

1. At the heart of DepEd's classroom assessment system is the commitment to ensure learners' success in moving from guided to independent display of knowledge, understanding, and skills. Which of the following is the theoretical basis of such system?
- A. Information Processing Theory
 - B. Multiple Intelligence Theory
 - C. Dale's Cone of Experiences
 - D. Zone of Proximal Development

Answer: Option D. DepEd Order No. 8, s. 2015 explicitly states the theoretical basis of classroom assessment as the Zone of Proximal Development by Lev Vygotsky which is focused on ensuring learners' success in moving from guided to independent display of knowledge, understanding, and skills.

2. James was given a module by his teacher for him to catch up with the lessons he missed. The module includes a series of objective type test items after each lessons for James to check and monitor his progress as he move to the next lesson. What form of assessment is being applied by the teacher?
- A. Assessment of learning
 - B. Assessment for learning
 - C. Assessment of and for learning
 - D. Assessment as learning

Answer: Option D. In the situation, James is using the objective test as a form of self-assessment to check and monitor his progress as he move to the next lesson. Self-assessment is associated with the concept of assessment as learning.

3. A learning outcome in Grade 12 research subject reads 'At the end of the lesson, the students will be exposed to various research designs'. Is this a good target for assessment?
- A. Yes, the action is observable.
 - B. Yes, the action can be measured.
 - C. No, the action is not done by the students.
 - D. No, the action is not attainable.

Answer: Option C. The behaviour contained in the learning outcome 'will be exposed' is primarily an action that reflects an input and not an outcome. It is an action that will be done by the teacher.

4. Teacher Venice requires her students to submit a portfolio that shows their best literary compositions from among all their finished works. What type of portfolio is she requiring?
- A. Working portfolio
 - B. Display portfolio
 - C. Documentation portfolio
 - D. Growth portfolio

Answer: Option B. A portfolio that shows students' best literary composition is characteristic of a display portfolio, which is also known as showcase or best work portfolio. Such portfolio aims to show the highest level of achievement attained by the student.

5. In the present marking system of K to 12, how are learners' behaviour reported?

- A. Numerical rating
- B. Non-numerical rating
- C. Pass-fail system
- D. Anecdotal records

Answer: Option B. DepEd Order No. 8, s. 2015 explicitly states that learners' behaviour will be reported through non-numerical rating based on observations by the teachers.

6. Mr. Francisco administered an achievement test in Mathematics. He is in the process of counting the scores obtained by his students. This process is called _____.

- A. Assessment
- B. Measurement
- C. Evaluation
- D. Testing

Answer: Option B. Measurement is the most specific answer among the choices, as the situation is focused on the process of obtaining a numerical description of the degree to which an individual possess a particularly characteristic, which in this case is the achievement in Mathematics.

7. Which of the following is the advantage of portfolio assessment?

- A. Learners are assessed based on a wide range of evidences of learning.
- B. Learners are assessed objective.
- C. Learners are assessed in a manner that is from the teachers' biases.
- D. Learners can demonstrate what they can do without any evidences of learning.

Answer: Option A. A primary advantage of portfolio assessment is that it allows learners to show varied evidences of learning. A certain level of objectivity may also be achieved by portfolio assessment thru the use of scoring guides, but this is not an advantage of portfolio over other forms of assessment, which are already objective in nature.

8. What is the lowest mark that can be reflected in the report card?

- A. 60
- B. 65
- C. 70
- D. 75

Answer: Option A. DepEd Order No. 8, s. 2015 states that the lowest mark that can appear on the report card is 60 for Quarterly Grade and Final Grades.

9. Which of the following test is considered to be relatively less reliable for scoring and grading?

- A. Completion
- B. Alternate response
- C. Essay
- D. Matching type

Answer: Option C. Essay tests are considered as a non-objective test, which means that relative to other types of test, it is considered to be less reliable in terms of scoring.

10. Teacher Vivian is asking her students to identify the equipment in the Chemistry Laboratory. Under the cognitive domain, in which assessment level is this?

A. Remembering
B. Understanding
C. Analyzing
D. Creating

Answer: Option A. Identifying laboratory equipments is an activity involving recalling of facts. Thus, it is considered to be in the knowledge level or the remembering level in the revised Bloom's taxonomy.

11. Which statement is true regarding the use of opinions in alternate response type of test?

A. Opinions can be used but should be attributed to a source.
B. Opinions have no place in such type of test.
C. Teachers' own opinions can be used as long as they can justify their opinions.
D. If used, it should be an opinion widely accepted as true.

Answer: Option A. Opinions are problematic as a premise because it cannot be classified as either true or false. However, citing the source within the statement will address such issue.

