A. Pagkontrol ng kilos
B. Pagbabahagi ng damdamin
4. Alin sa mga sumusunod ang pinakatamang pangungusap?
A. Ang kabataan ay naglalaro kung maliwanag ang buwan at nagtatakbuhan sa lansangan.
B. Ang mga kabataan ay naglalaro at nagtatakbuhan sa lansangan kung maliwanag ang gabi.
- i. Laging UMUUKILKIL sa isipan ng ama ang nasirang pangako ng anak.
A. Sumasagi
B. Gumugulo
- i. Ang Kagawaran ng Ugnayang Panlabas ng Pilipinas ay gulong-gulo kapag may giyera sa ibang bansa. Ano ang unang ginagampanan ng ambassador ng bansa?
A. Bilangin ang mga nasugatan at nasawi
B. Alamin ang mga tirahan ng mga Pilipino sa bayang iyon.
- . Ano ang pokus ng pandiwa sa pahayag na "Bumili ng bagong sasakyan si Angelo"?
A. Pokus sa sanhi
B. Pokus sa actor
- . Kabaliwan at paglulustay ang inyong ginagawa taon-taon. Higit na marami ang maralitang nangangailangan ng salapi at dunong. Ang nagsasalita ay:
A. Matipid
B. Praktikal
- . Naglaro ng basketball sa Rizal Stadium ang koponan ng aming pamantasan.
A. Kagamitan
B. Ganapan
0. Anong tayutay ang tinutukoy sa pahayag.
Durog ang katawang bumagsak sa semento si Miguel.
A. Pagbibigay katauhan
B. Pagmamalabis
1. Sino ang pinagkalooban ng karangalan bilang "Unang Tunay na Makata" noong 1708?
A. Jose dela Cruz
B. Felipe de Jesus
2. Mag-aalas-singko na _____ umaga _____ magising siya.
A. ng – nang
B. nang – kapag
3. "Magtatrabaho ako at ikaw ay mag-aaral upang makatapos ka ng pag-aaral." Anong uri ng pangungusap ito?
A. Hugnayan
B. Langkapan

14. Ang butong tinangay ng aso, walang pagsalang nalawayan ito. Ang kaisipang ito ay tumutukoy sa katotohanan ng _____.
A. Pagtatatanan B. Pagpapakasal
15. Anong uri ng pagbigkas ang salitang "dambuhala?"
A. Malumi B. Malumay
16. Ang katawagan sa pangngalan, pang-abay, pang-uri at pandiwa ay?
A. Pangnilalaman B. Palaugnayan
17. Ang panukalang inihain niya ay lubhang malalim at mahirap arukin.
A. Abutin B. Unawain
18. Ang wikang Filipino ay hawig sa mga wika sa Asya. Alin dito ang pinagmulan ng wikang Filipino?
A. Bahasa B. Malayo-Polinesyo
19. Siya ay hinirang na taga-sensus ng bahay-bahay. Ano ang kanyang nalikom?
A. Ang datos tungkol sa mga bata sa bawat bahay
B. Ang datos tungkol sa mga naninirahan sa bawat bahay
20. Kami ang kabataang siyang magiging pag-asa ng bayan. Paano ginamit ang salitang may salungguhit?
A. Pagtukoy B. Pagpuri
21. Walang tubig kahapon. Ito ay pangungusap na:
A. May panaguri B. Walang paksa
22. Ipinagmamalaki mo siya, BAHAG naman pala ang kanyang BUNTOT. Ang ibig sabihin ng salitang may malaking titik ay:
A. Duwag B. Mahiyain
23. Sabihin ang gawi ng pananalitang ito: "Bawal tumawid, may namatay na dito!"
A. Babala B. Paalala
24. Pinakamahalagang nobelang Pilipino sa maraming taon na nalimbag noong 1906 at tumalakay nang masinsinan sa paksang puhunan laban paggawa at sa sosyalismo ang _____.
A. Luha ng Buwaya B. Banaag at Sikat
25. Ayon kay Balagtas, "ang laki sa layaw, karaniwa'y hubad" kaya ang mga bata ay:
A. nakapagtatapos sa pag-aaral B. hindi sumusunod sa magulang
26. Anu ang salitang ugat ng PINAGLABANAN?
A. Laban B. Labanan
27. Noong taong 1962, ano ang pagbabago sa paglimbag ng diploma at sertipiko ng pagtatapos?
A. Nilimbag sa Tagalog ang diploma sa di-Tagalog na bayan
B. Nalimbag sa Filipino ang diploma

- The "**Kataas-taasang Sanggunian**" (supreme council) was the highest governing body of the Katipunan. It was headed by a supremo, or president.
- The 1987 Constitution created the **Commission on Appointment** with the power to confirm major appointments of the president.
- The article that Rizal wrote in *Diariong Tagalog* urging his compatriots to love their fatherland just like his prize-winning piece "A La Juventud Filipina" is "**Amor Patrio**."
- The Asian World, said to be the **region of the rising sun** refers to the East.
- The basis of John Dewey's commitment to naturalism is **Darwin's theory of evolution**.
- The chancellor of Prussia who successfully united Germany and made it a republic was **Otto Von Bismark**.
- The **credit cooperative** promotes thrift among members and generates funds in order to lend to its members.
- The **Executive Power** approves or vetoes the bill passed by Congress.
- The famous Rizal monument in Luneta was not the work of a Filipino but a Swiss sculptor named **Richard Kissling**.
right or power to decide or approve something
- The Filipino trait of "pakikisama" is said to be ambivalent because it can be used for or against the person who values it.
contradictory attitude
- The government tax people's labor through an **income tax**.
- The greatest Babylonian ruler and famous for his written code was **Hammurabi**.
- The greatest legacy of the Americans to the Filipinos is education while to that Spaniards is **Christianity**.
- The **House of Representatives** serve as the initiating body in the Impeachment Case. After that, the Senate has the power to try and serve as Impeachment court.
- The **northern part of Asia** experiences freezing cold.
- The **Philippine Bill of 1902** provided a bill of rights which guaranteed the Filipinos the right to speech, free press and the freedom to petition for the redress of grievances.
- The Philippines is approximately **300,000 square kilometers** (115,831 sq mi.) of land area are spread over 7,641 islands.
to correct something
- The Philippines is made up of **7,641 islands**, making it one of the largest archipelagos in the world. But more than 5,000 of the islands remain unnamed on most international maps.
- The Philippines is the only Asian nation that is predominantly **Christian**. While many of its Southeast Asian neighbors practice Buddhism, 86 percent of the Filipino population is Roman Catholic.

- The **power of judicial review** of the courts to interpret the constitution and to declare any legislative or executive act invalid because it is in conflict with the fundamental law.
- The **Renaissance** is a vibrant period of European cultural, artistic, political and scientific "rebirth" after the Middle Ages, was led by people including Leonardo da Vinci, Michelangelo, Machiavelli and the Medici family.
- The **rice terraces** of the Philippine Cordilleras are a UNESCO World Heritage Site. The terraces were built about 2,000 years ago and — thanks to the rough terrain keeping settlers out — remain as they would have been in pre-colonial times.
- The saying "Every right has a corresponding duty" means that rights and duties are **reciprocal**.
- The sole power to declare existence of a state of war is the **Congress**.
- The term **barangay** was derived from the Malay word *barangay* or *balangay*, which means sailboat.
- The time orientation of the Filipino is **situational** rather than mathematical.
- The **Treaty of Paris** was a treaty signed by Spain and the United States on December 10, 1898, that ended the Spanish–American War.
- **Timawa** refers to the class of Filipinos who were free and independent.
- **Timawa** or **Freemen** were the feudal warrior class of the ancient Visayan societies of the Philippines.
- **Tipol** is the largest Philippine Bird.
- **Totalitarian** is a government that seeks to subordinate the individual to the state by controlling not only all political and economic matters, but also the attitudes, values and beliefs of its population.
- **Treaty of Tordesillas** is the agreement between Spain and Portugal aimed at settling conflicts over lands newly discovered or explored by Christopher Columbus and other late 15th century voyagers.
- **Tributo** is a tax or tribute to the colonial government paid by the Filipinos. This tribute means loyalty to the Spanish Government.
- What is important to Asian people is the inner or spiritual purity and not materialistic interests. This trait is **religiosity**.
- When John concealed the fact during marriage that he was a homosexual, he committed the crime of **fraud**.
- When the commonwealth government of the Philippines fell, a **Republican Democracy** was formed.
- **William Howard Taft** was the first Civil Governor and also the first lawmaking body of the Philippines under the Americans; while Governor Taft exercised legislative powers.

