

Agriculture and Fishery Arts

101. The phenotypic traits of an animal is a product of the interactions between environment and _____.
102. Causes the average superiority of the crossbreds, _____.
103. The process in which certain individuals in a population are preferred to others for the production of the next generation, _____.
104. A group of animals which have common origin and common characteristics, _____.
105. The first buffaloes produced through in vitro maturation in the Philippines, _____.
106. The administration of hormone to a group of female mammals causing them to come into heat at or at the same time, _____.
107. The basic unit of inheritance is known as _____.
108. Responsible in the generation of energy in the form of ATP, _____.
109. Also known as the male gamete, _____.
110. The genetic make up of an animal or individual, _____.
111. The chromosomes of the male individual, _____.
112. Site in the cell where the synthesis of carbohydrates is undertaken, _____.
113. Letter representation for haploid, _____.
114. The crossing of single pair of genes for two different traits is called _____.
115. What do you call the system of mating used between mating of mother and son, _____.
116. The law stating that living organisms come from other organisms, _____.
117. The process of gamete formation in mature male, _____.
118. What do you call the sex cell division in male animals, _____.
119. A technology where the semen is introduced to the female genitalia by the use of an instrument, _____.
120. The scientist who started the idea of genetics, _____.
121. The character or trait that failed to be expressed or it is hidden, _____.
122. Another name for the animals with compound stomach, _____.
123. What do you call the carbohydrate found in the milk, _____.
124. The condition where there is Vitamin A deficiency, _____.
125. Aids in the absorption & retention of Vitamin E, _____.
126. What do you call the feed offered daily to the animal, _____.
127. Another term for Vitamin B₁, _____.
128. Responsible in increasing the hardness of bones and teeth, _____.
129. The mineral content of the egg shell, _____.
130. Cheapest and most abundant nutrient, _____.
131. Responsible for the yellow color of cow's milk, _____.
132. Symptom for Vitamin E deficiency, _____.
133. Union of egg cell and sperm cell, _____.

134. Breeding of two different breeds of animal, _____.
135. What does DNA stands for, _____.
136. Grouping of chromosomes based on similarity of their morphology is known as _____.
137. Control and regulate the functions (on/off) of other genes, _____.
138. It is the crossing of offspring to either with parental genotypes, _____.
139. The phenotypic traits of an animal is a product of the interactions between environment and _____.
140. Causes the average superiority of the crossbreds, _____.
141. The process in which certain individuals in a population are preferred to others for the production of the next generation, _____.
142. A group of animals which have common origin and common characteristics, _____.
143. The first buffaloes produced through in vitro maturation in the Philippines, _____.
144. The administration of hormone to a group of female mammals causing them to come into heat at or at the same time, _____.
145. Beneficial bacterial species, _____.
146. Protects the fats, oil and other fat soluble vitamins from oxidation, _____.
147. Feeds containing high fiber but low Total Digestible Nutrients (TDN), _____.
148. Avoids bleeding disease, _____.
149. The protein part of hair, horn and wool, _____.
150. Chemical structure of carbohydrates, _____.
151. The energy from fat is how many times higher than the energy coming from carbohydrate _____.
152. Another name for Vitamin H, _____.
153. Used against diabetes, _____.
154. Change in the genetic code due to natural or artificial means, _____.
155. Sign for female animal or individual, _____.
156. Used in coagulating milk to produce cheese, _____.
157. Self-feeding or allowing cattle to consume feed on a free-choice basis, _____.
158. Microorganisms that require free oxygen to biodegrade organic matter, _____.
159. Microorganisms that biodegrade organic matter without free oxygen, _____.
160. The technique of placing semen from the male in the reproductive tract of the female by means other than natural service, _____.
161. Kilograms of live weight gained per day, _____.

