

Curriculum Development

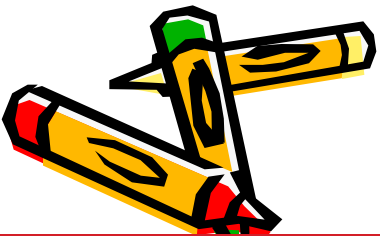

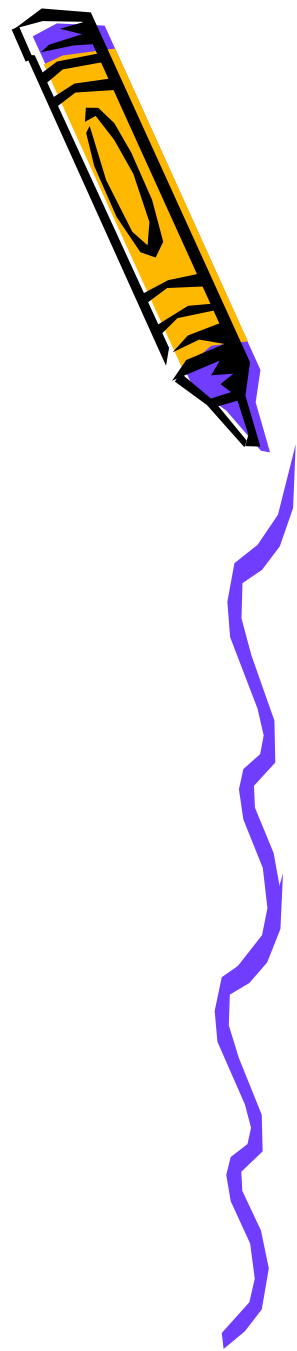

Professional Education

Curriculum

*All of the learning of students which is planned by and directed by the school **to attain its educational goals.***

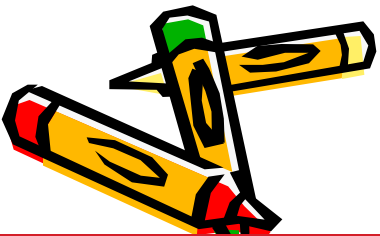

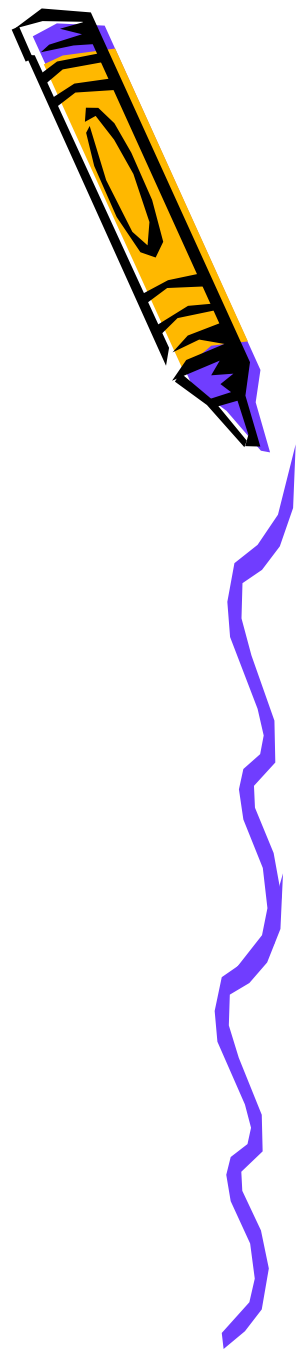

—Ralph Tyler, 1949

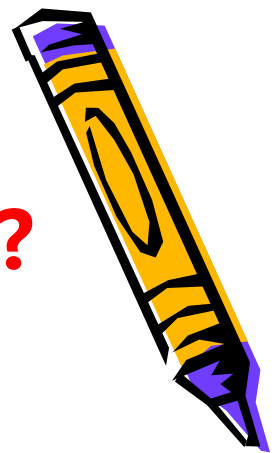

Curriculum

*A **plan** or **program** for all experiences which the learner encounters under the direction of the school*

–Oliva, 1982

What is the difference between **CURRICULUM** and **INSTRUCTION**?