12. Based on assessment results, Teacher Joan concluded that her students have attained the lesson's objectives so Teacher Joan _____.

A. should conduct remediation
B. must review the past lessons
C. should enrich the lesson
D. can proceed with the next lesson

Answer: Option D. One of the functions of assessment is to find out if the lesson's objectives are met. With evidence that objectives are met, the teacher can then proceed to the next lesson.

13. For grades 1 to 10, what is the percentage weight given to performance tasks in the learning areas under Languages?

A. 50%
B. 40%
C. 60%
D. 30%

Answer: Option A. DepEd Order No. 8, s. 2015 states that for Languages, Araling Panlipunan, and Edukasyon sa Pagpapakatao, performance tasks are given a weight of 50%.

14. Which of the following types of objective tests measures the greatest variety of learning objectives?

A. Short-answer
B. Alternate response
C. Matching type
D. Multiple choice

Answer: Option D. Among the options given, multiple choice type of test is considered to be the most flexible as the stem can be modified to assess higher levels of thinking skills.

15. Which of the following statements can be considered a limitation of true-false test?
- A. Oversimplified, 'hard-to-measure HOTS
 - B. Scoring is easy, objective, and reliable.
 - C. Cannot measure complex learning outcomes
 - D. Scores are easily influenced by guessing.

Answer: Option D. Since a true-false test only has two alternatives (if not modified), scores are more influenced by guessing.

16. Teacher Andrea is planning to assess the students' ability to defend their stand on whether the country should shift to Federalism or not. Which type of essay questions should she use?
- A. Extended response
 - B. Restricted response
 - C. Holistic
 - D. Analytic

Answer: Option A. Extended response questions allow students to determine the content and organize the form of response by deciding which among the details are relevant and pertinent as well as how to organize, integrate, and present it in a coherent manner, while restricted response is less valuable when measuring learning outcomes focused on organizing and integrating ideas. Options C and D, on the other hand, are not types of essay questions but rather types of scoring rubrics.

17. Teacher Maricor ensures that her students are well-prepared for their quarterly exam by regular conduct of assessment that is used as basis of decisions concerning whether to review, re-teach, remediate, or enrich the day-to-day lessons. What type of assessment is this?
- A. Formative
 - B. Summative
 - C. Assessment of learning
 - D. Assessment as learning

Answer: Option A. By definition, assessment that is used as basis of decisions concerning whether to review, re-teach, remediate, or enrich the day-to-day lessons is called formative assessment. Options B and C are synonymous, and both refer to assessment of students' attainment of standards/learning outcomes, while Option D is related to self-assessment among learners.

18. A group of test constructors is trying to find out how well does the performance on the assessment instrument they made estimates current performance on another valued measure. They are trying to establish _____.
- A. Predictive validity
 - B. Content validity
 - C. Face validity
 - D. Concurrent validity

Answer: Option D. Concurrent validity refers to how well performance on the assessment estimates current performance on some valued measures other than the test itself (criterion). Face validity is just based on superficial examination of the tasks while predictive validity is concerned on how well performance on the assessment predicts future performance. Content validity, meanwhile, is about how well the sample of assessment tasks represents the domain of tasks to be measured.

19. Teacher Marie is engaged in assessment of learning. She should make sure that her assessment is based on _____.
- A. Learning content
 - B. Learning resources
 - C. Learning pace
 - D. Learning outcome

Answer: Option D. The primary basis of assessment of learning is the learning outcome. In fact, what is assessed in assessment of learning is the achievement of the learning outcomes.

20. Which of the following situations is an example of diagnostic assessment?
- A. Teacher Andrew who administered a 10-item test to determine specific concepts difficult to students
 - B. Teacher George who required his students to do journal writing after discussion on a news commentary
 - C. Teacher Mary who administered a quiz at the end of the unit in Trigonometry
 - D. Teacher Joy who administered an achievement test to Grade 4 students

Answer: Option A. Diagnostic assessment is aimed at finding out persistent learning difficulties as well as causes of these.

21. Among the types of objective tests below, which DOES NOT belong to the group?
- A. Multiple choice
 - B. Alternate response
 - C. Completion
 - D. Matching type

Answer: Option C. Only option C is considered as a supply type of objective test. Options A, B, and D are all considered selection type of objective test.

22. Teacher Marie is interested in establishing the stability of an achievement test in Mathematics. Which of the following methods will provide the most relevant information?
- A. Parallel test
 - B. Test-retest
 - C. Split-half
 - D. Kuder-Richardson

Answer: Option B. Test-retest is also known as a measure of stability, while parallel test or equivalent forms is a measure of equivalence. Both Split-half and Kuder-Richardson are measures of internal consistency.

