

LET REVIEWER IN PROFESSIONAL EDUCATION

FACILITATING LEARNING (PRACTICE TEST)

1. The process of metacognition helps every learner how to learn effectively. Which of the following statements is not a result of metacognition?

- a. It makes the learner realize his strengths and weaknesses in learning
- b. It develops the learner's self-motivation to learn and improves his study habits.
- c. It trains the learner how learn on his own more efficiently and effectively.
- d. It teaches the learner to know what to learn and for him to accumulate more knowledge.
- e. It develops the ability of the learner to evaluate his own thinking and learn more effectively.

2. Below are the six aspects and/or processes of study habits listed in no particular order. Which should be the correct logical and systematic sequence of the six aspects?

- 1. Note-taking and reading
- 2. Organizing and planning the work
- 3. Preparing an assignment/project
- 4. Motivation
- 5. Managing school work stress
- 6. Working with others

- a. 1-2-3-4-5-6
- b. 4-2-6-5-1-3
- c. 4-2-5-6-3-1
- d. 4-3-5-2-6-1
- e. 3-4-1-5-6-2

3. According to John Flavell, metacognition consists of metacognitive knowledge and metacognitive experience or regulation. This simply means ____.

- a. "thinking about thinking" or "learning how to learn"
- b. learning focuses on the accumulation of verbalized information.
- c. learning by rote and memorization with emphasis on knowledge of specific facts
- d. knowing what to learn through reading books and other vicarious experiences
- e. gaining knowledge in the most abstract and symbolic way

4. Which category / variable of cognitive knowledge refers to the knowledge about how human beings learn and process information?

- a. Strategy variable
- b. Task variable
- c. Person Variable

- d. Space variable
- e. Time variable

5. The Task Variable of Metacognitive knowledge includes the following except one. Which is an exception?

- a. Knowledge about the nature of the learning tasks to be accomplished
- b. Type of processing demands placed upon the individual
- c. Gauging the difficulty of the tasks to be done by the learner
- d. Kind of effort it will demand from the learner for him to exert
- e. Knowledge of various and appropriate strategy to be used in learning

6. That variable of cognitive knowledge in which the learner is made aware of the procedure to be used in trying to learn the topic/lesson and for him to evaluate whether the procedure is effective or not is the ____.

- a. Task variable
- b. Strategy variable
- c. person variable
- d. Time and Space variable
- e. Resources – variable

7. In a Science class, Mr. Santos guided his students to state a scientific problem, formulate hypothesis and identify the experimental and controlled variables for an experiment which the class performed by groups. From the variables identified, each group designed their respective procedure on how to go about the experiment. Which psychological principle of learner-centered learning is involved in this situation?

- a. Developmental and social
- b. motivational and affective
- c. individual differences
- d. Cognitive and Metacognitive
- e. none of these

8. In the cognitive and metacognitive factors, what process is involved when the learner is able to link new information and experiences in meaningful ways?

- a. Construction of knowledge
- b. Goal-directed learning process
- c. Learning of complex subject matter
- d. Strategic thinking process
- e. Thinking about thinking process

9. When the successful learner can create and use a repertoire of thinking and reasoning ways to achieve complex learning goals, what cognitive and metacognitive factor is involved?