CURRICULUM

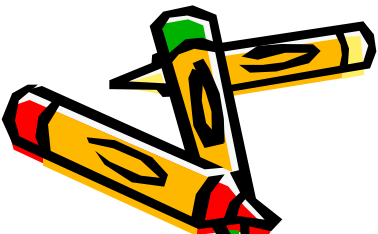

- Plan, program, content learning experience
- “what” is taught
- Programmatic

INSTRUCTION

- Means, methods, teaching act, implementation, presentation
- “how” to teach
- Methodological

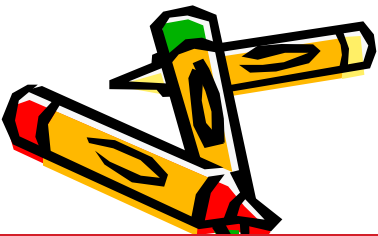

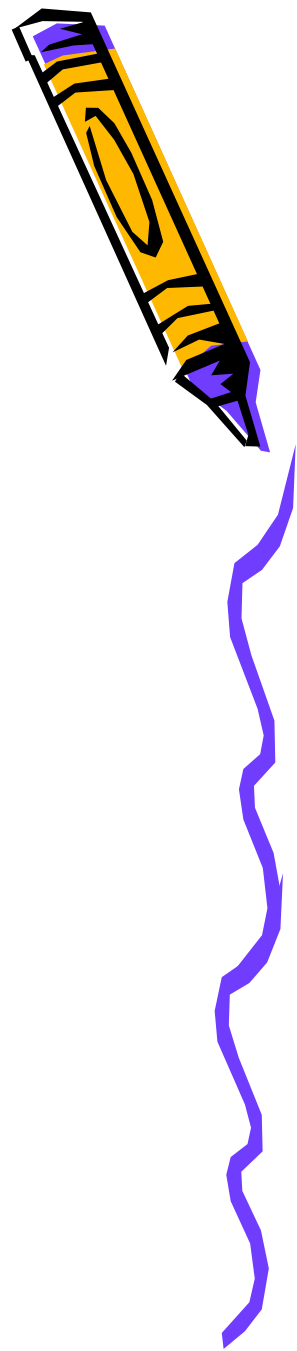

LEARNING

knowledge or skill

ELEMENTS OF CURRICULUM

- 1. Curriculum intent**
- 2. Contents**
- 3. Learning experiences**
- 4. Evaluation**

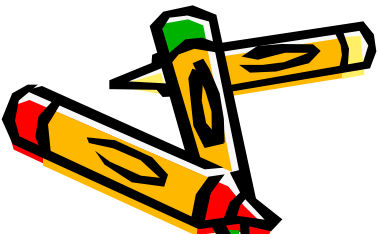

ELEMENTS OF CURRICULUM

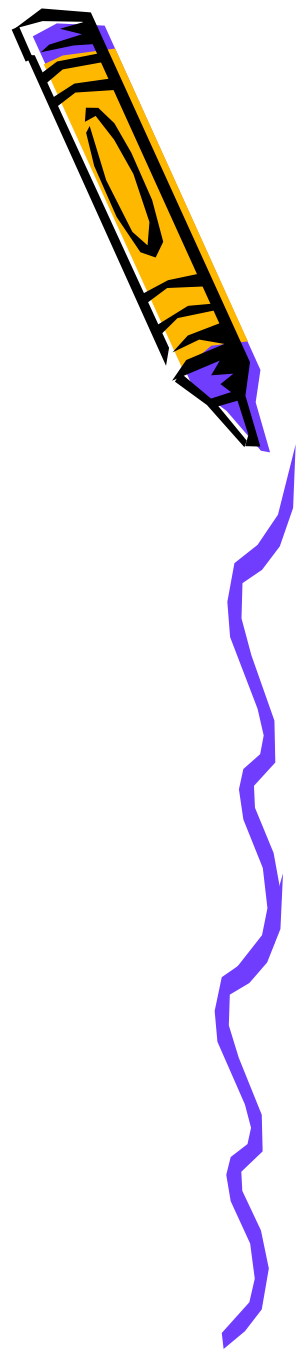

- **Curriculum Intent**

- **Aims** – broad statements of social or educational expectations; what is hoped to be achieved
- **Goals** – general statements of concepts, values, and skills to be learned
- **Objectives** – specific learning outcomes; basis for instructions