- **Writ of Certiorari** is a writ issued by higher court requiring the lower court to elevate the case to them for the purpose of review.
- **Writ of Kalikasan** is a writ for the protection and preservation of the environment.
- **Writ of Mandamus** is an order from the superior court requiring the lower court to do their duty.

Writ of Prohibition is an order from the superior court to prohibit the lower court for further proceeding in an action or matter.

Writ of Quo warrant is an order in which the legality of the individual to the government position is questioned and challenged.

Yangtze River is the longest on the Asian continent. It is in China and is 6,300 meters or 3,915 miles long.

- **62** is the smallest positive number which, when it is divided by 3, 4 or 5, will leave a remainder of 2.
- A fraction whose denominator is equal to or greater than the numerator, such as $\frac{6}{4}$ is an **improper fraction**.
- A geometrical close bounded figure which has 20 sides is known as an **icosagon**.
- A graph that uses bars with equal ranges of values is a **histogram**.
- A line where two faces meet in a three-dimensional structure is termed as the **edge**.
- A line whose points correspond to numbers is a **number line**.
- A number less than zero is denoted with the symbol (-). Negative 3 = -3, is **negative number**.
- A number squared is multiplied by itself; the **square root** of a number is whatever integer gives the original number when multiplied by itself.
- A number that can be divided or is divisible by 2 is an **even number**.
- A number that cannot be represented as a decimal or fraction is said to be **irrational**.
- A parallelogram with four sides of equal length and no right angles is a **rhombus**.
- A **perfect number** refers to a positive integer that is equal to the sum of its positive divisors. By this rule, 6 is the smallest perfect number.
- A tenant was awarded a house and lot package worth P180,000.00. She has to pay the package for 20 years at 9% per annum. The house and lot will cost **P504.00** after 20 years.
- A **Venn diagram** is usually shown as two overlapping circles and is used to compare two sets. The overlapping section contains information that is true of both sides or sets and the non-overlapping portions each represent a set and contain information that is only true of their set.
- **Absolute value** is the distance between a number and 0 on a number line.
- **Albert Girard** published a treatise on trigonometry which contains the earliest use of the abbreviations: sin, tan, sec for sine, tangent and secant.
- **Algebra** is the use of letters of the alphabet to represent numbers in equations, formulas, and rules.
- **Algebraic expression** is an expression that contains a variable.
- Also known as Gaussian distribution, **normal distribution** refers to a probability distribution that is reflected across the mean or center of a bell curve.
- Among all shapes with the same perimeter, a **circle** has the largest area.

- An 18th Century Swiss Mathematician, **Jacob Bernoulli** introduced the "Law of Large Numbers" in his "The Art of Conjecture". In statistics, this implies that the larger the sample, the more likely will the sample become representative of the population.
- Ana and Beth do a job together in three hours. Working alone, Ana does the job in 5 hours. It will take Beth **7 and $\frac{1}{2}$ hours to do the job alone.**
- **Angle** is a figure formed by two rays or two line segments with a common endpoint called the vertex of the angle.
- **Area of Circle** is computed as : $\pi \times r^2$
- **Area of Parallelogram** is computed as : area = base x height
- **Area of Rectangle** is computed as: area = length x width
- **Area of Triangle** is computed as: area = $(\frac{1}{2})$ (base) (height)
- **Arithmetic mean (average)** = Sum of values / Number of values
- A **bar graph** is a graph with horizontal or vertical bars that represent data.
- **Blaise Pascal** has been described as the greatest "might-have-been" in history of mathematics.
- A **cartographer** is a person who makes maps.
- **Celsius** is a temperature scale on which pure water at sea level freezes at 0° and boils at 100°.
- **Census** is an official count of population and the recording of other demographic data such as age, gender, income, and education.
- **Cent** came from the Latin word '*centesimus*,' which means "a hundredth part."
- **Centimeter (cm)** is a metric unit of length equivalent to 10 millimeters $\frac{1}{10}$ of a decimeter, and $\frac{1}{100}$ of a meter.
- **Circle** is the set of all points in a plane that are equally distant from a fixed point in the plane called the center of the circle.
- **Circumference** is the distance around a circle; its perimeter.
- **Circumference of a circle** is computed as: circumference = $2\pi \times r$
- **Clockwise rotation** is the direction in which the hands move on a typical analog clock; a turn to the right.
- **Common denominator** is a nonzero number that is a multiple of the denominators of two or more fractions.
- **Common factor** is a factor of each of two or more counting numbers. For example, 4 is a common factor of 8 and 12.

- **Common fraction** is a fraction in which the numerator and the nonzero denominator are both integers.
- **Compass** is a tool used to draw circles and arcs and copy line segments.
- **Composite number** is a counting number greater than 1 that has more than two factors.
- **Cone** is a geometric solid with a circular base, a vertex (apex) not in the plane of the base, and all of the line segments with one endpoint at the apex and the other endpoint on the circumference of the base.
- **Confidence level** is the probability that the statistician's confidence interval contains the true, unknown population parameter.
- **Congruent figures** ($\cong$) is a figure having the same size and shape.
- Congruent plane figures or shapes that cover a plane completely without overlapping is **tessellation**.
- **Coordinate** is a number used to locate a point on a number line; a point's distance from an origin.
- **Copernicus** was a Renaissance-and-Reformation-era Mathematician and astronomer, who formulated a model of the universe that placed the Sun rather than the Earth at the center of Universe.
- **Cosine (CAH):** Cosine = adjacent/hypotenuse
- **Counterclockwise rotation** is the opposite of the direction in which the hands move on a typical analog clock; a turn to the left.
- **Cubic centimeter** (cc or cm^3) is a metric unit of volume or capacity equal to the volume of a cube with 1-cm edges.
- **Cubic unit** is a unit such as cubic centimeters, cubic inches, cubic feet, and cubic meters used to measure volume or capacity.
- **Cubit** is an ancient unit of length, measured from the point of the elbow to the end of the middle finger.
- **Data** is an information that is gathered by counting, measuring, questioning, or observing.
- **Decimal** is a number written in standard base-ten notation containing a decimal point, such as 2.54.
- **Decimal point** is a mark used to separate the ones and tenths places in decimals.
- **Decimeter** (dm) is a metric unit of length equivalent to $1/10$ meter, or 10 centimeters.
- **Degree** ($^\circ$) is a unit of measure for angles based on dividing a circle into 360 equal parts.
- **Degree Celsius** ($^\circ\text{C}$) is the unit interval on Celsius thermometers and a metric unit for measuring temperatures.

