
**PED 1 - FOUNDATION OF THE TEACHING LEARNING PROCESS – THE
TEACHER, SCHOOL CULTURE, AND ORGANIZATION**

Philosophical Foundations of Education

- The word philosophy comes from a combination of two Greek words- “philos” meaning “love” and “sophi” meaning “wisdom.”
- Philosophy in a general sense is conceived a person’s “sum of his fundamental beliefs and convictions”.
- Philosophy is the study or creation of theories about basic things such as the nature of existence, knowledge, thought, or about how people should live.

BRANCHES OF PHILOSOPHY	DEFINITION	SUB – BRANCH	CURRICULAR IMPLICATIONS
Metaphysics			
SUB – BRANCH			
	The study of questions concerning the nature of reality or existence.	Epistemology -The study of the nature of knowledge and how these are attained and evaluated	Curriculum must go beyond its content; must consider what the students can become.
		Social/Political Philosophy - the study of the value judgments operative in civil society	
ASPECTS			
		Cosmology consists in the study of theories about the origin, nature, and development of the universe as an orderly system.	
		Theology is that part of religious theory that deals with conceptions of and about God.	
		Anthropology deals with the study of human beings	
		Ontology is the study of the nature of	

		existence, or what it means for anything to exist.	
Epistemology			
INFLUENTIAL SOURCE OF KNOWLEDGE			
	concerned with the nature and scope of knowledge and is also referred to as “theory of knowledge”.	Empirical knowledge appears to be built into the very nature of human experience.	Curriculum should revolve around the issues on teaching-learning process.
		Revealed knowledge has been of prime importance in the field of religion. It differs from all other sources of knowledge because it presupposes a transcendent supernatural reality that breaks into the natural order.	
		Authoritative knowledge is accepted as true because it comes from experts or has been sanctified over time as tradition.	
		Rationalist knowledge the view that reasoning, thought, or logic is the central factor in knowledge is known	
		Intuitive knowledge direct apprehension of knowledge that is not derived from conscious reasoning or immediate sense perception.	
Axiology			
SUB – BRANCH			
	The study of the question of value.	Ethics is the study of moral values and conduct.	Development of a sense of right and wrong. Projecting a system of values, proposes educational aims under the form of

			axiological objectives and ideals.
			Comprises both general human or universal and specific values for a determined community, thereby giving it its personality.
		Aesthetics is a realm of value that searches for the principles governing the creation and appreciation of beauty and art	performance of values requires knowledge and experience, which means the involvement in this process of education on its two interrelated planes
			horizon of the manifestation of human creativity, education has among its fundamental functions that of cultivating the creative power of the individual and the human community.
Logic	focus on logical and accurate thought patterns		The goal of all curricula must be the development of the ability of students to think logically.

Philosophy: Philosophy is a critical examination of reality characterized by rational inquiry that aims at the Truth for the sake of attaining wisdom.

- Metaphysics: Study about the Reality.
- Epistemology: Study about the Knowledge.
- Axiology: Study about Value.
- Cosmology: Study about origin, nature & development of Universe.
- Theology: Deals with religion or God.
- Anthropology: Study about human being.
- Ontology: study of the nature of existence.
- Empiricism: A theory which states that knowledge comes only or primarily from sensory experience
- Intuition: Ability to understand something instinctively, without the need for conscious reasoning.

- **Ethics:** Moral principles that govern a person's behavior or the conducting of an activity.
- **Aesthetics:** Set of principles concerned with the nature and appreciation of beauty.

The main branches of Philosophy are:

1. **Axiology:** Study of the nature of value and valuation

- Also referred to as the theory of value, Axiology explores the nature of value and its metaphysical aspects.
- Value Theory is often interchangeably used as Axiology and this branch of Philosophy peruses upon the value of goodness.
- To put it simply, Axiology looks at the concept of value in terms of its philosophical terms and argues questions about nature and what is valued.

2. **Metaphysics:** Study of the fundamental nature of reality

- Metaphysics has been a primary area of philosophical debate. It is mainly concerned with explaining the nature of being and the world.
- Traditionally, it has two different study areas, including Cosmology and Ontology.
- Cosmology is focused on understanding the origin, evolution, and the eventual fate of the universe, which include laws that keep it in perfect order. On the other hand,
- Ontology investigates various types of things that exist and their relationship with each other.
- Much before the discovery of modern science, all the science-related questions were asked as a part of Metaphysics.

3. **Epistemology:** Study of the nature, origin, and limits of human knowledge

- Another major component of Philosophy is Epistemology.
- Going back into history, this term originated from the Greek word episteme which literally means knowledge, and the other half of the word 'logy means 'the study of'. Basically, it is about the study of knowledge.
- What can we know? A fundamental question concerning Epistemology is, what is knowledge? It also asks questions like; can knowledge ever be absolute? Is there a limit for humans to know certain things? If we are living in a world of simulation, how can we know it? These are some of the essential questions Epistemology seeks answers for.

4. **Ethics:** Study of what is right and wrong in human behaviour

- Everyone in their day to day life tries to conduct themselves according to some established ethical norms.
- This philosophical concept has different applications in a person's real life. For instance, there are certain organizations that have ethical committees which lay down rules of behaviour for its employees.
- Ethics is concerned with the definition of right and wrong.

- It elucidates schools of thought that instruct us how to act in a given situation, which has always been a matter of contention between philosophers.
- Every philosopher has defined it according to their own subjective understanding.

5. **Aesthetics:** Study of beauty and taste

- Every person defines beauty as per his or her own perspectives.
- This philosophical subject is wholly devoted to defining the different aspects of beauty, even its contours.
- How do we find something beautiful? Is beauty always subjective or can it be objective too? Can everyone find a thing beautiful? It also examines individual taste and attempts to provide answers about these things in a scientific manner. Aesthetic Philosophy's primary topic of investigation is beauty and art.
- It is often debated inside its classrooms. It also talks about performing arts like music.

