physical components of the computer system?
- A. software
 - B. hardware
 - C. firmware
 - D. central processing unit
13. Which is a permanent output?
- A. ~~soft copy~~
 - B. ~~hard copy~~
 - C. output displayed on the monitor
 - D. texts and graphics
14. Sending a file from your computer to another computer is called
- A. emulation
 - B. uploading
 - C. downloading
 - D. freeloading
15. Which of the following is a true statement?
- A. Web sources must always be cited in your report.
 - B. You are free to copy information you find and include it in your report.
 - C. It is just alright to distribute copies of your newly bought original DVD to your friends.
 - D. You do not have to cite the web sources you use in your research report.
16. <http://www.classzone.com> is an example of what?
- A. a URL
 - B. a directory
 - C. an access code
 - D. a server
17. What does a word that looks underlined on a webpage usually mean?
- A. a very important word
 - B. a link to another web page
 - C. the web address
 - D. a mistake

18. What program searches documents for specified keywords and returns a list of the documents where the keywords are found?
- A. search engine
 - B. browser
 - C. crawler
 - D. Uniform Resource Locator (URL)
19. What do you call the worldwide system of computer networks - a network of networks in which users at any one computer can, if they have permission, get information from any other computer?
- A. WAN
 - B. internet
 - C. LAN
 - D. intranet
20. Which of the following refers to creations of the mind: inventions, literary and artistic works, and symbols, names, images, and designs used in commerce?
- A. Intellectual Property
 - B. Copyright
 - C. Intellectual Property Rights
 - D. Inventions
21. Which one does not belong to the group?
- A. hacker
 - B. cyber extortionist
 - C. cyber terrorist
 - D. programmer
22. What do you call the software that is distributed free on a trial basis with the understanding that the user may need or want to pay for it later?
- A. freeware
 - B. public domain software
 - C. shareware
 - D. firmware

23. Which type of computer is very useful for mobile computing nowadays?
- A. Tablet pc
 - B. desktop
 - C. laptop / notebook
 - D. wireless computer
24. Which software allows end users to accomplish one or more specific (not directly computer development related) tasks?
- A. application software
 - B. utilities
 - C. operating systems software
 - D. systems software
25. Which is NOT an application of ICT in education?
- A. learning and instruction
 - B. management
 - C. auto CAD
 - D. research