- **Degree Fahrenheit** ($^{\circ}\text{F}$) is the unit interval on Fahrenheit thermometers and a U.S. customary unit for measuring temperatures.
- **Density** is a rate that compares the mass of an object to its volume.
- **Denver** is known as the mile-high city because it has an elevation of precisely 5,280 feet – the length of a mile.
- **Dependent variable** is a variable whose value is dependent on the value of at least one other variable in a function.
- **Diagonal** is a line segment joining two non-consecutive vertices of a polygon.
- **Diameter** is a line segment that passes through the center of a circle or sphere and has endpoints on the circle or sphere.
- **Diameter** is a line that passes through the center of a circle and divides it in half.
- **Digits** are the numerals 0-9 found in all numbers. 176 is a 3-digit number featuring the digits 1, 7, and 6.
- **Distance Formula:** $d = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$
- An **equation** is a statement that shows the equality of two expressions by joining them with an equals sign.
- **Equilateral** is a term used to describe a shape whose sides are all of equal length.
- **Factoring** is the process of breaking numbers down into all of their factors.
- **Fibonacci Sequence** is a sequence beginning with a 0 and 1 whereby each number is the sum of the two numbers preceding it. "0, 1, 1, 2, 3, 5, 8, 13, 21, 34..." is a Fibonacci sequence.
- **George Dantzig** invented a method of determining the optimal values of a linear function subject to certain constraints. This method is known as linear programming.
- **Girolamo Cardano** is a 16th Century Mathematician, who was first to define the probability of an event as the quotient of all favorable outcome over the total number of outcomes.
- **Googol** means 1 followed by 100 zeroes. A googolplex is 1 followed by a googol zeros.
- **Graph Theory** is a branch of mathematics focused on the properties of graphs.
- If the exchange rate of US dollars to peso is \$1=php 47.90, **0.02** is the value of 1 php in American cents.
- If the sum of the digits is divisible by three, then the given number will also be divisible by three. This is known as the rule of divisibility of **three**.
- If two apples cost 25 pesos, **8 apples** can be purchased for 100 pesos.

- If you add up all the numbers between 1 to 100 consecutively then the total that you will reach is **5050**.
- If you multiply a single-digit number by 9 and add all the digits of the product, the sum will always be **9**.
- If you take any number multiplied by three and sum the digits in the answer, then the answer you receive after adding the digits will always be divisible by **three**.
- In a certain school, the ratio of boys to girls is 5 is to 7. If there are 180 boys and girls in the school, there are **75** boys.
- It takes 20 men to build a house for 60 days. **80 men** will be needed to build it in 15 days.
- Jeff has 2,880 classic rock singles. He began his collection 7 years ago and has doubled the number in his collection years. He collected **90 singles** during the 2nd year.
- **Johann Gauss** is a 19th Century Mathematician who added the integers from 1 to 100 within seconds by a flash of mathematical insights.
- John can eat a quarter of a pizza in one minute. It takes **6 minutes** for John to eat one pizza and a half.
- **John Napier's** greatest contributions includes such groundbreaking texts in invention of dividing roots used as multiplication table.
- **Leonardo Fibonacci** from Pisa, in the 13th century, discovered the Fibonacci sequence.
- Line segments join together to form a closed figure. Rectangles, squares, and pentagons are just a few examples of **polygons**.
- Mathematically, an **even number** is a number that can be divided into two smaller numbers which are actually whole numbers.
- **Mixed Numbers** refer to whole numbers combined with fractions or decimals. Example $3\frac{1}{2}$ or 3.5.
- Mrs. Alice's bathroom has to be covered with tiles. The edge of the bathroom needs a rubberized tile. If the tub is 2.3 meters long and 1.8 meters wide, **8.2** meters of rubberized tiles are required.
- **Numerology** is the study of significant numbers and how they impact aspects of one's life, much like astrology.
- One quarter (*qua*) of the plane on the Cartesian coordinate system. The plane is divided into 4 sections, each called a **quadrant**.
- **Operation** refers to addition, subtraction, multiplication, or division.
- **Ordinal** numbers give relative position in a set: first, second, third, etc.
- **Probability** = Target outcomes/Total outcomes
- **Pythagorean Theorem:** $a^2 + b^2 = c^2$

Pafnuty Chebyshev is a "grand" Russian Mathematician who gave the basis for applying the theory of probability to a statistical data, worked a number of prime numbers not exceeding a given number, and proved Bertrand Conjecture in 1850.

Parabola is an open curve whose points are equidistant from a fixed point called the focus and a fixed straight line called the directrix.

Parallelogram is a quadrilateral with two sets of opposite sides that are parallel.

Pi is used to represent the ratio of a circumference of a circle to its diameter, denoted with the Greek symbol π .

Prime numbers are integers greater than 1 that are only divisible by themselves and 1.

Quadratic Formula: $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$

Radius is the distance found by measuring a line segment extending from the center of a circle to any point on the circle; the line extending from the center of a sphere to any point on the outside edge of the sphere.

Roman numerals only have seven different letters which form the entire number system: I, V, X, L, C, D, and M.

Sine (SOH): Sine = opposite/hypotenuse

Slope Formula: Slope = $\frac{y_2 - y_1}{x_2 - x_1}$

Slope Intercept: $y = mx + b$

Slope shows the steepness or incline of a line and is determined by comparing the positions of two points on the line (usually on a graph).

Sound intensity which is measured using decibel scale also uses common logarithm. Decibel is name after **Alexander Graham Bell**.

Tangent (TOA): Tangent = opposite/adjacent

Tangent is a straight line touching a curve from only one point.

The angles of a triangle always add up to **180 degrees**.

The area of a rectangle is $(x^2 + 2x - 8)$. If its length is $x + 4$, its width is $x - 2$.

The average of 5 different counting numbers is 20. The highest possible value that one of the numbers can have is **90**.

The average of A, B, C is $(A + B + C)/3$.

The biggest prime number known as **M77232917** was discovered in January 2018 by a computer in Tennessee.

The **correlation** between two variables x and y is a measure of how closely related they are, or how linearly related they are.

- The **difference** is the answer to a subtraction problem, in which one number is taken away from another.
- The edges of a rectangular solid have these measures: 1.5 feet by $1\frac{1}{2}$ feet by 3 inches. Its volume in cubic inches is **972**.
- The idea of **zero** was invented by an Indian astronomer and mathematician Brahmagupta in around 600 A.D.
- The largest number common to each set of factors that divides both numbers exactly is **Greatest Common Factor**.
- The majority of the months have **31 days** in a calendar. Only four months have 30 days i.e. April, June, September, and November. February typically only has 28 days, with the exception of leap years.
- The mean absolute deviation of the following numbers: 60, 80, 100, 75 and 95 is **12.4**.
- The **multiple** of a number is the product of that number and any other whole number. 2, 4, 6, and 8 are multiples of 2.
- The number **2** is the smallest prime number.
- The number of times an event can happen in a given period of time; often used in probability calculations is **frequency**.
- The number that denotes repeated multiplication of a term, shown as a superscript above that term is called **exponent**.
- The numerals we use now are called "**Hindu-Arabic**" numbers.
- The only prime numbers that end with a "2" or "5" are **two and five**.
- The opposite sides of a dice always add up to 7. For example, 6 and 1 will always be on opposite sides which add up to 7.
- The power to which a base must be raised to produce a given number is **logarithm**.
- The quote "logarithmic plots are device of the devil" is attributed to **Charles Francis Richter** who is the most famous as the creator of the magnitude scale, until the development of the moment magnitude scale in 1979, quantified the size of earthquakes.
- The vertex angle of an isosceles triangle is 20° . The measure of one of the base angles is 80° .
- The word "**hundred**" comes from the old Norse term, "hundrath", which actually means 120 and not 100.
- The **n**th root of a number is how many times a number needs to be multiplied by itself to achieve the value specified.
- There are **86,400** seconds in a day.

There were two outstanding astronomers who contributed notably to mathematics in the early part of seventeenth century: The German Johann Kepner and the Italian Galileo Galilei.

Three brothers inherited a cash amount of P62,000 and they divided it among themselves in the ratio of 5:4:1. The largest share is **P24,800** more than the smallest share.