6. **Logic Philosophy:** Study of the nature and types of logic

- We use this word in our commonplace conversations, so we are all aptly familiar with it.
- People constantly ask each other, "where is the logic behind this or that?".
- People even acknowledge a good thought or act by calling it logically correct.
- Hence, the question arises, what does Science of logic has to do with Philosophy?
- In logic, we usually construct two sentences which are called premises, and they are used to make a conclusion. This sort of logic is called a **sylogism**, pioneered by Aristotle.

7. **Political Philosophy:** Study of government, addressing questions about the nature, scope, and legitimacy of public agents and institutions

- The nature of philosophy can be said to be purely scientific as it incorporates curious discovery of human reality and integrates with other sciences like Psychology, **Sociology**, **Physics**, **Political Science**, amongst others to understand various philosophical questions.

PHILOSOPHY	FOCUS	PROPONENT	DOCUMENTS	TEACHINGS
CHINESE PHILOSOPHY				
Confucianism	humanistic values like familial and social harmony, ○ xiào filial piety ○ Rén "benevolence" or "humaneness") ○ Lǐ which is a system of ritual	Kung Fu Tzu (Confucius)	Analects The Golden Rule Meritocracy	1. Life is a gift that must be treasured 2. Golden rule: do not do unto others what you would not like others to do unto you 3. Government: sufficient food, weapons, and confidence of people

	norms that determines how a person should act to be in harmony with the law of Heaven.			4. Five constant values for leaders: benevolence, righteousness, propriety, wisdom, sincerity 5. Five constant values for citizens: attitude, procedure, knowledge, moral courage, and persistence
Taoism	individuality, pluralism, and diversity; return to infancy	Lao Tzu; Chuang Tzu	Tao Te Ching	1. Tao - path of the universe; path to perfection and harmony 2. Yin & Yang 3. Three Jewels: compassion, moderation, and humility 4. Five main organs correspond to the five parts of the sky: water, fire, wood, metal and earth 5. Wu Wei - let things come naturally
Mohism (Mo di/ Mozi)	ethical and political theories Mohism is best known for the idea of "impartial care"	Mozi (Socrates of the East)		Mohist two major doctrines: 1. Illuminating the nature of ghosts. 2. The will of Heaven. 3. Anti-fatalism. 4. According with one's superiors. impartial meritocracy in government which should be based on talent, not blood relations.
Legalism	Legalism (pinyin: Fǎjiā ; school of "methods" or "standards" was a philosophical tradition which focused on laws, realpolitik, and	Khan Chung and Shang Yang Shen Buhai Han Fei (Shen Buhai's Successor)		1. Book of Lord Shang: laws are designed to maintain the stability of the state from people who are innately selfish and ignorant 2. No such thing as objective goodness/virtue

	bureaucratic management.			3. Obedience the is of paramount importance
INDIAN PHILOSOPHY				
Hinduism	divinity of the soul; control desire	Mahatma Ghandi	1. Vedas (hymns, chants, treaties of the Aryans) 2. Upanishads (secret readings) 3. Epics (Ramayana; Mahabharata)	1. Brahman (oneness of Brahma, Vishnu, Shiva) 2. Reincarnation; Karma; 3. Moksha (rebirth to spiritual perfection) 4. Bhagavad-Gita: Gita - whole world of nature; Bhagavad - union of one's soul with Gita; 5. Yoga (Patanjali) - state of mental and physical exercise designed to free the sould from reliance on the body to reach union of Atman and Brahman 6. Dharma - obligation, motivation, purpose of human action 7. Ahinsa - non-violence in words, thought and deeds; love and service towards others
Buddhism	1. Freedom from suffering (Dukkah); 2. achieve enlightenment and Nirvana (state of completeness & peace; freedom from worldly desires)	1. Siddharta Gotama (Gautama) aka "Buddha"; 2. Dalai Lama (Tenzin Gyatzu)		1. Samsara - endless stream 2. FOUR NOBLE TRUTHS: 1. Life is pain and suffering (dukha) 2. The cause of pain is self- craving 3. The cause of pain can be eliminated 4. The way to end suffering is by 8FOLD PATH 3. Eight fold path Right Faith Right Resolve Right Speech Right Action Right Living

				Right Effort Right Thought Right Connection
Jainism	path to enlightenment is through Ahimsa	Vardhamana/Mahavira (tirthankara or a teacher of the dharma)		1. Jiva - every living thing consist of an eternal soul 2. Jinas - persons who attained enlightenment 3. Karma 4. Dharma 5. Reincarnation
Charvaka (Carvaka)/Lokayata	1. Materialism; 2. Hedonism; 3. Philosophy of the people	Brhaspati		1. Chaari - sweet; Vaka - speaking 2. Only material world exists 3. Ritual is livelihood 4. Pleasure and pain 5. Hell is mundane 6. Intelligence resides in the body
MIDDLE EAST PHILOSOPHY				
Islam	Submission to Allah	Mohammad		Five Pillars of Islam: 1. Shahada (confession of faith) 2. Salat (prayer) 3. Zakat (alms giving) 4. Ramadan (fasting) 5. Haji (pilgrimage)
JAPANESE PHILOSOPHY				
Zen Buddhism	Harmony, purity in all spheres of life			1. Koan - anecdote/riddle used as tool to invoke insights that does not depend on reasoning, ideas, and words 2. Practice what you preach; practice what one learns
Shintoism				1. Kami - spirits 2. Respect and care for environment 3. Physical dimension of men

Eastern philosophy or Asian philosophy includes the various philosophies that originated in East and South Asia, including Chinese philosophy, Japanese philosophy, Korean philosophy, and Vietnamese philosophy; all of these are dominant in East Asia and Vietnam, and Indian philosophy (including Hindu philosophy, Jain philosophy, Buddhist philosophy), which are dominant in South Asia, Southeast Asia, Tibet, and Mongolia

