The most important source of sediment is earth and rock material carried to the sea by rivers and streams; the same materials may also have been transported by glaciers and winds. Other sources are volcanic ash and lava, shells and skeletons of organisms, chemical precipitates formed in seawater, and particles from outer space.

Water is a most unusual substance because it exists on the surface of the earth in its three physical states: ice, water, and water vapor. There are other substances that might exist in a solid and liquid or gaseous state at temperature normally found at the earth's surface, but there are no other substances which occur in all three states.

Water is odorless, tasteless, and colorless. It is the only substance known exist in a natural state as solid, liquid, or gas on the surface of the earth. It is a universal solvent. Water does not corrode, rust, burn, or separate into its components easily. It is chemically indestructible. It can corrode almost any metal and erode the most solid rock. A unique property of water is that it expands and floats on water when frozen or in the solid state. Water has a freezing point 0° deg. C. and a boiling point of 100° deg. C. Water has the capacity for absorbing great quantities of heat with relatively little increase in temperature. When distilled, water is a good conductor of electricity but when salt is added, it is a poor conductor of electricity.

Sunlight is the source of energy for temperature change, evaporation, and currents for water movement through the atmosphere. Sunlight controls the rate of photosynthesis for all marine plants, which are directly or indirectly the source of food for all marine animals. Migration, breeding, and other behaviors of marine animals are affected buy light.

Water, as the ocean or sea, is blue because of the molecular scattering of the sunlight. Blue light, being of short wavelength, is scattered more effectively than the light of longer wavelengths. Variations in color may be caused by particles suspended in the water, water depth, cloud cover, temperature, and other variable factors. Heavy concentrations of dissolved materials cause a yellowish hue, while algae will cause the water to look green. Heavy populations of plant and animal materials will cause the water to look brown.

An international education initiative, known as global competence, was first noted in 1988 in a report published by the Council on International Education Exchange. Higher education institutions were enjoined to send students on exchange programs to universities abroad where Americans are not the majority population and where English is not the dominant language.

Educational scholars have proposed definitions for the term global competence and postulates regarding the required knowledge, skills, attitudes and experiences necessary to become globally competent. Cross-cultural awareness and interaction, familiarity with an environment, intercultural facility, effective two-way communication, interconnectedness of peoples and systems, acceptance of the different cultural values and attitudes are integral components of global competence.

PART IV (60 questions)

- Which of the following statements is TRUE about scientific method?
 - A. The** scientific method is a continuous process by which people learn about the physical world.
 - When the results of an experiment do not fit the hypothesis, a scientist may ethically discard the results and repeat the experiment.
 - Scientists report the experimental results but not the experimental design to their competitors.
 - People structure their lives on the principles of scientific method.
- The making of careful observations and experiments, then using the data obtained to formulate general principles is called _____.
 - logical method
 - hypothetical method
 - experimental method
 - D. scientific method**
- If the theory survives, it becomes a valid _____.
 - hypothesis
 - assumption
 - C. law**
 - postulate
- The scientist undergoes a manipulative process by which a prediction made on the basis of hypothesis can be tested. This is called _____.
 - A. experimentation**
 - analyzation
 - hypothesization
 - conclusion
- The daffodil reacts to the lengthening days of spring by forming flowers. What characteristic of life is being exhibited by the daffodil?
 - motility
 - B. responsiveness**
 - metabolism
 - evolution
- Ancient organisms develop into the tremendous and ever-changing variety of life seen on Earth today. This illustrates what characteristic of life?
 - heredity
 - adaptation
 - reproduction

B. endoparasite
C. invasive
D. innate
12. Predation in plants is known as _____.
A. **herbivory**
B. florescence
C. ammensalism
D. florization
13. It refers to a process of change in the species that make up a community.
A. **ecological succession**
B. climax community
C. pioneer species
D. ecological equivalent
14. The biome of the Philippines.
A. **tropical rainforest**
B. tundra
C. taiga
D. chaparral
15. Animal behaviors help to maintain _____.
A. evolution
B. adaptation
C. **homeostasis**
D. parthenogenesis

PART VII (*40 questions*)

1. Regala Company manufactures beds; in its catalogue, a double bed is priced at PhP5, 000.00 less a discount of 20%. What will Rizza have to pay for the bed she ordered?