- a. Nature of learning process
- b. Goals of the learning process

- c. Construction of knowledge process
 - d. Strategic process
 - e. Context of learning process
10. Which of the following does not intrinsically motivate and influence the learner to learn?
- a. Emotional state
 - b. Beliefs
 - c. Interests and goals
 - d. Habits of thinking
 - e. High scholastic ratings
11. On what condition/conditions can a learner effectively learn despite different opportunities and constraints for learning that interfere?
- a. When learning materials for learning are appropriate, suited to his developmental level
 - b. When the learning activity is interesting and enjoyable
 - c. When the learning task is catered to his intellectual / mental capacity
 - d. When he is ready and capable to perform a particular task
 - e. All of these mentioned are favorable conditions for effective learning
12. Which of the factors below does not make an individual learner different from another?
- a. Mental and intellectual factors
 - b. Social and Environmental factors
 - c. Physical and emotional factors
 - d. materials used for learning
 - e. family background and culture
13. In Jean Piaget's "genetic epistemology" (theoretical framework), what was the main focus of the study?
- a. To determine how knowledge developed in human organism at different developmental stages
 - b. To determine the rate of learning among children
 - c. To distinguish between dull and intelligent individual learners
 - d. To identify linguistic, social and manipulative abilities of a young child
 - e. To determine the hereditary traits manifested at every developmental stage of a child
14. When a small child calls another animal that looks a little bit like a dog, he thinks and calls it a "dog". What learning process is illustrated on Piaget's cognitive development theory?
- a. Reversion
 - b. Accommodation
 - c. Assimilation
 - d. Equilibration
 - e. Centration

15. A child was presented two identical glasses with equal amount of water. The water in one glass was transferred to a taller and narrower glass. The child said that the taller and narrower glass contains more water than the other glass. What function in the pre-operational stage of child development is illustrated?

- a. Symbolic function
- b. Egocentrism
- c. Centration
- d. Reversibility
- e. Transductive reasoning

16. John, a two-year old boy, pretended to be drinking from a glass which was actually empty. His idea about the glass was for him to drink water from it. What function for the pre-operational stage is illustrated by this situation?

- a. Symbolic function
- b. Centration
- c. Conservation
- d. Transductive reasoning
- e. Animism

17. This is the tendency of the child in the pre-operational stage to only see his own point of view and to assume that everyone also has the same point of view as his.

- a. Animism
- b. Centration
- c. Symbolism
- d. Reversion
- e. Egocentrism

18. Considering the same situation in item number 15, the child who is now in the concrete operation stage can now judge rightly that the amount of water in the taller and narrower glass is still the same as when the water was in the shorter but wider glass. What function does this illustrate?

- a. Seriation
- b. Reversibility
- c. Decentration
- d. Conservation
- e. Centration

19. In the Formal Operational Stage of cognitive development of a child ages between 12 – 15 years, he has already the ability to perceive the relationship in one instance and then use that relationship to narrow down possible answers in similar situation or problem. What do you call this ability?

- a. Hypothetical Reasoning
- b. Analogical Reasoning`
- c. Deductive Reasoning

- d. Inductive Reasoning
 - e. Abstract Reasoning
20. According to Erickson, what years are critical for the development of self-confidence?
- a. High School years
 - b. College years
 - c. Pre-School years
 - d. Elementary years
 - e. in all years
21. Which of the following does not belong to the stages of personality dimensions of Erik Erickson's Pscho-Social Development during infancy and childhood?
- a. Trust versus mistrust
 - b. Autonomy versus shame and doubt
 - c. Initiative versus guilt
 - d. Intimacy versus isolation
 - e. Industry versus inferiority
22. In what stage of Erickson's theory of development is identity versus identity confusion prevalent?
- a. Infancy
 - b. Childhood
 - c. Adolescence
 - d. Adulthood
 - e. in all stages
23. Scaffolding is a teaching technique in assisting a learner to accomplish a given learning task. From whom and what theory of development was this technique based?
- a. Erickson's Pscho-Social Theory
 - b. Vygotsky's Socio-Cultural Theory
 - c. Kohlberg's Stages of Moral development
 - d. Bandura's Social Learning Theory
 - e. Pavlov's Classical Conditioning
24. According to Vygotsky, what are the two central factors in cognitive development?
- a. Social interaction and language factors
 - b. Emotional and mental factors
 - c. Intellectual and language factors
 - d. Pscho-social factors
 - e. Socio-environmental factors
25. Which of the six stages of moral development advocated by Lawrence Kohlberg states that an individual is motivated to do what is desired of him to do in order to avoid punishment?

- a. Mutual benefit stage
- b. Social approval stage
- c. Punishment-obedience stage
- d. Law and Order stage
- e. Social contract & universal principles