Some of the most common philosophies of Education

Philosophy	Description
Idealism	Mind and spirit
Realism	Teach and see (tangible)
Pragmatism	Practical use; learning by doing; skill
Essentialism	Body of knowledge; content focus
Perennialism	Forever, unchanging
Existentialism	Freedom and choice
Social Reconstructionism	Changing the society
Progressivism	Child-centered
Hedonism	Pleasure
Utilitarianism	Betterment of others; common good
Rationalism	Logical and critical thinking
Behaviorism	Behavior learned from environment

Historical Foundations of Education

Historical Foundations of Education

PERIOD	EDUCATION
ANCIENT PERIOD	
Primitive Era Education for Conformity	AIM: survival, security, preservation of tradition STUDENTS: children METHOD: informal, vocational, practical CURRICULUM: hunting, fishing, songs, poems, dances AGENTS: parents, tribal leaders, religious leaders INFLUENCE ON EDUCATION: transmission of skills Culture was passed on and preserved

Anthropological

Anthropology is the study of humanity in the past and present, including culture, human biology and linguistics.

1. Biological anthropology

Biological anthropology includes three main areas of study: the biology of humans, primatology and paleoanthropology. Human biologists and primatologists study the biological characteristics of humans and other closely related species, including living primates, such as monkeys and apes.

Paleoanthropologists study fossilized remains of human ancestors and collaborate with other anthropologists and social scientists, including geologists and paleozoologists. The goal of biological anthropology is to find answers about human evolution by researching evolution mechanisms and genetics and how environmental stressors over time cause human variation and adaptations.

2. Cultural anthropology

Cultural anthropology studies human culture by researching behaviors, beliefs and traditions of societies around the world, including:

- Social groups
- Political organizations
- Concepts of marriage and relationships
- Religious beliefs
- Economic and living patterns

Also called sociocultural anthropology, this branch focuses on present-day societal behaviors. They do this by looking at a variety of cultures, from small, isolated groups of people like Pacific Islanders to large modern groups of people like residents of Southern California.

The goal of cultural anthropology is to learn about the similarities and differences between societies to understand human diversity. Professionals may focus their research on determining how the current global patterns of poverty, disease and overpopulation may impact the longevity of existing traditions, or they may use their expertise to document emergent socio-cultural trends.

3. Linguistic anthropology

Linguistic anthropology studies human communication, including:

Change in languages

Socio-cultural influences on verbal and written language

Nonverbal communication

Speech physiology/phonetics

Language differences across cultures

Linguists can conduct research by learning a language from native speakers or reviewing cultural documents and artifacts to learn about its evolution. They learn about different sounds and their meanings, sentence construction rules and differing dialects based on the region or social situation. Linguistic

anthropology is important because it allows people to understand how language shapes communication and the role it has in social identity and the formation of beliefs and ideologies.

4. Archaeology

Archaeology is the study of human cultures of the past. Archaeologists research the history of different societies and cultural practices by excavating sites of ancient civilizations. They look for artifacts left behind by earlier people, then date and analyze evidence to help reconstruct everyday life during a particular time period by a specific group of people. This allows people to understand the evolution of human behavior and culture. The archaeology branch includes multiple specialty fields, such as:

- Classical: Focuses on the Middle East and the Mediterranean
- Historical: Recovers the past of more modern societies
- Prehistoric: Focuses on pre-literature societies
- Underwater: Excavates shipwrecks and ancient cities engulfed by water
- Zoo-archaeologists: Studies animal remains found during archaeological digs

The Importance of Studying History of Education

1. Educational issues and problems are often rooted in the past; the study of educational history of our past; the study of educational history can help us to understand to solve today's problems.
2. Realistic effort to reform education begins with present conditions which are a product of our past; by using our past; we can shape the future.
3. The study of education's past provides a perspective that explains illuminates our present activities as teachers.

Historical

KEY PERIODS IN EDUCATIONAL HISTORY 1000 BC TO A.D.1600

HISTORICAL GROUP OR PERIOD	EDUCATIONAL GOALS	CURRICULUM	AGENTS	INFLUENCES IN WESTERN EDUCATION
Primitive Societies 7000 BC to 5000BC	To teach group survival skills; to cultivate group cohesiveness	Practical skills of hunting, fishing, food gathering, stories, myths, songs, poems, dances	Parents, tribal, elders and priests	Emphasis on the role of informal education in transmission of skills and values
Greek 1600 BC – 300 BC	To cultivate civic responsibility and identity with city-state; Athenian: to	Athenian: reading, writing, arithmetic, drama, music,	Athens: private teachers and schools; Sophists; philosophers	Athens: The concept of the well-rounded, liberally educated person

	develop well-rounded person Spartan: to develop soldiers and military leaders	physical education, literature, poetry Spartan: drill, military songs and tactics	Sparta: military teachers, drill sergeants	Spartan: The concept of the military state
Roman 750 BC – AD 450	To develop sense of civic responsibility for republic and then empire; to develop administrative and military skills	Reading, writing, arithmetic, Laws of Twelve Tables law, philosophy	Private schools and teachers; schools of rhetoric	Emphasis on ability to use education for practical administrative skills; relating education to civic responsibility
Arabic AD 700 – AD1350	To cultivate religious commitment to Islamic beliefs, to develop expertise in Mathematics, medicine and Science	Reading, writing, mathematics, religious literature, scientific studies	Mosques, court schools	Arabic numerals and computation; reentry of classical materials on science and medicine
Renaissance AD 1350-1500	To cultivate humanist who was expert in the classics – Greek and Latin; to prepare courtiers for service to dynastic leaders	Latin, Greek, classical literature, poetry, art	Classical humanist educators and schools such as lycee, gymnasium, Latin grammar school	An emphasis on literary knowledge, excellence and style as expressed in classical literature, a two-tract system
Reformation AD 1500-AD1600	To cultivate sense of commitment to a particular religious denomination; to cultivate general literacy	Reading, writing, arithmetic, catechism, religious concepts and ritual, Latin and Green; theology	Vernacular elementary schools for the masses; classical schools for the upper classes	A commitment to universal education to provide literacy to the masses; the origins of school systems with supervision to ensure doctrinal conformity

