

GURONG
PINOY

The logo features the word "GURONG" in a large, bold, blue font with a white outline and a slight 3D effect. Below it, the word "PINOY" is written in a similar bold font, but in white with a blue outline. Three yellow stars are integrated into the design: one is positioned above the "R" in "GURONG", and two are placed between the "U" and "R", and between the "O" and "N" of "GURONG". A yellow sunburst graphic is located above the central star.

Professional Education

Final Coaching 4

1. Dr. Goldberg does a study in which he observes Jerome, a child who has been identified as having a rare disorder. Jerome is the only subject in the study. Which type of research design is Dr. Goldberg using?

☐ a. Experiment

☒ b. Case study

☐ c. Survey study

☐ d. Quasi-experiment

Cross-Sectional Research

just one time, in a single session

Advantage

easy and inexpensive

Disadvantage

*cannot study
whether people change*

Longitudinal Research

***over multiple sessions, or over
an extended period of time***

Longitudinal Research

Advantage

easy and inexpensive

Disadvantage

*cannot study
whether people change*

A Case Study

a single person in a research study

A Field Study **(A Naturalistic Study)**

***observe the participants
in their natural environments***

A Survey Study

***give a group of people a
survey with lots of questions***

Experiment

***creates two or more groups
of people to compare.***

Quasi-Experiment

***groups were not created by the experimenter
--instead, they occurred naturally.***

2. Mr. Freeman randomly gives half of the children in his class an extra dessert over the lunch hour; the other half gets no dessert. After lunch, he tests the children's levels of resentment toward each other. Which type of research design is Mr. Freeman using?

☐ a. Case study

☐ b. Quasi-experiment

☒ c. Experiment

☐ d. Longitudinal

3. Miss Tanaka wants to know how parenting style affects children's personalities. To complete her study, she observes children in their own homes, doing what they would naturally be doing anyway. Which type of research design is Miss Tanaka using?

☐ a. Quasi-experiment

b. Field study

☐ c. Experiment

d. Case study

4. Dr. Yang does a study in which she observes one hundred children over a period of six years, noting changes over time. Which type of research design is Dr. Yang using?

☐ a. Experiment

☐ b. Field study

☐ c. Quasi-experiment

☒ d. Longitudinal

5. Ms. Olsen decides to study differences in her classroom between children who have an identified learning disability and children who do not. Which type of research design is Ms. Olsen using?

☐ a. Case study

☐ b. Cross-sectional

☐ c. Experiment

☒ d. Quasi-experiment

6. Dr. Patel does an experiment in which she shows people either a happy movie, a sad movie, or no movie in a classroom. Then, she asks them to fill out a survey assessing their feelings about whether they want to adopt a pet from the animal shelter. In this experiment, what is the INDEPENDENT variable?

a. The type of movie viewed

b. The classroom location

c. Their feelings about pet adoption

d. The participants

Hypothesis

When students in school consume caffeine, their performances on tests are affected.

Independent Variable

Manipulated

Cause

Caffeine

Dependent Variable

Measured

Effect

***Test
Performance***

7. Dr. Marion wants to conduct an experiment that involves the distribution of a questionnaire. She has only enough copies for half of the students. She decides who will participate by pulling names out of a hat and choosing ten students from each of the four grades in the school. What constitutes the sample in this experiment?

☐ a. Only the first ten students she chooses

☐ b. The students who are not chosen to participate

☒ c. Only the students who actually participate

☐ d. All of the students in the school

Random Assignment

each person in the study has an equal chance of being in either the control group or the experimental group

Population

*entire group of people
you're interested in*

Sample

***the group of people actually
participating in the study***

Convenience Sample

***people who are readily available
and willing to participate***

Clustered Sample

A specific type of convenience sample that's based on a particular geographic area

Random Sample

***every person in the larger population
has an equal chance of being in the sample***

Stratified Random Sample

***identify variables like this in advance
that you want to make sure are
covered by your sample***

8. A school principal wants to conduct an experiment that involves the distribution of a questionnaire. She has only enough copies for half of the students. She decides who will participate by pulling names out of a hat and choosing ten students from each of the four grades in the school. What constitutes the population of this experiment?

