

FIELD STUDY REVIEWER

Prepared by:
SANTOS, JHON MARK M., LPT

Field Study 1-

Observations of Teaching-Learning in Actual School Environment, is aligned with the Philippine Professional Standards for Teachers (PPST) and program outcomes common to all teacher education programs as contain in CMO No. 74-80 and No. 82, s. 2017.

The PPST's, the standards of quality teaching in the Philippines, consist of seven (7) domains and thirty seven (37) strands and 148 performance indicators of good teaching the PPSTs are focused on the development of the 21st century teacher who can respond to the demands of the k-12 Basic Education Curriculum which the department of Education began implementing in SY 2012-2013

Philippine Professional Standards for Teachers

1 Content Knowledge and Pedagogy

2 Learning Environment

3 Diversity of Learners

4 Curriculum and Planning

5 Assessment and Reporting

6 Community Linkages and Professional Engagement

7 Personal Growth and Professional Development

Central to the K to 12 Reform and places, at the beginning, the importance of teachers knowing their content and knowing how to teach it.

What are Field Study subjects for?

Field Study 1 is the first experiential course which will immerse a future teacher in the actual classroom setting where direct observation of teaching-learning episodes that apply educational theories learned in the content and pedagogy courses will be made. This is followed by Field Study 2 where the future teacher assists and participates in guided actual teaching-learning process.

What is the approach in the Field Study?

In 2006, an approach used in the field study was derived from all the theoretical underpinnings previously discussed. This is the OAR approach.

The OAR is a tool that helps the boat move into its intended direction. They used acronym OAR to represent the general cyclical pattern of the task that pre-service teachers are expected to do in the different learning episodes.

OBSERVE in the actual setting
ANALYZE in the observation data
REFLECT on the experience

MAJOR OBSERVATIONS IN THE FIELD STUDY

1. Environment- which serves as the context (classroom, learning spaces, activities) in which teaching and learning occur.
2. Learners- whose growth and development, characteristics and diversity influence how they interact, how they respond to teaching, shown in their on-task or off-task behaviour.
3. Teachers- who are the guide and the facilitators, managers of learning, the techniques they use, their philosophy of education, their personal and professional characteristics that influence their teaching and learning strategies.

Course Description:

This is the first experiential course, which will immerse a future teacher to actual classroom situation and learning environment where direct observation of teaching learning episodes that focus on the application of educational theories learned in content and pedagogy courses will be made. Observations on learners' behavior, motivation, teacher's strategies of teaching, classroom management, assessment in learning among others shall be given emphasis. A portfolio shall be required in the course.

CHED Program Outcomes Common to all Teacher Education Programs

- 6.2 a Articulate the rootedness of education in philosophical, socio-cultural, historical, psychological and political contexts
- 6.2 b Demonstrate mastery of subject matter / discipline
- 6.2.c Facilitate learning using a wide range of teaching methodologies and delivery modes appropriate to specific learners and their environments
- 6.2.d Develop innovative curricula, instructional plans, teaching approaches, and resources for diverse types of learners
- 6.2.e Apply skills in the development and utilization of ICT to promote quality, relevant, and sustainable educational practices, and
- 6.2.f Demonstrate a variety of thinking skills in planning, monitoring, assessing, and reporting learning processes and outcomes, and
- 6.2.g Practice professional and ethical standards sensitive to local, national and global realities,
- 6.2.h Pursue lifelong learning for personal and professional growth through varied experiential and field based opportunities

Course Intended Learning Outcomes

1. Describe how a safe and secure learning environment contributes to the physical, socio-emotional and cognitive development of learners (PPST Domain 2)
2. Determine ways of addressing learners' diversity in terms of gender, needs, interests, cultural background and difficult circumstances (PPST Domain 3)
3. Appraise how teacher manifests her/his personal and professional competencies. (PPST Domain 7)
4. Illustrate the teaching-learning process and the use of ICT to promote quality relevant and sustainable educated process (PPST Domain 4)
5. Assess the various classroom management strategies observed in the class (PPST Domains 2 and 4)
6. Analyze concepts, theories and principles in curriculum development in actual classroom setting. (PPST Domain 4)
7. Evaluate assessment and reporting practices done in the classroom (PPST Domain 5)
8. Formulate one's philosophy of teaching (PPST Domain 7)

THE SCHOOL ENVIRONMENT

1. A physical environment conducive for learning is one that has consistent practices that:
 - Keep the school safe, clean, orderly, and free from distraction
 - Maintain facilities that provide challenging activities
 - Address the physical, social and psychological needs of the students

2. Display boards can be powerful in communicating information about the learning environment. They help in building and establishing the social culture. These boards become one-way for everyone to learn about VMGO and values that the school upholds.