Period	Characteristics	Curricular Focus
Spanish	▢ Focused on Practical Training to satisfy basic needs for survival	▢ Broad; not defined nor written ▢ Prescriptive

	and to transmit social ideas, customs, beliefs and traditions. ▢ Training done in the homes.	▢ Reading and writing in relation to the study of Koran for the Maguindanao Moslems.
Spanish	Focused on the learning of the Christian Doctrine.	▢ Parochial schools study of Doctrina Cristiana, arithmetic, music, arts, and trades; vernacular was the medium of instruction.
American	Focused on establishing the public school systems, highly influence by the philosophy of John Dewey.	▢ Reading, writing, arithmetic, good manners and right conduct, civics, hygiene and sanitation, domestic science, American history, Philippine History; English as medium of instruction.
Commonwealth	Focused on the development of moral character, personal discipline, civic consciousness, and vocational efficiency as provided for in the 1935 Constitution.	▢ Tagalog and later on Filipino, as another medium of instruction. ▢ Provided for a 6-year elementary schools; school entrance at age 7; compulsory attendance in Grade 1; introduction of double-single sessions. ▢ Teaching of Filipino as subject.
Japanese	Focused on promoting the East Asia co-prosperity sphere educational objective.	▢ Diffusion of elementary education with the promotion of vocational education. ▢ Fostering of new Filipino culture based on the awareness that Filipinos are Orientals. ▢ Termination of use English as medium of instruction.
Third Republic Patterned after the Provisions of the 1935 Constitution		
New Society	Focused on national development goals; manpower training; high level professions, self-actualization.	▢ Promotion of Bilingual Education Policy.

		▯ Development of moral character, self-discipline; scientific, technological and vocational efficiency; love of country and good citizenship.
Fourth Republic	Focused on promotion of the rights of all citizens to qualify education.	▯ Strengthening of the teaching of values; return to the basics in the new elementary and secondary schools curriculum.

Key Periods on the History of Education

Historical Period	Description
Primitive Societies	• Teaching of survival skills and group cohesiveness • Practical skills
Greeks	• <i>Athens</i>: developing well-rounded persons • <i>Sparta</i>: developing soldiers
Romans	• Developing sense of civic responsibility, and administrative and military skills
Arabic	• Cultivation of commitment to Islam • Expertise in mathematics, medicine, and science
Medieval	• Development of religious commitment • Establishment of social order
Renaissance	• Cultivation of humanists as experts in the classics
Reformation	• Cultivation of commitment to a particular religious denomination • Cultivation of general literacy

Periods of Development in Philippine History

Historical Period	Description
Pre-Spanish Period	• Focus on survival, practical skills
Spanish Period	• Beginning of formal instruction • Introduction of Christianity • <i>Educational Decree of 1863</i>: elementary schools in every town
American Period	• Promotion of democratic ideals • Implementation of free public education
Philippine Commonwealth	• Emphasis on nationalism
Japanese Occupation	• Development of love for labor • Promotion of vocation education • Health education
Third Republic	• Full realization of democracy
The New Society	• Education for national development
Fifth Republic	• <i>Corazon Aquino</i>: Values Education • <i>Fidel Ramos</i>: Trifocalization • <i>Gloria Arroyo</i>: DepEd • <i>Benigno Aquino III</i>: K-12 • <i>Rodrigo Duterte</i>: Free tertiary education

Basic Philosophical Systems	Fundamental Idea/s	Curricular Implications
Idealism (Plato)	* Importance of mind and spirit and of the developing them in the learner. * Reality is in the ideas independent of sense and experience.	Subject matter- or content focused, believing that this is essential to mental and oral development

Aristotle)	*Truth can be tested/proven. *Knowledge is derived from sense experience.	Curriculum is subject-centered, organized from simple to complex, and stressing mastery of facts and development of process and objective skills, critical analysis and attention to Science and Math.
Pragmatism (W. James, Dewey, Rousseau)	The world is a world of change, man can know anything within his experience; belief in " <i>learning by doing</i> ".	*Provisions for direct experiences. *Activity/learner-centered. *Basis: problems of democratic society focus on problem solving inquiry.
Hutchins, Adler)	Human beings are rational and their existence remains the same throughout differing environments; includes knowledge that has endured through the years.	Subject matter consists of perennial basic education of rational men, history language, math, logic, classical literature, science, fine arts, and cultural heritage.
Existentialism (Kierkegaard, Marcel, Sartre)	Reality is a matter of individual existence. The meaning of life is what each individual makes; focus on conscious awareness of choice.	Curriculum stress activity; recognition of individual differences, opportunities for making choices and awareness of consequence, of introspection and self analysis through individualized learning experiences.
Essentialism (Bagley)	There are certain ideas that men should know for social stability.	Curriculum focused on assimilation of prescribed basic subject matter, 3Rs, history, science, math, language.
Reconstructionism (Plato, Augustine, Dewey, Counts, Rugg)	Societal reform needed towards experiencing the good life now and in the future, schools are the chief means for building new social order (NSTP).	Curriculum should include subjects that deal with social and cultural crises to prepare students to make become analyzer and ensure that democratic principle are followed.