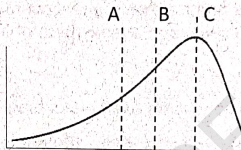

23. Teacher Marriane ensures that students are ready for their quarterly assessment as she teaches and assesses students regularly prior to the summative assessment. What principle reflects such practice?

A. Content principle
B. Equity principle
C. Learning principle
D. Product principle

Answer: Option C. The situation shows the use of assessment as a formative tool, which is essential towards students' mastery of the curriculum objectives. Such practice best reflects the learning principles, which states that assessment should be an integral part of learning and teaching, rather than merely the culmination of the process.

24. In the following graph indicating a negatively skewed distribution of test scores in a Science achievement test, what do A, B and C represent, respectively?

A. Mode, Median, Mean
B. Mean, Median, Mode
C. Median, Mode, Mean
D. Mean, Mode, Median

Answer: Option B. In a negatively skewed distribution, the mean and median are on the left of the mode. The value of the mode is the highest and the median remains at the middle of the mode and the mean. The mean, because it is sensitive to extreme scores, falls toward the direction of the skewness.

25. The following is the age distribution of the students enrolled in Grade 12 class of Ms. Tolentino.

Ages	Frequency
16	21
17	25
18	40
19	45

What is the median age of the students?

A. 16
B. 17
C. 18
D. 19

Answer: Option C. Median is the middlemost value when values are arranged in order. Overall, there are 131 students. There are 21 students aged 16. The next 25 students are aged 17. Thus, there are 46 students aged 16 to 17. The next 40

students are aged 18. Thus, the median age is 18 because we are looking for the 66th value when the ages of the 131 students are arranged in order.

26. The frequency distribution of Teacher Cocoy's quarterly assessment in Filipino has a mean that is greater than the mode, and a median less than the mean but greater than the mode, the distribution is considered to be:
- A. Symmetrical
 - B. Positively skewed
 - C. Negatively skewed
 - D. Skewed to the left

Answer: Option C. In a positively skewed distribution, the mean and median are on the right side of the mode. The value of the mode is the lowest and the median remains at the middle of the mode and the mean. The mean, on the other hand, has the highest value.

27. The school where Teacher Vivian is teaching utilizes norm-referenced grading; thus, test scores are given percentile-ranked equivalent. What is/are important for Teacher Vivian to state when explaining percentile-ranked tests to parents?
- I. What group took the test
 - II. That the scores show how students performed in relation to other students
 - III. That the scores show how students performed in relation to an absolute standard
- A. II only
 - B. I and III
 - C. I and II
 - D. III only

Answer: Option C. It is important to state the characteristics of norm-referenced interpretation of performance, particularly that the scores show how students performed in relation to other students. Aside from this however, it is also important to provide information about the nature of the group that took the test as it provides the backdrop for the norm-referenced interpretation.

28. Teacher Mark constructs a table of specifications and made it as basis for his quarterly assessment in English. The students can be assured that the test has _____.
- A. Content validity
 - B. Internal consistency
 - C. Reliability
 - D. Predictive validity

Answer: Option A. Content validity refers to how well the sample of assessment tasks represents the domain of tasks to be measured. Content validity is the most feasible answer, since internal consistency is established through statistical analysis either through split-half or Kuder-Richardson reliability methods, while predictive validity is defined as how well performance on the assessment predicts future performance.

29. Under the Philippine Professional Standards for Teachers, which of the following characterizes a highly proficient teacher in terms of the design, selection organization, and utilization of assessment strategies?
- A. Demonstrate knowledge of assessment strategies
 - B. Show skilled application of assessment strategies

- C. Work collaboratively with colleagues and use a range of effective strategies
- D. Lead initiatives, particularly in the evaluation of policies related to assessment

Answer: Option C. Design, selection organization, and utilization of assessment strategies is the first strand of the 5th domain (Assessment and Reporting). For highly proficient teachers, the expectations for this strand is that teachers should be able to work collaboratively with colleagues to review the design, selection, organization, and use of a range of effective diagnostic, formative and summative assessment strategies consistent with curriculum requirements.

30. Student Isha took an intelligence test three times and each time earned a similar score. The test is said to possess _____.
- A. Validity
 - B. Practicality
 - C. Scorability
 - D. Reliability

Answer: Option D. Reliability refers to the consistency of the assessment results. It is a necessary but not sufficient condition for validity.

