

ART APPRECIATION

INTRODUCTION TO ART APPRECIATION

Humanities

- A broad field.
- Includes not only the fine arts but also the performing arts.
- Derived from the Latin “humanus” meaning *human, cultured or refined*.
 - Embraces the social sciences & the philosophy.
 - In this course, students learn to appreciate the arts, to produce artworks, to dignify artists & to value the true, the good & the beautiful.
 - Afford the students opportunities to produce creative works & to acquire artistic skills w/c they can apply later in their academic activities & professional lives.

Art

- Human ingenuity in adapting natural things to man’s use (Webster).
- *Therefore, an artist uses his genius in transforming God-made things into man-made things that satisfy his needs.*
- From the word “ars” means *skills*.
- Synonymous w/ skill, cunning, artifice & craft.

Functions of Art

- ✓ Personal or Individual Function
- ✓ Social Function
- ✓ Economic Function
- ✓ Political Function
- ✓ Historical Function
- ✓ Cultural Function
- ✓ Religious Function
- ✓ Physical Function
- ✓ Aesthetic Function

Art Style & Factors Affecting Style

- art style- way of presenting an art work
- affected by the following factors:
 - *Geographical Factors*
 - Marble Sculptures in Romblon
 - *Historical Factors*
 - Noli & El Fili- Hispanic Rule
 - Les Miserables- French Revolution
 - Magkaisa- 1986 Revolution
 - Spoliarium- Filipino oppression by the Spaniards
 - *Ideational Factors*
 - Sigmund Freud proposed ideas that have influenced surrealist painters

- the idea of Nudism influenced painters
- *Psychological Factors*
 - 'The Filipino Is Worth Dying For'-by Benigno S. Aquino
- *Technical Factors*
 - different brushes produce different strokes
 - If no brushes, painter use their hands
- *Social Factors*
 - Kubrador
 - Ang pagdadalaga ni Maximo Oliveros
- *Political Factors*
 - Propagandists wrote satires against Spanish Friars
 - Writers during the Marcos Regime
- *Economic Factors*
 - Independent Film
 - Multi-Million Peso Film

Principles of Art

- to come up w/ attractive artworks, artists must be governed by the five conventions of artistic compositions.

5 Principles of Arts

1. Harmony- called unity, it is achieved when all the elements of a thing are put together to come up with a coherent whole.
2. Balance- known as physical equilibrium; it is a stability produced by even distribution of weight on each side of the thing.
 - *Formal Balance*- called as symmetrical balance because the thing displays symmetry (same measure)
 - Bilateral Symmetry- it is present when the left & the right sides appear the same, ex. right side mirrors, the left side of the human body.
 - Radial Symmetry- exists when the same measure occurs from the central point to end of every radius, ex. round objects, those w/ radii like star & starfishes.
 - Informal Balance- is present when the left & the right sides of the thing, though not identical in appearance, still display an even distribution of weight.
3. Rhythm- the repetitive pattern of a succession of similar or identical items.
4. Proportion- the comparative relationship of different parts in relation to the whole.
5. Emphasis- is giving proper importance to one or more parts of the thing or the whole. thing itself, achieved by means of size or proportion, shape, color, line, position & variety.

Genres of Art

1. Visual Arts- are those forms perceived by the eyes, includes painting, sculpture, & architecture also called as spatial arts, because it occupies space.
 - Division of Visual Arts
 - A. Graphic Arts- those visual arts that have length & width, they are also called 2-dimensional arts.

- described as flat arts because they are seen on flat surfaces.
 - ex, painting, drawing, sketching, commercial art, mechanical processes, computer graphics & photography.
- B. Plastic Arts- those visual arts that have length, width, & volume, they are also called 3-dimensional arts.
- ex. sculpture, architecture, landscape architecture, city planning, interior design, costume design, set design, theatre design, industrial design, crafts & allied arts
2. Audio-Visual Arts/Performing Arts- are those forms perceived by both ears (audio) and eyes (video).
- ex. music & drama
3. Literary Arts- are those presented in the written mode and intended to be read.
- ex. prose (short stories, novels, essays & plays) & poetry (narrative, lyric & dramatic poems)

Divisions of Art Study

1. Aesthetics or Art Appreciation- the science of beauty, division of art study in which the student learns to admire the artists, value highly different works of art & appreciate the role of the art in society.
2. Art History- division of art study in which the student acquires knowledge of the artists, their backgrounds, their masterpieces, & their significant contributions in various fields of art.
3. Art Production- division of art study in which the student learns to use his creativity & apply his artistic knowledge & skills in producing his own works of art.
4. Art Criticism- division of art study in which the student learns to use his judgment in evaluating different art works based on the criteria set.

ELEMENTS OF VISUAL ARTS

1. Line- a series of connected dots. Painters, sculptors & architects use lines as springboard of their finished products.

Classification of Lines

Vertical- show height or stature, poise, balance, force & dynamism.

Horizontal- indicates rest, repose, calmness, quietness & inaction.

Diagonal - manifest movement, action & direction.

Straight- exhibit stiffness, stillness, & inactivity.

Curved- indicate movements that are smooth.

Repeating- succession of vertical, horizontal, diagonal or curved lines; used to show rhythm.

Contrasting- combination of vertical & horizontal lines or a combination of diagonal lines in opposite directions.

Modified- combination of straight & curved lines or a combination of lines of varying shapes.

2. Color- a property of an object that makes it appealing to the visual sense

Hue- also known as the name for color

One hue- monochromatic

Two or more hues- polychromatic

Classification of colors

Primary- BLUE, RED & YELLOW; they are the first to be produced & the rest of the colors produced by their combination

Secondary-GREEN, ORANGE, & VIOLET- they are produced by combining two primary colors. Ex. BLUE + YELLOW= GREEN

Intermediate- RED -VIOLET, RED-ORANGE, YELLOW-ORANGE, YELLOW- GREEN, BLUE- GREEN, BLUE-VIOLET- produced by combining one primary color & one secondary color

Adjacent- colors situated next to each other in the color wheel; RED & RED ORANGE (e.g.).

Complementary- those colors situated opposite each other in the color wheel; RED & GREEN (e.g.).