ELEMENTS OF CURRICULUM

- **Content**

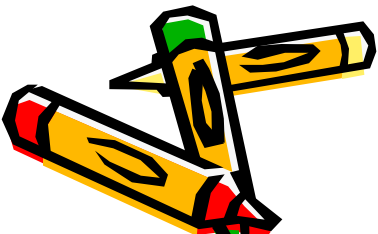

- Topics to be learned/covered

- **Learning experiences**

- Instructional strategies activities, methods, and approaches to teach contents

- **Evaluation tools**

- To check if intents were realized

INFLUENCES on CURRICULUM

1. **Sociological and cultural**

2. **Philosophical**

Metaphysics, Epistemology, Logic,
Axiology, Idealism, Realism,
Pragmatism, Perennialism,
Existentialism, etc.

3. **Historical**

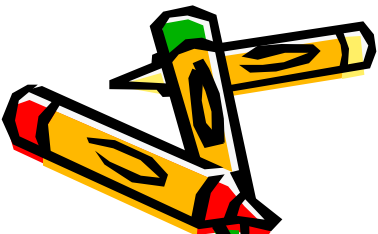

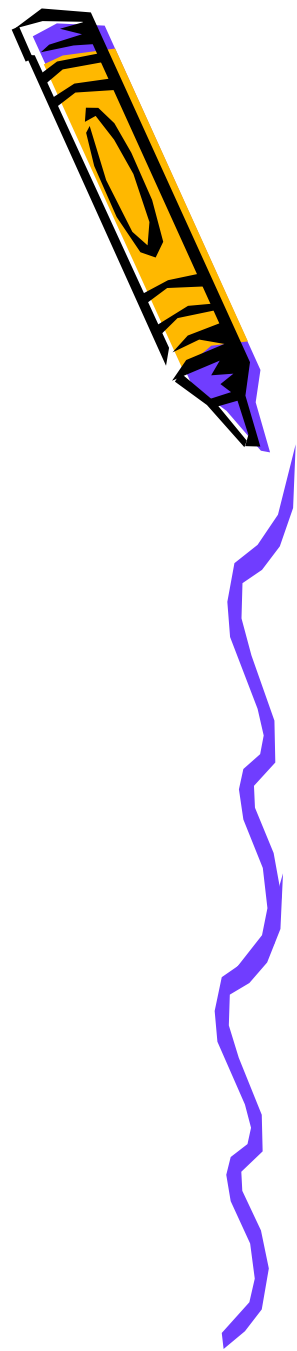

Pre-Spanish, Spanish, American,
Commonwealth, Japanese, 3rd and 4th
Republic

4. **Psychological**

Learners

Conditions of learning

Teaching and learning styles

LEVELS of CURRICULUM

According to Remoteness from Learners

1. Experiential

- used and experienced by the learner

2. Instructional

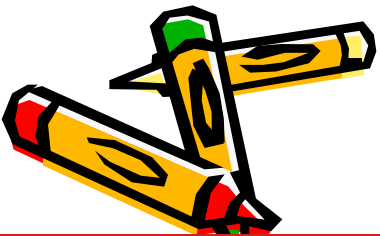

- teacher's instructional strategies and materials

3. Institutional

- standards, philosophies, teaching guides, themes of subjects to be taught

4. Societal

goals, topics, time frame, materials

MAJOR TYPES OF CURRICULUM DESIGN

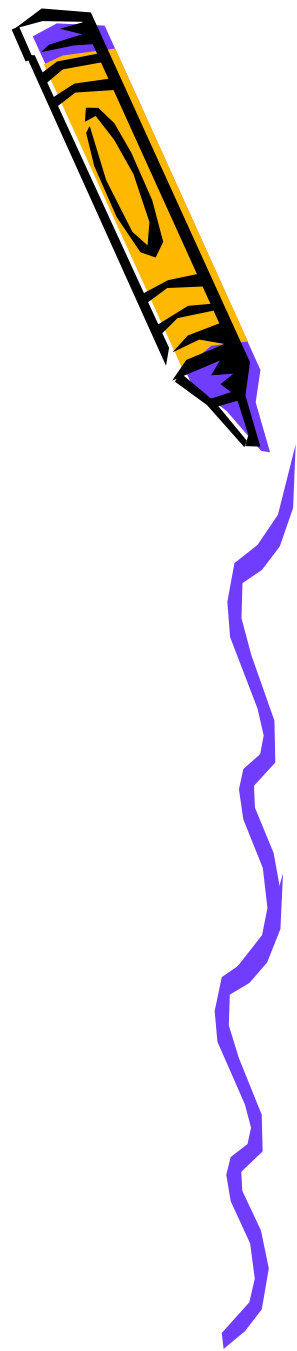

1. SUBJECT-CENTERED

- emphasis on mastery of subject matter
- teacher with full control
- main instructional tool: textbook
- teaching of facts; no interrelations between subject areas