Trigonometry is the study of the relationship between the angles of triangles and their sides.

Two buses leave the same station at 8:00 PM. One bus travels north at the rate of 30 kph and the other travels east at 40 kph. The buses are **100 km** apart at 10 PM.

Two lines or line segments intersecting to form a right angle are **perpendicular** lines.

Unit is a standard quantity used in measurement. Inches and centimeters are units of length, pounds and kilograms are units of weight, and square meters and acres are units of area.

Vertex is the point of intersection between two or more rays, often called a corner. A vertex is where two-dimensional sides or three-dimensional edges meet.

When a set of points join together to form a flat surface that extends in all directions, this is called a **plane**.

Yard is a unit of measure that is equal to approximately 91.5 centimeters or 3 feet.

The Department of Information and Communications Technology is mandated by DICT act or **Republic act 10844** of **2015** to be the primary policy, planning, coordinating, implementing, and administrative entity of the Executive Branch of the government that will plan, develop, promote the national ICT development agenda.

The **DICT Secretary** is Senator Gregorio Ballesteros Honasan II.

Bar graphs illustrate a particular data series through rectangles

A social network services available through the computer is **Facebook**.

Multimedia is the program application that provides users with a means to organize and present information through the use of text, numbers, graphs, sounds, and visual images.

Software refers to a computer program.

The information highway is called **internet**.

The spreadsheet in the computer can perform and aid in **computation**.

The **central processing unit** is the brain of the computer.

The **local area network** links the computer to the base computer making it possible to share software materials.

Mainframe computers are type of computers for processing and accessing data at very high speeds.

- An organizational tool used to structure the way you save files on your computer is called **folder**.
- **Encoding** is the process of translating sound card signals from a microphone into codes the computer can use.
- Charles Babbage is considered to be the "**Father of Computing**" because of his contributions to the basic design of computer.
- **Press Ctrl + Alt + Delete. Select the application in the task manager window and click End task.** This is an appropriate routine to shut down a non-responding application.
- **PowerPoint** replaces overhead presentation through the use of computer generated slides.
- The unit that transforms data into information is the **CPU**.
- **My computer desktop icon** can be used to access the files and programs in the computer.
- **Modem** enables the computer to communicate with other computers over the telephone.
- **Computer worm** is a malware program that repeatedly copies itself and is very similar to a computer virus.
- **Massive Open Online Courses** are considered massive because they can accommodate a big number of learners.
- The father of Computer Science is **Alan Mathison Turing**.
- In the delivery of distance education, the **computer-assisted instruction application** is used to organize instructions and track students' records and progress.
- The important practice to scan a computer's drive for virus prevention is **immediately after installing software from a disk created by a friend**.
- Like the typewriter, the computer has a **keyboard**.
- **Command** refers to a single phrase or word that tells the computer to do something with a program or file.
- A **password** is a secret word that must be entered into the computer before a person is allowed to have an access to a certain information.
- Random Access Memory (RAM) is a **temporary memory**; Read-Only Memory (ROM) is a permanent memory.
- **Hypertext Markup Language (HTML)** was first created by Tim Berners-Lee, Robert Cailliau.
- **Ajay Bhatt** invented the Universal Serial Bus.

- The **Basic Input and Output System** that controls the computer tells us about the operations to be performed on the System. The Instructions are embedded on a chip connected to the Motherboard.
- **Byte** is known as the Storage unit of data
- **CPU** is the Brain of a Computer. It is also known as the Central Processing Unit of the Computer.
- **MAC** is the common abbreviation used for a type of personal Computer Macintosh made by the Apple Computer Company.
- **OS** is the Operating System of the Computer. It is the main program that runs on the Computer and begins automatically when the Computer is turned on.
- The Personal Computer is given the common abbreviation named **PC**. All the Computers are IBM Compatible
- When the File is to be stored in the Portable Document Format, the term **PDF** is used.
- The Space that can be accessed only one time is known as **Random Access Memory**. The Working Speed of the Computer System depends on the RAM.
- The Instructions for the Computer is the **ROM** or Read Only Memory. ROM is a non-volatile and cannot be altered
- The System that is used for displaying the graphics is known as Video Graphics Array or **VGA**. It was developed by IBM.
- File Transport Protocol is also known as **FTP** that moves a file between computers using the Internet Service.
- Hypertext Transfer Protocol or **HTTP** is the set of instructions for the software that is used to control the movements of Files on the Internet.
- The **IP** also known as Internet Protocol is the method of exchanging the data or information between the set of Computers on the Single Network or the series of the Interconnected Network.
- Internet Service Provider or **ISP** is the Organization that provides the Internet Service to connect the device to the Internet Services.
- The Local Area Network or **LAN** is the group of Computer and Devices Services provided in the geographical region of an individual.
- **GIF** is a graphics image format widely used on the Internet. The images are in bitmap image format and are compressed for easy downloading when accessing web pages.
- **GPS** is a navigation system used to determine a current location. A GPS system is satellite-based and comprised of a satellite network located in orbit powered by a radio signals

JPEG is a digital image format commonly used in digital photography. The JPEG format is a loose compression format and is the most commonly used format for transmitting images over the Internet.

MBPS (Megabits per Second) refers to the speed of data being transferred over a network and is measured in megabits. One megabit represents over one million bits which means the data transfer rate is one million bits per second.

SMS (Short Message Service) is a method used to transmit short messages over the Internet or via a mobile communication system.

- A 25-year old pregnant women is on her last month of pregnancy and has been experiencing uterine contractions every 20 minutes. The hormone responsible for having this contractions is called **Oxytocin**.
- A biome is best defined as a **major climatologic regions with consistent inhabiting populations**.
- A **black hole** is a massive star that has collapsed to such a small volume that its gravity prevents the escape of everything, including light.
- A change in state from solid to gas without passing the liquid state is called **sublimation**.
- A cold-blooded animal is one that has a variable body temperature while **warm-blooded animal** is one that has fixed body temperature.
- A **light-year** is the distance light travels in a year, about 9.5 trillion kilometers.
- A **meteor** is the luminous phenomenon observed when a meteoroid enters Earth's atmosphere and burns up, popularly called a shooting star.
- A **meteorite** is any portion of a meteoroid that reaches Earth's surface.
- A **meteoroid** is a small, solid particle that travels through space.
- A **plasma** is a gas that is composed of free-floating ions (atoms stripped of some electrons).
- A population is a group of organisms with same species that can **interbreed in natural setting**. Therefore, it can pass their traits from one generation to another generation.
- A **scalar quantity** is any quantity in physics the has magnitude, but not a direction associated with it.
- **Absolute magnitude** is the apparent brightness of a star if it were viewed from a distance of 32.6 light-years.
- Agricultural centers have found lately varieties of coconut propagation thru **putting up plant nurseries**.
- Albino corn seedlings may grow several inches tall. However, they will eventually die, primarily because **they cannot produce their own food**.
- **Allele** is an alternative form of a gene.
- **Ammonia** is a compound with nitrogen and hydrogen.
- An **artesian well** is any formation in which groundwater rises on its own under pressure.
- An atom consists of a **nucleus**, located in the center of the atom that contains protons and neutrons and represents most of the mass of an atom.
- At **cellular level** of biological organization shows the interaction of molecules within one cell.