Cool- those colors that are not striking. They suggest distance, tranquility, sobriety & restfulness. Ex. BLUE (Coolest), VIOLET, GREEN

Warm- those colors that are striking in the eyes. Also called as advancing color, they suggest warmth, vivacity, cheerfulness & excitement. Ex. ORANGE & YELLOW (most brilliant & most cheerful) & RED (the warmest & most exciting)

Light/Tints- those colors w/ values lower than the normal value. Ex. SKY BLUE is a tint of BLUE.

Dark/Shades- those colors with values higher than the normal value. Ex. MAROON is a shade of RED.

Rainbow or Prismatic- those colors that form a rainbow or prism; ROYGBIV.

Neutral- are WHITE (absence of all colors), GRAY (combination of white & black) & BLACK (presence of all colors).

3. Texture- associated w/ the sense of touch. Ex. smooth or rough, fine or coarse, glossy or dull, regular or irregular.

4. Shape- contributes to the final form of the art work. Ex. Christmas lantern is composed of different shapes.

5. Space- area or surfaced occupied by the art work.

6. Volume- amount of space occupied by an object in 3- dimensions.

7. Perspective- synonymous with point of view, angle of vision or frame of reference. The point where the artists stands to view his subjects as he creates his art work.

8. Form- refers to the overall composition of the art work. Describes the entire shape or organization of the thing or object created. Ex. Pyramid.

METHODS OF PRESENTING THE SUBJECT

Realism-the method of presenting the subjects as they appear in real life.

Abstractionism-drawing away from realism.

Different Methods- distortion, mangling, elongation, cubism, abstract expressionism.

Distortion (abstractionism) - presenting the subject in a misshaped form.

Mangling (abstractionism) - presenting the subject w/ parts w/c are cut, lacerated, mutilated or hacked w/ repeated blows.

Elongation (abstractionism) - presenting the subject in an elongated form.

Cubism (abstractionism) - presenting the subject w/ the use of cubes & other geometric figures.

Symbolism- is presenting the subject symbolically, that is, the artists show his subject as it appears in real life, but he intends to let it representing something.

Fauvism- is optimistic realism; it is presenting the real- life subject with the use of bright colors suggesting comfort, joy & pleasure

Dadaism- is shocking realism; it is presenting the real-life, subject w/ the intention to shock the audience through the exposition of the evils in society.

Expressionism- is emotional realism; it is presenting the real-life subject w/ the intention to express emotions, pathos, chaos, fear, violence, defeat, morbidity & tragedy

Impressionism- is realism based on the artist's impressionism; it is presenting the real-life subject w/ emphasis on the impression left in the artist's mind or perception, particularly the effect of light on the object used in the subject.

Futurism- is realism in the future; it is presenting a subject that relates not to present, but to the future

HISTORY OF ART

A. Greek Period

- ✓ Greek Golden Age (500 BC- 410 BC)
- ✓ Hellenistic Period (336 BC- AD 146)

B. Roman Period

C. Medieval Period or Middle Ages (323- 1400)

- ✓ Early Medieval Period
- ✓ High Middle Ages

D. Renaissance Period (1270- 1594)

- ✓ Early Renaissance Period
- ✓ High Renaissance Period

E. Age of Mannerism (1530- 1616)

F. Baroque Period (1600- 1750)

G. Classic Period (1644- 1793)

H. Rococo Period (1715-1774)

I. Romantic Period (1773- 1848)

J. Realist and Naturalist Period (1827- 1927)

K. Impressionistic Period (1863- 1900)

L. Modern Period (1895- 1990)

M. Post- Modernism (1990-up to present)

PRINCIPLES OF DESIGN

- The principles of design describe the ways that artists use the elements of art in a work of art.

1. **Balance** is the distribution of the visual weight of objects, colors, texture, and space.

- If the design was a scale, these elements should be balanced to make a design feel stable.
- In symmetrical balance, the elements used on one side of the design are similar to those on the other side; in asymmetrical balance, the sides are different but still look balanced.
- In radial balance, the elements are arranged around a central point and may be similar.

2. **Emphasis** is the part of the design that catches the viewer's attention.
 - Usually the artist will make one area stand out by contrasting it with other areas.
 - The area could be different in size, color, texture, shape, etc.
3. **Movement** is the path the viewer's eye takes through the work of art, often to focal areas.
 - Such movement can be directed along lines, edges, shape, and color within the work of art.
4. **Pattern** is the repeating of an object or symbol all over the work of art.
5. **Repetition** works with pattern to make the work of art seem active.
 - The repetition of elements of design creates unity within the work of art.
6. **Proportion** is the feeling of unity created when all parts (sizes, amounts, or number) relate well with each other.
 - When drawing the human figure, proportion can refer to the size of the head compared to the rest of the body.
7. **Rhythm** is created when one or more elements of design are used repeatedly to create a feeling of organized movement.
 - Rhythm creates a mood like music or dancing.
 - To keep rhythm exciting and active, variety is essential.
8. **Variety** is the use of several elements of design to hold the viewer's attention and to guide the viewer's eye through and around the work of art.
 - Unity is the feeling of harmony between all parts of the work of art, which creates a sense of completeness.

PAINTING

Definition

Painting is the practice of applying paint, pigment, color or other medium to a solid surface (support base).

Subjects

- The term subjects in art refer to the main idea that is represented in the artwork. The subject in art is basically the essence of the piece.
- To determine subject matter in a particular piece of art, ask yourself:
 - What is actually depicted in this artwork?
 - What is the artist trying to express to the world... what is his or her message?
 - And how are they conveying that message?

Some of the Main Subject in Painting for Centuries

1. **Still Life**- a collection of inanimate objects arranged together in a specific way.
2. **Landscape** - natural scenery such as mountains, cliffs, rivers, etc.
3. **Nature** - a focused view or interpretation of specific natural elements.
4. **Portraiture** - an image of a particular person or animal, or group thereof.
5. **Abstract** - a non-representational work of art.

Mediums

1. **Acrylic** is a fast drying paint. It contains pigments suspended in polymer emulsion. Acrylic paints are usually diluted with waters.

2. **Pastel** comes in three different types, the soft pastels, the hard pastels and the pastel pencils.

The **soft pastels** are the most widely used; it has a higher portion of pigments and less binder.

The **hard pastel** has a higher portion of binder and less pigment.

The **pastel pencils** are pencils with pastel leads.

3. **Fresco paintings** can often be seen on walls and ceilings. The word fresco came from the Italian word fresco (fresh).