☐ a. The students who are not chosen to participate

☐ b. Only the students who actually participate

☐ c. Only the first ten students she chooses

☒ d. All of the students in the school

9. Dr. Patel does an experiment in which she shows people either a happy movie, a sad movie, or no movie in a classroom. Then, she asks them to fill out a survey assessing their feelings about whether they want to adopt a pet from the animal shelter. In this experiment, what was the control group?

a. The people who watched no movie

b. The group of pets who are currently in the animal shelter

c. The people who watched the happy movie

d. The larger population of people who live in that town

10. If a research study is so specific and strange that it does not have any real world application, we can say that the study has a low level of ____.

☐ a. internal validity

☐ b. external validity

☐ c. reliability

☒ d. ecological validity

Internal Validity

Making sure that the cause-effect relationship identified in the study is really there and there are no other explanations for the result.

External Validity

The results you get from the sample of participants in your study are true of people outside of the experiment as well

Ecological Validity

***Results have meaning in the
real lives of everyday people.***

11. A researcher performed a study in which she concluded that children who have parents who read to them at home have better reading skills at school. However, she only included children in the top reading level at school, and no children who have trouble reading. Because she only included one group, and not all groups of children, her study probably has a low level of ____.

- | | |
|---|--|
| ☒ a. external validity | ☐ b. internal validity |
| ☐ c. ecological validity | ☐ d. reliability |

12. Which one of the following coefficients indicates that the two variables of interest move in opposite directions while remaining within the possible range of correct calculations?

☐ a. +4.50

☐ b. -2.78

☒ c. -0.83

☐ d. +0.32

Correlation

Simple statistic that explains whether there's a relationship or association between any two variables.

Scatter Plot

- ***Shows a dot for each person of interest***
- ***Each dot represents one person's scores on the two variables of interest***

Correlation Coefficient

The resulting statistic you get from a correlation equation.

$$r = -0.56$$

Correlation Coefficient

Sign / Direction

1. **+ or -**

Number

2. **(0 - 1)**

$r = -0.56$

Positive Correlation

Both variables move in the same direction - as one goes up, the other goes up, or vice versa.

Negative Correlation

The two variables move in the opposite direction from each other - as one goes up, the other goes down.

Number

***Strength of the association between
the two variables of interest.***

0 → 1

Relationship becomes stronger

INTERPRETING THE STATISTIC: THE NUMBER

13. José wants to calculate a correlation; which of the following graphs should he use?

- ☐ a. Pie chart
- ☐ b. Line graph
-  c. Scatter plot
- ☐ d. Histogram

14. A teacher wants to compare the reading comprehension skills of children with learning disabilities and children without learning disabilities. Which statistical test should she use to make this comparison?

☐ a. Regression

☐ b. p-test

 c. t-test

☐ d. Analysis of Variance (ANOVA)

Inferential Statistics

ways of analyzing data that allow the researcher to make conclusions about whether a hypothesis was supported by the results

t-test

compare the average scores between two different groups in a study to see if the groups are different from each other.

Analysis of Variance (ANOVA)

Compares the average scores between three or more different groups in a study to see if the groups are different from each other.

p-value

The likelihood that the results in the study would have happened simply by random chance.

p-value

Range: 0.00 – 1.00

***0% chance that the
results happened randomly***

p-value

Range: 0.00 - 1.00

***100% chance that the
results were random***

***We should only accept a
maximum of a***

5%

***chance that the scores were
random***

0% - 5%
p-value
(0.00 - 0.05)

15. A teacher wants to compare children of high, medium, and low family incomes on their satisfaction with the school lunch program. Which statistical test should be used to make this comparison?

