

Social Dimensions

PILLARS OF LEARNING

- The Four Pillars of Education all started with the report entitled "Learning the Treasure Within" of the International Commission of Education for the Twenty-first Century, chaired by Jacques Delors in 1996. It was published by UNESCO,
- The report itself provides new insights into education for the 21st century. It stresses that each individual must be equipped to seize learning opportunities throughout life: broaden one's knowledge, skills and attitudes, and adapt to a changing complex and interdependent world.

LEARNING TO KNOW

- Implies learning how to learn by developing one's concentration, memory skills and ability to think; acquiring the instrument of understanding.
- To learn to know, students need to develop learn-to-learn skills. Such skills are learning to read with comprehension, listening, observing, asking question, data gathering, note taking and accessing, processing, selecting and using information
- The role of the teacher is as a facilitator, catalyst, monitor and evaluator of learning

LEARNING TO DO

- Represents the skillful, creative and discerning application of knowledge.
- One must learn how to think creatively, critically and holistically, and how to deeply understand the information that is presented.
- To perform a job or work, the learning to do must be fulfilled. This entails the acquisition of competence that enable people to deal with a variety of situations, and to work in teams.

LEARNING TO LIVE TOGETHER

- Vital in building a genuine and lasting culture of peace in the world.
- Can be achieved by developing an understanding of others and their history, traditions and spiritual values, and appreciation of interdependence
- A wide range of skills is necessary for this pillar of education: self-control, handling emotions, communication, interpretation of behaviors, critical thinking, relationship building and cooperation, negotiation, mediation and refusal, problem solving and decision making.
- Teachers should help the students realize the value of being able to live together, in their gradually enlarging world: home, school, community, city, town, province, country and the world as a global village.

LEARNING TO BE

- Dominant theme of Edgar Faure is report "Learning To Be: The World of Education Today and Tomorrow," published by UNESCO
- It refers to the role of education in developing all the dimensions of the complete person: to achieve the physical, intellectual, emotional and ethical integration of the individual into a complete man. Pertains to the overall development of the human person as individual and as a member of the society.

PHILOSOPHY OF EDUCATION

REALISM

Advocates: Aristotle, St. Thomas and Jonathan Herbart

- Concerns with the actualities of life, what is real
- Ultimate reality is the world of physical objects. Hence, reality is independent of the human mind.
 1. Objective existence of the world and beings in it
 2. Knowledge of these objects as they are in themselves
- **Education:**
 1. The most effective way to find about reality is to study it through organized, separate and systematically arranged matter – emphasis is on subject matter concerning Science and Mathematics.
 2. Methods used in teaching include recitation, experimentation and demonstration
 3. Character development is through training in the rules of conduct

IDEALISM

- Ideas are the only true reality, the ultimate truths for matter is nothing but

Advocates: Socrates, Plato	just a mere representation of ideas. • Emphasis is given on knowledge obtained by speculation and reasoning for its central tenet is that ideas are the only thing worth knowing for • Focus is on conscious reasoning of the mind in order to attain truth. This includes the activities pertinent to the human mind such as introspection and intuition and the use of logic • Education: 1. It aims to discover the full potentials in child and cultivates it in order to prepare him for a better position in the society and for him to serve the society better. 2. Emphasis is given on subjects – Philosophy, Literature, Religion and History that will develop and enhance the mind of a child 3. Methods used in learning include lecture, discussion and the Socratic dialogue. 4. Character development is through emulation of examples and heroes.				
NATURALISM Advocates: JJ Rousseau, John Lock, Montaigne	• Rooted from Ancient Philosophers such as Thales, Anaximander, Anaximenes • Denies everything that has supernatural significance – dogmas/revelations – for all can be accounted by scientific laws • Preserves the natural goodness of man • Truth can only be found through nature • Education: 1. Naturalism stands for democratic and universal way – everyone must be educated in the same manner 2. Education is in accordance to human development and growth 3. Emphasis is given more on the physical development – informal exercise – and hygiene of the person rather of the 3R's 4. Aims to unfold the child's potential not to prepare him for a definite vocation or social position – but to prepare him to adapt to the changing times and needs. Consequently, one's conduct is governed by impulse, instincts and experience. 5. It puts the child at the center of educational process and prepares him to experience life as it is.				
HUMANISM Advocate: Da Feltre, Erasmus, Pestalozzi	• Rooted in the economic and political changes during the Renaissance period • Three main lines of growth 1. Intellectual (includes Education) 2. Aesthetics 3. Scientific • Education: 1. Education is a process and should not be taken abruptly. The unfolding of human character proceeds with the unfolding of nature 2. The learner should be in control of his destiny 3. Concern is more on methods which include theme writing rather than of oral discussions, drills and exercises, playing 4. Asserts the importance of playing in the curriculum 5. Emphasizes motivations and the use of praise and rewards 6. Curriculum includes subjects concerning literary appreciation, physical education, social training in manners and development <table><tr><th colspan="2">DIVISIONS</th></tr><tr><td>Individualistic Humanism 1. Making the most out of one's life 2. Living life to the fullest 3. Stresses on individual freedom, culture and development </td><td>Social Humanism 1. Aims for social rather than individual happiness 2. Includes social reforms and improvement of social relationships </td></tr></table>	DIVISIONS		Individualistic Humanism 1. Making the most out of one's life 2. Living life to the fullest 3. Stresses on individual freedom, culture and development	Social Humanism 1. Aims for social rather than individual happiness 2. Includes social reforms and improvement of social relationships
DIVISIONS					
Individualistic Humanism 1. Making the most out of one's life 2. Living life to the fullest 3. Stresses on individual freedom, culture and development	Social Humanism 1. Aims for social rather than individual happiness 2. Includes social reforms and improvement of social relationships				
PRAGMATISM Advocate: Charles Sanders Peirce, John Dewey	• What is experienced and observed is true. Hence, what is useful is true: U=T • Synonymous to functionality and practicality • Focuses more on "praxis" • Thought must produce actions (realizations) rather than to continue lying inside				