There are three types of fresco, the **Buon fresco**, which consist of painting pigments mixed with water on a thin layer of plaster. **Secco**, which done in dry plaster. The pigment requires a binding medium such as egg (tempura, glue or oil to attach pigments). The **Mezzo-fresco**. In this type, the pigment should only penetrate slightly on the plaster.

4. **Gouache**, derived from Italian guazzo, water pan, splash or body color. This medium is also dilute in water. It differs from water color considering that its particles are larger, the ratio of pigment to water is much bigger and white pigment such as chalk is present on it.

5. **Oil** is a type of slow drying paint. It consists of particular pigments suspended in a drying oil. This kind of medium does not dry quickly. It blends into the surroundings and allow the blending of color. It produces vivid colors with a natural sheen and distinct context. It provides a surface translucency similar to human skin making it an ideal for portrait painting.

6. **Tempera** is a permanent fast drying painting medium consisting of colored pigment mixed with water soluble binder. Tempera paints dries rapidly and it allows for great precision. When dry it produces smooth matte finish. Tempera painting has been found on early Egyptian sarcophagi decorating many of the Fayum mummy portraits sometimes in combination with encaustic.

7. **Water Color**, in water color the pigments are suspended in a water soluble vehicle. The art of water color extremely began in the cave paintings of the Paleolithic Europe, used in the manuscript illumination by the Egyptians and continuous to flourish in the renaissance. Water color paint consist of four principal ingredients; colorant (commonly pigment), binder, the substance that holds the pigment in suspension and fixes the pigment to the painting surface, additives, substance that alter the viscosity, hiding, durability or color of the pigment and vehicle mixture, lastly, the solvent, the substance use to thin or dilute the paint for application and that evaporates when the paint hardens or dry.

8. **Water Miscible Oil Pain**; this is a modern variety of oil paint. One of its features is that it can be thinned and cleaned up with water. The water solubility comes from the use of oil medium in which one end of the molecule has been altered to bind loosely to water molecules.

Styles in Painting

1. **Realism** is the art style most people regard as "real art," where the subject of the painting looks much like the real thing rather than being stylized or abstracted. Only when examined up close will what appears to be solid color reveal itself as a series of brushstrokes of many colors and hues.

2. **Painterly style** appeared as the Industrial Revolution swept Europe in the first half of the 19th century. Liberated by the invention of the metal paint tube, which allowed artists to step outside the studio, painters began to focus on painting itself. Subjects were rendered realistically, but painters made no effort to hide their technical work.

3. **Impressionism** emerged in the 1880s in Europe, where artists such as Claude Monet sought to capture light not through the detail of realism but with gesture and illusion. You don't need to get too close to Monet's water lilies or Vincent Van Gogh's sunflowers to see the bold strokes of color.

4. **Expressionism and Fauvism** are similar styles that began to appear in studios and galleries at the turn of the 20th century. Both are characterized by their use of bold, unrealistic colors chosen not to depict life as it is but as it feels or appears to the artist.

he styles differ in some ways.

Expressionists such as Edvard Munch sought to convey the grotesque and horror in everyday life, often with hyper-stylized brushwork and horrific images, such as his painting "The Scream." Fauvists, despite their novel use of color, sought to create compositions that depicted life in an idealized or exotic nature. Think of Henri Matisse's frolicking dancers or George Braque's pastoral scenes.

5. **Abstraction** is about painting the essence of a subject as the artist interprets it, rather than the visible details.

A painter may reduce the subject to its dominant colors, shapes, or patterns, as Pablo Picasso did with his famous mural of three musicians. The performers, all sharp lines and angles, don't look the least bit real, yet there's no doubt who they are.

6. **Purely abstract** work, like much of the Abstract Expressionist movement of the 1950s, actively shuns realism, reveling in the embrace of the subjective. The subject or point of the painting is the colors used, the textures in the artwork, and the materials employed to create it.

7. **Photorealism** developed in the late 1960s and '70s in reaction to Abstract Expressionism, which had dominated art since the 1940s. This style often seems more real than reality, where no detail is left out and no flaw is insignificant.

Some artists copy photographs by projecting them onto a canvas to accurately capture precise details. Others do it freehand or use a grid system to enlarge a print or photo. One of the best-known photorealistic painters is Chuck Close, whose mural-size headshots of fellow artists and celebrities are based on snapshots.

Some of the Greatest Filipino Painters

1. **Juan Luna**- painter and revolutionary activist. He is best known for his Spoliarium, his painting that gave him the gold medal in the Exposición Nacional de Bellas Artes in 1884.

2. **Fernando Amorsolo**- famous for his rural landscape paintings and his mastery in the use of light.

3. **Vicente Manansala**- painter famous for his style of Cubism. Like Amorsolo, Manansala is also a National Artist for Visual Arts.

4. **BenCab (Benedicto Cabrera)**- the "artist-activist", BenCab was awarded the National Artist for Visual Arts in 2006.

5. **Botong Francisco**- also a National Artist for Visual Arts awardee. He is famous for his murals. He also discovered the Angono Petroglyphs in 1965.

SCULPTURE

Definition

Sculpture is the branch of the visual arts that operates in three dimensions. It is one of the plastic arts. Durable sculptural processes originally used carving (the removal of material) and modeling (the addition of material, as clay), in stone, metal, ceramics, wood and other materials but, since Modernism, there has been an almost complete freedom of materials and process. A wide variety of materials may be worked by removal such as carving, assembled by welding or modeling, or molded or cast.

Mediums

1. Bricks, Clay and Terra Cotta

Artists often use the medium that works best for the application. Sculptures can be made from brick, such as the Patriots Peace Memorial in Louisville, Kentucky, and may include bas-relief stone carvings like the Arc de Triomf -- the Arch of Triumph -- in Barcelona, Spain. Clay is a common sculpting medium because it's easy to work with. The Chinese Terracotta Army discovered in 1974 near the tomb of China's first emperor Qin Shi Huangdi contains life-sized horses and an army of 8,000 individually sculpted soldiers, all with different faces and gear.

2. Metal and Wire Sculptures

Metal artist Richard Carey makes wire and metal sculptures depicting dragonflies, rabbits, kiwi, chameleon and even a piece that resembles a xenomorph creature from "The Alien" movie franchise. Other metal sources for sculptures include gold, lead, brass, steel, copper and silver.