ISOLATED FACTS AND THE BANKING METHOD

Most lessons in a traditional classroom are devoted to asking low level questions and students answering with what they memorized a night before. The teacher deposited these facts a day before and withdraws the next day. Paulo Friere is against with this banking system in education as it does not make the learner reflect and connect what they have learned in real life.

Below are summaries of thoughts of educational philosophers on what should be taught and how learners should be taught

A. John Locke (1632-1704) The Empiricist Educator

- ✚ Proponent of tabula rasa
- ✚ Acquire knowledge about the world through senses – learning by doing and interacting with the environment
- ✚ Simple ideas become more complex through comparison, reflection and generalization (inductive method)
- ✚ Questioned the view that knowledge came exclusively from literary sources, particularly the Greek and Latin
- ✚ Opposed the “divine right of kings” theory
- ✚ Aristocrats are not destined by birth to be rulers
- ✚ Education is not acquisition of knowledge contained in the Great Books. It is learners interacting with concrete experiences.
- ✚ The learner is an active not a passive agent of his/her own learning

B. Herbert Spencer – Utilitarian Educator

- ✚ “Survival of the fittest”
- ✚ Social development is through an evolutionary process
- ✚ Industrialized society require vocational and professional education based on scientific and practical objectives
- ✚ Was not inclined to rote learning
- ✚ Individual competition leads to social progress
To survive in a complex society, Spencer favors specialized education over that of general education.

C. John Dewey(1859-1952)

- ✚ Learning through experiences (learning by doing)
- ✚ Education is a social process and so school is intimately related to the society it serves
- ✚ Children are socially active human beings who want to explore their environment and gain control over it
- ✚ The steps of the scientific or reflective method which are extremely important in Dewey’s educational theory are as follows:
 - a. The learner has a “genuine situation of experience”
 - b. Within the experience, the learner has “genuine problem”
 - c. The learners possess the information or does research to acquire the information needed to solve the problem
 - d. The learner develop tentative solution to the problem
 - e. The learner tests the solution by applying them to the problem
- ✚ Prior knowledge was to be used as the material for dealing with the problem The school is social, scientific and democratic
- ✚ The authoritarian or coercive style of administration and teaching is out of place
- ✚ Values are relative but sharing, cooperation and democracy are significant human values that should be encouraged by school

D. George Counts (1889-1974)

- ✚ Building new social order
- ✚ Schools and teachers should be agents of change
- ✚ He asserts that there is a cultural lag between material progress and social institution and ethical values
- ✚ Schools are considered instruments for social improvement and not just change for the sake of change
- ✚ Problem solving should be the dominant method for instruction
- ✚ Schools should cope with social change that arises from technology
- ✚ Students are encouraged to work on problems that have social significance
- ✚ Teachers are called on to make important choices in the controversial areas of economics, politics and morality

E. Theodore Brameld (1904-1987)- “Social Reconstructionism”

- ✚ Social reconstructionism is a philosophy that emphasizes the reformation of society. Social reconstructionist asserts that schools should critically examine present culture and resolve inconsistencies, controversies and conflicts to build a new society not just change society (Ornstein, A. 1984)
- ✚ Technological Era is an era of interdependence
Education is designed to awaken students' consciousness about social problems and to engage them in problem solving (Ornstein, A. 1984) Education is a right that all citizens must enjoy

F. Paulo Freire (1921-1997)

- ✚ Critical Pedagogy and Dialogue
- ✚ Believed that systems must be changed to overcome oppression and improve human situations
- ✚ Education and literacy are the vehicle for social change
- ✚ Teaching and learning as a process of inquiry rather than “teaching as banking”
- ✚ Teachers must not see themselves as the sole possessors of knowledge and their students as empty receptacles. This pedagogical approach is known as “banking method”
- ✚ His pedagogy is problem-posing education
Dialogue is the central element of his pedagogy. It means the presence of equality, mutual recognition, affirmation of people, a sense of solidarity with people and remaining open to questions.

Social Science Theories and Their Implications to Education

Sociological Aspects of Education

5 MAJOR SOCIAL INSTITUTIONS

- A well-established and structured pattern of behavior or of relationships of group of people that is accepted as a fundamental part of a culture.

- Institutions are structures and mechanisms of social order and cooperation governing the behavior of a set of individuals within a given human collectivity.
- A set of organized beliefs, rules, and practices that establishes how a society will attempt to meet basic needs.
- A socially approved system of values, norms, and roles that exists to accomplish specific societal goals.

Elements of Social Institutions

- 1) A Group of People
- 2) United by common interests
- 3) Having material resources
- 4) Having norms
- 5) Fulfill some social need

Characteristics of Social Institutions

- Social institutions are patterns of behavior grouped about the central needs of human beings in society.
- In all societies, the institution of family plays a central role.
- Social institutions are therefore social patterns directing the ordered behavior of human beings in the performance of their basic activities.
- The continuity of institutional practices is further assured by the development of rituals.
- The central aspects of institutions are the functions they perform and the pattern, established to carry out the functions.
- The claim of institutions upon the members are also known as loyalties.
- The institutions of a society are connected in a close end interdependent pattern.
- Institutions are connected through status and role of the members

General functions of Social Institutions

- 1) Institution Satisfy the Basic Needs of Society.
- 2) Institution Define Dominant Social Values.
- 3) Socialization
- 4) Institutions Establish Permanent Patterns of Social Behavior
- 5) Preservation of Social Order.
- 6) Institutions Support Other Institutions.
- 7) Institutions Provide Roles for Individuals .

