47. What is the study of variations and passing of traits from one generation to another

generation?

A. Genetics

B. Heredity

48. Mendel's law of segregation describes the inheritance of a single character. Which

among these hypotheses is from the result of Mendel's experiment?

A. If the two alleles of an inherited pair differ, then one determines the organisms' appearance and the other has also has noticeable effect on the organism's appearance.

B. A sperm or egg carries only one allele for each inherited character because allele pairs separate from each other during the production of gametes.

49. Which component of nucleotide where in DNA and RNA is just the same?

A. Fluorine group

B. Phosphate group

50. Who explained that Purines and Pyrimidines are specifically complements each other in

every nucleic acid?

A. Watson and Crick

B. Chargaff

51. What characteristic of nucleic acid telling that

- A. Semi-conservative
- it is made of both old and new strand?
- B. Semi-permeable

ॐ Balita

52. What do you call a pathogen that does not contain any nucleic acid, only proteins are present?

- A. Virion
- B. Prion

53. Evolution, this is the changes over a period of time. One of the pieces of evidence is the fossil. But how is the age of the fossil being determined?

- A. Carbon Dating

54. Study of age of the earth:

- A. Pestemology
- B. Hydrogen Dating
- B. Palaeontology

55. What structure pertain to having same origin but different functions?

- A. Homologous Structure
- B. Analogous Structure

56. What structures no longer have a purpose in the current form of an organism of the given

species but has some important functions before in the organism?

- A. Vestigial Structure