3. Fabric, Paper and Ivory

Internationally acclaimed Polish artist Magdalena Abakanowicz began working with fabric mediums such as burlap and gauze, among other items in the 1970s. Her Androgyn III, created in 1985, consists of burlap, wood, string, resin and nails, and resides in New York's Metropolitan Museum of Art. Sculptors have long valued ivory from elephant tusks as a material for small detailed carvings. People even create 3D art pieces from paper by wetting, molding, cutting and shaping.

4. Sand and Stone

If you've ever visited a beach during a sand sculpting contest, you'll marvel at the creativity of the artists who create sculptures from sand. In most cases, the sculptures are temporary, washed away with the next high tide. One company promotes their sand sculptors for special events, which involves displays of the project as the artists create castles and dragons from sand. All types of stone are used as source materials for a variety of sculptures, with Michelangelo's work at the top of the list for his creations from marble, such as David and the Pieta.

5. Wax and Wood

Wax sculptures abound at Madame Tussauds wax museums in cities around the world. These museums depict life-sized wax sculptures of the famous and infamous. With museums in America, Asia, Australia and Europe, the wax sculptures include movie stars, historical figures, world leaders and more. Native Americans have long used wood for their hand-sculpted totem poles, [while many wood artisans today carve wooden sculptures with chainsaws].

6. Recycled Materials

In the end, the materials an artist uses may be part of a statement she makes with her artwork, as when an artist creates a sculpture that includes glass, lights and sound or recycled materials. Slater Barron -- the Lint Lady -- makes sculptures from lint from the dryer lint screen and uses recorded sound in some of her pieces. The mediums that artists choose are as varied and wild as their imaginations.

Techniques

Sculptors use many different materials and techniques to create their sculptures. Methods for sculpting:

1. Additive- adding the materials little by little to form a new image.
 - Pottery
 - Paper Mache'
 - Modeling
 - Molding
 - Assemblage & Construction
 - Casting: Negative- mold hollow which the liquefied casting material is pour.
Positive: the copy or reproduction derived from the negative ready for hardening.
 - Welding – the process of forming by the use of welding machine.
 - Mobile- an sculptural works that moves and with sounds.
 - Body Forms
2. Subtractive- carving- pre-historic style, a pain staking and time consuming process of cutting away until the desired form is reached.

Some of the Greatest Filipino Sculptors

1. **Napoleon Abueva**, was a Filipino artist. He was a sculptor given the distinction as the Philippines' National Artist for Sculpture. He was also entitled as the "Father of Modern Philippine Sculpture". He was awarded National Artist of the Philippines in the field of Visual Arts.
2. **Abdulmari Asia Imao** was a Filipino painter and sculptor. Imao was named National Artist of the Philippines for Sculpture in 2006. A Tausūg, Imao is the first Moro to receive the recognition. Aside from being a sculptor, Imao is also a painter, photographer, ceramist, cultural researcher, documentary film maker, writer, and a patron of Philippine Muslim art and culture.
3. **Ray Mudjahid Ponce Millan** better known as Kublai Millan or Kublai is a prolific artist from Mindanao. He is known for his giant sculptures. Aside from being a sculptor he is also an art photographer, painter, digital artist and performance artist.
4. **Melecio Figueroa** is a Filipino sculptor and engraver whose design was featured in previous coin series of the Philippine peso.
5. **Claude Tayag**, is a Filipino artist, restaurateur and food writer. He is best known for depicting scenes of impressionistic landscapes and scenes of Philippine folk festivals and religious imagery in his art. In recent years, he has written and been involved with Philippine gastronomy both as renowned chef and as food writer with his weekly column, Turo-Turo (Filipino for pinpoint) on The Philippine Star. A scion of the Tayag family of Pampanga, he is the son of author and journalist, Renato D. Tayag.

ARCHITECTURE

Definition

Architecture is both the process and the product of planning, designing, and constructing buildings or any other structures. Architectural works, in the material form of buildings, are often perceived as cultural symbols and as works of art.

Styles and Designs

Depends on climate, geographical location, aspects of life, social, political, economical, spiritual, ideological, and technological.

Materials Used

1. Mortar Construction- cement, sand, gravel, and rocks.
2. Organic Materials- wood: yakal, guijo, apitong, tanguile, lauaan, and made into plywood, lawanit, and plyboard.
3. Highbred Materials- adobe, bricks, tiles, marbles, granite:
: long span- oven baked- Jacinto Steel, Philmetal etc.
4. Reinforced Bars- 6, 8, 10, 12, 16, 18, and 20 mm etc.
5. Synthetic Materials- plastic, glass, and aluminum.
6. High Tech Steel for skeleton support.

Evolution of Philippine Architecture

1. Pre-Hispanic Era

- Caves and rock shelters like the Tabon Cave in Palawan served as shelters for the early Filipinos. Later on the invention of various tools allowed for the fabrication of tent-like shelters and tree houses.
- Early pre-historic houses were characterized by rectangular structures elevated on stilt foundations and covered by voluminous thatched roofs ornamented with gable-finials and its structure could be lifted as a whole and carried to a new site. Examples include the Ifugao House, bahay kubo and the Maranao's torogan.
- Caves and rock shelters like the Tabon Cave in Palawan served as shelters for the early Filipinos. Later on the invention of various tools allowed for the fabrication of tent-like shelters and tree houses.
- Early pre-historic houses were characterized by rectangular structures elevated on stilt foundations and covered by voluminous thatched roofs ornamented with gable-finials and its structure could be lifted as a whole and carried to a new site. Examples include the Ifugao House, bahay kubo and the Maranao's torogan.