examples: spiral, mastery learning,
open classroom, problem solving

2. LEARNER-CENTERED

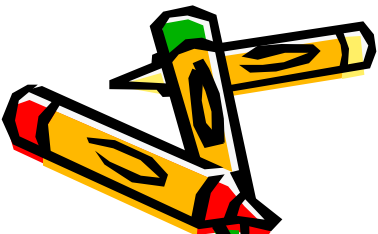

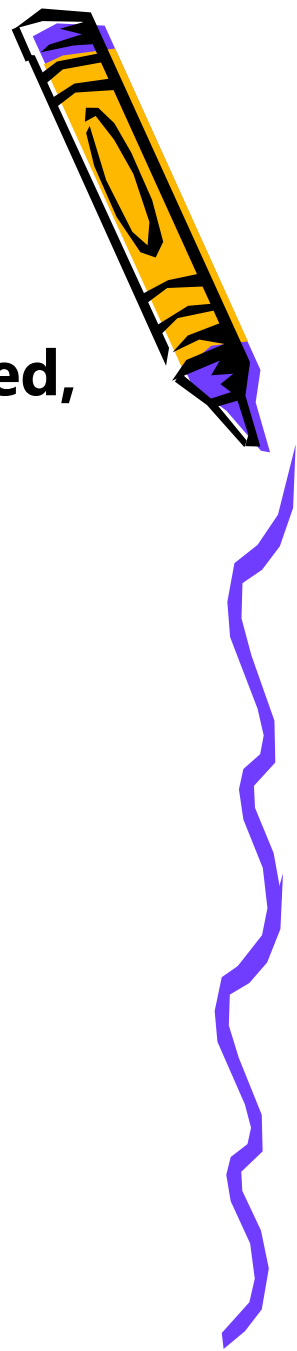

- emphasis on holistic development of learner
- cooperative interaction: learners, teachers,
parents

- **meaningful learning** ← lessons based on learners' needs and interests
examples: activity-based, child-centered, social process and life functions-focused, process-oriented.

3. SOCIETY-BASED

- **rooted on needs of society and culture**
- **emphasis on problem-solving processes and human relations skills**
- **integrates subject matter to needs of learner and society**

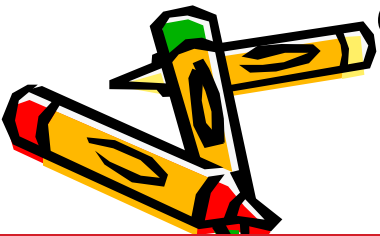

PATTERNS OF SUBJECT-CENTERED CURRICULUM

1. Mastery Learning Curriculum

- **student master subjects through remembering**

2. Spiral Curriculum

- **students are ready to learn concepts when they reach required level of development, and maturity; have necessary experience topics treated with corresponding degree of complexity across levels,**

3. Open Education Curriculum

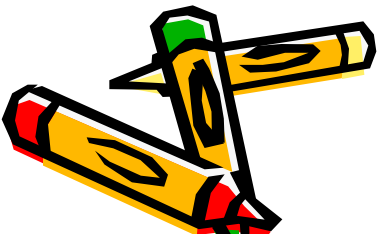

**allows students to be free to discover important knowledge;
teachers - major curriculum developers**

4. Problem Solving Curriculum

students guided to discover answers to problems

5. Separate Subjects Curriculum

subjects independent in content and time

6. Correlated Subjects Curriculum

**subjects related in content and time
may be factual, descriptive, normative**

7. Broad Fields Curriculum

**subjects integrated through principles or
themes**

8. Core Curriculum

**aims to create a universal sense of
inquiry, discourse, and understanding
among learners of different background
context or theme is the core of learning**