3. As a basic part of the school's visual environment, display boards have four general purposes:

- Decorative-They offer stimulation and appeal to aesthetics. They set the social and psychological atmosphere of the school.
- Motivational- they encourage students to perform better and have greater confidence. An example would be the display of students output that's how that each output is recognized and valued.
- Informational- they are used as a strategy to readily disseminate information.
- Interactive- they move students to respond and participate through interactive displays. They get students to respond and communicate their learning.

Learning Episode 2: Learner Diversity: Developmental Characteristics, Needs and Interests

Major Principles of development to this episode:

1. Development is relatively orderly. Development follows directional patterns such as from the head to toe (Cephalocaudal), and from the center of the body then outwards (proximodistal)
2. Development takes place gradually.
3. All domains of development and learning-physical, social and emotional, and cognitive-are important and they are closely interrelated.

Learning Episode 3: Focus on Gender, Needs, Strengths, Interests, Experiences, Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstance, and Indigenous People.

1. Principles of Development
 - a. Development and learning proceed at varying rates from the child to child, as well as at uneven rates across different areas of child's functioning
 - b. Development and learning are maximized when learners are challenged to achieve at a level just above their current level of mastery, and also when they have many opportunities to practice newly acquired skills.

C. Differentiated-instruction is a student-centered approach that aims to match the learning content, activities and assessment to the different characteristics, abilities, interest, and needs of the learners.

2. The PPST highlighted the following factors that bring the diversity of learners:

- a. Differences in learners' gender, needs, strengths, interests and experiences
- b. Learners' linguistic, cultural, socio-economic and religious backgrounds
- c. Learners with disabilities, giftedness and talents

D. Learners under challenging circumstances which include geographic isolation, chronic illness, displacement due to armed conflict, urban resettlement or disasters, child abuse, and child labor.

Effective teachers are knowledgeable about how issues related to the factors mentioned affect learners. The teachers develop in them **sensitivity** and **empathy**.

The teachers assure the students that their **gender identity**, **culture** and **religion** are respected, **their strengths are recognized**, and their needs will be met.

Learning Episode 4: Learner Diversity: The Community and Home Environment

1. Urie Bronfenbrenner's bio-ecological model presents the learner within the context of layers of relationship systems that make up the learner's environment. The layers are:

Microsystem- includes structure such as one's family, school and neighborhood

Mesosystem- the connection between the structures in the microsystem

Exosystem- the bigger social system which includes the city government, the workplace and the mass media.

Macrosystem- Outermost layer which includes cultural values customs and laws

Chronosystem- the element of time, patterns of stability and pacing of the child's everyday life.

2. Baumrind's Parenting Styles

Authoritarian- Parents are very firm with their children and expect unwavering and unquestioning obedience. Rules are set by parents and misbehaviour.

Permissive- Parents are not firm or controlling. They have few expectations. Maybe warm and caring but appear to be uninvolved and uninterested.

Rejecting-Neglecting- Parents are disengaged from children. Neither demanding nor responsive to children.

Authoritative- Parents achieve good blend. They are firm yet loving. Have clear and reasonable expectations and limits for their children.

Children of:

Authoritarian Parents: are often unhappy, fearful, withdrawn inhibited, hostile and aggressive.

Permissive Parents: believe that their parents do not care for them.

Rejecting-Neglecting Parents: are found to be the least competent in their over all functioning and adjustment.

Authoritative Parents are socially competent, self-reliant, and have greater ability to show self-control.

Learning Episode 5: Creating an Appropriate Learning Environment

The classroom climate that is conducive for learning is one that is non-threatening yet business-like. It is a classroom where, when creating audio-visual presentations, the following are observed:

- Specific classroom rules and procedures are clear
- Classroom Rules and procedures are discussed within the first few days of the school.
- Students are involved in the design of rules and procedures.
- Techniques to acknowledge and reinforce acceptable behaviour are employed.