- Angiosperms are plants with vascular tissues, with seed inside/ outside a fruit. Also known as **fruit-bearing plants or flowering plants**. Examples are tomatoes and cucumbers.
- **Asexual reproduction** requires no fertilization causing no variation because there is no crossing-over of chromosomes. This happens only from a single parent and producing an offspring of exact copy.
- **Astronomy** is the study of celestial bodies such as stars, comets, planets and galaxies and phenomena that originate outside the earth's atmosphere.
- **Balance** in the water cycle means the average annual precipitation over Earth equals the amount of water that evaporates.
- Based on Chargaff's rule, Pyrimidine nitrogenous base is **always complementary** to purine nitrogenous base.
- Because the mass of subatomic particles is so small, chemists use a very small unit of mass called the **atomic mass unit (amu)**.
- **Bernoulli's Principle** states that as the velocity of a fluid increases, the pressure exerted by the fluid decreases.
- **Bose-Einstein Condensate** consist of particles called bosons which exist at the temperature of 0 K or -273°C with most minimum amount of energy a particle can possess.
- **Brain stem** is the part of the brain that controls the following activities: breathing, blood pressure, heart rate, alertness.
- Cell theory has 3 statements:
 1. All living organisms are made up of cell.
 2. Cell is the basic functional unit of life.
 3. **Cells came from pre-existing cells.**
- **Cerebral Palsy** refers to a disorder which muscular control and coordination are impaired due to brain damage.
- **Cerebrovascular accident** is a severe damage to some parts of the brain due to lack of blood supply.
- **Chemical Properties** are properties that are only observable when the substance reacts with another substance thereby causing a change in the chemical composition of the substance.
- **Chemistry** is a science that describes matter – its properties, the changes it undergoes, and the energy changes that accompany those processes.
- **Chromosome** is a thread of DNA, made up of genes.
- **Circulatory system** is described as the lifeline of the body. It is the body's "pickup" and delivery system."
- **Cleavage** is the tendency of a mineral to cleave, or break along flat, even surfaces.

- **Commensalism** is the relationship between an organism and a host where neither is benefited nor harmed.
- Comparing the speed of sound in liquids, gases, and solids, the speed of sound is usually lowest in **gases** and highest in **solids**.
- **Cosmology** is the study of the nature of the universe, its origin and overall structure.
- **Cytosine and Uracil** are pyrimidine nitrogenous bases and **Guanine and Adenine** are purine nitrogenous bases.
- **Decomposition** is a process in which a substance is broken to make it useful in other processes. The organisms that are capable of decomposing a substance are called Saprophytes.
- **Democritus (400 B.C.)** proposed that matter was composed of tiny indivisible particles.
- **Dependent variable** is the factor that may change as a result of changes made in the independent variable.
- Desert is the **driest ecosystem**, very low amount of precipitation, may have very high or very low temperature. Therefore, presence of life form is none or low. Desertification is the conversion of semi-arid areas to absolute desert (arid means dry).
- Despite the observed diversity among organisms, they are all made from the same set of biomolecules composed of monomeric units, the **carbohydrates, proteins and nucleic acids**.
- Developing mines require getting a **DENR Environmental Clearance**.
- **Diffusion** involves the spontaneous and random movement (Brownian movement) of molecules from one place to another.
- DNA means Deoxyribonucleic acid; RNA mean Ribonucleic acid. DNA and RNA are both nucleic acids composed of **phosphate group, sugar group, and nitrogenous bases**.
- Ecosystem is the relationship between the physical and biological environments in a certain plain. Among desert ecosystems, the world's largest ecosystem is **Antarctica**.
- **Ectopic pregnancy** is the abnormal implantation of embryo in any place of female reproductive organ except the uterus' endometrium.
- Eight out of the top ten leading causes of morbidity in the Philippines are communicable. To prevent these from happening to your students, the best advice you can give them is to **wash hands frequently**.
- Element in the periodic table that has the symbol Ca is calcium; **Au is gold**; K is potassium; and Na is sodium.
- Equal to work done against gravity is **gravitational potential energy**.
- **Estuaries** are areas where freshwater merge with the ocean.

- **Essential amino acids** are proteins that an organism must consume from another source because it cannot be synthesized by itself. In human, the essential amino acids are: histidine, isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan, and valine.
- **Fermionic Condensate** consist of normal fermions (which are the building blocks of normal matter) which are almost identical to bosons they cannot stick together.
- **Few organisms can directly utilize atmospheric nitrogen** that can able to integrate nitrogen gas from the atmosphere into the nitrogen cycle of the biosphere.
- Fog is a cloud with its base at or very near the ground. The formation of fog generally occurs after the ground has lost heat by **evaporation**.
- **Fold eruptions** of rock formation cause the world's greatest mountain ranges.
- Food preparations are handled well to avoid spoilage caused by **unsanitary conditions** in the preparation and processing of the food products.
- Food, plants and other animal wastes should be segregated in waste disposal because these are **biodegradable**.
- For neutral atoms, the net charge is **zero**.
- Forces acting on an object that are opposite in direction and equal in size are **balanced forces**.
- **Fossil fuels** are hydrocarbons that may be used as fuel, including coal, oil, and natural gas.
- **Fundamental Quantities** are quantities that do not depend on any other quantity for their measurement.
- **Gene** is a section of DNA, which codes for the formation of a protein controlling a specific characteristic of the organism.
- **Gene** is a segment of DNA molecule which controls the appearance of a given trait.
- Green plants are considered autotrophs because they **can build simple inorganic substances into organic compounds**.
- Hair and fingernails are made up of **Keratin**.
- **Herbert Spencer** coined the term "survival of the fittest."
- **Heterotrophic** organisms obtain their energy by eating plants or animals that have eaten plants.
- Humans have a **closed circulatory system** where blood is enclosed only inside a body and passes through blood vessels.
- **Hurricane** is a weather disturbance in the western part of the Atlantic Ocean.

If a color blind man marries a woman who has normal vision and no history of the disease, it is most probable that all of their **daughters will be carriers**.

If the flower has either stamen or pistil, it is called an **Imperfect flower**. If the flower has stamen only, it is a staminate flower. If the flower has pistil only, it is a pistillate flower.

Immigration (travel into) and Natality (birth) contribute to an increase in human population.

In a normal breathing process, **inhalation** happens when the diaphragm contracts and goes down as the ribcage goes upward and outward.

In this situation of **commensalism**, one animal is benefited from the presence of the other animal while the other animal is not harmed nor benefited.

Independent variable is the factor that is intentionally manipulated or changed in an experiment.

Inheritance is the transmission of genetic information from one generation to the next, leading to continuity of the species and variation within it.

Insects have 6 legs, **spiders have 8 legs**; crustaceans have 10 legs, centipedes have 1 pair of leg in one segment, and millipedes have 2 pairs of leg in one segment.

Intrusive igneous rocks are formed when magma hardens beneath the Earth's surface.

Invertebrate animals have no bones such as jellyfish and sea anemone; Vertebrate animals have bones such as tigers and monkeys.

Ionic compounds consist of positive and negative charges held together by the strong electrical attractions between oppositely charged ions.

Ionization energy is the energy required to remove one of the outermost electrons.

Ions are formed by gaining or losing electrons.

Iron-deficiency contributes to the poor scholastic performance of students. **Liver** is best for iron-deficient students.

Isostasy is the concept that the Earth's crust is floating in gravitational balance upon the material of the mantle.

Isotonic solution has an equal amount of solute and solvent between the internal and external environment of the cell. Therefore, water molecules enter and exit to the cell.

Isotonic solution is when there is an **equal amount of solute and solvent** between the internal and external environment of the cell. Therefore, water molecules enter and exit to the cell.

Kinematics is a way of describing the motion of objects without describing the causes.

LASER stands for Light Amplification by Stimulated Emission of Radiation.

Limitation is measured by **Heisenberg principle**.