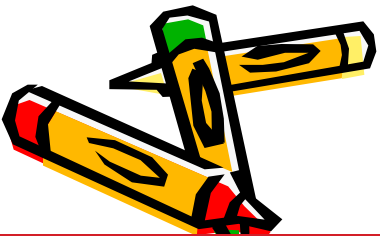

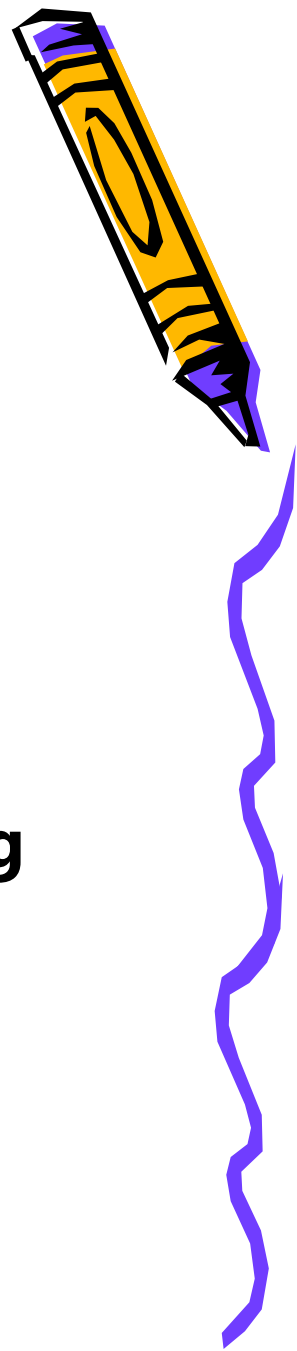

PATTERNS OF EXPERIENCE-CENTERED CURRICULUM

1. Activity-based

**based on child's needs
no advance planning
cooperative planning**

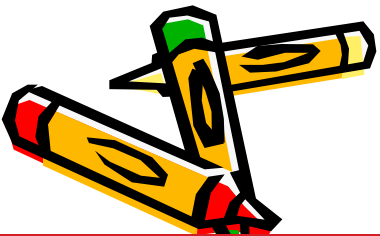

2. Child-centered

**uses experiential rather than rote learning
custom-made activities for children**

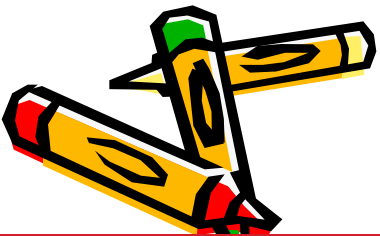

3. Social processes and life functions-focused
centered on major cultural life activity of man
relate learners and society

4. Process-centered
focuses on personal attributes and skills of
individual learner in ever-widening
circles of self, others and society
emphasis on development of skills traits
that will serve the learner for life

Other types of Curriculum

- **Overt, explicit, written**
formally designed and reviewed
- **Societal**
massive, informal curriculum of family, peers groups, communities, churches, occupation, media & other socializing forces
- **Hidden or covert**
implied by nature and structure of school, administrators, teachers