2. Spanish Colonial Era

- In 1564, the Franciscans built the First Hospital in the Philippines, Hospital Real.
- The 1573 royal ordinance of King Philip II, known as the Laws of the Indies, was prescribed and stated that every town was to have a gridiron design (cuadricula) with a central square (plaza).
- In 1583, Intramuros was destroyed by fire, requiring new buildings to be constructed of stone and tile.
- Jesuit Antonio Sedenio introduced stone and masonry construction.
- Implementation of the hybrid type of construction called arquitectura meztiza:

- wood in the upper floor and stone in the lower floor;
- house posts or haligues supported the second floor;
- stone floors at the ground floor acted as a solid curtain concealing the wooden framework within, and;
- wooden pegs and dovetailed joints connected the wooden structural system together.
- The bahay na bato, typically two stories with the ground level made of massive cut stone or brick walls and the upper level built of hardwood, emerged from the 17th to the 19th centuries.
- The last quarter of the 19th century witnessed the rise of accessorias (apartment dwellings), single or two-stories high and having multiple units called viviendas.
- School buildings surfaced: the colegio or universidad (urban areas) and the escuela primaria (pueblos), a cluster of multi-storey buildings in rectangular configuration with a central courtyard.
- The leading-edge technology available at that time was employed to build ports, roads, bridges, lighthouses, waterways, piped water systems, railways and street-car systems.

2. American and Japanese Era

- In 1902, the Americans introduced the use of the toilet via a pail conservancy system, or cubeta in Manila.
- In 1908, the concept of a well-planned neighborhood called Sanitario Barrio was introduced and led to the crossbreed of the tropical features of vernacular buildings with hygienic structural principles and modern materials.
- In 1912, the Bureau of Health endorsed several variations of the toilet.
- American architects Edgar K. Bourne and William E. Parsons, steered Philippine architecture to the proto-modernist route. Their works were characterized by unembellished facades with large windows.
- Daniel H. Burnham, the Father of the City Beautiful Movement, was commissioned to design masterplans for Manila and Baguio. Burnham endorsed the appointment of Beaux Arts-trained William Parsons as Consulting Architect (1905-1914) whose contribution to local architecture include:
 - the Kahn system of concrete reinforcements and hollow-blocks;
 - the use of termite-resistive Philippine hardwood, and;
 - the concept for the mass fabrication of standard building types.
- In 1906, the construction of the Asylum for the Insane in San Lazaro instigated the use of reinforced concrete as the standard construction material for all government structures.
- Buildings that defined the pre-war skyline of Manila include the El Hogar Filipino Building, Hongkong Shanghai Bank Building, Pacific Commercial Company Building, Filipinas Insurance Company Building, China Banking Corporation, French Renaissance Luneta Hotel, and the Mariano Uy Chaco Building.
- Birth of “first generation” Filipino architects who were sponsored by colonial officials to study architecture and engineering in the United States. Together with the maestros de obras Arcadio Arellano and Tomas Arguelles, they combined Beaux Arts elements – aesthetic proportions, optical corrections – with the influences of modernism and the concepts of utility and honesty of architecture.

- The “second generation” architects, namely, Andres Luna de San Pedro, Fernando Ocampo, Pablo Antonio and Juan F. Nakpil, emerged in the late 1920s and 1930s and introduced the Art Deco, characterized by exuberant exoticism and ornamentation, as evident in the following facades of buildings: ELPO Building, Bautista-Nakpil Pylon, Metropolitan Theater, Santos House, and the Mapua House.
- The three-year Japanese occupation grounded all architectural production to a standstill.

4. Post-World War II Era

- In 1946, the independent Philippines expressed its identity by implementing modernism through the utilization of reinforced concrete, steel and glass, the predominance of cubic forms, geometric shapes and Cartesian grids, and the absence of applied decoration.
- In 1947, a corps of architects and engineers were tasked to study the modern US and Latin American capitals and formulate the master plan for Manila.
- Federico Ilustre, consulting architect from the 1950s to 1970s, worked on the buildings at the Elliptical Road in Quezon City. The centerpiece is the 66-meter high Art Deco Quezon Memorial Monument, composed of three pylons topped by winged figures representing the three island groups.
- The 1950s and 1960s staple architectural elements were the brise-soleil (sunbreaker), glass walls, pierced screens and thin concrete shells.
- The post-war doctrine was “Form follows function,” professed by the “third generation” architects, namely, Cesar Concio, Angel Nakpil, Alfredo Luz, Otillo Arellano, Felipe Mendoza, Gabriel Formoso, and Carlos Arguelles.
- The 1950s also witnessed Space Age aesthetics and Soft Modernism, which experimented with the sculptural plasticity of poured concrete to come up with soft and sinuous organic forms with the use of thin-shell technology.
- Examples:
 - Space Age: Victor Tiotuyco’s UP International Center and Jose Zaragoza’s Union Church, and
 - Soft Modernism: Church of the Risen Lord, Church of the Holy Sacrifice (UP Chapel) and the Philippine Atomic Research Center.
 - In the 1950s, the height of buildings was limited by law to 30 meters. With the amendment of Manila Ordinance No. 4131, a high-rise fever redefined Manila’s skyline:
 - Angel Nakpil’s 12-storey Picache Building, considered as the first skyscraper in the Philippines.
 - Cesar Concio’s The Insular Life Building, the first office building the old 30-meter height restriction.

5. Late Twentieth Century

- In the 1960s, Filipino architects incorporated some modernist formal principles by employing local materials and referencing vernacular traditions:
 - the Manosa Brothers’ Sulo Hotel and Esso Gas Stations
 - Francisco Fajardo’s Max’s Restaurant
 - Felipe Mendoza’s Holiday Hills Golf Club House

- Otillo Arellano's Philippine pavillion for the 1964 New York World's Fair
- In the 1970s, Former First Lady Imelda Marcos pursued a singular "national architectural style" to concretize the official maxim of Isang Bansa, Isang Diwa (One Nation, One Soul).
- The oil crisis of 1973 to a movement for energy-efficient designs called Tropical Regionalism:
 - The Manosa Brother's San Miguel Corporation's Headquarter Building
 - Felipe Mendoza's Development Academy of the Philippines
 - Locsin's Benguet Corporation Building
 - Jorge Ramos' GSIS Building

