

Agriculture and Fishery Arts

1. What makes the buffaloes unable to stay long under the sun? _____.
2. What is the major organs belonging to the integumentary system? _____.
3. Type of animals that secrete milk. _____.
4. What is the organ of copulation of hens? _____.
5. Major mineral component of chicken egg. _____.
6. Where is blood formed in the body of animals? _____.
7. Study of the structure of the body and the relation of its parts. _____.
8. A system responsible in the extraction and removal of waste products from the blood.
9. The largest gland in the body. _____.
10. Gas carried by the artery. _____.
11. The organ responsible in pumping the blood. _____.
12. The type of milk secreted by mammals immediately after parturition. _____.
13. A hormone that induces heat. _____.
14. Means by which heat is lost from the body. _____.
15. The system that produces anti-bodies. _____.
16. Known as the soldier of the body. _____.
17. Also known as the paunch in ruminants. _____.
18. Where in the tongue can we sense the sweet taste? _____.
19. The system responsible in cleansing the blood. _____.
20. The organ that secretes milk. _____.
21. The female primary sex organ. _____.
22. Another term for the true stomach. _____.
23. Another term for cold-blooded animals. _____.
24. Sexual desire. _____.
25. Animals exhale what? _____.
26. System responsible in animal movement. _____.
27. The gland that secretes watery fluid from the body. _____.
28. Known as the teeth of the chicken. _____.
29. The bone found in the thigh. _____.
30. A hormone responsible in the breakdown of glycogen and glyconeogenesis in the liver.
_____.
31. A hormone responsible in the release of the ova in the ovary of the chicken.
_____.
32. Site of water absorption, fiber digestion and water soluble in chicken. _____.
33. What are the major organs found or part of the skeletal system? _____.
34. The organ for smelling. _____.
35. Responsible in the development of the duct system of the udder. _____.
36. Functions of lymph nodes? _____.
37. Heat from the sun. _____.
38. Storage place of the bile. _____.

39. Animal starch. _____.
40. What do you call the yellow part of the egg? _____.
41. Responsible in the secretion of albumen during egg development. _____.
42. Serves in storing the food in chicken. _____.
43. Rise in body temperature. _____.
44. Refers to the management of animals for the purpose of making profit. _____.
45. Examples of careers associated with animal science. _____.
46. Which region in the country having the highest number of carabaos. _____.
47. Refers to young goat. _____.
48. Young deer. _____.
49. The largest organ of the body. _____.
50. The hormone that promotes growth. _____.
51. It secretes milk. _____.
52. The length of gestation period of pigs in days. _____.
53. An animal that is always in heat due to continuous secretion of estrogen. _____.
54. An animal that comes into heat only once a year. _____.
55. The term used for the expulsion of urine from the bladder. _____.
56. It contains urine coming from the kidney. _____.
57. How is heat lost or dissipated from the body of animals? _____.
58. Another term for thermoneutral zone. _____.
59. Another term for "hinal" after some sort of exercise. _____.
60. It produces oily secretion for the lubrication of the skin. _____.
61. The horny covering of the distal end of the digit of cattle or pig; also known as claw. _____.
62. A stage in the life of a female mammal that indicates it has reached sexual maturity. _____.
63. Pinkish bodies that act as filters and removes foreign matters from the lymph streams. _____.
64. Blood reservoir. _____.
65. The fluid that remains after blood has clotted. _____.
66. It determines the rate, rhythm and amplitude of the heart. _____.
67. Purifies the air before it is used up by the body. _____.
68. It serves as teeth of the chicken. _____.
69. The end part of the digestive system. _____.
70. The organ that helps the horse digest grass. _____.
71. Storage place of the bile. _____.
72. It aids the gizzard in digesting seeds and grains eaten by the chicken. _____.
73. They are present in the rumen which help in digesting fibrous feeds like grass. _____.
74. Average estrus cycle of cows. _____.
75. The principal oxygen transport medium that contains iron. _____.
76. The CPU of the body. _____.
77. Gas essential to plant growth and it is produced by animals. _____.

78. Another term for bill. _____.
79. The basic unit of inheritance is known as _____.
80. Responsible in the generation of energy in the form of ATP, _____.
81. Also known as the male gamete, _____.
82. The genetic make up of an animal or individual, _____.
83. The chromosomes of the male individual, _____.
84. Site in the cell where the synthesis of carbohydrates is undertaken, _____.
85. Letter representation for haploid, _____.
86. The crossing of single pair of genes for two different traits is called _____.
87. The crossing of single pair of genes for two different traits is called _____.
88. What do you call the system of mating used between mating of mother and son, _____.
89. The law stating that living organisms come from other organisms, _____.
90. The process of gamete formation in mature male, _____.
91. What do you call the sex cell division in male animals, _____.
92. A technology where the semen is introduced to the female genitalia by the use of an instrument, _____.
93. The scientist who started the idea of genetics, _____.
94. The character or trait that failed to be expressed or it is hidden, _____.
95. Union of egg cell and sperm cell, _____.
96. Breeding of two different breeds of animal, _____.
97. What does DNA stands for, _____.
98. Grouping of chromosomes based on similarity of their morphology is known as _____.
99. Control and regulate the functions (on/off) of other genes, _____.
100. It is the crossing of offspring to either with parental genotypes, _____.

Answers:

1. Less number of sweat glands
2. Skin
3. Mammals
4. Cloaca
5. Calcium carbonate
6. Spinal column
7. Anatomy
8. Excretory system
9. Liver
10. Oxygen
11. Heart
12. Colostrum
13. Estrogen
14. Radiation, conduction, convection; thru skin (sweat), lungs, feces and urine
15. Lymphatic system
16. White blood corpuscles
17. Rumen
18. Tip
19. Excretory system
20. Mammary gland or udder
21. Ovary
22. Abomasum
23. Poikilotherms
24. Libido
25. Carbon Dioxide
26. Muscular system
27. Sweat gland
28. Gizzard
29. Femur
30. Insulin
31. Luteinizing hormone
32. Ceca and large intestine

33. Bones, cartilage, teeth and joints
34. Nostril
35. Progesterone
36. Filter, produce antibodies and produce lymphocytes
37. Radiation
38. Gall bladder
39. Glycogen
40. Yolk
41. Magnum
42. Crop
43. Fever
44. Animal husbandry
45. Nutritionist, Animal physiologist, Animal breeder, etc.
46. Ilocos region
47. Kid
48. Fawn
49. Skin
50. Growth hormone
51. Mammary gland or udder
52. 114 days
53. Nymphomaniac or chronic buller
54. Monoestrus
55. Mictorition
56. Urinary bladder
57. Radiation, conduction and convection, sweating, respiration, and thru feces and urine
58. Comfort zone
59. Panting
60. Sebaceous gland
61. Hoof

62. Puberty
63. Lymph nodes
64. Bile
65. Serum
66. Pulse
67. Lungs
68. Gizzard
69. Anus
70. Ceca
71. Gall bladder
72. Grit
73. Microorganisms
74. 21 days
75. RBC of the blood
76. Brain
77. Oxygen
78. Beak
79. Gene
80. Mitochondria
81. Sperm cell
82. Genotype
83. XY
84. Golgi apparatus
85. n
86. Monohybrid cross
87. Monohybrid cross
88. Inbreeding
89. Biogenesis
90. Gametogenesis
91. Meiosis
92. Artificial Insemination
93. Gregor Mendel
94. Recessive
95. Fertilization
96. Crossbreeding
97. Deoxyribonucleic acid
98. Karyotype
99.
100. Back cross