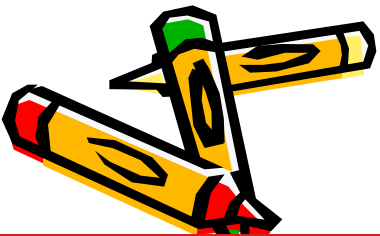

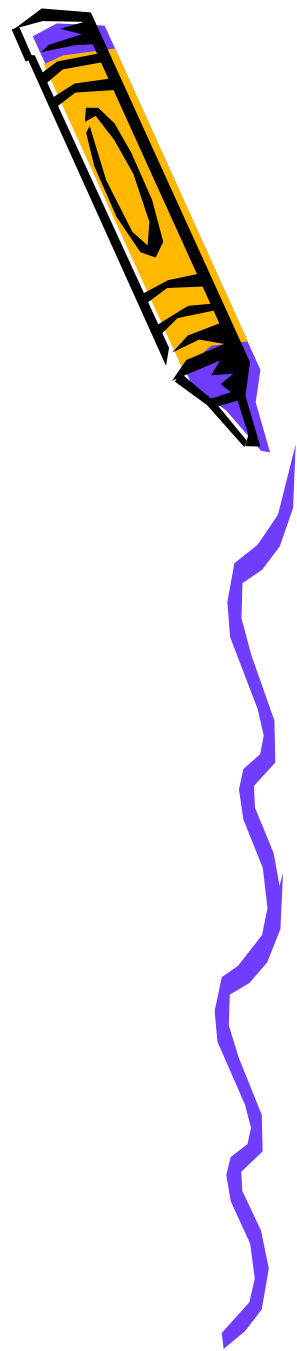

Other types of Curriculum

- **Null or censored curriculum**
should not be taught; not important
- **Phantom**
messages prevalent in and through exposure to any type of media
- **Concomitant**
from church – in the context of religious expression, values, ethics, morals
- **Rhetorical**
ideas from policy makers, school officials, administrators, politicians

Other types of Curriculum

- **Curriculum-in-use**
actual curriculum delivered
and presented by teachers
- **Received or attained**
content and concepts students learn
- **Internal**
processes, content and knowledge
combined with learner's realities –
internalized by student
- **Electronic**
derived from internet

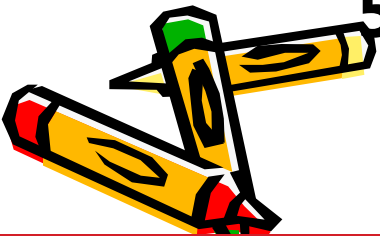

CURRICULUM DEVELOPMENT

Process of selective organizing, executing and evaluating learning experiences based on needs, abilities and interest of learners, considering nature of community

PHASES

- 1. Planning**
- 2. Organization and Design**
- 3. Implementation**
- 4. Evaluation**
- 5. Improvement**

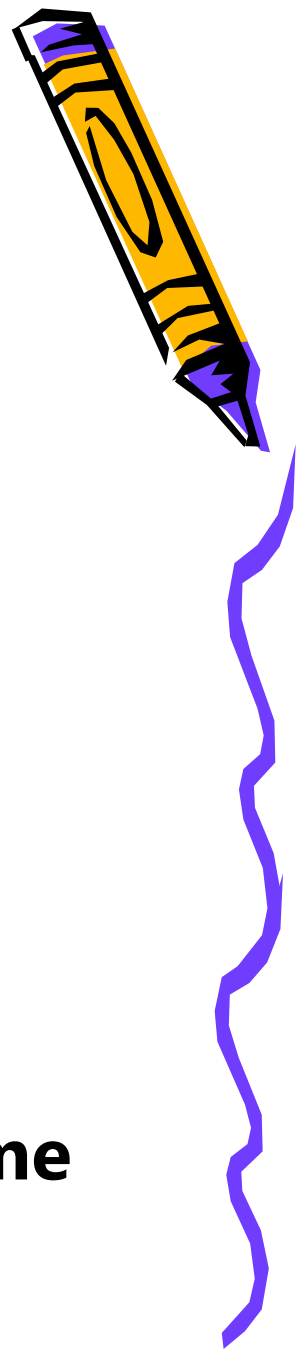

1. PLANNING

- situation analysis
- goal setting
- need identification
- budgeting
- decisions regarding implementation and evaluation details

2. ORGANIZATION and DESIGN

- arrangement of curriculum elements
- selection of: content, subject matter, sequence, focus, grade placement, time allotment, activities

3. IMPLEMENTATION

- instructional phase of curriculum dev't

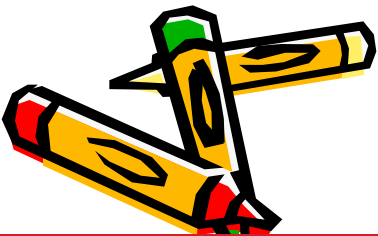

4. EVALUATION

- determination of quality, effectiveness, or value of a curriculum
- process and product evaluation
- Criteria:
 - a. Consistency with objectives
 - b. Comprehensive scope
 - c. Continuity
 - d. Balance
 - e. Coherence
 - f. Articulation