6. The New Millennium

- Exemplified by the garish applications of pastel colors and the mixing and matching of ornaments and styles.
- Skyscrapers adopted the tripartite division of columnar architecture (Tower-on-the-Podium): the podium, the shaft and the crown.
- Rise of master planned micro-cities like Bay City, Eastwood City, Fort Bonifacio Global City and Rockwell Center, retail environments SM Mall of Asia, Gateway Mall, Trinoma, and Greenbelt Mall; and gated communities of suburban pretensions.
- Global architectural firms bestow "designer labels" to mega structures like Michael Graves' World Trade Exchange, I.M. Pei's Essensa Towers, Arquitectonica's Pacific Plaza Tower, Kohn Pedersen Fox Associates' LKG Tower, and Skidmore and Owings & Merrill's Yuchengco Tower.
- Architects were labeled as "late modernists" and, later as "neo-modernists" and "super modernists."
- Inspirations were drawn from aircraft technology, robotics and cyberspace as demonstrated by the One San Miguel Building, the PBCOM Tower, and the GT International Tower.
- Reflective blue or aquamarine curtain walls, aluminum cladding, metallic sun visors, and metal mullions are mainstays of millennium skyscrapers.
- Presence of architecture of deconstruction, which is characterized physically by controlled fragmentation, non-linear design processes, stimulating unpredictability, asymmetric geometries and orchestrated chaos like the works of Alexius Medalla, Eduardo Calma and Joey Yupangco.
- Advances in computer-aided design (CAD) and computer-aided manufacturing (CAM) technologies.
- Implementation of "green architecture" to reverse the negative impact of buildings on human health and on the environment by enhancing the efficiency and moderating the use of materials, energy and space.

Some of the Greatest Filipino Architects

1. **Leandro Locsin** (1928-1994) was in some ways a quintessential Renaissance man. A brilliant architect, interior designer, artist, and classically trained pianist, Locsin was also a keen art collector, amassing a sizable collection of fine Chinese art and ceramics

during his lifetime. It is for his buildings, however, that he is remembered. From airport terminals to memorial chapels, arts centers to stock exchange structures, Locsin left his mark on the urban landscape of the Philippines.

- Locsin was determined to reconfigure western architectural mores for a Filipino audience. His most substantial contribution to Filipino architecture is the Cultural Center of the Philippines, a collection of five buildings that demonstrate the architect's drive to find a vernacular form of modernist architecture. The National Theatre building within the complex is a good example of Locsin's trademark style. Known as "floating volume," it consists of a two-floor-high block of travertine marble cantilevered 12 feet into the air. The theatre harks back to traditional Filipino dwelling huts, but on a monumentally modern scale.
- Despite the wide range of buildings Locsin created, all of them have one thing in common: concrete. His ability to make this most monolithic of materials appear weightless, and to elegantly combine Western brutalism with vernacular elements, led Locsin's peers to dub him the "poet of space."

2. Ildefonso P Santos

- The father of Philippine landscape architecture, Ildefonso Paez Santos, or IP Santos as he was known, created some of the best-loved urban spaces in the Philippines. Landscape architecture, which deals with parks, plazas, and green spaces, was a little-considered element of urban planning in the first half of the 20th century. However, Santos changed that, carrying out pioneering work that, after four decades in the profession, led him to become National Artist for Architecture in 2006.
- One of his earliest successful projects was the Makati Commercial Center, an outdoor shopping mall in which the shop fronts and walkways were interspersed with garden trails, fountains, and public artworks. This led him to be commissioned to revitalize Manila's Paco Park, the work for which he is perhaps best remembered. A former Spanish cemetery and Japanese ammunitions store, the park was transformed into a national park in 1966.
- Between 1967-1969 Santos revived the park's grounds and incorporated the original park structures, including memorial sites and fortification walls, into a space for urban recreation.

3. Pablo Antonio

- One of the first exponents of modernist architecture in the Philippines, Pablo Antonio (1901-1975) is revered as a pioneer and the foremost architect of his time. This success was perhaps unexpected for a boy who was orphaned at 12 and who dropped out of his first architecture program. It was during his studies at the University of London that Antonio began to shine, completing a five-year program in only three years. He went on to revolutionize popular architecture in the Philippines, eschewing the fashionable neo-classical style for his own version of art deco. Antonio was acutely aware of the demands made on architecture by the unforgiving Philippine climate. Buildings such as the Galaxy Theatre, the Far Eastern University, and the Manila Polo Club display practical innovations such as natural ventilation systems and sunscreens, all of which are rendered in Antonio's signature style: clean lines, strong shapes, and simplicity. As Antonio's

son Pablo Jr explains, “for our father, every line must have a meaning, a purpose. For him, function comes first before elegance and form.”

4. Juan Nakpil

- The son of veterans of the Philippine Revolution, Juan Nakpil (1899–1986) was committed to the belief that architecture built in the Philippines should reflect its culture and people. In his early career, Nakpil spent time studying in the United States and France, absorbing the lessons of international architecture. When he returned to Manila in the mid-1920s, Nakpil applied his new-found knowledge to Filipino structures. He worked on the restoration of the home of national hero Jose Rizal and, like Locsin, took inspiration from traditional stilt houses, remaking them in cantilevered concrete on a mammoth scale. His own holiday home was designed along these lines, combining traditional nipa roofing (made out of natural materials) with a poured concrete base. Nakpil worked on dozens of buildings across the nation, from the Manila Jockey Club and the Quiapo Church, to the Mabini Shrine and government departments. Despite his determination to make buildings specifically for Filipino citizens, some of his designs were considered too radical by the public. Nakpil’s stainless steel pylon, superimposed over a granite obelisk memorialising Jose Rizal was unpopular and was soon removed. But Nakpil’s failures were few, and he remained one of the Philippines’ most popular and revered architects until his death. He was named a National Artist for Architecture in 1973.

5. Francisco Mañosa

- Francisco ‘Bobby’ Mañosa has been challenging architectural convention in his native country for five decades. He displayed an artistic temperament from an early age and remained a keen painter throughout his life. Along with his three brothers, Mañosa eventually chose to pursue architecture, and before long became the “outspoken champion of indigenous architecture,” thus popularizing the idea of Philippine architecture for Filipinos.
- Mañosa’s distinctive style, known as Contemporary Tropical Filipino Architecture, is a heady mixture of seemingly incongruous elements. Coconut lumber, rattan, shell, thatch, and even indigenous textiles are juxtaposed with hypermodern materials: metal, glass, concrete. The Coconut Palace at the Cultural Center of the Philippines complex typifies Mañosa’s style. Its coconut gourd roof, coconut shell chandelier, and pineapple fiber bedcovers are infused with technological innovation for the modern era. In 2009 Mañosa was designated a National Artist in Architecture.