- **Law of conservation of energy** states that energy may change forms, but it cannot be created or destroyed under ordinary conditions.
- **Law of conservation of mass** (Anton Lavoisier) states that in a chemical reaction, matter is neither created nor destroyed, it is transformed into something else.
- **Law of constant/definite composition** (Joseph Proust) states that a given compound always contains the same, fixed ratio of elements.
- **Law of Entropy** states that heat flows from an object with a higher temperature to an object with a lower temperature.
- **Law of multiple proportions** (Joseph Proust) states that elements can combine in different ratios to form different compounds.
- **Lewis symbols** represent the valence electrons as dots placed on sides of the symbol for an element.
- Malaria is carried by **Anopheles mosquito**, Dengue is carried by *Aedes aegypti* mosquito.
- **Mechanical weathering** occurs when physical forces break rock into smaller and smaller pieces without changing the rock's mineral composition.
- **Metals** are lustrous (shiny), malleable, ductile, and are good conductors of heat and electricity.
- **Milk** is an antidote that have a similar effect if vinegar or citrus juice were not available.
- *Mimosa pudica*, locally known as Makahiya is called as such because its leaflets tend to close when touched. This organismal response to a given stimuli that is called **Thigmotropism**.
- **Minerals** are naturally occurring solid substances with an orderly crystalline structure and definite chemical composition.
- **Molarity** (moles of solute/liter of solution) is defined as the moles of solute per volume (L) of solution.
- **Mollusca** is a soft-bodied, consisting of three main parts: a muscular foot, which functions in locomotion; a visceral mass containing most of the internal organs; and a mantle, a fold of tissue that drapes over the visceral mass and secretes a shell.
- Mosses are plants that are small and cannot grow very large because **they do not have vascular tissues**.
- Most of our hydrogen and oxygen is found as **water**, which makes up 55 to 60% of our body mass.
- **Muro-ami** is a destructive fishing method wherein fishes are driven out of a coral reef by pounding the corals with a heavy weight.
- **Nitrogen Cycle** is observable in the mushrooms which thrive few days after lightning strikes.

- **Non-renewable resources** take millions of years to form and accumulate.
- **Nuclear change** are changes in the atomic properties of an element.
- **Nuclear fusion** is the way that the sun produces energy. This reaction converts four hydrogen nuclei into the nucleus of a helium atom, releasing a tremendous amount of energy.
- **Occlusion** forms from cold front pushing warm air up of the ground.
- Of all the elements, **20** are essential for the well-being and survival of the human body.
- On average, about **90%** of the energy is lost at each level in a food chain.
- Organisms that belong to the same genus are necessarily included in the same **Family**.
- **Oxygen** is not needed in the process of photosynthesis (manufacturing of food in green plants).
- PAGASA announces the approach of the seasonal winds. The familiar names used are Amihan and Habagat, internationally known as **Northeast** and **Southwest** respectively.
- **Paleomagnetism** is the natural remnant magnetism in rock bodies; this permanent magnetization acquired by rock can be used to determine the location of the magnetic poles at the time the rock became magnetized.
- **Parallax** is the slight shifting of the apparent position of a star due to the orbital motion of Earth.
- **Parasite** is an organism that feeds on another organism for survival.
- Parturition is a process by which the baby is born through labor. Labor is the period **during which uterine contractions occur** that result in expulsion of the fetus.
- Patients suffering from malfunction of the kidney are now assisted by machine that serves as artificial kidney called **Hemodialyzer**.
- Perihelion is the point in the Earth's orbit nearest to the sun; **Aphelion** is the point in the Earth's orbit farthest to the sun.
- **Phase change** is one in which substances goes from one phase to another, solid, liquid or gas, by the addition or removal of heat.
- Photosynthetic plants and some bacteria can trap light energy and convert it into **chemical energy**.
- **Physical change** are changes in the physical properties of matter and takes place without changing the chemical composition.
- **Physical properties** are properties that can be measured or observed without changing the chemical nature of the substance.
- **Population** is composed of a group with different species of living things.

- **Positive geotropism** is exhibited by the roots of the plants.
- Post-mortem is the stage of the body after the inevitable death. There are 4 stages of post-mortem:
 1. Pallor mortis, paleness of the body due to lack of blood circulation.
 2. Algor mortis, coldness of the body.
 3. **Rigor mortis**, stiffness of the body.
 4. Livor mortis, settling and pooling of blood due to gravity.
- **Projectile** is any object which projected by some means or thrown into the air that continues to move due to its own inertia (mass).
- Prokaryotic cells are different from eukaryotic cells because prokaryotes have **genetic materials that are floating and not enclosed in a capsule**.
- **Radiocarbon dating** is the method for determining age by comparing the amount of carbon-14 to the amount of carbon-12 in a sample.
- **Radiometric dating** is the procedure of calculating the absolute ages of rocks and minerals that contain radioactive isotopes.
- **Red shift**, or a **Doppler shift toward** the red end of the spectrum, occurs because the light waves are "stretched," which shows that Earth and the source are moving away from each other.
- **Renewable resources** can be replenished over fairly short spans of time, such as months, years, or decades.
- Respiration is the **exchange of oxygen and carbon dioxide gases** to and from between the internal and external environment of the body.
- **Rotation** is the turning, or spinning, of a body on its axis.
- Same structure but different in function is known as **Homologous structure**.
- School feeding and milk rationing programs to school children are being implemented by the government. The project is designed to **stop malnutrition among schoolchildren**.
- **Sedimentary rocks** are formed from the weathered products of pre-existing rocks that have been transported, deposited, compacted, and cemented.
- **Seismology** is the study of earthquakes as well as structure of the earth, based on the study of seismic waves.
- **Simple machines** are tools that change the direction or magnitude of a force; it can do work with one movement.
- **Slab-pull** is a mechanism that contributes to plate motion in which cool, dense oceanic crust sinks into the mantle and "pulls" the trailing lithosphere along. It is thought to be the primary downward arm of convective flow in the mantle.
- **Small intestine** is the area of final absorption of nutrients through villi with high efficiency in terms of its surface-area ratio.

General Sciences

- **Solar eclipses** occur when the moon moves in a line directly between Earth and the sun, casting a shadow on Earth.
- **Solar flares** are brief outbursts that normally last about an hour and appear as a sudden brightening of the region above a sunspot cluster.
- **Solubility** is the maximum amount of solute that dissolves in a specific amount of solvent.
- Sound cannot travel in **vacuum** because there are no molecules to pass on the vibration.
- Sound travels fastest in **solids** and travels slowest in gases. The speed of sound in air is 340 m/s.
- **Sun**, the ultimate source of all energy based on 1st Law of Thermodynamics – energy is not created, nor destroyed. Energy is transform from one form to another.
- **Sunspots** appear dark because of their temperature, which is about 1500 K less than that of the surrounding solar surface.
- **Symbiosis** is manifested by algae and fungi in lichens.
- **Terranes** are any crustal fragments that have a geologic history distinct from that of the adjoining fragments.
- The **activation energy** is the minimum amount of energy required to break the bonds between atoms of the reactants.
- The angle of incident and reflected ray of light is measured by **forming a line perpendicular to the surface of the mirror**
- The **big bang theory** states that at one time, the entire universe was confined to a dense, hot, supermassive ball.
- The branch of biology that deals with the study of animal behavior is **Ethology**.
- The breathing organs found in leaves are called **stomata**. The size of the stomata is regulated by the guard cells.
- The **buoyant force** on an object in a fluid is equal to the weight of fluid displaced by the object.
- The chemical reaction that releases heat energy during the process is called **exothermic reaction**.
- The **density** of the solid object is calculated by dividing its mass by the displaced volume.
- The DOH warns the public about preservatives being used in vegetables. To ensure a safe edible vegetables, wash **the vegetables well with clean water**.
- The **First Law of Thermodynamics** states that when heat flows in or out of a system, the energy it gains or loses is equal to the amount of heat transferred.
- The first space telescope, built by NASA, was the **Hubble Space Telescope**. Hubble was put into orbit around Earth in April 1990.