	• Education: 1. Involves student to work in groups 2. Methods of teaching include experimentation, project making and problem solving 3. Stresses on the application of what have learned rather than the transfer of the organized body of knowledge
EXISTENTIALISM Advocate: Soren Kierkegaard, Jean Paul Sartre	• Rooted from the dehumanization of man by technology and reaction to the traditional Philosophy of Kant and Hegel • Defining feature is "existence precede essence" – man conceives and makes of himself • Known as the Philosophy of Subjectivity: proclaims man's freedom in the accomplishment of his destiny • Conceives philosophy as something that is felt by individual for it is concrete in itself or based on what is concrete • Stresses on knowledge about realities of human life and the choice that each person has to make
ESSENTIALISM Advocate: William Bagley, James Koerner, H.G Rickover, Paul Copperman	• Rooted in idealism and realism and arose in response to progressive education • Defining feature is "essence precedes existence" • Refers to the traditional or back to the basic approach in education • Concerns with the fundamental of education skill and knowledge without which a person can't either be efficient individually or socially • Education: 1. Schooling is practical for this will prepare students to become competent and valuable members of the society 2. Focuses on the "basics" – reading, writing, speaking and the ability to compute 3. Subjects that are given emphasis include geography, grammar, reading, history, mathematics, art and hygiene 4. Stresses the values of hard work, perseverance, discipline, and respect to authorities to students 5. Students should be taught to think logically and systematically – grasping not just the parts but the whole 6. Methods of teaching centers on giving regular assignments, drills, recitation, frequent testing and evaluations
PROGRESSIVISM Advocate: John Dewey	• Contrasted the traditional view of essentialism and perennialism • Emphasizes change and growth • Stresses that man is a social animal who learns well through active interplay with others • Learning is based from the questions of one's experience of the world. Hence, it is the learner himself who thinks, solves and gives meaning through his individual experiences • Education: 1. Focuses on the child as a whole rather than of the content or the teacher 2. Curriculum content comes from the questions and interests of the students 3. Emphasis is given on the validation of ideas by the students through active experimentation 4. Methods of teaching include discussions, interaction (teacher with students) and group dynamics 5. Opposes the extreme reliance on bookish method of instruction, learning through memorization, the use of fear and punishment and the four walled philosophy of education
CONSTRUCTIVISM	• A philosophy of learning which asserts that reality does not exist outside of human conceptions. It is the individual that construct reality by reflecting on his own experience and gives meaning to it. • Learning is the process of adjusting one's mental modes to accommodate new experience

RECONSTRUCTIVISM Advocate: Theodore Brameld, George Counts, Paulo Freire	• A philosophy that aims to awaken the consciousness of individual about the social issues, concerns and problems that confront him. This should involve him to look for solutions and engage in addressing this social concerns and issues • Primary goal is to achieve the elusive Social Change • Education: 1. Schools should originate policies and progress that will bring social reforms and orders 2. Teachers should be an instrument to encourage and lead students in the program of social reforms 3. Curriculum emphasizes on social reforms as the aim of education. It focuses on student experience and taking social actions on real problems 4. Method of teachings include the problem oriented type (students are encouraged to critically examine cultural heritage), group discussions, inquiry, dialogues, interactions and community-based learning 5. The classroom will serve as a laboratory in experimenting school practices bringing the world into the classroom
PERENNIALISM Advocate: Robert Hutchins, Mortimer Adler	• The word itself means “eternal,” “ageless,” “everlasting”, “unchanged” • Influenced by the philosophy of realism • Truth is universal and does not depend on circumstances of place, time and person • To learn means to acquire understanding of great works of civilizations • Education: 1. Some of the ideas in the past are still being taught because they are significant 2. Curriculum should contain cognitive subjects that cultivate rationality, morality, aesthetics and religious principles. This includes history, language, mathematics, logic, literature, humanities and science. 3. Curriculum must be based on recurrent themes of human life for it views education as a recurring process based on eternal truths 4. The teacher must have the mastery of the subject matter and authority in exercising it 5. Aims for the education of the rational person – to develop man’s power of thought
BEHAVIORISM Advocate: John Watson, BF Skinner	• Rooted in the work of Russian experimental psychologist Ivan Pavlov and American psychologist John Watson in the early 1900s • Asserts that human beings are shaped entirely by their external environment • The only reality is the physical world • Man by nature is neither good nor bad but a product of his environment. Hence, an autonomous acting man is but an illusion since it negates faculty of freewill
NATIONALISM Advocate: Jonathan Herbart, Johan Heinrich Pestalozzi	• Rapid rise was in the 18th century • Center of ideology is the concept of national sovereignty • Aims for the preservation and glorification of the State • Emphasis is on the development of loyalty, patriotism, national feeling and responsible citizenship • Education: 1. The most important development was the creation of common language 2. Stresses on the teaching of the principles of democracy and duties of citizenship 3. Stimulates the development of the state which includes the control and support of public school system 4. Curriculum includes the teaching of grammar, geography and history 5. Method of teaching gives emphasis on the content regarding on nature studies, physical exercises and play activities.