MAJOR SOCIAL INSTITUTIONS	DEFINITION	FUNCTION	TYPES
---------------------------	------------	----------	-------

FAMILY	• A fundamental social group in society typically consisting of one or two parents and their children. • Two or more people who share goals and values, have long-term commitments to one another, and reside usually in the same dwelling place.	• Reproduction • Cultural Transmission • Socialization • Affection	1) <u>STRUCTURE</u> a. Nuclear b. Extended 2) <u>RESIDENCE</u> a. Patrilocal b. Matrilocal c. Neolocal 3) <u>AUTHORITY</u> a. Patriarchal b. Matriarchal c. Equalitarian 4) <u>MARRIAGE</u> a. Monogamy b. Polygamy • Polygyny • Polyandry Mates Selection 1.Exogamy 2.Endogamy 3.Polygamy 4.Monogamy 5.Polyandry 6.Group Marriage
EDUCATION	• Refer to the set of norms centered round the teaching and learning aiming at the adjustment of individuals to the environment. • Education is synonyms with Socialization.	1. Intellectual 2. Social 3. Economic 4. <u>Political</u>	1. Formal Education 2. Informal Education
GOVERNMENT		• The Institutionalization of norms (Laws). • The enforcement of laws.	Structure of Government 1. Executive 2. Legislative 3. Judiciary

		• The adjudication of conflict (Court). • Provide for the welfare of members of society. • Protection of Society from external threat.	
ECONOMY	• the set of norms related to production of goods and services. • Is an aspect of theoretical and practice. • Economic Institutions are very important for almost all Groups. • Economic growth and development has changed the pattern of interaction of people all over the world.		
RELIGION	system of beliefs and practices influencing human events where man is helpless to explain them.	1. Providing solutions for unexplained natural, phenomena. 2. Supplying a means for controlling the natural world. 3. Religion tends to support the normative structure of the society. 4. Furnishing a psychological diversion from	

		unwanted life situations. 5.Sustaining the existing class structure. 6.Religion serves as an instrument of socialization. 7. Religion may both promote and retard social change.	
--	--	--	--

Social Science Theories

1. Consensus Theory

- ▮ Emphasizes on social order based on tacit agreements, and view social change as occurring in slow and orderly fashion.

2. Conflict Theory

- ▮ Grew out from the work of Karl Marx
- ▮ Focuses on the struggle of social classes to maintain dominance and power in social system.
- ▮ Focuses on the heterogeneous nature of society and the differential distribution of political and social power.
- ▮ Conflict theories ask how schools contribute to the unequal distribution of people into jobs in society so that more powerful members of society maintain the best positions and the less powerful groups (often women, racial, and ethnic groups) often minority groups, are allocated to lower ranks in the society.

3. Structural Functional Theory

- ▮ Proposed by Herbert Spencer
- ▮ States that society is made of various institutions that work together in cooperation.
- ▮ Is concerned with the functions of schooling in the maintenance of social order
- ▮ Focuses on how education serves the need of society through the development of skills encouraging social cohesion.
- ▮ The role of the schools is to prepare students for participation in the in institutions of society
- ▮ Sees active social change as undesirable because the various parts of society will compensate naturally for any problems that may arise

Purposes of Schooling According to Functionalist

- 🌈 Intellectual Purposes – acquisition of cognitive skills, inquiry skills

Political Purposes – educate future citizens; promote patriotism, promote assimilation of immigrants, ensure order, public civility and conformity to laws

✚ Economic purposes – prepare students for later work roles; select and train the labor force needed by society

✚ Social purposes – promote a sense of social and moral responsibility; serve as a site for the solution or resolution of social problems; supplement the efforts of other institutions of socialization such as the family and the church

4. Symbolic Interactionist Theory Perspective

✚ Proposed by George H. Mead

✚ Interaction does not only mean dealing with people but also includes reading, listening and

✚ viewing Positive symbols include gestures, words, actions and appearances

✚ Directs sociologists to consider the symbols and details of everyday life, what these symbols mean and how people interact with each other.

✚ Language is the predominant symbol among people

Critics claim that symbolic interactions neglect the macro level of social interpretation – the big picture because it focuses closely on the trees and restricting themselves to small or individual interactions.

Theory	Description	Proponent	Contribution to schools	Focus, Emphasis and
Consensus	Consensus is a general or widespread agreement among all members of a particular society.			- social order based on tacit agreements, - view social change as occurring in slow and orderly fashion.
Conflict	- Society as a <u>competition</u> for limited resources - Two opposing sides, both aiming to maintain status quo Education as a powerful means of maintaining power structure	Karl Marx	Conflict theories ask how schools contribute to the unequal distribution of people into jobs in society so that more powerful members of society maintain the best positions and the less powerful groups (often women, racial, and ethnic groups) often minority groups, are allocated	Focuses on the heterogeneous nature of society and the differential distribution of political and social power.

			to lower ranks in the society.	
Structural-Functional	Society as a system of <u>interconnected</u> parts, each having a unique function	Herbert Spencer		Intellectual Purposes – acquisition of cognitive skills, inquiry skills Political Purposes – educate future citizens; promote patriotism, promote assimilation of immigrants, ensure order, public civility and conformity to laws Economic purposes – prepare students for later work roles; select and train the labor force needed by society Social purposes – promote a sense of social and moral responsibility; serve as a site for the solution or resolution of social problems; supplement the efforts of other institutions of socialization such as the family and the church
Symbolic Interactionist	Society as the product of shared symbols, i.e.: <u>meanings</u> that individuals attach to events	George H. Mead		- Major tenets: - Individual's actions based on meaning - Different people give meaning to the same thing - Meanings change as individuals interact with one another

Violence

Forms of Violence

Form of Violence	Description
Physical	Using a part of their body or an object to control a person's actions

Sexual	One is forced to participate in sexual activity
Emotional	Someone says or does something to make another feel worthless
Psychological	Someone uses threats, causing fear
Spiritual	Uses an individual's spiritual beliefs to control
Cultural	Individual is harmed as a result of his/her culture, religion, or tradition
Verbal	Use of language (written or verbal) to harm an individual
Financial	Someone controls/misuses another's financial resources
Neglect	Someone has the responsibility to take care of someone else but does not