General Sciences

- The **goal of science** is to understand the world around us and use that understanding to our benefit.
- The human body temperature is **98.6 Fahrenheit**.
- The increase of carbon dioxide in the atmosphere has altered the carbon cycle and contributed to **global warming** – the unnatural warming of the lower atmosphere.
- The inverse relationship between the pressure and volume of a gas is known as **Boyle's law**.
- The latest discovery in biological science as applied to animal industry is **Artificial Breeding**.
- The **measurement** of any quantity is made relative to a particular standard or unit that must be specified along with the numerical value of the quantity.
- The **Milky Way** is a large spiral galaxy whose disk is about 100,000 light-years wide and about 10,000 light-years thick at the nucleus.
- The **moon's gravitational pull** causes high and low tides.
- The most abundant inorganic compound is **water**.
- The **photosphere** is the region of the sun that radiates energy to space, or the visible surface of the sun.
- The principle of **fossil succession** states that fossil organisms succeed one another in a definite and determinable order.
- The smallest particle of an element that could not be further divided but still retain the properties of such element is called **atom**.
- The technology that uses plants to breakdown or concentrate toxic wastes in the soil is called **Phytoremediation**.
- The use of product containing chlorofluorocarbon is discouraged because they contribute to the depletion of ozone layer. The **ozone layer** is the Earth's shield against sun's harmful radiation.
- The world ocean can be divided into four main ocean basins – the **Pacific Ocean, the Atlantic Ocean, the Indian Ocean, and the Arctic Ocean**.
- There are seven fundamental quantities: **mass, length, time, temperature, electric current, luminous intensity, and amount of substance**.
- Three factors control the apparent brightness of a star as seen from Earth: **how big it is, how hot it is, and how far away it is**.
- **Trenches** form at the sites of plate convergence where one moving plate descends beneath another and plunges back into the mantle.
- **Uranium** will produce lead that is used for radioactivity.

- Vascular tissue that transports water in leaves connects directly thru **xylem** inside the stem.
- **Vestigial structures** are with ancestral function. But thru adaptation and natural selection, its function consequently was decreased.
- Water constantly moves among the oceans, the atmosphere, the solid Earth, and the biosphere. This unending circulation of Earth's water supply is the **water cycle**.
- Wegener proposed that the supercontinent, **Pangaea**, began to break apart 200 million years ago and form the present landmasses.
- Wegener's **continental drift** hypothesis stated that the continents had once been joined to form a single supercontinent.
- When a gardener propagates a plant by taking cuttings, he plants his cutting in a well-watered soil in a plant pot. **To reduce the water demand of the cutting**, the gardener may then cover the plant and pot with a lightly perforated polythene bag.
- When elements are arranged in order of increasing atomic number, there is a **periodic pattern** in their physical and chemical properties.
- When light from a heated element passes through a prism, it separates into distinct lines of color separated by dark areas called an **atomic spectrum**.
- When the temperature is lower than the dew point, but without precipitation, it is said to be **supercooled**.
- Within a large population, the **Random Mating** helps to maintain a constant gene pool. The gene pool is the sum of all the heritable alleles for all of the traits in a given population.
- **Work** is done when an object applies a force on another object and this force displaces the other object.
- **Zone** is found along the surface of the Earth between the tropic of cancer and the equator.

FACTS ABOUT CoViD-19

- CoViD-19 spreads primarily from person to person thru droplets released when someone sick sneezes or coughs can land on the mouths or noses of people nearby. May also be transferred thru close contact with someone sick like hugging or shaking hands and can also be left on objects and surfaces.
- Cleaning the hands often, cough or sneeze in your bent elbow – not your hands, avoid touching eyes, nose and mouth, avoid close contact with someone is sick, and clean and disinfect frequently touched objects and surfaces are ways to prevent CoViD-19 Infection.
- To avoid CoViD-19, avoid the crowded places with many people nearby, avoid close-contact settings especially where people have close-range conversations, and avoid confined enclosed spaces with poor ventilation.
- Most vulnerable to CoViD-19 infection are healthcare workers, people over 60 years of age, and those with underlying health conditions.
- Contract tracing means identifying everyone who has come in close with someone who has CoViD-19.
- Hand rub for hand hygiene has a duration of entire procedure for 20-30 seconds.
- WHO recommends that all healthy adults do 30 minutes/day of physical activity, and children should be physically active for 1 hour/day.
- The 1st Metro manila lockdown happened last March 15, 2020.
- San Lazaro Hospital is the 1st institution which took care of the 1st CoViD-19 case.
- CoViD-19 was first discovered in Wuhan, China.
- Comorbidity refers to the presence of a pre-existing chronic disease condition.
- Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) refers to the Coronavirus Disease 2019.
- General Community Quarantine (GCQ) refers to the implementation of temporary measures limiting movement and transportation, regulation of operating industries, and presence of uniformed personnel to enforce community quarantine protocols.
- Modified General Community Quarantine (MGCQ) refers to the transition phase between GCQ and the New Normal, when the following temporary measures are relaxed and become less necessary: limiting movement and transportation, the regulation of operating industries, and the presence of uniformed personnel to enforce community quarantine protocols.
- Modified Enhanced Community Quarantine (MECQ) refers to the transition phase between ECQ and GCQ, when the following temporary measures are relaxed and become less necessary: stringent limits on movement and transportation of people, strict regulation of operating industries, provision of food and essential services, and heightened presence of uniformed personnel to enforce community quarantine protocols.

Appendix: CoViD-19 Facts

- Enhanced Community Quarantine (ECQ) refers to the implementation of temporary measures imposing stringent limitations on movement and transportation of people, strict regulation of operating industries, provision of food and essential services, and heightened presence of uniformed personnel to enforce community quarantine protocols.
- Interzonal movement refers to the movement of people, goods, and services between provinces, highly urbanized cities, and independent component cities under different community quarantine classification.
- Intrazonal movement refers to the movement of people, goods, and service between provinces, urbanized cities, and independent component cities under the same community quarantine classification.
- New normal refers to the emerging behaviors, situations, and minimum public health standards that will be institutionalized in common or routine practices and remain even after the pandemic while the disease is not totally eradicated through means such as widespread immunization. These include actions that will become second nature to the general public as well as policies such as bans on large gatherings that will continue to remain in force.

REVIEW GUIDE

EARTH	
Moon can orbit around the earth for 27 days	
Only rocky planet with form of life	
With 72% body of water; With 28% is land	
Has core of iron and nickel; Has mantle of iron and rock; Has crust majorly made of basalt	
Silicon is the most abundant mineral in the Earth's crust	
Diameter	7, 926 miles (12,756 km)
Number of moon	1 (Luna – natural satellite)
Highest point on Earth	Mt. Everest
Lowest point on Earth	Marianas Trench
Longest river on Earth	Nile River
Largest lake on Earth	Caspian Sea
Deepest lake on Earth	Lake Baikal
Largest and deepest ocean on Earth	Pacific Ocean
Longest mountain range on Earth	Andes mountain
Highest waterfall on Earth	Angel Falls
Largest waterfall on Earth	Victoria Falls
Biggest sand island on Earth	Fraser Island
Largest continent on Earth	Asia
Largest country in Asia	China
Smallest continent on Earth	Australia
Smallest independent state	Vatican City
Largest nation by area	Russian Federation
Most populous nations	China and India
Highest population density	Monaco
Largest archipelago	Indonesia
Largest landlocked country	Kazakhstan
Smallest landlocked country:	Vatican City

Appendix: Review Guide

- **Continents of the world** = from Pangaea to Laurasia and Gondwanaland to 7 continents:
 1. Asia
 2. Africa
 3. North America
 4. South America
 5. Antarctica
 6. Europe
 7. Australia
- **Types of storms:**
 - Cyclone – form in Indian Ocean
 - Hurricane – form in Atlantic Ocean
 - Typhoon – form in Pacific Ocean
- **Global Warming**
 - Cause by increased amount of greenhouse gases
 - Greenhouse gases are molecules absorbing the reflected heat from earth's surface
 - Examples of greenhouse gases: Carbon dioxide, Methane, Nitrous Oxide
 - May cause forest fire, and climate changes effects like el Niño and la Niña

PHILIPPINES

Located on the Ring of Fire – area on the surface of the earth where volcanoes in an arc formation.