31. In the DepEd's grading system, what are the components of summative assessment?
- A. Written, Paper and Pencil, and Performance Tasks
 - B. Written, Performance, and Periodical Assessment
 - C. Written, Attendance, Projects, Objective-Type Tests, and Achievement Test
 - D. Written, Periodical, National Achievement Test, and National Career Assessment Exam

Answer: Option B. In the present grading system of DepEd, the components of summative assessment, which are recorded and used as basis of grades, are written work, performance tasks, and quarterly assessment.

32. Angelo is a grade three student who, at the end of the last grading period, did not meet expectations in three learning areas. Under the DepEd guidelines on assessment, what will happen to Angelo?
- A. Promoted to the next grade
 - B. Must pass remedial classes for learning areas with failing mark before being promoted
 - C. Retained in the same grade level
 - D. Promoted to the next grade level with 'back subjects'

Answer: Option C. For grades 1 to 10, students who did not meet expectations in three or more learning areas would be retained in the same grade level.

33. Based on DepEd's present grading system, which of the following are recorded and graded?
- I. Formative assessment
 - II. Summative assessment
 - III. Assessment of learning

- A. I and II
- B. II and III

- C. I and III
- D. I, II, and III

Answer: Option B. DepEd Order No. 8, s. 2015 explicitly states that summative assessments serve as basis of grades. Furthermore, assessment of learning is used to describe summative assessment, which is an assessment of students' attainment of standards/outcomes.

34. If a teacher is tasked to give emphasis on assessing higher-order thinking skills, which of the following can be done?

- A. Focus on oral examination
- B. Avoid objective types of test
- C. Conduct less formative assessment
- D. Focus on problem-solving activities

Answer: Option D. Problem-solving activities go beyond comprehension level, thus, involving higher-order thinking. Focusing on oral examination doesn't mean giving emphasis on assessing HOTS in the same way that avoiding objective types of test and conducting less formative assessment do not mean emphasizing HOTS.

35. Angela got a final grade of 80 in her Araling Panlipunan subject. Which best describes her performance?

- A. Very satisfactory
- B. Did not meet expectations
- C. Fairly satisfactory
- D. Satisfactory

Answer: Option D. The following are the descriptors, grading scale, and remarks:

DESCRIPTOR	GRADING SCALE	REMARKS
Outstanding	90-100	Passed
Very Satisfactory	85-89	Passed
Satisfactory	80-84	Passed
Fairly Satisfactory	75-79	Passed
Did Not Meet Expectations	Below 75	Failed

36. In the learning areas Technology and Livelihood Education and Music, Arts, PE and Health, performance tasks are given the largest weight because _____.

- A. It's purely psychomotor without cognitive aspect.
- B. Both have no affective component.
- C. Objective assessment cannot be performed.
- D. Both are predominantly skills subjects.

Answer: Option D. The best answer is that both are predominantly skills subjects. Any learning area will have a cognitive and affective aspect, so options A and B are incorrect. Objective assessment can also be done regardless of the learning area, so option C is also incorrect.

37. Teacher Joanna asked her class to provide feedback on each other's learning. Which form of assessment was used?

A. Summative
B. Objective
C. Peer
D. Self

Answer: Option C. Among the choices, the closest to the idea of providing feedback on each other's learning is peer assessment.

38. Teacher Anna found that one item in her achievement test has a difficulty index of 1. This means that _____.

A. The item is very difficult.
B. The item is very easy.
C. The item was missed by everyone.
D. The item has high discriminating power.

Answer: Option B. The highest possible difficulty index is 1, which means that everyone got the item correctly.

39. What does Mark's percentile score of 75% in his class means?

A. He scored less than 75% of the class.
B. He got 75% of the items correctly.
C. He barely passed the test.
D. He scored better than 75% of the class.

Answer: Option D. Percentiles refer to the 99 values that divide a distribution to 100 equal parts. Thus, a percentile score of 75 means that 75% of all the other scores are at or below the given score.

40. Which is the most improved version of an alternate response type of test item: 'K to 12 makes the Philippine educational system one of the best in Southeast Asia'?

A. K to 12 makes the educational system of the country better.
B. K to 12 makes the Philippine educational system at par with Southeast Asian countries.
C. According to DepEd, K to 12 makes the Philippine educational system one of the best in Southeast Asia.
D. Should be totally discarded because it's an opinionated statement.

Answer: Option C. The main problem with the item is that it is an opinionated statement. Opinions are problematic as a premise because it cannot be classified as either true or false. However, Gronlund and Linn (1995) suggest citing the source within the statement to address such issue.

41. Teacher Ladislawa conducted an assessment to her grade 3 pupils as she aims to describe the standard reached by the learner at the end of instruction. Which form of assessment is being described?