Global Issues that Concern Schools

Current Global Issues

2. Pollution
3. Violence
4. Security and well-being
5. Lack of education
6. Unemployment
7. Government corruption
8. Malnourishment and hunger
9. Substance abuse
10. Terrorism

UN Sustainable Development Goals 2015-2030

- Based on the principle of "leaving no one behind"
- Emphasis on the holistic approach to achieving sustainable development

School Partnership

Partnership

- Two parties helping each other for mutual benefit

What Communities can do for Schools

- *Brigada Eskwela*
- Curriculum Development
- Work experience programs (e.g.: work immersion)
- Remediation and enrichment classes
- Youth development programs
- Community Service

What Schools can do for Community

- Classrooms used for organizational meetings

- Schools as polling place and medical missions
- Schools as an evacuation center
- Facilities used for community assemblies
- Courts used for local celebrations and sports leagues
- Schools conducting livelihood skills-training seminars

Legal Bases for Community Involvement

- *Governance of Basic Education Act (RA 9155)*: encouragement of local initiatives for the improvement of schools, school heads to establish school and community networks
- *Education Act of 1982 (BP 232)*: schools establishing appropriate bodies for assistance and support of the school and the promotion of common interest
- *Adopt-a-School Program Act (RA 8525)*: allows private entities to assist public school in certain areas
- *Education for All 2015*: schools to continue harnessing local resources

Legal and Sociological Bases of School and Community Partnership

1. Legal Bases of Education / Relevant Laws
 - a. Article XIV of the 1987 Philippine Constitution
 - b. RA 4670 – magna Carta for public school, teacher
 - c. RA 7836
 - d. Education Act of 1940
 - e. Education Act of 1982
 - f. Code of Ethics
 - g. RA 1006
 - h. RA 1265
 - i. RA 1425
 - j. RA 4670
 - k. RA 6655
 - l. RA 6728
 - m. RA 6972
 - n. 8. RA 7277
 - o. 9. RA 7687
 - p. 10. RA 7722
 - q. 11. RA 7784
 - r. 12. RA 7796
 - s. 13. RA 7731
 - t. 14. RA 7743

Sociological Bases of School Community Partnership

The functionalist theory states that institutions must perform their respective functions for the stability of society. Other institutions must come in if one institution fails to do its parts for the sake of the society.

The school cannot do it all. ***“It takes a village to educate a child”***, so goes the African proverb. It has to work in a partnership with other institutions in the community. With the breakdown of families, schools face greater challenge in educating the youth.

Legal Bases for Parents and Community Involvement

- a. RA 9155- Governance of Basic Education Act, Section E (10)
- b. Education Act of 1982, Section 7
- c. RA 8525 – Adopt a School Program Act
- d. Philippine Education for All (EFA) 2015 Plan
- e. RA 915

The Strength and Weaknesses of The Filipino Character: A Socio Cultural Issue

FILIPINO STRENGTHS

1. ***Pakikipagkapwa-tao*** : Opening yourself to others and feel one with others with dignity and Respect life as fellow human beings, Sense of fairness and justice, Concern for others, Ability to empathize with others, Helpfulness and generosity, Practice of hospitality and Sensitive to other feelings and trust.
2. ***Family Orientation*** : A genuine and deep love for family. Filipino families are characterized by Commitment and responsibility, Honor and Respect, Generosity and Sacrifice and Sense of trust and Security.
3. ***Joy and Humor*** : Filipinos have a cheerful and fun-loving approach to life and its up and down, Pleasant Disposition, a Sense of Humor and Propensity for happiness that contribute not only to the Filipino charm but also to the Filipino Spirit.
 - * Laughing or smiling at those we love and hate.
 - * Tend to make joke about our good and even bad fortune
 - * Smiling and heads up even in the most trying of times
 - * Emotional balance and optimism
 - * Healthy disrespect for power and office.
4. ***Flexibility, Adaptability and Creativity*** : Easy to adapt, blend to other culture, practice other tradition, speak and study other languages and even diff. environment or climate)
5. ***Hard Work and Industry*** : Capacity for hard work given to raise one's standard living of a decent life for one's family.
6. ***Faith and Religiosity*** : Faith in God - accepting reality to comprehend as a human created by God.
7. ***Ability to Survive***

FILIPINO WEAKNESSES (Based on the excerpt of the report “A Moral Recovery Program: Building a People, Building a Nation”- 1988)

1. **Extreme family centeredness** – excessive concern for family means using one’s office and power to promote family interests and thus factionalism patronage, political dynasties and the protection of erring family members. It results in lack of concern for the common good, and acts as a block to national consciousness.
2. **Extreme personalism** – takes things personally, cannot separate objective task from emotional involvement. Because of this, the Filipino is uncomfortable with bureaucracy, with rules and regulations and with standard procedures. He uses personal contacts and gives preference to family and friends in hiring, services and even voting. Extreme personalism leads to the graft and corruption evident in Philippine society.
3. **Lack of discipline** – A casual attitude toward time and space, manifested in lack of precision and compulsiveness, in poor time management and procrastination. Aversion to following procedures strictly results in lack of standardization and equality control. Impatience results in shortcuts, palusot, ningas cogon. Lack of discipline often results to inefficient work systems, the violation of rules and a casual work ethic lacking follow through.
4. **Passivity and lack of initiative** – waiting to be told what to do, reliance on others, complacency, lack of a sense of urgency. There is high tolerance of inefficiency, poor service and even violations of one’s basic right. Too patient and matisin, too easily resigned to his fate, the Filipino is easily oppressed and exploited.
5. **Colonial mentality** – Lack of patriotism, or of an active awareness, appreciation and love of the Philippines and an actual preference for things foreign.
6. **Kanya-kanya syndrome, talangka mentality** – done by tsismis, unconstructive criticism. It is evident in the personal ambition that is completely insensitive to the common good. This results in the dampening of cooperative and community spirit and in the trampling upon other’s right.
7. **Lack of self analysis and self – reflection.** The tendency to be superficial and some what flighty. In the dace of serious personal and social problems, there is lack of analysis or reflection and instead satisfaction with superficial explanations and solutions.
8. **Emphasis on porma rather than substance** - This lack of analysis and emphasis on form is reinforced by an educational system that is more form than substance.