6. Carlos A. Santos-Viola

- An urbane young man who enjoyed lawn tennis and playing the saxophone, Carlos Santos-Viola was also a gifted architect. He was a devout Catholic throughout his life, and many of his best known designs were executed for the Iglesia Ni Cristo, a Filipino religious group. Santos-Viola created churches for the group all over the archipelago, designed in a style quite distinct from that of his contemporaries. Instead of the monumentalism of Leandro Locsin or the art deco simplicity of Pablo Antonio, Santos-Viola chose to incorporate Gothic and Baroque elements into his modern churches.

- The Central Temple he built for the Iglesia Ni Cristo shows these revivalist flourishes working in harmony with Santos-Viola's passion for geometric shapes and, perhaps more than anything else, functionality. The desire for functionality informed almost all of Santos-Viola's work, and he was fond of asserting that "the structure must not only look good but must also be made well."

SOUTHEAST ASIA: ART HISTORY, ART TODAY (By Patrick D. Flores)

- Consider the complexity of the category "Southeast Asia" as a kind of theater. On one level, it is a stage on which a great tradition is idealized, the spectacle of a storied past juxtaposed with the speed and density of current urban life. The rubric also once embodied a theater of operations for various 19th- and 20th-century imperialisms, in which the empires of Europe and America extended their dominions across the world. One might think of it too as a present-day platform for both the marketing of goods and the migration of people and things.
- Southeast Asia is also a specific locale or region within Asia, the latter part of its name being the main coordinate. This "southeast" is a distinct category, not merely an allusion to traces of the great traditions of India and China, or the spiritual legacies of Hinduism and Buddhism. Southeast Asia is neither India nor China—and certainly not the West—but manifests significant inheritances from them, as may be seen in the monuments of Angkor in Cambodia, Borobudur in Indonesia, Ayutthaya in Siam (now Thailand), and the colonial churches of the Philippines.
- Southeast Asia may further be regarded as a geopolitical field, the scene of colonial expansion by the Portuguese in Eastern Timor; the British in Malaya, Burma, and Northern Borneo; the Dutch in Indonesia; the Spanish and Americans in the Philippines; and the French in Indochina (Cambodia, Vietnam, and Laos), with Siam as a buffer state. In an earlier time, the region was vaster, encompassing parts of China, India, and the Pacific. Southeast Asia may also be seen as a place where religions such as Christianity and Islam have undergone localization, exemplified by the only Catholic nation in Asia, the Philippines, and the world's most populous Islamic country, Indonesia. Links may be drawn from this colonial phenomenon to events ranging from the Cold War era that began in the late forties to the post-independence period, which spanned the rise of authoritarian states and the struggle for representation and justice, through the 1990s; the Vietnam War; the Asian financial crisis of 1997; and increasing terror and counter-terror operations after 9/11. The establishment of the Association of Southeast Asian Nations (ASEAN) in 1967 clarified the status of Southeast Asia as a geopolitical, not merely geographical, category—a distinction that remains in place. Finally, Southeast Asia may be traced to a deeper Austronesian history.
- When considering the many contingencies of Southeast Asian art history and its contemporary articulations, it is worth pondering a line from Malaysian artist and curator Redza Piyadasa's intermedia work *Entry Points* (1978), which consists of a text inscribed on the surface of a painting, in relation to an actual work of art. According to the piece: "Art works never exist in time; they have entry points." To replace presence with trajectory leads us to think about how the category "Southeast Asia" might figure in the mercurial logic of art history, a discipline that

emerged coincidentally with the birth of the museum and a certain phase of capitalism. In Piyadasa's scheme, it seems that art takes a nonlinear route, taking place out of time, slipping past edges and limits, insinuating itself into whatever discursive space renders it current or instills it with value.

- What might we identify as some of the “entry points” to which Piyadasa refers? First, there is the idea of the modernity of art in Asia. This theme has preoccupied the Australian art historian John Clark, who has written an extensive survey of Asian modern art as well as comparative studies of contemporary phenomena such as regional biennials, or the relations between modernities in Thailand and China. His concept of the “worlding of the Asian modern” (my italics) is instructive to the degree that it maps the histories of Asia's diverse art worlds, offering typologies, paradigms, and tendencies in the mediation of the translocal. Clark's ventures move beyond national art histories, which tend to bypass living interactions in favor of national imaginaries, but they are keenly attentive to local knowledge. He defines worlding as a process that “implies a coherence other than that provided by internal discourses: it posits an outside, and this depends on how the nature and extent of the outside were reciprocally conceived.”[1. John Clark, “The Worlding of the Asian Modern” (paper, World and World-Making in Art Conference, Australian National University, Canberra, 2011).]
- The second entry point is the set of signs that reveal the transfer of self-consciousness in Southeast Asian art and image production. This includes the signature that validates the identity of an artist and his or her claim on the work of art as a distinct category involving the criteria of talent, quality, and social significance. This was observable in the first time that Philippine engravers (Nicolas de la Cruz Bagay and Francisco Suarez) signed their names on the maps they made in the 18th century, and in the identifying mark stamped on pictures taken by a Javanese photographer (Kassian Cephas) working for the sultan of Jogjakarta in the 19th century. Allied with the signature are both the artist's innate skill and the ability derived from training through apprenticeship or art-school education. One such ability was the kind of mastery of perspective discernible in early drawing manuals from Manila (*Elementos de Perspectiva* in 1828) and a midwifery book (*Treatise on Midwifery* in 1842) from Bangkok.
- A third entry point is the face, a representation of the self and its sense of belonging to the world. The changing treatment of the face is concretized by the way in which Thai King Mongkut (1851–1868) defied the Buddhist interdiction of reproduction and allowed himself to be photographed so that his image could be disseminated to the world. This rupture catalyzed a more fulsome modernity in the efforts of his son Chulalongkorn (1868–1910), who invited Italian artists to Thailand to adorn the country with art. Portraiture, therefore, was a cogent instance of modernity, as evidenced in the self-portraits of two of Southeast Asia's most highly accomplished artists in the 19th century, Indonesian Raden Saleh and Filipino Juan Luna, as well as in group portraits that prefigured the nation as a filial system or network of affinities.