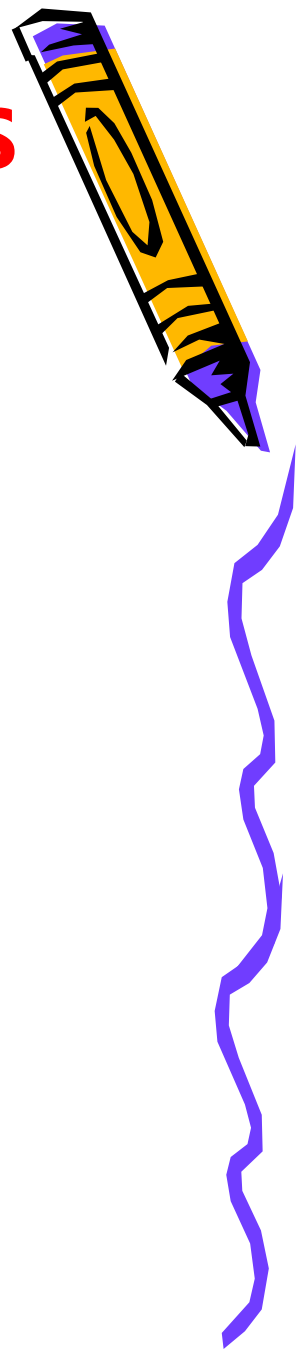

5. IMPROVEMENT or CHANGE

- **Improvement:** NO change in basic curriculum elements
examples: substitution, alteration, variation, restructuring, value orientation
- **Change:** basic alteration in structure and design of curriculum

CURRICULUM PLANNING LEVELS

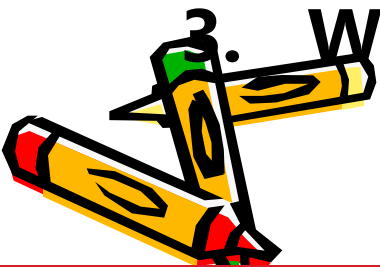

MICRO LEVEL

- 1. Classroom**
- 2. Team/grade/department**
- 3. Individual school**
- 4. School district**
- 5. State**

MACRO LEVEL

- 1. Regional**
- 2. National**
- 3. World**

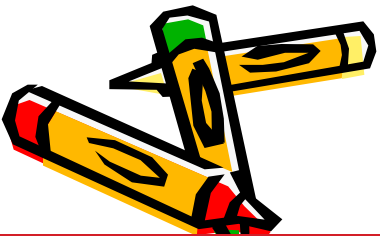

MAJOR MODELS of CURRICULUM DEVELOPMENT

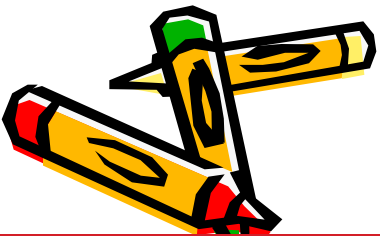

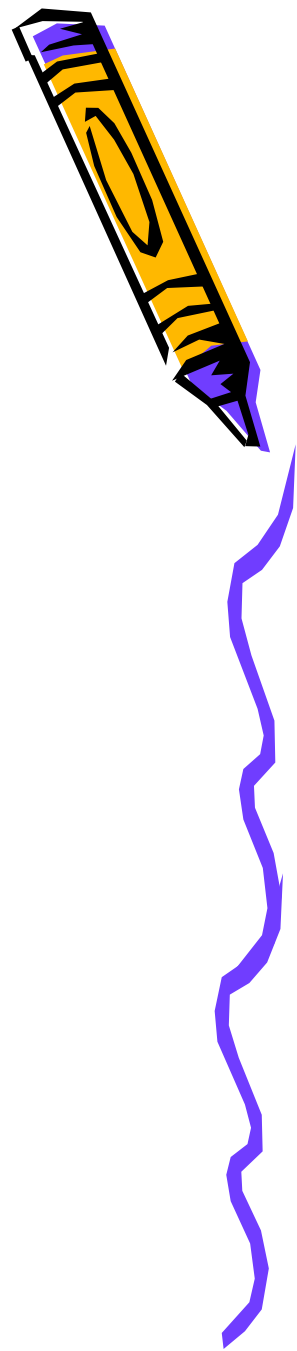

A. Ralph Tyler's Ends-Means Model

1. Determine philosophy of school and teacher
2. Identify educational experiences related to the purposes
3. Organize these experiences → content
4. Evaluate/reevaluate purpose ↔ results