Global Issues That Concern Schools and Society

Top 10 Global Issues

1. Climate change
The global temperature are rising and are estimated to increase from 2.6 degrees Celsius to 4.8 degrees by 2100. This would cause more severe weather, crises with food and resources and the spread of diseases. The reduction of greenhouse emissions and he spreading of education on the importance of going green can help make a big difference.

Lobbying governments and discussing policies to reduce carbon emissions and encouraging reforestation is an effective way to making progress with climate change.

2. Pollution

Pollution includes ocean litter, pesticides and fertilizers, air, light and noise pollution. Clean water is essential for human and animals, but more than one billion people don't have access to clean water due to pollution from toxic substances, sewages or industrial waste.

3. Violence

Violence can be found in the social, cultural and economic aspects of the world. Whether it is conflict that has broken out in a city, hatred targeted at a certain group of people or sexual harassment occurring on the street, violence is a preventable problem that has been an issue for longer than necessary

- a. Physical Violence – occurs when someone uses a part of their body or an object to control a person's action
- b. Sexual Violence – occurs when a person is forced to unwillingly take part in sexual activity
- c. Emotional Violence – occurs when someone says or does something which make a person feel stupid or worthless
- d. Psychological violence- occurs when someone uses threats and causes fear in an individual to gain control
- e. Spiritual violence – occurs when someone uses an individual's spiritual beliefs to manipulate, dominate or control that person.
- f. Cultural violence – occurs when an individual is harmed as a result of practices that parts of his or her culture, religion or tradition.

4. Security and well-being

The UN is a perfect example of what should be done to prevent the lack of security and well being. Though its efforts with regional organizations and representatives that are skilled in security, the UN is working toward increasing the well-being of people throughout the world.

5. Lack of education

- a. More than 72 million children throughout the globe that are of the age to be in primary school are not enrolled in school. This can be attributed to inequality and marginalization as well as poverty. Fortunately, there are many organizations that work directly with the issue of education in providing the proper tools and resources to aid schools.

6. Unemployment

Without the necessary education and skills for employment, many people struggle to find jobs and create a proper living for themselves and their families. This leads to a lack of necessary resources such as food, clothing, transportation and proper living conditions.

7. Government Corruption

Means of corruption include graft, bribery, embezzlement, backdoor deals, nepotism and patronage. Corruption is a major cause of poverty considering how it affects the poor.

8. Malnourishment and hunger

Long term success to ending world hunger starts with ending poverty. By fighting poverty through proper training for employment, people who are suffering will be more likely to get jobs, earn money to buy food and even learn how to make their own food.

9. Substance abuse

It is the harmful or hazardous use of psychoactive substances, including alcohol and illicit drugs (WHO).

10. Terrorism

b. It is an issue throughout the world that causes fear and insecurity, violence and death. Across the globe, terrorists attack innocent people, often without warning.

School Community Partnership

Opportunities for School-Community Partnership

Partnership implies two parties helping each other. Both parties benefit. This means that if a school –community partnership exists, both parties benefit from the relationship.

What can the community do for schools?

1. Brigada-Eskwela

This program engages all education stakeholders to contribute their time ,effort and resources in ensuring that public school facilities are set in tie for the forthcoming school opening. This is a school maintenance program that has been institutionalized since 2009 when DepEd issued DepEd Order # 100.

2. Curriculum development

This can use of community resources for learning e.g. museum, elders of the community as key informants in research or resources persons in the study of local history.

3. Work experience programs

Business establishments and offices in the community can serve as training ground for learners. A concrete example is the Work Immersion required of Senior High School students. In this work immersion , student are given the opportunity to work in relevant establishments or offices in the community to help develop in them “ the competencies,

work ethics, and values relevant to pursuing further education and/ or joining the world of work Partner offices for immersion provide Senior High School students with opportunities .

- a. To become familiar with the work place
- b. For employment simulation; and
- c. To apply their competencies in areas of specialization / applied subjects in authentic work environment

4. Remediation and Enrichment class

5. Youth Development program

6. Community service – examples are students participating in tutorial programs, community reforestation programs, clean up drive for a river, assisting in medical mission; school band playing in fiesta.

What can schools do for communities in return?

Schools may allow the community to use school resources. Below are examples:

- a. Classroom used by community organizations for meetings
- b. School used as a polling place and venue for medical mission which it may co-sponsor with RHU
- c. School used by the Rural Health Unit for mothers' class on child care
- d. School used as an evacuation center
- e. School facilities used for community assemblies
- f. School basketball court used for local celebrations and barangay sports league
- g. Schools conduct livelihood skills-training programs for parents and out-of-school youths
- h. Livelihood skills training for parents and out-of-school-youths by using school resources

Sociological Bases of School Community Partnership

The functionalist theory states that institutions must perform their respective functions for the stability of society. Other institutions must come in if one institution fails to do its parts for the sake of the society.

*The school cannot do it all. **"It takes a village to educate a child"**, so goes the African proverb. It has to work in a partnership with other institutions in the community. With the breakdown of families, schools face greater challenge in educating the youth.*

Legal Bases for Parents and Community Involvement

- f. RA 9155- Governance of Basic Education Act, Section E (10)
- g. Education Act of 1982, Section 7
- h. RA 8525 – Adopt a School Program Act
- i. Philippine Education for All (EFA) 2015 Plan