- Together with the face, the historic event as a subject for art is also a significant entry point, letting the artist act critically in at once recording and offering comment—either allegorically, as in the 1821 “Basi Revolt” series by Philippine painter Esteban Villanueva, or politically, as in *The Arrest of Diponegoro* (1857) by Saleh (who, incidentally, was the first major Asian artist to exhibit at a European salon, in Amsterdam in 1834 and in Paris in 1847). Related to this as a further entry point or index is the notion of movement beyond locality, an exposure to others within a global setting of the kind referenced by such instances of the universal expositions of art and culture as Luna’s receipt of a gold medal for his painting *Spoliarium* in Madrid in 1884, or the appearance of a Cambodian temple in Paris in 1900.
- Tradition is a way in too. What are the ties binding the modernity of art in Southeast Asia to a past, to an authentic “precolonial” or “premodern”—or alternatively “civilizational” or “ancient”—origin? The eminent scholar T. K. Sabapathy, who lives and works in Singapore, dwells on how art historiography may be shaped by a strategically non-Western epistemology. Sabapathy probes this problem through the oft-cited texts *History of Indian and Indonesian Art* (1957) by Ananda Coomaraswamy and *The Indianized States of Southeast Asia* (1968) by George Coedes. His main point is that Southeast Asia gains the privilege of identity through India; he even calls the region “Farther India.” Coedes for his part would reduce Southeast Asia to the process of Indianization or Sanskritization, prompting Sabapathy to argue that he “has imposed a programmatic design of Indian influence onto Southeast Asia. . . . tantamount to propounding a colonial doctrine.”[2. T. K. Sabapathy, “Developing Regionalist Perspectives in Southeast Asian Art Historiography,” in *The Second Asia-Pacific Triennial of Contemporary Art* (Brisbane: Queensland Art Gallery, 1996), p. 16.] Here, the true tradition is Indian, co-opting the *kunstwollen* of the Southeast Asian, as may be intuited in the interpretation of the image of Harihara (late 7th–early 8th century) from Prasat Andet in Cambodia. Coomaraswamy describes the latter in terms of its diffusion of Pallava art of the same period in India, not in terms of its peculiar translocal form.
- This burden of context in Southeast Asian art history leads us to Stanley J. O’Connor’s essay “Art Critics, Connoisseurs, and Collectors in the Southeast Asian Rain Forest: A Study in Cross-Cultural Art Theory” (1983), in which he speaks of a mode of being and origin. Looking at Southeast Asian ceramics, O’Connor marks the origin of an aesthetic that, according to him, “seems to lead not to some special province reserved for an affective response to privileged objects, but is instead rooted in social customs concerning death and a speculative investigation into the nature and destiny of the soul.”[3. Stanley J. O’Connor, “Art Critics, Connoisseurs, and Collectors in the Southeast Asian Rain Forest: A Study in Cross-Cultural Art Theory,” *Journal of Southeast Asian Studies* 14, no. 2 (September 1983), p. 408.] What we see here is a turn to the ethnographic and the affective in the discussion of art as well as the intimate connections between art and ethnology, imagination and origin. As a pioneering mentor of scholars in the field, O’Connor represents what may be characterized as the Cornell school in the history of art in Southeast Asia. From this school

came such influential names as Claire Holt, Nora Taylor, Astri Wright, and Apinan Poshyananda. Taylor in particular elaborates on this methodology in her recent book on Vietnamese art, which takes a decidedly ethnographic approach in the writing of what may already be a tenuous enterprise of art history.[4. Nora Taylor, *Painters in Hanoi: An Ethnography of Vietnamese Art* (Singapore: National University of Singapore, 2009). Taylor also co-edited with Boris Ly the anthology *Modern and Contemporary Southeast Asian Art: An Anthology* (Ithaca: Cornell University Press, 2012).]

- The final entry point is the consolidation of art in Southeast Asia as a corpus, collected by museums, traded in the market, historicized by discourse, subjected to connoisseurship, and studied in schools. In this regard, survey and thematic exhibitions, biennials, conferences, and publications testify to the body of work, which was predominantly generated by certain centers such as Brisbane through the Asia-Pacific Triennial, Fukuoka through the Asian Art Show and later the Triennial, Singapore through its biennial (the first of its kind in the area), and Tokyo through the Japan Foundation. That said, ASEAN's initiatives to convene art and specialists and develop regional discourse must be acknowledged. The region's grandest museum project, the National Art Gallery, Singapore (slated to open in 2015), also has a role to play. But with such gains come multiple pressures on the practice of Southeast Asian art history.
- The entry points discussed here may be regarded as tangential to the Southeast Asian contemporary, which gathers its lineage from a nuanced history of relationships with the West and its systems of artistic knowledge. Mediations of the modern and its critical appropriation reside at the core of this contemporary condition. The process of belonging to it, resisting it, or transforming it constitutes a significant aspect of art making, and has yielded a body of works, texts, and practices. Another impulse might be that of opposition to critique, an attitude that expresses a certain comfort with the world and its relocations and dispersals; it is playful, performative, unafraid of the foreign, and unburdened by the anxiety of influence. The interplay of these tendencies may yet shape Southeast Asia as a postcolonial, contemporary, and global artistic terrain, animated by the integrities and idiosyncrasies of a region known for its cogent thought and histories of struggle.
- In terms of aesthetic practice, Southeast Asian contemporary art also turns on multiple pivots. First, we must consider its fraught tie with the image, whose potency stems from its promise of salvation and relationship with authority. Whether religious or monarchical, imbricated in dictatorships or capitalist regimes, the image is a central "structure of feeling" that invites resistance by way of parody, iconoclasm, scatology, and instructive social commentary. That said the devotional or heretical image appears open to exploitation by a market that peddles "realism," resulting in a mannerist approach to the figure and image.
- Second, the Southeast Asian contemporary exhibits a strong sense of the relational, advancing a spirited argument against the fragmentation wrought by forces such as a patrimonial state preoccupied with development and nation building, democracy and paternalism. The search for a respite from this relentless instrumentalization of the "mass" has sparked the formation of artist-

initiated spaces and the emergence of the artist-curator-historian. It also has fostered efforts in the fields of performance, activism, and collaborative endeavors among dispossessed communities from cities to rural villages—and, in the case of the Philippines, in the context of an in-progress socialist revolution.

- Finally, there is an instinct to re-purpose the hybrid impedimenta of globalization and further intensify an already ebullient post-colonialist drive. The effect is a vibrant, even baroque challenge to the totality of the dominant order that lies somewhere between ethnographic surrealism and everyday life.

*****the end*****