☐ a. Regression

☒ b. Analysis of Variance (ANOVA)

☐ c. p-test

☐ d. t-test

16. On which of the following cases would an Analysis of Variance (ANOVA) be useful?

☐ a. Testing whether girls enjoyed hearing a certain story read aloud

☐ b. Finding the average score of a group in a Spanish test

☒ c. Testing whether children in Iowa, California, and New York have different learning skills

☐ d. Comparing the language acquisition skills of two different groups

17. A researcher asks a group of students to complete a survey that measures maturity. She finds that the average score for girls is higher than the average score for boys, with a p-value of 0.03. What should she conclude from this p-value?

☐ a. There's a ninety-three percent chance that the scores in the study are due to random chance.

b. There's a three percent chance that the scores in the study are due to random chance.

☐ c. Three percent of the girls are more mature than the boys, on average.

☐ d. Ninety-three percent of the girls are more mature than the boys, on average.

18. Which of the terms below refers to a piece of paper that explains to you, in detail, everything that will happen in a research study before it begins?

☐ a. IRB review form

☐ b. Confidentiality form

☐ c. Deception form

☒ d. Informed consent form

19. If a laboratory rat is conditioned to push a feeder bar for a food pellet after seeing a candy apple red light flash in its cage, according to the principles of stimulus generalization the rat would likely also push the feeder bar following the flash of a ____ light.

a. maroon

b. blue

c. black

d. yellow

Stimulus generalization

when a previously unassociated, or new, stimulus that has similar characteristics to the previously associated stimulus elicits a response that is the same or as or similar to the previously associated response

Stimulus generalization

***eliminates the need to learn how to respond or
react to every stimulus that we encounter***

20. The major advantage of stimulus generalization is that ____.

☐ a. our brains can over-generalize and therefore make incorrect responses

☐ b. stimulus generalization is not advantageous at all

☒ c. our brains do not have to re-learn how to respond to every new situation we encounter

☐ d. stimulus generalization does not require a reward or punishment to allow for conditioning to occur

21. Stimulus generalization occurs when a stimulus similar to a(n) ____ elicits a similar ____ to the conditioned stimulus.

☐ a. unconditioned stimulus,
reward

☐ b. unconditioned stimulus,
response

☒ c. conditioned stimulus,
response

☐ d. conditioned stimulus,
pattern

22. You coach a basketball team, and one of your players asks you if he's shooting the ball correctly. You model the correct form and explain the technique to him. This is an example of ____.

☐ a. expository instruction

b. interactive instruction

☐ c. sports instruction

d. collaborative instruction

Summary

Expository Instruction

- ***Relies on expert information***
- ***Examples include lectures, presentations, textbooks, and videos***

Summary

Interactive Instruction

- **Learn through social interaction**
- **Examples include group discussion, question and answer sessions, debates, and tutoring**

Summary

Hands-On Instruction

- *Learn through activities*
- *Examples include practicing a physical skill, filling out a worksheet, or crafting projects*

Summary

Collaborative Instruction

- **Learn through multiple teachers**
- **Examples include multiple coaches or a general and special ed teacher collaboration**

23. Dr. Carter teaches psychology and gives a PowerPoint presentation during each of her class sessions. A presentation is an example of ____.

- | | |
|--|--|
| ☐ a. lectured instruction | ☒ b. expository instruction |
| ☐ c. interactive instruction | ☐ d. hands-on instruction |

24. Mr. Jones wants to incorporate an authentic activity to teach his students how to recognize maple trees. Which of the following is his best option?

☐ a. Show the students pictures of a maple tree leaf and have students draw one

☒ b. Take the students outside to show them a maple tree and point out the differences between the maple and other trees

☐ c. Give each student a bag of seeds and give a presentation about how maple trees grow

☐ d. Show the students a video on the growth of maple trees

25. Which of the following is NOT an example of hands-on instruction?

☐ a. A student dissects a frog using a computer simulation

☐ b. A student completes a calculus formula on the board

☐ c. A student writes a letter to the editor of the local newspaper

 d. A student records a live lecture on marketing strategies

26. Which type of instruction puts the teacher in the role of controller or organizer?

a. Direct instruction

b. Discovery instruction

c. Dominant instruction

d. Common instruction

27. Trisha wrote an unfamiliar math problem on the board. She then asked her students to brainstorm and discuss with each other possible solutions to the problem while she observed. This is an example of ____.