162. The mating of a two-breed crossbred offspring back to one of its parental breeds.
Example: A Hereford-Angus cross cow bred back to an Angus bull. _____.
163. Meat from cattle (bovine species) other than calves, _____. Meat from calves is called _____.
164. The weight of a calf taken within 24 hours after birth, _____.
165. Cattle adapted in warm or tropical areas, _____.
166. Cattle adapted in temperate areas, _____.
167. Refers to a general family grouping of cattle, _____.
168. Cattle of common origin and having characteristics that distinguish them from other groups within the same species, _____.
169. An intact (i.e., not castrated) adult male cattle, _____.
170. Young bull, typically less than 20 months of age, _____.
171. Young cattle of both sexes, _____.
172. The number or percentage of calves produced within a herd in a given year relative to the number of cows and heifers exposed to breeding, _____.
173. The number or percentage of calves produced within a herd in a given year relative to the number of calves weaned over number of cows and heifers bred, _____.
174. Product of considerably less value than the major product. For example, the hide and offal are byproducts while beef is the major product, _____.
175. Abnormal size or presentation fetus causing difficulty in delivering it, _____.
176. Techniques of measuring components of quality and quantity in carcasses of cattle, _____.
177. Desirability of a carcass relative to quantity of components (muscle, fat, and bone), plus potential eating qualities, _____.
178. Long DNA molecules on which genes (the basic genetic codes) are located, _____.
179. Domestic cattle have _____ pairs of chromosomes.
180. Feed that is high in energy, low in fiber content, and highly digestible, _____.
181. The fertilization of the ovum (egg), _____.
182. An adult female that has had a calf, _____.
183. Management unit that maintains a breeding herd and produces weaned calves, _____.
184. The mating of animals of different breeds (or species), _____.
185. The process of eliminating less productive or less desirable cattle from a herd, _____.
186. An estimate of the percentage of salable meat (muscle) from a carcass versus percentage of waste fat, _____.
187. General term for female parent, _____.
188. The biochemical reduction of nitrate or nitrite to gaseous nitrogen, either as molecular nitrogen or as an oxide of nitrogen, _____.

189. All external (nongenetic) conditions that influence the reproduction, production, and carcass merit of cattle, _____.
190. A fertilized ovum (egg) in the earlier stages of prenatal development usually prior to development of body parts, _____.
191. Removing fertilized ova (embryos) from one cow (donor dam) and placing these embryos into other cows (host cows), usually accompanied by hormone-induced superovulation of the donor dam, _____.
192. An estimate of an individual's true breeding value for a trait based on the performance of the individual and close relatives for the trait, _____.
193. The recurrent, restricted period of sexual receptivity in cows and heifers, _____.
194. Offspring resulting from the mating of a purebred (straightbred) bull to purebred (straightbred) females of another breed., _____.
195. Units of feed consumed per unit of weight gained. Also the production (meat, milk) per unit of feed consumed, _____.
196. Cattle that need further feeding prior to slaughter, _____.
197. Enterprise in which cattle are fed grain and other concentrates for usually 90-120 days, _____.
198. Fed cattle whose time in the feedlot is completed and are now ready for slaughter, _____.
199. Feedstuffs composed primarily of the whole plant, including stems and leaves that are utilized by cattle, _____.
200. Female born twin to a bull calf (approximately 9 out of 10 will not conceive), _____.

Answers:

101. Genetics
102. Heterosis or hybrid vigor
103. Selection
104. Breed
105. Malakas at Maganda
106. Heat synchronization
107. Gene
108. Mitochondria
109. Sperm cell
110. Genotype
111. XY
112. Golgi apparatus
113. n
114. Monohybrid cross
115. Monohybrid cross
116. Inbreeding
117. Biogenesis
118. Gametogenesis
119. Meiosis
120. Artificial Insemination
121. Gregor Mendel
122. Recessive
123. Fertilization
124. Crossbreeding
125. Deoxyribonucleic acid
126. Karyotype
127. Thiamine
128. Back cross
129. Calcium carbonate
130. Water
131. Beta carotene
132. White muscle disease, low fertility
133. Fertilization
134. Crossbreeding
135. Deoxyribonucleic acid
136.
137.
138.
139. Genetics
140. Heterosis or hybrid vigor
141. Selection
142. Breed
143. Malakas at maganda
144. Heat synchronization

145. Probiotics
146. Anti-oxidants
147. Roughage
148. Vit. K
149. Keratin
150. C ₆ H ₁₂ O ₆
151. 2.25
152. Biotin
153. Insulin
154. Mutation
155.
156. Renet extract or Acetic acid
157. Ad libitum
158. Aerobic
159. Anaerobic microorganisms
160. Artificial Insemination (AI)
161. Average daily gain (ADG)
162. Backcross
163. Beef; Veal
164. Birth weight
165. Bos indicus
166. Bos taurus
167. Bovine
168. Breed
169. Bull
170. Bullock
171. Calf
172. Calf drop
173. Calf crop
174. Cattle By-product
175. Dystocia
176. Carcass evaluation
177. Carcass Evaluation
178. Chromosomes
179. 30
180. Concentrate
181. Conception
182. Cow
183. Cow-calf operation
184. Crossbreeding
185. Culling
186. Cutability
187. Dam
188. Denitrification
189. Environment
190. Embryo
191. Embryo transfer

192.	Estimated breeding value (EBV)
193.	Estrus (heat)
194.	F1
195.	Feed Conversion Efficiency
196.	Feeder
197.	Feedlot
198.	Finished cattle
199.	Forage
200.	Freemartin