Has 7, 641 islands

Has Luzon, Mindanao, and Samar as the largest islands

Palawan as the largest province

Batanes as the smallest province

Has Mt. Pinatubo as the highest point

Manila City as the country's capital

The only Christian country in Asia

Had 5 different republic of the Philippines created from Spanish time up to present

Philippines is an archipelago – islands surrounded by water

South of Philippines is the Celebes Sea

Northwest of Philippine is the West Philippine Sea

East of Philippines is the Philippine Sea

Coastline is about 36, 290 km (22, 550 miles)

70 years old is the average Filipino life expectancy

Philippine Peso as the currency

PHILIPPINES

World's second largest archipelago	
Combination of Malay, Chinese, Spaniard, and American culture	
Most extensive river system: PuRio Grande	
Known active volcanoes are Mt. Mayon, Taal Volcano, and Mt. Apo	
BaLongest mountain range: Sierra Madre	
Largest type of forest: Dipterocarp forest	
Largest freshwater lake: Laguna de Bay	
Government type: Republic and Democratic	
LUZON	• National Capital Region (NCR) • Cordillera Administrative Region (CAR) • Region 1 - Ilocos • Region 2 - Cagayan Valley • Region 3 - Central Luzon • Region 4 - Southern Tagalog • Region 5 - Bicol
VISAYAS	• Region 6 - Western Visayas • Region 7 - Central Visayas • Region 8 - Eastern Visayas
MINDANAO	• Region 9 - Western Mindanao • Region 10 - Northern Mindanao • Region 11 - Southern Mindanao • Region 12 - Central Mindanao • Autonomous Region in Muslim Mindanao – ARMM

INVENTION/DISCOVERY	PLACE OF ORIGIN
Alphabet	Egypt
Boat	Australasia
Calendar	Babylonia
Coinage	Turkey
Control of Fire	Africa
Farming	Mesopotamia
Horse domestication	Europe/Asia
Irrigation	Mesopotamia
Law code	Babylonia
Mechanical Calculator	Germany
Mining	Europe
Newspaper	Germany
Paper	Ancient china
Permanent shelters	Eastern Europe
Plough	Mesopotamia
Pottery vessels	Ancient Japan
Scientific method	England
Silk Weaving	Mesopotamia

COUNTRY	EPIDEMICS
India	Cholera
Mediterranean	Plague of Justinian
Worldwide	Black death
India	Bubonic Plague
Worldwide	Spanish Influenza

Appendix: Review Guide

GREAT FLOODS	DESCRIPTION
England	Flooding of Thames River
Netherlands and Germany	North Sea Storm
Western England	Tsunami in the Bristol Channel
China	Flooding of Yellow River
Central China	Flooding of Yellow, Yangtze, and Huai River

FAMINES	DESCRIPTION
Central America	Collapse of Classic Maya Civilization
China	Sparked the Huang Zhao Rebellion
Japan	Kangi Famine
India	The Durga Dewi Famine in Maharashtra
Iran	The Great Persian Famine
Ukraine	The Holodomor

VOLCANIC ERUPTION	DESCRIPTION
Krakatoa	Produced beautiful sunset
Laki	Produced largest lava flow ever recorded
Lanzarote	Eruption in Canary Island
Montagne	Destroyed the town of Saint- Pierre
Oraefajokull	"Glacier Burst"
Tambora, Sumbawa	"Year without a summer"
Vesuvius	Destroyed the Pompeii and Herculaneum

EARTHQUAKES	DESCRIPTION
Kanto, Japan	Most destructive earthquake in Japanese history
Lebanese Coast	Widespread destruction in Beirut, Tyre, and Tripoli
Shaanxi, China	Most destructive earthquake in China's history

Praxiteles	Cnidian Aphrodite
Raffaello Sanzio da Urbino	Sistine Madonna
Rogier van der Weyden	Deposition

SCIENTISTS	CONTRIBUTIONS
Alexander Fleming	Penicillin
Alexander Graham Bell	Telephone
Antoine Lavoiser	Discovered oxygen
Antoine Van Leeuwenhoek	Invented the Compound Microscope
Barbara McClintock	Discovered the jumping genes
Caroline Herschel	Catalogue of nebulae
Carolus Linnaeus	Father of Modern Taxonomy
Charles Darwin	On the Origin of Species by Means of Natural Selection
Copernicus	Heliocentric Model
Daniel Bernoulli	Kinetic Theory
Dmitri Mendeleev	Periodic Table of Elements
Euclid	Optics
Francis Bacon	Scientific Method
Gregor Mendel	Father of Genetics
Isaac Newton	Universal gravitation
James Clerk Maxwell	Electromagnetism
James Watson and Francis Crick	Structured the model of DNA
Matthias Schleiden	Discovered the Plant Cell
Michael Faraday	Electrolysis
Neils Bohr	Quantum Mechanics
Ptolemy	Geocentric Model
Robert Brown	Discovered the nucleus
Robert Bunsen	Discovered Cesium and Rubidium
Robert Hooke	Coined the term "cell"
Rosalind Franklin	Discovered the DNA
Rudolf Virchow	"Cells came from pre-existing cells"
Staphanie Kwolek	Invented the Kevlar
Theodore Schwann	Discovered the Animal Cell
William Harvey	Human blood circulation

Appendix: Review Guide

- **Five ships of Magellan:**

1. San Antonio
2. Santiago
3. Trinidad
4. Concepcion
5. Victoria

- **Five groups of evangelizers arrived in the Philippines:**

1. Augustinian
2. Franciscans
3. Jesuits
4. Dominicans
5. Recolletos

SPANISH TERMS	DEFINITION
Peninsulares	Full-blooded Spaniard living in the Philippines born in Spain
Insulares	Full-blooded Spaniard born and living in the Philippines

1987 CONSTITUTION OF THE REPUBLIC OF THE PHILIPPINES	
Preamble	We, the sovereign Filipino people, imploring the aid of Almighty God, in order to build a just and humane society and establish a Government that shall embody our ideals and aspirations, promote the common good, conserve and develop our patrimony, and secure to ourselves and our posterity the blessings of independence and democracy under the rule of law and a regime of truth, justice, freedom, love, equality, and peace, do ordain and promulgate this Constitution.
Article I	National Territory The national territory comprises the Philippine archipelago, with all the islands and waters embraced therein, and all other territories over which the Philippines has sovereignty or jurisdiction, consisting of its terrestrial, fluvial, and aerial domains, including its territorial sea, the seabed, the subsoil, the insular shelves, and other submarine areas. The waters around, between, and connecting the islands of the archipelago, regardless of their breadth and dimensions, form part of the internal waters of the Philippines.
Article II	Declaration of Principles and State Policies
Article III	Bill of Rights
Article IV	Citizenship
Article V	Suffrage
Article VI	Legislative Department
Article VII	Executive Department
Article VIII	Judicial Department
Article IX	Constitutional Commissions

1987 CONSTITUTION OF THE REPUBLIC OF THE PHILIPPINES	
Article X	Local Government
Article XI	Accountability of Public Officers
Article XII	National Economy and Patrimony
Article XIII	Social Justice and Human Rights
Article XIV	Education, Science and Technology, Arts, Culture and Sports
Article XV	The Family
Article XVI	General Provisions
Article XVII	Amendments or Revisions
Article XVIII	Transitory Provisions