☐ a. common instruction

b. discovery instruction

☐ c. direct instruction

d. expository instruction

28. Kate noticed that all of the desks in her math and science classrooms are blue. She concludes that all of the desks in all of the classrooms must also be blue. This is an example of ____.

☐ a. logical reasoning

b. inductive reasoning

☐ c. deductive reasoning

d. sequential reasoning

Reasoning

Cognitive process of transforming thoughts and mental concepts into decisions and judgments

Inductive Reasoning

Specific environmental information is used to make generalized conclusions

29. The material that students are supposed to learn is referred to as ____.

- | | |
|---|----------------------------------|
| ☐ a. procedure | ☐ b. process |
|  c. content | ☐ d. product |

30. What level of Bloom's Taxonomy is demonstrated by a student explaining the main idea of a short story?

☐ a. Remembering
(knowledge)

☐ b. Analyzing

☐ c. Applying

☒ d. Understanding
(comprehension)

31. What level of Bloom's taxonomy is demonstrated by a student reciting information?

a. Remembering
(knowledge)

b. Evaluating

c. Understanding
(comprehension)

d. Creating (synthesis)

32. Carlos needs to develop a website for his computer technology class. What level of Bloom's taxonomy is demonstrated by this assignment?

☐ a. Remembering
(knowledge)

☒ b. Creating (synthesis)

☐ c. Understanding
(comprehension)

☐ d. Analyzing

33. Which of the following is an example of an expert that could provide expository instruction?

☐ a. Gym teachers

☐ b. Documentaries

☐ c. Guest speakers

☒ d. All of these are examples of experts that provide expository instruction.

34. An advance organizer is ____.

☐ a. a tool used to introduce the expert and highlight the most important information

☐ b. never used in expository instruction unless absolutely necessary

☒ c. something used to introduce the lesson and relate material they have previously learned to the material they are about to learn

☐ d. a method used to summarize the previous lesson

35. Miss Saylor is about to teach her second grade class about firefighters. Before she begins, she asks her students to write down what they already know and what they want to know about firefighters. Then, she asks them to write down what they've learned throughout the lesson. This is an example of a(n) ____.

☐ a. metaphor

☐ b. analogy

☐ c. Venn diagram

☒ d. KWL chart

36. Dr. Carlson is a college professor who teaches Anatomy and Physiology. He has just compared the human eye to a camera so that his students better understand the function of each part. This is an example of a(n) _____.

a. analogy

b. metaphor

c. KWL chart

d. concept map

37. Which of the following questions represents an example of when a teacher might prefer a short wait time?

☐ a. 'Why do you think the author wrote this poem?'

 b. 'What is the capital of Arizona?'

☐ c. 'Do dogs have feelings like we do?'

☐ d. 'What was the most important war fought in the history of the U.S.?'

38. Wait time 2 is defined as the ____.

☐ a. time period before the teacher asks a question

☒ b. time period between the student's initial response and the teacher's reaction

☐ c. time period between the lesson and the exam

☐ d. time period between the teacher's question and the student response

39. When creating classroom rules, teachers should:

☐ a. Never create rules because they stifle students' creativity and productivity

☐ b. Involve students in the creation of rules but not in determining the consequences of breaking them

☒ c. Involve students in the creation of rules and consequences

☐ d. Have the same rules in every class they teach

40. Which of the following statements about the Identity Diffusion stage is most accurate?

☐ a. Identity Diffusion is the final stage of Marcia's identity theory

☐ b. Identity Diffusion is the easiest stage to advance from

☐ c. Individuals at the Identity Diffusion stage have explored many options before committing

☒ d. Individuals at the Identity Diffusion stage are often lonely and exhibit a fear of the world

Identity

an individual's combination of behaviors, preferences, thoughts, talents, and beliefs