Learning Episode 6: Classroom Management and Classroom Routines

Routines are the backbone of daily classroom life. They facilitate teaching and learning. They save valuable classroom time. Efficient routines make it easier for students to learn and achieve more.

Establishing Routines early in the school year:

- Enables you to run your daily activities smoothly
- Ensures you to manage time effectively
- Helps you maintain order in the classroom
- Enables you to explain to the learners what are expected from them.

Learning Episode 7: Physical and Personal Aspects of Classroom Management

Importance of Effective Classroom Management

- Increases chances of students success
- Paves the way for teacher to engage in student learning
- Increaes instructional time
- Creates consistency in the employment of rules and regulations
- Decreases misbehaviour in the classroom
- Gives student boundaries as well as consequences.

Learning Episode 8: Close Encounter with the Curriculum

What are the salient features of the k-12 Curriculum?

1. Strengthens the early childhood education with the use of mother tongue
2. Makes the curriculum relevant to the learners
3. Builds skills in literacy
4. Ensures unified and seamless learning
5. Gears up for the future
6. Nurtures a fully developed youth.

The enhanced curriculum k-12 is the **RECOMMENDED CURRICULUM**. It is to be used nationwide as mandated by RA 10533

When the curriculum writers began to write the content and competency standards of the k-12 curriculum it became a **WRITTEN CURRICULUM**. A Lesson Plan is a written curriculum.

What has been written in a lesson plan has to be implemented. It is putting life to the written curriculum, which is referred to as the **TAUGHT CURRICULUM**. The guidance of the teacher is very crucial.

A curriculum that has been planned, and taught needs materials, objects, gadgets, laboratory and many more that will help the teacher implement the curriculum. This is referred to as the **SUPPORTED CURRICULUM**

In order to find out if the teacher has succeeded in implementing the lesson plan, an assessment shall be made. It can be done in the middle or end of the lesson. The curriculum is now called the **ASSESSED CURRICULUM**.

The result of the assessment when successful is termed as **LEARNED CURRICULUM**, learned curriculum whether big or small indicates accomplishment of learning outcomes.

There are unplanned curriculum in schools. These are not written, nor deliberately taught but they influence learning. These include peer influence, the media, school environment, the culture and tradition, natural calamities and many more. This curriculum is called **HIDDEN CURRICULUM**.

So what will be the roles and responsibilities of the teacher in the relations with the school curriculum, specifically in the k-12 or the enhanced curriculum for basic education?

- Know and understand the curriculum as enumerated above
- Write the curriculum to be taught
- Plan the curriculum to be implemented
- Initiate the curriculum which is being introduced.
- Evaluate the written, planned and learned curriculum.

Episode 9: Preparing for Teaching and Learning

This episode gives emphasis on the principles of learning which must be applied to ensure quality instruction. It also focuses on the intended learning outcomes which set the direction of the lesson. They must be (SMART) Specific, Measurable, Attainable, Realistic, and Time-Bound) and formulated in accordance with time-tested principles.

These are the time-tested principles of teaching and learning:

1. Effective learning begins with setting clear expectations and learning outcomes.
2. Learning is an active process. “ What I hear, I forget; What I see, I remember; What I do, I understand.”
3. Learning is the discovery of the personal meaning of ideas. Students are given the opportunity to connect what they learn with other concepts learned, with real world experiences and with their own lives.
4. Learning is a cooperative and a collaborative process.

Episode 10: The Instructional Cycle

This episode centers on the guiding principles in the selection and use of teaching methods. It will also tackle lesson development in the OBTL way. The K-12 curriculum and teacher education curriculum are focused on outcomes, standards, and competencies. This means lessons must be delivered with focus on outcomes.

These are the guiding principles in the selection and use of teaching methods:

1. Learning is an active process
2. The more senses involved, the more and the better learning
3. A non-threatening atmosphere enhances learning
4. Emotion has the power to increase retention and learning
5. Good teaching goes beyond recall of information
6. Learning is meaningful when it is connected to students' everyday life.