- A.PhP4,150.00
- B.PhP4, 100.00
- C.PhP4,200.00
- D.PhP4, 000.00**

Ratio: $100\% - 20\% = 80\%$

$X = (0.80) 5,000$

$X = \text{Ph}4,000$

2. Rowena Castro works as a sales clerk. She is paid a salary of PhP3, 000.00 a week plus 2% commission on sales over PhP4, 000.00. Find her gross pay for a week in which her sales are PhP9, 500.00

- A.PhP3,500.00
- B.PhP3,110.00
- C.PhP3, 190.00**
- D.PhP3, 210.00

Ratio: Commission = sales x rate

Commission = $9,500 \times 0.02$

Commission = 190.00

Rowena's gross pay = commission + weekly salary

= $\text{Ph}190 + \text{Ph}3000$

= $\text{Ph}3, 190.00$

3. A Toyota car travelling at a rate of 70 kph leaves the house 2 hours after a Kia car has left and overtakes it in 5 hours at what rate was the Kia car travelling?

A. 40 KpH

B. 30 KpH

C. 50 KpH

D. 20 KpH

Ratio:

	1	2	3	4	5	6	7
Toyota	70	140	210	280	350		
Kia	50	100	150	200	250	300	350

4. How many prime numbers are there between 1 and 100?

A. 24

B. 23

C. 22

D. 25

Ratio:

5. What number must be subtracted from both numerator and denominator of the fraction $\frac{11}{23}$ to give a fraction whose value is $\frac{2}{5}$?

A.4

B.2

C.5

D.3

Ratio:

$$\frac{11}{23} - \frac{4}{4} = \frac{7}{19}$$

$$\frac{11}{23} - \frac{5}{5} = \frac{6}{18} \text{ or } \frac{1}{3}$$

$$\frac{11}{23} - \frac{3}{3} = \frac{8}{20} \text{ or } \frac{2}{5}$$

$$\frac{11}{23} - \frac{2}{2} = \frac{9}{21} \text{ or } \frac{3}{7}$$

$$\frac{11 - n}{23 - n} = \frac{2}{5}$$

$$5(11 - n) = 2(23 - n)$$

$$55 - 5n = 46 - 2n$$

$$5n - 2n = 55 - 46$$

$$3n = 9$$

$$n = 3$$

7. A recipe calls for 2 cups of milk for every 7 cups of flour. A chef will use 28 cups of flour, how many cups of milk must he have?

A. 12

B. 10

C. 14

D. 8

Ratio: Ratio and Proportion

2 cups of milk : 7 cups of flour :: n cups of milk: 28 cups of milk

8. If Karl has an average of 76% on his first two tests and has an average of 85% on the next four test, what is his final average on all six tests?

A. 82.5%

B. 80.5%

C. 81.3%

D. 82.0%

9. A room is 30ft long, 25ft wide and 14ft high. If 42 balloons are inside the room, how many cubic feet of space does this allow for each balloon?

A.175

B.215

C.200

D.250

Ratio:

Volume of rectangle = $L \times W \times H$

= $30 \text{ ft} \times 25 \text{ ft} \times 14 \text{ ft}$

= 10,500 ft^3

To compute for the space for each balloon divide the computed volume with the total number of balloons

= $10,500 / 42$

= 250

A.parallel

B.oblique

C.supplementary

D.equal

18. The measure of an angle is 25 more than its supplement. What is the measure of the larger angle?

A.102.5 degrees

B.77.5 degrees

C.110.5 degrees

D.95.5 degrees