James Marcia

Occupation

the main role one has in society

Ideology

***a person's fundamental beliefs about
topics like religion or politics***

Identity Diffusion

no strong opinions, desires, or dreams for the future

Foreclosure

*commitments to beliefs and a future,
but without truly exploring options*

Moratorium

people continually explore options, experiment with identities and beliefs, but never make a decision or commitment

Identity Achievement

explored many possible beliefs and selves, and have made commitments that make them comfortable and happy

41. What are the two factors which most significantly affect identity formation according to James Marcia?

☐ a. Job and religion

☒ b. Occupation and Ideology

☐ c. Beliefs and Emotions

☐ d. Diffusion and Moratorium

42. Steven's parents have always wanted him to be a doctor. He accepted this preference and went to medical school even though he never really thought about whether he wanted to be a doctor. Which of Marcia's identity statuses applies to Steven?

a. Foreclosure

b. Identity Diffusion

c. Identity Achievement

d. Moratorium

43. Which of the following statements best describes the difference between the Moratorium and Foreclosure stages of Marcia's Identity Theory?

☐ a. Young people are more commonly in the Moratorium stage than the Foreclosure stage

☐ b. Those at the Moratorium stage have found their identity, those at the Foreclosure stage have not

☐ c. Those at the Moratorium stage may one day find their true identity, those in the Foreclosure stage never will

 d. Those at the Foreclosure stage commit to an identity without considering other options, those at the Moratorium stage explore many possible identities without committing

44. Bryan has autism, and often seems aloof and standoffish. According to experts, this is because ____.

a. he doesn't adequately understand emotions and empathy

b. his hearing is impaired

c. he finds other people's conversation stupid

d. he doesn't care about other people

45. A child with Asperger syndrome would likely experience difficulty in all the following situations EXCEPT which one?

a. Following clearly written instructions to assemble a remote-control helicopter

b. Playing the role of a talking animal in a school play

c. Understanding the sarcastic humor of a classmate

d. Participating in a group conversation without interrupting

46. Which of the following have been observed in children on the autism spectrum?

☐ a. Demonstrating repetitive (stereotypical) behavior

☐ b. Difficulty interpreting social cues, such as facial expressions

☐ c. Preferring to be alone

☒ d. All of the answers are correct

47. How did Renzulli theorize that giftedness arises?

a. Through the interaction of three human traits: above average abilities, task commitment and creativity.

b. Through the interaction of three human traits: above average abilities, task indifference, and creativity.

c. Through the interaction of three human traits: average abilities, task commitment and creativity.

d. Through the interaction of three human traits: below average abilities, task commitment and creativity.

GIFTED

*having outstanding abilities
and are capable of high performance*

RENZULLI THREE-RING MODEL

Joseph Renzulli

1978

 **Study.com®**

RENZULLI THREE-RING MODEL

At the intersection of above average abilities task commitment and creativity you will find the gifted behavior.

Giftedness arises through the interaction of three human traits

48. How is a gifted child considered different from a normal child?

a. They have outstanding abilities and are capable of high performance.

b. They have outstanding abilities and are capable of average performance.

c. They have average abilities and are capable of high performance.

d. They have average abilities and are capable of average performance.

49. Laura had an IQ of 100, which is considered ____.

☐ a. above average

☐ b. gifted

☒ c. average

☐ d. below average

Distribution of IQ Scores

50. According to Renzulli, at the ____ of above-average ability, task commitment, and creativity you will find gifted behavior.

a. end

b. cross roads

c. intersection

d. roundabout

RENZULLI THREE-RING MODEL

At the intersection of above average abilities task commitment and creativity you will find the gifted behavior.

Giftedness arises through the interaction of three human traits

GURONG
PINOY

The logo features the word "GURONG" in a large, bold, blue font with a white outline and a slight 3D effect. Below it, the word "PINOY" is written in a similar bold font, but in white with a blue outline. Three yellow stars are integrated into the design: one is positioned above the "R" in "GURONG", and two are placed between the "U" and "R", and between the "O" and "N" of "GURONG". A yellow sunburst graphic is located above the central star.