A. Formative
B. Diagnostic
C. Assessment for learning
D. Assessment of learning

Answer: Option D. Assessment of learning is summative assessment. It's an assessment that results in statements or symbols about how the students' achievement against outcomes and standards are. Assessment for learning and formative assessment, on the other hand, are usually done during instruction to inform teaching and/or to provide feedback to students. Diagnostic is specifically designed to find possible difficulties that may be encountered by the students.

42. Which of the following best describes the test scores of students in an achievement test, which is said to be leptokurtic?
- A greater portion of the distribution concentrates around the central tendency.
 - There is little concentration around the central tendency.
 - The scores are negatively skewed.
 - The distribution of scores is skewed to the right.

Answer: Option A. The prefix 'lepto' came from the Greek word leptos, which means slender. This curve is more peaked and the hump is higher and sharper compared to that of the normal curve.

43. Scores on an English test have an average of 80 with a standard deviation of 6. Did George, who scored a 75 on the test, perform relatively better than Mark, whose score got a z-score equivalent of -0.7?
- Yes, because George has higher z-score.
 - No, because George got higher z-score.
 - Yes, because George got lower z-score.
 - No, because George got lower z-score.

Answer: Option D. The z-score equivalent of George's score is $-0.833 [(75 - 80)/6]$, which is lower than Mark's z-score of -0.7. The higher the z-score, the better the relative performance of a student.

44. The scores of a batch of BLEPT reviewees in a pre-board examination are said to have a correlation of 0.75 with their actual BLEPT ratings. What can be inferred about the pre-board examination?
- There is predictive validity.
 - Reviewees performed better than expected.
 - Scores are widely scattered.
 - Examination has concurrent validity.

Answer: Option A. The closer the correlation coefficient or the 'r' value is to 1, the more closely the two variables are related. If r is positive, it means that relatively high values in one variable are associated with relatively high values in the other variable while low values in one variable are also associated with low values in the other variable. Thus, the positive correlation between the pre-board exam scores, and their actual BLEPT ratings suggest predictive validity.

45. Teacher Anne teaches Business Mathematics and she wants to know if her students understood the concept of rate, ratio, and proportion. If the assessment method is conventional, which of the following will she most likely do?

A. Write worded problems
B. Conduct role playing
C. Conduct plant visits
D. Observe students

Answer: Option A. Written, paper-and-pencil tests are commonly referred to as conventional assessment.

46. Authentic performance assessment refers to _____.

A. Tasks similar to real-world activities
B. Demonstration of skilful activity
C. Role playing sessions with students
D. Summative assessment of skilful activities

Answer: Option A. Authentic assessment is defined as a form of assessment procedure that is similar to real-world activities. Other options may also describe the term, but option A is the very definition of authentic assessment.

47. Teacher Venice conducted item analysis, and she found out that a significantly greater number from the upper group of the class got the test item number 10 correctly. This means that the test item _____.

A. Has negative discriminating ability
B. Has positive discriminating ability
C. Has low reliability
D. Has high validity

Answer: Option B. The item is about the proportion of students from the upper and lower groups who got an item correctly; thus, both C and D are incorrect options. When more students from the upper group gets an item correctly, the discrimination index is positive, which means that the item has the ability to discriminate between students who know the tested material and those who do not.

48. The class of Teacher Clara was given a pretest on empowerment technologies. She used the results as basis for teaching the lesson. She corrected wrong concepts and affirmed right answers. Then, she gave a post-test. Which of the following best describes assessment in this context?

A. Assessment of learning
B. Assessment of and as learning
C. Assessment for learning
D. Assessment as learning

Answer: Option C. Teacher Clara used assessment to guide her instruction. She taught her class based on the results of the pre-test. This is characteristic of assessment for learning.

49. Teacher Juan asked his learners to display composition work in the beginning, middle, and near the end of the grading period. Which type of portfolio did Teacher Juan require?

- A. Development
- B. Assessment
- C. Display
- D. Evaluation

Answer: Option A. Development or sometimes called growth or documentation portfolio highlights the development and improvement of student learning during a given period of time.

50. Five class sessions were spent for the topic 'Entrepreneurial Competencies' and the total number of class sessions spent for the topics covered by a periodical test is 20. If you are planning to administer a fifty item test, how many items will correspond to the topic 'Entrepreneurial Competencies'?

- A. 13
- B. 5
- C. 2
- D. 11

Answer: Option A. Based on the formula for estimating the number of items per lesson $[(5/20) \times 50]$, the estimated number of items for the topic 'Entrepreneurial Competencies' is 12.5 or 13 items.