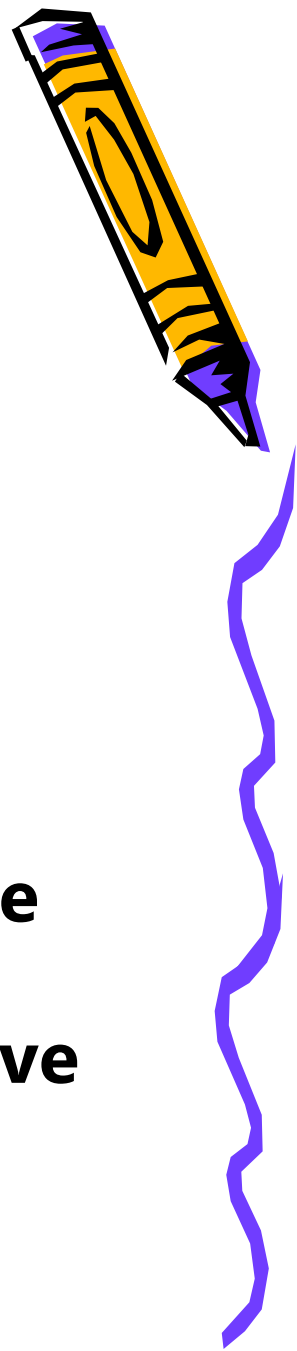

B. Hilda Taba's Inverted Model

- 1. Diagnose needs of schools and community**
- 2. Formulate specific objectives**
- 3. Select content ↔ student's developmental level**
- 4. Organize content**
- 5. Select activities**
- 6. Organize activities**
- 7. Evaluate lessons and units ↔ objectives**
- 8. Check for balance and sequence**

GUIDELINES to CURRICULUM DEVELOPERS

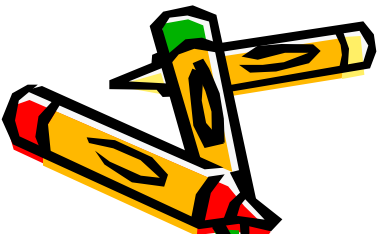

- 1. Curriculum change is inevitable and desirable.**
- 2. The curriculum is a product of its time.**
- 3. Curriculum changes of earlier periods often coexist and overlap curriculum changes of later periods.**
- 4. Curriculum change occur only as people are changed.**
- 5. Curriculum development is a cooperative group activity.**

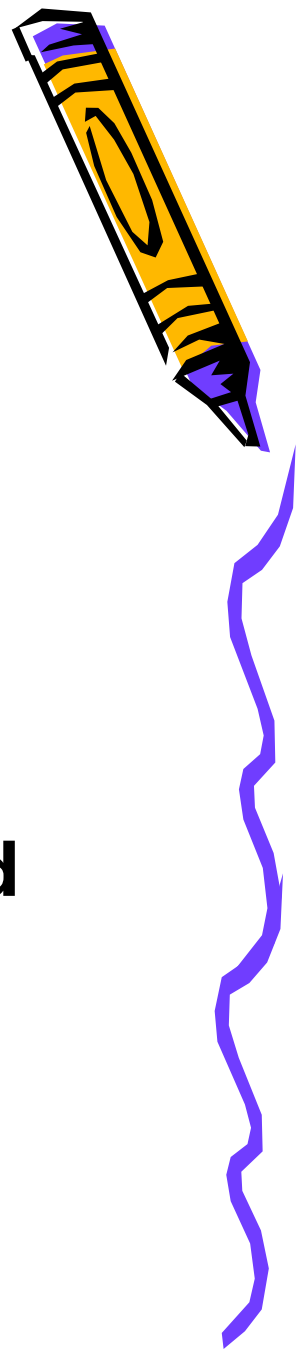

GUIDELINES to CURRICULUM DEVELOPERS

- 6. Curriculum development is basically a decision-making process.**
- 7. ... never ends.**
- 8. ... is a comprehensive process.**
- 9. ... is more effective if it is comprehensive.**
- 10. The curriculum planner starts from where the curriculum is just as the teacher starts from where the students are.**

(Oliva, 2005)

CURRICULUM DESIGN MUSTS

- ✓ **Holistic and coherent**
- ✓ **Accessible**
- ✓ **Student-centered**
- ✓ **Fosters learning and encourages independence**
- ✓ **Based upon or has links to research and scholarship**
- ✓ **Based on feedback, evaluation, review**
